Macmillan & Co., for whom 1893 is a jubilee year, as their first imprints bear date 1843, and who are about to remove their establishment in this city from Fourth to Fifth Avenue, show a long list of works by American authors among their forthcoming autumn publications. We cite 'A Theory of Development and Heredity,' by Prof. Henry B. Orr of Tulane University; 'The Distribution of Wealth,' by Prof. John R. Commons of the University of Indiana; 'Genetic Philosophy,' by David J. Hill, President of the University of Rochester; 'Notes on Electromagnets and the Construction of Dynamos,' by Prof. Dugald C. Jackson of the University of Wisconsin; a 'History of Mathematics,' by Prof. Florian Cajori of Colorado College; 'The Resistance of Ships and Screw Propulsion,' by D. W. Taylor of the United State Navy-yard at Mare Island; a novel, 'Marion Darche,' by F. Marion Crawford; an illustrated edition of William Winter's 'Shakspere's England'; and 'Bay Leaves,' a collection, by Prof. Goldwin Smith, of translations from the Latin poets.

Henry Holt & Co. announce for early publication a 'Brief German Reader,' by Prof. W. D. Whitney; 'German Literature in its Chief Epochs,' by Prof. Kuno Francke; 'Deutsche Gedichte,' a collection of the very best German ballads and lyrics, edited by Dr. Camillo von Klenze of the University of Chicago; 'Histoire de la Littérature Française, by Prof. Alcée Fortier; 'Seventeenth Century French Letters,' edited by Prof. Edward L. Walter of the University of Michigan; 'Episodes from Victor Hugo's Novels,' with some of his shorter poems, edited by Prof. F. M. Warren of Adelbert College; 'Prose Extracts from Coleridge,' edited by Prof. H. A. Beers of Yale; 'Specimens of Argumentation,' classical and modern, edited in two volumes by George P. Baker; and 'First Courses in Science,' by Prof. John F. Woodhull.

Houghton, Mifflin & Co.'s fall announcements embrace 'Massachusetts: Its Historians and its History,' by Charles Francis Adams; 'The Life and Writings of Jared Sparks,' with selections from his journals and correspondence, by Prof. Herbert B. Adams, a limited edition in two volumes; 'The Bench and the Bar of New Hampshire,' by ex-Gov. Charles H. Bell; 'The Old Colony Town, and Other Sketches,' by William Root Bliss; 'An Old Town by the Sea,' by Thomas Bailey Aldrich; 'Letters of Asa Gray,' edited by Jane Loring Gray, with portraits; 'The Poems of Thomas William Parsons,' and his metrical translation of 'The Divine Comedy of Dante,' which will be accompanied by a memorial sketch by Miss Louise Imogen Guiney, and an introduction by Prof. Norton; 'A Poet's Portfolio; Later Readings,' by W. W. Story; 'In Sunshine Land,' poems for young folks, by Edith M. Thomas; 'Sam Houston and the War of Independence in Texas,' by Alfred M. Williams; 'The Natural History of Intellect, and Other Papers,' by Ralph Waldo Emerson, some never included in any collection of his writings and some inedited, together with an index to all his works (in the Riverside and the large-paper editions); a new Riverside edition in ten volumes of the Works of Henry D. Thoreau; holiday editions of Holmes's 'Autocrat,' Longfellow's 'Hanging of the Crane,' Mrs. Deland's 'Old Garden,' and Miss Jewett's 'Deephaven'; 'Familiar Letters of Sir Walter Scott,' edited in two volumes by David Douglas; 'Greek Lines, and Other Architectural Essays,' by Henry Van Brunt; 'The Growth and Influence of Classical Greek Poetry,' by Prof. Jebb; 'Essays in Idleness,' by Agnes Repplier; 'Sub-Cœlum: A Sky-Built Human World,' by A. P. Russell; 'Glimpses of Unfamiliar Japan,' by Lafcadio Hearn; 'A Japanese Interior,' by Miss Alice M. Bacon; 'The Amateur Photographer,' by Alexander Black; 'The Witness to Immortality, in Literature, Philosophy, and Life,' by the Rev. Geo. A. Gordon; 'A Sketch of the History of the Apostolic Church,' by Prof. Oliver J. Thatcher of the University of Chicago; 'His Vanished Star,' by Charles Egbert Craddock; and 'Rachel Stanwood: A Story of the Middle of the Nineteenth Century,' by Mrs. Lucy Gibbons Morse.

Dr. William Wright's 'The Brontë Family' will be published, with illustrations, by D. Appleton & Co.

The editor of 'Nuttall's Standard Dictionary' has compiled a 'Dictionary of Quotations from Ancient and Modern English and French Sources,' with a topical index, which Frederick Warne & Co. will issue immediately.

Ginn & Co. have nearly ready Collar's 'Shorter Eysenbach' for the study of German. Their 'Ancient History,' by Prof. Myers, is about to be translated into Arabic.

Prof. O. B. Super of Dickinson College has annotated Erckmann-Chatrian's 'Waterloo' for D. C. Heath & Co.'s "Modern Language Series."

The announcement of the formation of the Navy Records Society in London cannot fail to be of great interest to the students of the early history of this country. Though the main object of the Society will be to render accessible the sources of English naval history, and to trace its obscure origin and early development, it will not confine its labors to the days of Elizabeth and the Stuarts. The Society's first publication will be the official documents relating to the fleet commanded by Lord Howard of Effingham, which defeated the Spanish Armada. This will be followed by the letters of Admiral Hood from the West Indies, 1780–3, and the memoir of Capt. Stephen Martin. Among the MSS. whose publication the Council has under consideration is the private journal of Rear-Admiral Bartholomew James, 1765-99. The latter officer assisted in the reduction of New York in 1776, and was taken prisoner at Yorktown when serving as lieutenant on board the *Charon*. The annual subscription is one guinea, entitling the member to receive one copy of all works issued by the Society during the year.

A new edition has been called for of Tristram's gossipy 'Coaching Days and Coaching Ways' (Macmillan)—two, in fact, but this before us is not the *édition de luxe*, though handier for reading, and most tastefully printed and bound. It contains the 214 pen-and-ink illustrations by Hugh Thomson and Herbert Railton, and is altogether an appetizing volume.

A reprint, by Lee & Shepard, of Sumner's

Boston oration on 'The True Grandeur of Nations,' coming upon the heels of an arbitration which has dissipated the war-cloud between this country and England, must be thought opportune. The prospect of war at once with Mexico (over Texas) and Great Britain (over the Oregon boundary) was what determined the Fourth of July theme in 1845. Sumner's financial argument against militarism and bloodshed every reader can now reinforce with the prodigality of pensions attendant upon a righteous and, in its main results, a beneficent war.

The two ladies (as we may infer) who have edited the 'Phillips Brooks Year-book' just issued by E. P. Dutton & Co. have eked out their pages of selections, carefully referred to the original source, with much good borrowed verse, often very fitly joined with the prose extract. Incidentally they have given a glimpse of Bishop Brooks's own poetic reading, where he cites passages in aid of his text. Emerson is thus used three times, Tennyson twice, Shelley, Wordsworth, and Coleridge each once—but the last, in his "Love, Hope, and Patience in Education," undergoes a strange transformation by clipping and substitution. The book is attractively manufactured.

A thin volume of 'Reminiscences of Early Anti-Slavery Days,' privately printed at the Riverside Press, is from the pen of Miss Sarah H. Southwick, a member of a prosperous Quaker family and connection which were of the greatest service to the editor of the *Liberator* and to the abolition cause. The writer says none too much of the Southwicks and Winslows, and aims chiefly to supplement larger narratives of the events which came under her observation with small details and personal impressions. But Miss Southwick was really almost omnipresent for the great occasions, being in the very midst of the Boston mob of 1835, hearing Wendell Phillips rebuke Austin at the Lovejoy meeting in Faneuil Hall in 1837, being among the mobbed audience at Pennsylvania Hall in 1838 and witnessing the consequent destruction of that building, attending the meeting of the American Anti-Slavery Society in New York in 1840 at which the great schism took place, being present at Frederick Douglass's début at Nantucket, etc. Her Boston home was a refuge for George Thompson in his deadly peril in 1835, and she once had the rare privilege of hearing that consummate orator repeat a speech of Edward Everett, just listened to, "nearly word for word, imitating him by voice and gesture." Her testimony to Thompson's charm of manner, in public and private, accords with the traditions. Very just, also, are Miss Southwick's appreciations of Mrs. Chapman and the Weston sisters. The simple narrative, which is quaintly illustrated with facsimiles of anti-slavery symbols and documents, is instinct with humanity and breeding, and no memoir has appeared better calculated to stimulate curiosity as to the epoch and the reformers to which it relates, or to propitiate the prejudiced. For this reason it is a pity that the edition is limited, and not for general circulation; but some copies, we may hope, will find their way into public libraries.

The combined catalogues of the several publishing houses which are bound up in the 'Publishers' Trade-List Annual for 1893' make a bulk slightly inferior to that of 1892, if not enough to tell in the handling. This indispensable volume needs no further remark when the issue of it has been chronicled but our eye falls on the advertisement in the front of it, and for the benefit of the curious we will say that the now famous "Rudolph Indexer" is there figured in its three forms of book, case, and cabinet, along with the Rudolph card-cutter.

Mr. W. M. Griswold, Cambridge, Mass., who has already made up one stout volume of his serviceable 'Descriptive Lists of Novels,' continues to extend the series, Norway and Germany being his latest issues. He also improves upon the lists already published, and we have from him copiously intercalated reissues of the 'Descriptive List of Novels and Tales Dealing with American Country Life,' and of the French and British lists respectively.

We have received Part II. of Mr. Hubert Howe Bancroft's 'Book of the Fair' (Chicago: The Bancroft Co.). The narrative is prolix and disorderly, and not too trustworthy in detail. On p. 62 we read of the New York State Building that the design "is the old Van Rensselaer residence of its metropolis"—whatever that may be; whereas it is an independent and palatial design. Nor is it correct to say of the statued front of the Pennsylvania Building, that it is "a facsimile of Independence Hall." Reading is made difficult by the balanced illustrations; the text being carried across, instead of up and down beside, the illustration. Finally, these process cuts, which are the best thing about the book (especially when they show buildings and grounds in early stages of preparation), are scattered with little or no reference to the immediate letterpress.

The two leading articles of *Petermann's Mitteilungen* for June, a description of the Andes of western Colombia, and considerations of the contraction theory of mountain construction and of the condition of the interior of the earth, are of a purely scientific character. Among the shorter papers, however, is a report from Lieut. v. Höhnel, giving some further account of the Astor Chanler expedition in eastern Africa, which is of general interest. From this it appears that, during the last week of January, in an attempt to seize forcibly cattle which the natives had refused to sell, the expedition was attacked by the Wa-Msa'ra—apparently a Masai tribe—and would have been destroyed but for the Mannlicher rifles with which it was armed. Several were killed or wounded, and the remainder finally escaped only by a timely fog which concealed their flight. Naturally the native losses were "far greater" (*ungleich grosser*). The July number contains a description of the northwestern part of the Argentine Republic, with especial relation to its soil. It is illustrated by two maps, the one showing the various heights, the watersheds and the limits of the deserts, the other especially the distribution of the vegetation, both wild and cultivated. Sugar plantations and vineyards seem to occupy the largest space under cultivation. This is followed by an account of the recent earthquakes at Zante, and a brief sketch, with a map, of Maistre's unsuccessful attempt to reach Lake Tsad from the Congo.

Early numbers of the *Century Magazine* will contain an unpublished diary of the secretary of the admiral in charge of the ship which conveyed Napoleon to St. Helena, thus checking Las Cases's Memoirs for the same voyage, and supplementing the magazine's recent account of the deportation to Elba.

The eighteenth annual report of the Boston Park Commissioners is, like its predecessors, a document valuable beyond local limits. It shows the progress up to February 1, 1893, of that system of pleasure grounds and connecting driveways in which Boston seems likely to surpass any city in the world, so great are the natural advantages of its environs, and so timely-wise have been the steps taken by State and municipality to improve these advantages to the utmost. Photographic views, maps, tables, and the text of statutes accompany the several reports. A genuine Boston notion is seen in the Massachusetts Emergency and Hygiene Association, which has had charge of the women's gymnasium on the bank of the Charles River, to which and to its equally public playground for children have flocked Jews in preponderance, Irish in next greater number, "then the colored people, then Poles and Germans." "At least two hundred working-girls a week, from eighteen to twenty-five years of age, have practised in the gymnasium, and to none has the exercise been of greater benefit than to them."

—The growth of the book collections of Cornell University during the academic year 1892–3 is most gratifying; perhaps unexampled in our college records. The aggregate falls a trifle short of 40,000 volumes. The books may be grouped under four heads: (1) the Moak law library, 13,000; (2) the Zarncke collection, 13,000; (3) bought out of the general library appropriation or donated by various persons, 10,500; (4) the Fiske Dante collection, 1,650. Of the Moak library, the gift of the family of the late Judge Boardman, it is enough to say that it is complete in its collection of Reports of English Courts and of all courts in the English language, *e. g.*, the old Year Books *ab initio*, all the Scotch, Irish, Canadian, Hawaiian, New Zealand, Australian Reports. It is fuller than the State Law Library at Albany, and as full as the Library of the Bar Association of New York city, probably fuller than the Harvard collection. Among the choice works under the second head we note the London, Edinburgh, and Dublin *Philosophical Magazine*, 1798 on; the *Preussische Jahrbücher;* London *Economist;* Journals of the Houses of Lords and Commons, British Statutes at Large, *Oesterreichische Militär-Zeitschrift*, Loddiges's 'Botanical Cabinet,' Sydenham Society (Old and New), "Pléiade Française" (Marty-Laveaux), and an almost complete collection of Dutch, Low German, Danish, Swedish, Icelandic lexicons. Of the Zarncke collection, it is quite impossible to give an idea of the variety and completeness. It is very rich in works upon the history of German Universities; almost, if not quite, exhaustive in Lessingiana; undoubtedly unique in Schelmuffsky literature (Christian Reuter); in Goetheana, surpassed only by one or two University collections in Germany; very rich in everything pertaining to general German literature and Germanic philology, and bringing many valuable additions to Romance and English philology. Of Prof. Willard Fiske's remarkable Dante collection we have already spoken. We will add that in size and value it is unsurpassed in England or America. It is decidedly superior to the Bodleian, somewhat to the Harvard, and about equal to the British Museum. In view of the foregoing, and of the general equipment of the University Library in the departments of science, history, and literature, the alumni of Cornell have reason to look forward to the twenty-fifth anniversary in October next with pride and satisfaction.

—A stout volume of four hundred and fifty pages on 'Benjamin Franklin and the University of Pennsylvania,' edited by Prof. Francis Newton Thorpe, has been issued by the Bureau of Education at Washington. It is the second of a series of monographs, succeeding 'Thomas Jefferson and the University of Virginia,'

edited by Prof. H. B. Adams. It is illustrated with portraits of Franklin, of the first Provost, Dr. Wm. Smith, and of the present Provost, Dr. Pepper, and views of the University buildings, more than forty in all, to assist the text. It is composed very much in the fashion of other "Circulars of Information" from the same Bureau. The editor writes a long disquisition to show the great service done to education in this country by Franklin in his plan for the Academy, later on the College of Philadelphia, and traces its history through colonial days, through the trying times of the Revolution, to its reorganization as the University of Pennsylvania, and on past its long period of mere existence to the more active and successful growth of our own times. The Provost, members of the Board of Trustees and of the various Faculties and Departments, and representative graduates, supply separate chapters on subjects in which they are specially interested, so that there is frequent repetition of salient facts, and a variety of methods of treating them. In the main, the story is not very novel nor very instructive. There is the same ambition that marked each colony to have its own institution for higher education, but in Pennsylvania neither Government nor people showed much zeal in the cause. It was left to men of Franklin's type, and to the energy of Provost Smith, who begged throughout the three kingdoms and in the South and the West Indies. The dreary neglect of the first half of this century ended in a revival of public spirit after the war and in a flood of private benefactions and some State and city aid that have made the additions of the last ten or twenty years greater than all earlier endowments. The title 'Jefferson and the University of Virginia' naturally suggested the taking headline of this account of the University of Pennsylvania, but it is hard to see what corresponding merit Franklin can claim with Jefferson. With characteristic shrewdness he aimed at establishing a high school suited to his times, but, with the business-like sense that marked his whole career, he builded for the needs of his own day and generation. That the Academy should grow into a College was natural enough, but that it should at last be a University in fact as well as in name was far beyond his dreams, and he was not given to dreaming. The present strength of the University is due to men of our own time, and the University of Pennsylvania is to-day the final outcome of the general elevation of the needs and standards of higher schools of education. Jefferson really did plan the University of Virginia, and it is to-day largely what he had in mind.

—Prof. Henry Carrington Bolton's 'Select Bibliography of Chemistry, 1492–1892' (Washington: Smithsonian Institution) is the second valuable bibliography with which the author has enriched the science of chemistry, the first being the well-known and highly esteemed 'Catalogue of Scientific and Technical Periodicals, 1665–1882.' Add to these various smaller special bibliographies, and the author's claim to the gratitude of his fellow-chemists must stand unquestioned. The bulky work before us is divided into seven sections, namely, of Bibliography, of Dictionaries, of History, of Biography, of Pure and Applied Chemistry, of Alchemy, and of Periodicals—the last being an excerpt from the second catalogue above referred to. In all the sections except those of Biography and Periodicals, the titles are arranged alphabetically. In the section of Biography the titles are placed under the names of the persons described, with cross-references from the authors. In the section of Periodicals the titles are arranged alphabetically by the first word, articles and "New" excepted, also with cross-references from the editors. Many very valuable and interesting notes have been introduced. The work does not profess to be a complete but (as its title indicates) only a select bibliography. Of course there will be some difference of opinion as to what should have been omitted and what should have been inserted, but this is unavoidable. A curious special table gives the number of titles in the several languages. For instance, there are 5 in Arabic, 29 in Chinese, 1 in Finnish, 1 each in Gujerati, Hebrew, Hindi, and Welsh. The book is a monument of well-directed and well-executed labor, and must become a standard work of reference. It is well and clearly printed. The titles in foreign languages have all been carefully revised by persons to whom these languages are native or at least familiar. There is a complete subject-index, but, in spite of the alphabetical form, an author-index would also have been acceptable.

—Mr. Emerson face to face with nature in the Adirondack "Philosophers' Camp," as described by Mr. Stillman in the August *Century*, recalls to a correspondent an unwritten leaf in the wildwood experience of the Concord sage. He writes:

"About 1877 it was my fortune to enjoy an hour's talk with Emerson beneath his own roof. He spoke of John Muir, who had been one of his guides in the Yosemite region, and who has given name to the chiefest among ten thousand glaciers. 'Muir,' said he, 'I was sorry to part with so soon. No scholarly man had looked so long and so lovingly upon the sublimities there. We arrived at the Big Trees before noon, had a lunch and a leisurely survey of the giants. We penetrated the dark caverns burned in the trunks of some, walked around others, wondered that the branches on the tops were so small while those fallen to the earth were themselves like thick trees. Then our party, largely business men from Boston and elsewhere, were eager to move on. But when I spoke of the matter to Muir he seemed equally surprised and grieved, in fact declared it "an injury and sullenness against Nature" to turn our backs so abruptly on her most marvellous works. I urged that our business demanded haste, and he rejoined that during years of mountaineering he had never approached the giants of Calaveras or Mariposa without making his camp beneath them. "We must go," said I, "and you cannot stay, for the horse you ride is ours." His answer was, "A horse is nothing to me. I have almost always come hither without one, and nowhere am I so much at home as among these chief things of the ancient mountains." Nor was he to be moved from his purpose, and so we reluctantly parted from him there, leaving him a true child of Nature in the solitude, alone but no more solitary than an infant in its mother's bosom.'"

—In Dr. Friedrich Klaeber's 'Das Bild bei Chaucer' (Berlin: Heinrich) students of English have a work of nearly 500 pages on Chaucer's use of figurative language—a work which they will read (or consult) with mixed feelings. The extensive and well-arranged collection of material will be welcome to scholars, and will probably interest even that sort of literary critic who instinctively guards the fine edge of his perceptions from contact with stubborn masses of linguistic and stylistic facts. There is much that is pedantic in the book, however, and not a little that is raw. As an example of elaborate pedantry we may instance the chapter on methods of introducing comparisons and metaphors, which is nearly all lumber. The author's immaturity of judgment is exemplified whenever he essays criticism. Particularly diverting is the grave sentence in which, using novelty in the flowers of rhetoric as the touchstone of originality, he denies to Chaucer the title of "an original genius of the first order" (p. 413). We fear that Dr. Klaeber does not understand his author so very well, though it must be admitted that he has a full appreciation of some of the coarser tales or parts of tales. He is guilty of the tiresome blunder of talking about Chaucer's naïveté; he discovers an involuntarily comic effect in lines where every word is used with the nicest art; he fails to grasp the intention of the poet in passages in which there is an attempt at "local color." His errors in details of interpretation are not few. For *elvish* he has no better gloss than *einfältig* (p. 173); for *cheste of every care* he has an ingeniously futile explanation (p. 392); and the tantalizing "he tolde a tale of Wade," which was well understood in the sixteenth century, loses all its possibilities of meaning under his treatment (p. 196). His imagination does not even rise to the height of the phrase *maken him a howve above a calle* (p. 430). His crowning exploit is the detection of a beastly pun in an innocent jest of Pandar's (p. 436). As compensation for this, he has overlooked the quip in the "high style" over which the Squire could not climb. His dissection of certain long descriptive passages (see p. 330, for example) has in its way not been surpassed since the author of 'Modern Painters' went botanizing in "Lycidas." But it is easy to find fault with details. After all, Dr. Klaeber has written a useful book, which Chaucerians will have to buy.

—One of the most gifted of German-American poets, Mr. Hermann Rosenthal, has published a metrical translation of the "Song of Songs" ('Das Lied der Lieder,' New York: The International News Co.) as a companion booklet to his version of Ecclesiastes, which appeared a number of years ago. The translation deserves high praise, alike for the intrinsic merit of its melodious verse and for the critical acumen which, in several instances, has elucidated obscurities in the original that have baffled not a few commentators. A random comparison of Prof. Ernst Meier's literal

> "Erhebe dich, Nordwind,
> Und komm doch, o Südwind,
> Durchwehe meinen Garten,
> Dass ströme sein Balsamduft!
> Damit komme mein Geliebter
> Zu seinem Garten
> Und geniessen möge
> Sein edles Obst,"

and Mr. Rosenthal's

> "Erwache Nordwind, fächle kühle Luft,
> Erbrause Südwind, ströme würz'gen Duft,
> Das meinen Garten Balsamhauch versüsse,
> Dass mein Geliebter nahe, mich begrüsse,
> Dass er des Gartens reife Frucht geniesse,"

shows at how slight a sacrifice of literalness the rhymed version succeeds in rendering the poetic flavor of the original. Mr. Rosenthal is master of more than one idiom. He was known in Russia fifteen years ago as a versatile littérateur and as the editor of the *Sarya* (the *Dawn*), published at Kiev. He has attested his knowledge of Hebrew by his own writings in that language, which include a biography of the naturalist Karl Vogt, written before he was twenty years of age. His ingenious surmises as to the authorship of the "Song of Songs," which he assigns to a female hand, attracted the attention of such eminent Hebraists as the late Michael Heilprin and Dr. S. Adler.

—The Royal Geographical Society of London has taken definite action upon the admission of women to fellowship in that body. At a special and largely attended meeting of the Society held on the 3d of July last, which was called for a reconsideration of a previous vote on the same question, it was decided that women shall

not be permitted to attach to their names the much-coveted letters F.R.G.S. This decision, of course, does not affect the status of the few women who already enjoy the distinction of membership, and who will now naturally hold to their seats with a double tenacity. Friends of intellectual activity will deplore this action of the Society, which seems to have been prompted through a "club" feeling rather than through the recognition that women do not possess the necessary qualifications for membership in a body whose first function is the acquisition and dissemination of knowledge regarding the earth's surface. The deciding vote was a close one, 158 to 172, and it is gratifying to know that the strength of the Council was with the minority, and that among the champions for the women's cause were some of the most distinguished members of the Society and some of the ablest minds of the country. It is to be regretted that the opinions of such men as Sir John Lubbock, the Earl of Mayo, Lord Northbrook (past President of the Royal Asiatic Society), Sir William Flower, and Mr. Douglas Freshfield should not carry more weight in a question of this kind than the opinions of men like Mr. Curzon and Mr. Hicks, who seem to have taken upon themselves the chief task of engineering the opposition.

## RUSKIN AS EXPOUNDED BY A RUSKINIAN.

*The Life and Work of John Ruskin.* By W. G. Collingwood, M.A., etc. 2 vols. Boston: Houghton, Mifflin & Co. 1893.

PERHAPS no justly famous man could so badly endure the test of having his biography written in his lifetime, by a friend or an enemy, as Mr. Ruskin. There is such an enormous discrepancy between his life and his work that no writer with any sense of humor could seriously attempt to carry out a comparison of them. Mr. Collingwood, unfortunately for the effect he might produce on the reputation of Mr. Ruskin as a reformer—were that not already settled beyond the power of his own generation to modify it—has no sense of humor and very little of what may be termed comparative phrenometry. He is too blind a partisan of his master and sits too close to his feet to be able to form an estimate of him, either as a thinker or as a worker, to see him in the light in which the world at large either sees him now or is likely to see him in the future. His book, which, for the rest, is a noble tribute to his own devotion to its subject, and a by no means valueless contribution to the history of a man who will always be an object of great interest in the history of literature, is otherwise simply a labored and almost indiscriminate as well as unintelligent laudation of all Mr. Ruskin has ever done or proposed to do; for though in two or three slight matters Mr. Collingwood ventures on deprecatory criticism, it is as one would remark that there are spots even on the sun.

In point of fact, the man John Ruskin and the reformer John Ruskin are in the nature of a complete antithesis—the former a splendid, pathetic, and noble instance of consistent and logical devotion to the principles he laid down for the guidance of his fellow-men, and the latter as complete a failure in every attempt to guide them, so far as present results can be seen. He is a signal example of the justice of Emerson's warning to beware of the man who thinks he has come with an inspiration. His early intellectual life was an isolated one, the later a morbid one. Educated as a boy in a narrow Puritanism, favored by a conscientiousness intense to morbidness, he never became a man of the world even in the best sense of the term, and refused to modify his views in accordance with the results of experience or the decisions of common sense in regard to the subjects which interested him. As he himself once expressed himself, "his views were not opinions, but positive knowledge"; but unfortunately he had too often shown, by his honest and creditable change of views held at one time for others quite different, that his positive knowledge was too partial to be asserted with so great definiteness, and his absolute sincerity did not protect his authority from wide and increasing protest, so that, except with people ignorant of art, or very narrow and exclusive in their conceptions of it, his art teachings have no longer any interest, while his political and politico-economical theories have never had any hold on practical people, sublime and inspired by a true love of humanity as some of them are.

The most masterly and thoughtful among the artists even of England never accepted Mr. Ruskin's views of art, nor did the scientists accept his geological and cosmic theories; and if one may judge of the final result of the contemplation of his work by the tendency up to the present, which is all that a man of the present is competent to do, all that will remain of his labors as a permanent acquisition to the world is the purely literary—his masterly eloquence, his intense worship of nature, and his lofty exhortations to a noble and unselfish life; a classification with Plato and the pure idealists, but not with men of science, or even with Carlyle and Emerson. There was always something of insanity in his way of looking at things, the lofty egotism which insists on its exclusive view and refuses to embrace the broader insight of an entire humanity—which, indeed, by its limitations is unable to perceive what that insight has discovered. The mental malady of the insane is in the inability to coordinate their faculties with those of the people around them and with facts, to maintain the constant mental contact with others, or, as it is commonly said, to "keep touch" with the general intelligence of our fellows, and this to a certain extent was in Ruskin's nature. He was an intellectual egotist, though a most unselfish one.

While, therefore, his life is one which becomes of the highest interest as biography, and deserves a far more thorough and honest study than the author of this book has given it, or than it can have from any one who has known or judged him in the heat of the controversies his theories have produced, Ruskin's work is of no more practical interest or value than that of the 'Republic' of Plato or any other Utopia of the poets and dreamers; and all his devotion to the interests of art in his work at Oxford, or his attempts at Christian socialism through the St. George community, have resulted in nothing more than the excitement of an enthusiasm very partial and very ineffective. His theories of art never floated across the Channel, and in England and America produced only a temporary fever of morbid intensity in nature-transcription which has less to do with art than it has with science, but more with the robust healthy love of outdoor nature than with either. His social theories took no account of the experience of humanity, but, convinced that he had found the panacea for the unhappiness of human life, and that he was made to be the leader of a new exodus from the selfishness of ordinary being, he threw himself into the movement with his money and his personality, with no study of the causes of past failures of dreamers like himself, and with only this difference between him and them, that he looked at the undertaking as a born leader and representative of the strong rule of the right man, which he imagined to have been the cause of the virtues of the middle ages. He dreamed history as he dreamed the reformation of humanity.

If the author of this Life had had any sense of humor, he would have omitted passages like the following:

"Ruskin's art-criticism fought its way to the front long ago. His economy is now practically accepted. His religious teaching has not yet been listened to. That must wait until this nineteenth century—as he put it in 1845—'has, I cannot say breathed, but *steamed* its last.'"

"But in the life of a thinker and leader of men, like Ruskin, the question becomes more than a matter of curiosity. We all admit him to be sincere; but is he sound? Or if infallibility be put out of the question, is he more—or less—logical, rational, coherent in mental development than other men to whom we listen and in whom we trust for opinion and advice?

"To this I think there is only one answer. The more I study his life, the more I see that his work is not irresponsible and eccentric. The careful student should be able to trace his genius, down to the end, in continuous and rational progression. Passing over defined intervals of mental disease, and allowing for vehemence of expression—partly characteristic, partly the temporary effect of the penumbra of the storm-cloud—his mental development, I make bold to say, is normal and logical throughout his life. And I believe that when his work can be looked back upon as a whole, with proper understanding of its environment and with full knowledge of its circumstances, the common reproach of insanity made against each new manifestation of his mind will then be scorned as an exploded prejudice."

"In the great composers of Florence and Venice he found a quality of abstract design which tallied with his experience of what was beautiful in nature. Aiguilles and glaciers, drawn as he had drawn them, and the figure subjects of severe Italian draughtsmen, are beautiful by the same laws of composition, however different the associations they suggest."

It is unnecessary to say that the views of Ruskin and his work held by the author are those of a devotee, and all that the latter asserts and prophesies as to the effect of Ruskin's teachings on the world at large marks the blind ignorance of the world which belongs to a devotee. But while we might accept Mr. Collingwood as the preacher of Ruskinism pure and simple, and leave the doctrinal part of his elaborate essay to the judgment of time, it is not permissible to ignore the false color he gives to many transactions in Ruskin's life or connected with it. Thus, when he says that Pre-Raphaelitism "was the outcome of a general tendency which *he, more than any other man*, had helped to start; and it was the fulfilment, though in a way he had not intended, of his wishes, . . . it [his advice] was beginning to be accepted by many, but with timidity and modifications, etc.," he makes a gross misstatement of the facts in the case, for Ruskin had nothing to do with the early Pre-Raphaelite movement, and this has been authoritatively declared by the men who began it, for none of them had ever read ten pages of Ruskin's 'Modern Painters' at the time the movement began, nor were there, as our author insinuates, any precursors in England, though in France and Italy there had been, and in a certain way in Germany. And of all the illogical conclusions which could be put in words, the statement that "his advice to go to nature, selecting nothing, rejecting nothing, and scorning nothing, had been offered to landscape students, and it had involved the acceptance of Turner as their great exemplar and ultimate standard," is the most

illogical, for the practice of Turner was directly antagonistic to any such precept. Of this Mr. Collingwood might have convinced himself by reading what Mr. Hamerton has written on the subject. What Ruskin really did, the author has told in another place, though it has a very different meaning from that which he sees in it: "Just in the same way, our young Aristotelian, by beginning with the observed facts of nature—truths, he called them—and the practice, not the precept, of great artists, superseded the eighteenth-century academic-art theories and created a perfectly new school of criticism, which, however erring or incomplete in details or misapplied in corollaries, did for English art what Aristotle did for Greek ethics." What "he really did" was to make people believe that they were critics of art because they could see whether a picture represented nature literally or not, and persuade them that when they pronounced on a question of fidelity, they had been judging of art; *i. e.*, he enabled ignorance of art to erect itself into a canon of criticism.

But the book is throughout marked by this disingenuous treatment of the facts of Mr. Ruskin's life. "He could have been a painter if he had devoted himself to painting—not a Turner or a Titian, but a sound practitioner, much above the average," is the author's opinion, which is directly opposed to that of Mr. Ruskin, who said that if he had had the ability to become a painter, he would probably never have written a book, and here he was correct in his estimate of himself, for he had no eye for color, though a very great impressibility to it, and up to the last could see things only in detail, while his idea that Turner had any definite relation to Nature, or could ever be reconciled with the facts of her, is proof enough that his perception of her was too imperfect ever to have given rise to even an average art. The public, knowing nothing of art, takes his fidelity to detail as correctness of vision, but the real student of art knows that there is an impassable gulf between his imitation of the facts of nature and any form of true art. Mr. Collingwood is, consciously or unconsciously, trying to fight over battles which have been settled long ago by the collective judgment of the artists of all the world; and, however the single artist may err in a collective judgment, collectively the artistic judgment determines, and must determine, all questions of art, as that of collective scientists must of science.

The story of Ruskin's marriage and divorce, which was one of the gravest affairs of his life, and which as such should have been stated for what it really was, or simply but frankly put aside for reasons given, is really totally misstated, with a like falsification of the color of the biography. The subsequent love affair with a young lady in Ireland is equally disguised. When Mr. Collingwood deals with Ruskin's relations with Rossetti, he says: "And as editors refused them [the poems of Rossetti], he made himself responsible for the cost of their publication, both in the case of the 'Early Italian Poets,' I believe, and also in the case of the 'Poems' in 1868. It was only afterwards, when Rossetti gave way to chloral and misanthropy, and became inaccessible to nearly all his old friends, that he and Mr. Ruskin drifted apart." The facts are that Mr. Ruskin made himself responsible for the cost of the 'Early Italian Poets' in 1861, but there was no publication of original poems until 1870, when Ruskin and Rossetti had "drifted apart" for five years, not owing to chloral or misanthropy, but to the painter becoming impatient of the efforts of the critic to make him, to use the expression of another artist who knew Ruskin well, "hold the brush while Ruskin painted," and perhaps because *au fond* there was no real artistic sympathy between the two. Ruskin posed not merely as the defender of the Pre-Raphaelites, but as their master and teacher, and they rebelled. When Rossetti fell into the habit of taking chloral, he had no relations whatever with Ruskin.

Again, we are told that "His pupil, Signor Giacomo Boni, after recommending himself in Venice as the practical exponent of these principles at the Ducal Palace, has lately been appointed by the Government to the post of director of the monuments of Italy, etc."; and in another place Mr. Collingwood speaks of Boni as "the *capo d'opera* of the Ducal Palace." The fact is that Signor Boni was no more the pupil of Ruskin than any reader of his works might be, and was no adherent of his doctrines at any time, while he has never been, in relation to the Ducal Palace, anything more than the assistant of Signor Vendrasco, who was, not the *capo d'opera* of the Ducal Palace (which is commonly supposed to be the "Adam and Eve" capital or the "Noah" at the corner of the Ponte della Paglia), but the foreman of the works for the restoration of the palace, and Signor Boni had never anything to do with either restoring or preserving the ancient sculptures. He is now one of the inspectors of monuments of which each province in Italy has one; his province, we believe, being Apulia.

The history of Ruskin's religious evolution, which, one would say, was one of the important items in a man's life when it has been of such importance as Ruskin's, is no more honest or instructive. But returning to the principal matter, it was long ago settled in the general mind of earnest students of art in its largest sense that Ruskin's teachings, whatever may be their force and value in the provinces of morality and social economy as abstract ethics applied to human conduct, are in the last degree misleading for art; and his pretension of setting up as a teacher of art, or even of drawing, had never any justification, for no artist who has mastered the higher elements, either of design or of color, has ever accepted the teaching of Ruskin as true guidance. Mr. Collingwood quotes sarcastically a passage from an article by Mr. Stillman that "Mr. Ruskin never seemed to understand style in drawing," but he has furnished the proof in what he writes of Ruskin's appreciation of Miss Alexander and her work: "As to style, she fulfilled his own teaching of bygone years—the combination of free point-work with the pure line without blotting or bungling; and her sense of color and texture compensated for any weakness in anatomy and composition." Now, without any disparagement of Miss Alexander's work, which is as sincere and loving as drawing can be, but childish in the extreme and utterly destitute of style as the word is applied to genuine art, one may say with a great painter, Ruskin's warm personal friend, that "we can forgive him not appreciating Michael Angelo, but not his admiration of Miss Alexander." And, in fact, this is the kind of work that Ruskin has always done, and well done, and most warmly appreciated in others, but it is not in the road to art.

No man of our time has better deserved the personal appreciation he has received from the finest intellects—his contemporaries, Carlyle, Lowell, Froude, Thackeray, Norton, and the heads of Oxford; but this is due to the quality of the man and to the influence he had rather on the intellectual than on the artistic life of the times. And no one who is an authority in art, as no one who is an authority in geology, in political economy, or in theology, has ever stood up as his supporter in the respective province. The breezy quality of his thought, his originality, his passionate earnestness, and the very waywardness which was like a prophecy of his final condition, aroused interest in all he said; and the man remains one of the intellectual features of that nineteenth century which he so much abused and disparaged, never realizing how much better in reality it is than his beloved Middle Ages, with their lordly paternal virtues and cathedral-building excellence. His work, beyond its literary quality and its provocation to contradiction and discussion, is like sand-castles at the seaside; neither his art nor his sociology has solid foundation, and the most pathetic declaration of the simple-minded devotion of our author to his idol is in the passage quoted above: "His art-criticism fought its way to the front long ago. His economy is now practically accepted." The effect of 'Modern Painters' on the style of the crowd of emulating art-critics is beginning to pass away, but our author, true to his ideals, keeps something of it, though like a boy wielding his great ancestor's broadsword. The best sample given us in the book is worth quotation, not perhaps as a model of style, but to show the author's appreciation of it:

"To read 'Fors' is like being out in a thunder-storm. At first, you open the book with interest, to watch the signs of the times. While you climb your mountain—shall we say the Old Man of Coniston?—at unawares there is a darkening of the cloud upon you, and the tension of instinctive dread, as image after image arises of misery and murder and lingering death, with here and there a streak of sun in the foreground, only throwing the wildness of the scene into more rugged relief; and through the gaps you see broad fields of ancient history, like lands of promise left behind. By and by the gloom wraps you. The old thunder of the Ruskinian paragraph, shortened now to whip-lash cracks, reverberates unremittingly from point to point, raising echoes, sounding deeps; allusions, suggestions, intimations, stirring the realm of chaos, that ordinarily we are glad to let slumber, but now terribly discern, by flashes of thought, most unexpectedly arriving. Fascinated by the hammer play of Thor, berserking among rime-giants—customs that 'hang upon us, heavy as frost'—you begin to applaud; when a sudden stroke rolls your own standpoint into the abyss. But if you can climb forward, undismayed, to the summit, the storm drifts by; and you see the world again, all new, beneath you—how rippling in Thor's laughter, how tenderly veiled in his tears!"

What is most interesting and valuable in the book is the account of Ruskin's present life at Brantwood, for, as a man, no reader of the English literature of the day, loving honest manhood and noble life, can lose his interest in John Ruskin, though he will certainly wish him, some time, a more intelligent biographer. He, when he comes, will find some things in Mr. Collingwood's book of real utility, when properly sifted, for the understanding of the man, if not of his work.

---

*The Simple Adventures of a Memsahib.* By Sara Jeannette Duncan. D. Appleton & Co. 1893.

*From the Five Rivers.* By Mrs. F. A. Steel. D. Appleton & Co. 1893.

WHAT with Aliph Cheem and Rudyard Kipling, the Theosophists and the Buddhist propaganda, the visiting Rajahs at the White City, the North German Lloyd service to the Mediterranean, and the fate of silver in India, it would seem—despite all the Sanskrit professors

tell us—as if Uncle Sam and his dusky Oriental cousins had never been so much to each other before, except, perhaps, at the time when our civil war raised such a tremendous excitement among the cotton-merchants of Colaba, at the tip of Bombay Island. But now come two more volumes to draw the West still nearer to the East. The first is a charming series of sketches of the various phases of the social and domestic life of a young couple of Anglo-Indians. Were we to insist upon a pedantically truthful title, we should amend it to 'The Experiences of a Memsahib,' but the dividing line between "adventures" and "experiences" is doubtless a vague one, and perhaps "*simple*-adventures," with italics and a hyphen, is just on the line. The book has neither plot nor love-story nor other meretricious seduction of the sort. The incidents are loosely attached to a Mrs. Browne, *née* Peachy; but Mrs. Browne, like the Hindu One-in-All of the Vedanta, is a wholly impersonal entity, an algebraic *a* for the genus Memsahib; and the author might have changed the name from chapter to chapter without serious damage to her recital. The said recital is put into the mouth of "Mrs. Perth Macintyre," who has been "out here only twenty-two years." Doubtless an old stager will smile very pensively at the thought of all the author has not seen, and easily forgive her this guileless little fiction on the score of all she has seen and (if we may be excused) "caught on to."

The book is bright and entertaining throughout. We can enjoy everything at our ease, without going to India, without perspiring under a punkah, without feeling nervous before the Viceroy; the pathos and humor of the scene when the embryo Memsahib bids adieu to her Wiltshire relatives on the deck of the P. and O. steamer; her wedding in Calcutta Cathedral; her installation as Memsahib, Mrs. Browne; the marshalling before her of her house-servants, including the scullion, who "wore a dhoty and an expression of dejection," and the washerman, who pounds your linen between two stones just as he did in the Sanskrit books twenty-five hundred years ago; the Viceregal drawing-room; the going to dinner, "quite quietly" and otherwise; the admirable satire on globe-trotters in general and the Parliamentary globe-trotter in particular, instanced by Mr. Jonas Batcham, M.P., in ignorant and ridiculous quest of native grievances to "report upon" at home; and more the like, and unlike. A comfortable chapter takes us through the discomforts, or the terrors, of the heat, the burst of the monsoon, the rains, and the ensuing mugginess. And, as an offset to this, we take a trip to "the Hills," and end with a sight of "the Snows," and, as a climax, the delights of a shiver.

Notably amusing is the way (p. 227) in which a Memsahib "picks up" Hindustani:

> "From Bengal and Bombay, from Madras and the Punjab, a preposition from Persia, a conjunction from Cashmere, a noun from the Nilgherries. . . . She prefers to improve it [her Hindustani] by the admixture of a little English; and the effect upon the native mind is quite the same. It really doesn't matter whether you say, 'That is very *corab* ['bad'], you stupid *ool-ka-beta*' ['son-of-an-owl'], or use the simple Hindustani statements to express your feelings. The [added] English may adorn them, but it is the Hindustani after all that gives vitality to your remarks. '*Chokee lao*' means 'Bring a chair'; but if you put it, 'Bring me a *chokee lao*,' the meaning of the command is not seriously interfered with, besides convincing you more firmly that you have said what you wanted to say."

Mr. Townsend's numerous illustrations are admirably done, full of fun and spirit. But he has made a slip at page 222 in giving Jimmy Forbes a high collar. At 218 Mr. Jack Lovitt had made Jimmy throw all his high ones away.

Mrs. Steel's little volume is concerned with the joys and sorrows of the real natives of the Punjab. Its chief contents are half-a-dozen short stories—one humorous, the rest tragical. The first and best is "Gunesh Chund." Gunesh is a village headsman. After years of unfruitfulness, his wife bears him a child; but, alas! it is only a daughter. Even now, just as centuries ago in the days of the great law-giver Manu, a wife that bears no son may be supplanted. The story turns on the conflict between the father's strong natural affection for wife and child and the unnatural requirements of his position. The author's matter is excellent and interesting; but her style of narration is by no means lucid and flowing. Whether this be due to inability or to affectation, the result is neither pleasing nor defensible, least of all in a midsummer book.

---

*B. F. Stevens's Facsimiles of Manuscripts in European Archives relating to America.* 1773-1783. Vol. XVII. Nos. 1601 to 1643. February, 1893. London: B. F. Stevens.

THE arrangement of vol. xvii. is both simple and eminently satisfactory to the student wearied by the diplomatic wrangles of the foregoing volume. It is made up of forty-three papers, all letters of Lafayette, or closely related enclosures. Five of these letters have been previously translated and printed in part, twelve translated and printed entire, while twenty-six have never been previously translated or printed. With the exception of the cipher despatches and a few other papers, it is fair to say that Sparks's 'Washington' and the 'Mémoires, Correspondance et Manuscrits du Général Lafayette' (Paris, 1837-38; English translation, London, 1837), have already skimmed off the cream of this correspondence. Nevertheless, the volume before us is interesting, mainly because it is a substantial fraction of the entire mass of Lafayette's letters, and incidentally because it well supplements his correspondence with D'Estaing, edited in 1892 by M. Doniol in the *Revue d'Histoire Diplomatique*. Two ideas were uppermost in Lafayette's mind, and he never hesitated to iterate them to Vergennes, seemingly quite unsubdued if they did not immediately get the attention which his enthusiasm must have led him to expect. The condition of the American soldier, and the pressing necessity of securing "maritime superiority" to the French—these are his themes in almost every despatch. Nothing could be more ingenuous than his early proposed plan for approaching Halifax with four or five vessels, passing the batteries, shelling the town to pieces, and taking the Basin. It shows how little the young officer must have known of the topography of that imposing garrison, but it still more reveals the fact that a successful carrying of the Revolution into the lost ground of Canada was an underlying motive of the French. A great candor, the most extreme courtesy and deference to Washington, and a genuine modesty, especially after Yorktown, run through all the letters, although in No. 1613, and in several of the minor numbers of uncertain date, Lafayette hints to Vergennes that preferment would not be ungrateful to him.

Of this correspondence of Lafayette, written with all a soldier's directness and limitations, it is not possible, for the reasons given above, to speak with much freshness; attention must centre at once upon what new matter the volume offers. No. 1616 is a "Summary of the political and military Condition of America" in the hand of and probably composed by the Chevalier de Fleury, dated November 16, 1779, written, as its author admits, in a "filibustering style." Possessing no more than the usual claims to serious consideration of most French "impressions," this paper is full of a vivacious interest. Of New Hampshire the Chevalier says it is "almost of no account in the Confederation," of Hancock that he is "King of the Rabble," while Adams is a "sensible and intelligent man, but indolent on principle and by temperament." He insists that the Vermonters, "that half savage people," will always keep New York in check—a conclusion certainly warranted at that time. The Boston idea of the French seems to him to have been that they were "like pedlers, very honest thieves!" "Patriotism is non-existent at Philadelphia; it has there almost become ridiculous." He thinks South Carolina "has neither strength nor virtue," while Charleston is "open to the highest bidder." This charming prattle must close with the Chevalier's opinion of Washington: "This great man has only one fault—a very creditable one—too much virtue for the chief of a party." Lafayette states in No. 1619 that Fleury enjoyed a "very brilliant reputation in America."

Nos. 1625, 1626, 1627, 1631, 1632 are in cipher, with interlinear decipher, and have never been printed. It is natural to find them revealing somewhat intimately the actual condition of the French forces in America, especially in relation to Washington, of whom Lafayette says in No. 1625: "The French Generals and troops will be well pleased with his uprightness, his delicacy, with that noble and frank politeness which characterizes him." Again, in No. 1626: "The officers and men of the American army do not possess a shilling. The former only receive one ration, and have no clothes, nor have they, like the soldiers, the hope of receiving some from France." In a very long letter, No. 1632, of fifty pages in cipher and twenty-five in translation, the one surpassing theme is "maritime superiority," while at every point is evident the French policy of preventing an undesirable peace by furnishing sufficient munitions of war. Of late some infelicitous, but, we believe, not malicious, merriment has been made over the condition of some of the Northern troops in the war of the Revolution. Lafayette presents in this long letter a valuable counter opinion, which should be welcomed with equal pleasure. He says: "We cannot praise too highly the zeal and the discipline of the troops of New England, nearly all national, whose cause was at bottom the same, and who, also, in spite of their nakedness, and through the snow, marched willingly against the insurgents." Of the Continental troops as a whole he affirms that they "are more hardened and patient than the Europeans," and "have seen more shots fired than three-fourths of the European soldiers."

This lengthy letter raises the serious question as to how this important collection of papers is to be properly indexed. There is no pagination to the translated portion, and it is not easy to see how reference can be made to such an important incident, for instance, as the mutiny of the Pennsylvania troops stationed at Morristown and their march to Princeton. In Lafayette's first letter from Boston, of May 1, 1780 (No. 1622), he presents to Vergennes the son-in-law of Dr. Cooper, whom he plainly enough calls Johonnot; the translation, how-

ever, gives it wrongly Johonnoh. In No. 1635 Gen. Greene's name, rightly given in the original, is changed to Green in the translation.

---

*An Adventure in Photography.* By Octave Thanet. Illustrated from photographs by the adventurers. Charles Scribner's Sons. 1893.

It may be doubted whether the attempt to make photography funny, which is the excuse for being of this new manual, in so far as it differs from all other primers of the art-science, is likely to make it more instructive, or increase the attractiveness of photography for the hitherto unphotographic. The fun is too close a reminder of Warner to be made much account of, and the instruction is that of confessed greenhorns attempting to make proselytes. The former will be discounted by the reader and neophyte who wants to learn photography, and the latter, when the grain is culled from the chaff, will be found in any quarter-dollar treatise on the subject. The authors (for the joke is a joint affair of two women) begin by what the reader will be apt to end by—*i. e.*, making light of the whole affair:

"When my kind friends the publishers first proposed this book to me, I at once laid the proposition before my partner.

"Jane and I have taken photographs, developed photographs, and mounted photographs together for four years.

"'But we don't know enough to write a book,' said Jane.

"'And they want us to illustrate it with our own photographs,' I continued, under the impetus of my first burst of information, although I felt a distinct shock, similar to the feeling produced by unexpected cold water.

"'But we don't make good enough photographs to illustrate a book,' said Jane."

And Jane was right from the start, to adopt the style of the authors; for the book is not an addition to our knowledge of photography, nor are the illustrations such as require great experience or much skill or knowledge to produce. There is not only nothing new in the way of facts or experience in the 'Adventure,' but there are some evidences of ignorance which should have stood in the way of the present undertaking. We read:

"All this brings me to another trick of the ground-glass. It concerns what the artist calls values. If it were not for a tender conscience and some knowledge of the cost of reproducing photographs, I could fill pages with illustrations of values out of gear, as it were—fences larger than houses, and lop-sided scenery. . . . For a single example, observe, in the picture I sadly submit, the size of those black children in the foreground; they are Gullivers, and the women Lilliputians. . . . The question of values, of the harmonious arrangements of a picture, is infinitely expansive. . . . It is not only a question of proportion, it is a question of interest as well."

It is needless to remark that this writer has no conception of what "values" means, and it is one of the most important points in the photography of the day. If the ignorance is affected for the sake of chaff, the book should be passed over to the humorists, where it would stand a poor chance; if intended for instruction, the book is too elementary for beginners.

Practically, the opinions of the authors are scarcely worth more. "We are not scientific, Jane and I, and we profess no opinion; we simply know that eikonogen will get more out of a sullen plate than either pyro or hydrochinon." This, as can easily be proved, is quite contrary to "scientific" experience. "At the beginning of our adventure we tried the time-honored pyro. It was slow, it was dirty, it fogged the plates if you dared push it, and it would not work if it was not pushed! During the reign of pyro we spent the time that we could spare from the studio in scrubbing our hands." If this is chaff, again, it is poor chaff, and not the truth. We have tried, as carefully as scientific method enabled us to do, the various developing agents in use as they came before the public, heralded by the outcries of the advertisements in the trade journals, and nothing has yet been introduced which quite equals the "time-honored pyro," and, though using it continually, we do not require to scrub our hands to go into society.

"Jane and I" are too technical for good joking and too jocose for good instruction. "The experiment fails, but the principle is illustrated," as Dr. Draper used to say when his experiment in the chemistry class failed.

---

*Some Further Recollections of a Happy Life.* Selected from the Journals of Marianne North. Edited by her sister, Mrs. John Addington Symonds. Macmillan & Co. 1893.

The success of the former volume relating to Miss Marianne North's travels, with the history of her life, has induced Mrs. J. A. Symonds to edit for publication further recollections from her sister's journals, telling of the earlier journeys of this adventurous lady together with her father and sister in Europe and the East. These wanderings in lands now easily accessible to any person of moderate means who puts himself in the hands of Cook or Gaze, were thirty years ago fraught with a certain amount of difficulty and adventure which added zest to the journey, and gave rise to unforeseen incidents which lent themselves to description. Miss North tells of her experiences with such enjoyment and *verve* and such a true sense of humor that the book is delightful reading, besides which it possesses all the charm of an intimate record for her own use, perfectly sincere without the disturbing thought of an audience.

The journeys date from 1859, in the Pyrenees and Spain, and continue till 1870 through Switzerland, Italy, Austria-Hungary, Turkey, Smyrna, Athens, the Adriatic, Egypt, Palestine and Syria, the Dolomite Alps, and lastly the Riviera and Sicily. Mr. North and his daughters travelled with little baggage and few insular prejudices; moreover, they had a great sense of enjoyment of things new and beautiful. They talked to the people they met of every class, and so got to know a great deal about the countries they passed through; they also came upon many people of their time now known to fame—Emin Pasha, Lady Duff Gordon, Palgrave, Mr. Finlay, Gen. Church (the hero of the Greek war of Independence, whom Miss North miscalls an American, evidently confusing him with the American painter of the same name), and Miss Hosmer, of whom Miss North writes while at Rome:

"Once Miss Raincock took me to see Gibson's young American pupil, Miss Hosmer, in a large unfurnished studio she had just taken, where she was preparing to make a portrait statue of some famous countryman. It was to be nine feet high, she said (looking herself like a small child); she had only one chair, which she gave me, as the stranger; seating our old friend on the table, she mounted to the top of a high ladder herself, from whence she chattered and laughed with the happy air of one who is successful and sure to please."

The thirty years which have gone by have so changed and civilized many of the then little-known mountain places among the Dolomites, in the Val Aosta, and in Switzerland that this journal remains as the record of what has long passed away. Venice was still under Austrian rule and Greece under King Otho. It is a pity the editor did not more carefully revise some statements, such as, "The temple of Ægina is of a coarse gray limestone; *it is 300 years older than the Parthenon*, and its architecture is heavy and barbaric in character, with those sculptured figures from its pediment we remembered at Munich, which, in point of art, are as inferior to the Elgin marbles as the temple is to that of Pallas Athene." About the Bocche di Cattaro, too, Miss North writes: "It is the only sea outlet of that country [Montenegro], so is naturally a source of perpetual discord between Greece [?] and Austria for its possession"; but Greece never laid claim to the Bocche di Cattaro. Notwithstanding inaccuracies of this kind and some misspellings, the book is very pleasant reading, full of amusing stories of people and events that came across the writer's paths.

---

*The Literature of Philanthropy.* Edited by Frances A. Goodale. With Introduction by Blanche Wilder Bellamy. Harper & Bros.

This second volume of the small, 16mo "Distaff" series is presented to the public with the same introductory words that accompanied its predecessor. Their writer, signing herself "Chairman of the Committee on Literature of the Board of Women Managers of the State of New York," somewhat naïvely ignores the fluctuating prominence of events in not definitely mentioning by name the Chicago Exhibition, here as elsewhere in her undated brief account of the women's exhibit in literature at Chicago, of which the papers in the volume form a part. In the editing, also, explicitness has been deemed unneedful, not one of the papers bearing the date of composition. Several of the twelve that fill the measure of the collection seem to have been written expressly for it, while two—one, by Mrs. Maud Wilder Goodwin on "The Anti-Slavery Legacy," the other, by Mrs. Julia Margaret Fuller Lloyd, on "The Negro and Civilization"—are stated to be reprints from the *Popular Science Monthly* and the *Evening Post*. As the chief permanent value of papers having the journalistic character of all of these is to serve as milestones along the path of progress, the oversight of not stamping their numerals distinctly upon them, so that he who runs may read, is naturally a damaging one.

As a matter of fact, the only justification of the existence of a series of volumes ostentatiously composed, edited, and prefaced exclusively by women is as a sort of special pleading of the cause of women before a stiff necked generation. Viewed in this light, they ought to be armed at all points against adverse criticism; and although papers from such writers on particular subjects as Mrs. Josephine Shaw Lowell on "Criminal Reform," and Mrs. Elaine Goodale Eastman on her wards, "The Indians," must lend value and interest to any volume, to call one of this modest compass 'The Literature of Philanthropy' is to give a rather wide interpretation to its scope, notwithstanding the variety and timeliness of the topics on which the essays briefly touch.

Curtis, G. W. Other Essays from the Easy Chair. Harpers. $1.

Daly, C. P., and Kohler, M. J. The Settlement of the Jews in North America. Philip Cowen.

Ethelmer, Ellis. Woman Free. London: Women's Emancipation Union.

Ford, P. L. The Writings of Thomas Jefferson. Vol. II. Putnams.

*NOW READY NEW EDITIONS OF:*

**Remsen's Introduction to the Study of Chemistry** (American Science Series, Briefer Course). By IRA REMSEN, Professor of Chemistry in the Johns Hopkins University. xix+435 pp. 12mo. Teachers' price $1.12; postage 13 cents additional.

A revised and enlarged edition, from new plates, of a work that has become standard the world over. The theoretical matter has been rearranged, the treatment of metals expanded and based on the periodic law, and chapters on organic chemistry and qualitative analysis have been added. In the descriptions of experiments questions are substituted for statements where practicable, and for these descriptions a distinctive type is used.

**Otis's Elementary German. Seventh Edition.** Based on the Sixth Edition, edited by HORATIO S. WHITE, Professor in Cornell University, with additional revisions by WILLIAM H. CARRUTH, Professor in the University of Kansas. xvi+431 pp. 16mo. Teachers' price 80 cents; postage 7 cents additional.

Contains a number of minor improvements suggested by experience, including some alterations in the account of declension and an important note on the syntax of participles and infinitives. None of the changes are so radical as to make impossible the use of the sixth and seventh editions in the same class.

*READY FOR THE FALL TERM:*

**Freytag's Karl der Grosse,** nebst zwei anderen Bildern. With introduction and Notes by A. B. NICHOLS, Instructor in German at Harvard. xix+179 pp. 12mo.

Three essays offering variety of topic and containing a large element of narrative and anecdote, which makes them much easier and better suited to rapid reading than the more abstract essays of the *Bilder*.

**Verne's Michel Strogoff.** Abridged, with Summaries of Omitted Passages and Notes, by EDWIN S. LEWIS, Instructor in French at Princeton. About 220 pp. 12mo.

Its high ideals of courage and patriotism make this more than a merely clever story. It is suitable for beginners in school or college, and the notes assume that the text is begun after a few lessons in the grammar.

**De Quincey's The English Mail Coach and Joan of Arc.** With introduction and notes by J. M. HART. xxvi+138 pp. 12mo.

**Marlowe's Edward II.** With the best passages from TAMBURLAINE THE GREAT and from his POEMS. With brief notes and an introductory essay by the late Professor E. T. MCLOUGHLIN of Yale.

*Messrs. Henry Holt & Co. also have in hand for early publication an elaborate edition of Schiller's Wallenstein, prepared by Professor W. H. Carruth of the University of Kansas, and will have ready for the second half of the year Schiller's Wilhelm Tell, edited with a comprehensive introduction and full notes by Professor A. H Palmer of Yale.*

# ROBERTS BROTHERS, PUBLISHERS, BOSTON.

NEW AMERICAN NOVELS.

## Joseph Zalmonah.

By EDWARD KING, a journalist of wide experience and an author of repute. Paper, 50 cents; cloth, $1.25.

Joseph is a Jew, of an austere and lofty type, wholly unselfish, and devoted to the cause of his oppressed people in New York. The pictures of life among the toilers and other hardly used men and women are striking and effective, without exaggeration and without offensive details. The wisdom, probity, and courage of Joseph make him a natural leader.

The story contains many touching pictures and scenes of idyllic beauty. Not the least interesting are the descriptions of the Hebrew festivals and holy days, which have seldom been presented in such a vivid and attractive style. The book portrays "Life among the Lowly," and is so well managed that a deep and absorbing interest pervades it from beginning to end.

## Not Angels Quite.

By NATHAN HASKELL DOLE. Paper, 50 cents; cloth, $1.25.

The scenery throughout is beautifully done. A yacht cruise on the coast of Maine, with which the action closes, is a picturesque poem. A number of original poems are scattered through the book—a *largesse* quite unusual with novelists.

It is a wholly modern book, *fin de siècle* in method and style, and will interest the younger iconoclasts who are tired of the old models.

Aside from the interest of the story, the reader will be entertained by the glimpses of the social institutions and fads of an Eastern city—possibly Boston. But there are also serious discussions offering food for thought.

RECENTLY PUBLISHED.

PAULA FERRIS. By Mary Farley Sanborn. Paper, 50 cents; cloth, $1.25.

LARRY. $2,000 Prize Story. By Amanda M. Douglas. Paper, 50 cents; cloth, $1.00.

# COLLEGE EDITION

TEACHERS AND STUDENTS OF ECONOMICS WILL FIND IT ADVANTAGEOUS TO EXAMINE THIS BOOK BY AN ACKNOWLEDGED MASTER OF THE SCIENCE BEFORE ADOPTING A TEXT-BOOK FOR NEXT YEAR'S WORK. . . .

## Outlines of Economics,

**By RICHARD T. ELY, Ph.D., LL.D.,**

Professor of Political Economy and Director of the School of Economics, Political Science, and History in the University of Wisconsin, Madison, Wis.

**Crown 8vo. 429 pages. Price, postpaid, $1.25. Price for Introduction, $1.**

**HUNT & EATON, 150 Fifth Ave., New York.**

THIS NEW BOOK by Professor Ely marks so considerable a development of his thought and involves features so unique that it cannot fail to interest every teacher of Economics. It is a noteworthy attempt to restate Economics from the standpoint of the latest European thought. As such it cannot fail to be of interest to all schools of thought.

# J. B. Lippincott Company's

## REFERENCE BOOKS.

### The New Chambers's Encyclopædia.

As a work of ready reference for the student, as a handy book of facts and statistics in a business office or school-room, as a guide in the home library, *surpasses all others.* It is twenty years later than any of its competitors, and is really *a new work.* All the articles have been entirely rewritten or revised, and thousands of new ones incorporated. The type is clear and of a beautiful cut; the numerous illustrations are remarkably fine, and the maps show not only all the countries of the globe, but also all the States and Territories of the United States. *In ten volumes. A valuable and extremely cheap set of books.* Price, per set, in cloth binding, $30.00; sheep, $40.00; half morocco, $45.00; Twenty-four-page illustrated circular sent to any address on application.

### Lippincott's Pronouncing Gazetteer of the World.

*Edition of 1893. Revised and Enlarged, with Latest Census Returns.* A complete Pronouncing Gazetteer or Geographical Dictionary of the World, containing notices of *over 125,000 places*, with recent and authentic information respecting the Countries, Islands, Rivers, Mountains, Cities, Towns, etc., in every portion of the globe. Invaluable to the Student, Teacher, Editor, Lawyer, Library, and all who desire authentic information concerning their own and other countries. Nearly 3,000 pages, sheep, $12.00; with patent Index 75 cents additional.

### Lippincott's Biographical Dictionary.

Contains Memoirs of the Eminent Persons of all Ages and Countries, and accounts of the various subjects of the Norse, Hindoo, and Classic Mythologies, with the Pronunciation of their Names in the Different Languages in which they occur. By JOSEPH THOMAS, M.D., LL.D. It is really a cyclopædia within itself, including every character that has strong claims to our notice, either from public notoriety or lasting celebrity, and from it may be gathered a knowledge of the lives of those who have made the world's history famous. Large octavo, bound in sheep, $12.00; bound in half Russia, $15.00; with patent Index, 75 cents additional.

### Worcester's Dictionary

Is, in the truest sense, the Standard Dictionary of the English Language, and it is so accepted by the great body of literary men. The truth of this statement may be readily ascertained by an inspection of our literary productions, particularly in regard to the spelling of certain words wherein dictionaries differ. It will be found that *in at least three-fourths of the standard works of the language and in most of the leading periodicals* the orthography is according to Worcester. In fact, the great literary interests of this country and of England are now substantially united in the use of the word-forms given in Worcester's Dictionary.

Worcester's Dictionaries have been largely used in the *common schools* since their publication. Every year brings an extended field and an increased sale. They have been recommended by State Superintendents of Education and adopted by State Boards. All the leading cities of the country have authorized their use, among which are Boston, New York, Philadelphia, Brooklyn, Chicago, Washington, St. Louis, Cambridge, Worcester, etc.

*Sold by all booksellers. Sent, postpaid, on receipt of price by*

**J. B. LIPPINCOTT COMPANY, Publishers, Philadelphia.**

# LONGMANS, GREEN, & CO.'S NEW BOOKS.

*Just Ready.*

## English History for American Readers.

By THOMAS WENTWORTH HIGGINSON, author of "Young Folks' History of the United States," etc., and EDWARD CHANNING, Assistant Professor of History in Harvard University. With 77 Illustrations, six colored Maps, Bibliography, a Chronological Table of Contents, and Index. 12mo. Pp. xxxii-334. Teachers' price, $1.20.

"The name 'English History for American Readers,' which suggests the keynote of this book, is based on the simple fact that it is not the practice of American readers, old or young, to give to English history more than a very limited portion of their hours of study. . . . It seems clear that such readers will use their time to the best advantage if they devote it mainly to those events in English annals which have had the most direct influence on the history and institutions of our own land. . . . The authors of this book have, therefore, boldly ventured to modify in their narrative the accustomed scale of proportion; while it has been their wish, in the treatment of every detail, to accept the best result of modern English investigation, and especially to avoid all unfair or one-sided judgments."—*Extract from the Preface.*

## Longmans' Summary of English History.

*From the Earliest Times.* With 10 Maps and full Genealogical Tables. Crown 8vo, 168 pages. 40 cents.

*** In this book the leading facts of English history are exhibited in order of chronology. At the same time the natural order of events has not been lost sight of.

The Summary is not intended to supersede, but to be used with some standard history. It is hoped that by its use teacher and scholar will be saved the trouble of collating the leading facts for the purposes of review.

## Epochs of American History.

*Concluding Volume in the Series.*

### III. DIVISION AND REUNION, 1829-1889.

By WOODROW WILSON, Ph.D., LL.D., Prof. of Jurisprudence in Princeton University, author of "Congressional Government," etc. With five colored maps. Pp. xix-326. Cloth, $1.25.

"Considered as a general history of the United States from 1829 to 1889 his book is marked by excellent sense of proportion, extensive knowledge, impartiality of judgment, unusual power of summarizing, and an acute political sense. Few writers can more vividly set forth the views of parties."—*Atlantic Monthly.*

*Just Published.*

## Longmans' German Grammar.

By J. ULRICH RANSOM, B.A. With numerous Exercises, Appendices, and Vocabularies. 12mo. 260 pages. 90 cents.

*** In the compilation of this work the author's object has been two-fold: to simplify the grammar as far as possible, and by gradually lengthening the exercises to form a stepping-stone to continuous prose.

*** The book may be also had in two parts, viz.:

PART I.—Up to and including the Regular Verbs. 12mo. 50 cents.
PART II.—The Irregular Verbs, Syntax, Derivation, &c. 12mo. 50 cents.

## Easy Stories and Exercises in German.

By A. A. DAVID, B.A., Assistant Master at Bradfield College. 8vo, 74 pages. 35 cents.

This book is intended to supply material for German translation and retranslation at the earliest possible stage. In the teaching of any language it is admitted as desirable that a boy should be able to put his grammatical knowledge into practical exercise as soon as possible. In German, the need for an early and definitely progressive reading book, with a plentiful supply of parallel exercises, has seemed to many especially marked.

## Longmans' French Grammar.

By T. H. BERTENSHAW, B.A., Assistant Master in the City of London School. Crown 8vo. 212 pages. 60 cents.

This series of French Lessons has been drawn up with special reference to an English-speaking boy's difficulties. Pronunciation is dealt with on a new plan, and very great care has been used in the selection of the vocabularies, and in an attempt to render the exercises more than usually interesting.

## Souvenirs Des Cent Jours.

By M. VILLEMAIN. Edited with Notes by GRANVILLE SHARP, M.A., Assistant Master at Marlborough College. 12mo. Pp. vi-188. 75 cents.

## Episodes from Modern French Authors.

Edited by W. E. RUSSELL, M.A., Assistant Master at Haileybury.

*New Volume.*

### EPISODES FROM FRANCOIS le CHAMPI.

By GEORGE SAND. Edited with Notes by C. SANKEY, M.A. 16mo. 142 pages. 40 cents.

*Our Classified Catalogue of School Books, covering works in all branches of Education, sent to any address, upon request.*

EMBRACING

*Plane Geometry and an Introduction to Geometry of Three Dimensions.*

BY

PROF. EDWARD A. BOWSER, LL.D.,

Professor of Mathematics and Engineering in Rutgers College, New Brunswick, N. J.

In this revised edition some of the demonstrations are shortened and much simplified; a few useful propositions are added; several diagrams are inserted; quite a number of suggestive notes are introduced, and about two hundred additional examples, carefully selected and well graded, with hints for the solution of the more difficult ones, are distributed throughout the book.

One volume, 12mo, cloth, illustrated, $1.75.

Special terms for examination and introduction.

## Recent Text-Books

## Elements of Physics.

By HENRY S. CARHART, University of Michigan, and HORATIO N. CHUTE, Ann Arbor High School.

12mo, cloth, 388 pages. Price, $1.20.

The basis of the whole book is the introductory statement that physics is the science of matter and energy, and that nothing can be learned of the physical world save by observation and experience, or by mathematical deductions from data so obtained. The authors do not believe that immature students can profitably be set to rediscover the laws of Nature at the beginning of their study of physics, but that they must first have a clearly defined idea of what they are doing, an outfit of principles and data to guide them, and a good degree of skill in conducting an investigation

## An Academic Algebra

By Professor J. M. TAYLOR, LL.D., Colgate University.

16mo, cloth, 338 pages. Price, $1.00.

This work presents the subject of Elementary Algebra in a clear, scientific and attractive form The order of presentation has been determined mainly by three considerations.

First, to introduce as early as possible the equation, of which Algebra is the science

Second, to show how each subject bears directly on the end in view, namely, the solution and use of equations.

Third, to eliminate as far as possible any unnecessary difficulties of the science

The book is adapted to beginners of any age, and covers sufficient ground for admission to any American college or university.

## A HOME IN AMERICA'S UPLANDS,

A gentleman desirous of securing the advantages of the rarified atmosphere of *Colorado*, with its 300 clear days in the year, can find a home (in the mountains, elevation 6,500 feet) with a refined family, where the privacy and comforts of a genteel home may be had. For full particulars, address

W. E. Y., Buffalo Creek, Colorado.

# In the Wake of Columbus.

By Special Exposition Commissioner F. A. OBER. Elegant Library Edition, Royal 8vo, uncut edges, gilt top, 500 pages, Spanish and American seals, and seal of Commission on cover, with maps and 200 illustrations, pen and inks, and photographs taken on the spot. Dedicated to Pres. Higinbotham and to Wm. Eleroy Curtis, Chief of Department that sent Mr. Ober on the Commission. $2.50.

Delayed in the press, this volume was issued *the middle of July.*

Mr. Ober WAS TWO AND ONE-HALF YEARS employed by our Government on this quest; and following up the trail of Columbus from Spain to South America, he explored every coast on which he touched. Relics, papers, portraits, etc., discovered by Mr. Ober on this journey are exhibited at the Exposition within the walls of the replica of the Convent of La Rabida.

This book is therefore the *only one of its kind*, and most especially fitted for the SCHOOL LIBRARY. Every Superintendent, Teacher, and pupil should have a copy.

**D. LOTHROP COMPANY, Publishers, Boston, Mass.**

*An Indispensable Companion to the New U. S. Pharmacopœia.*

## A Manual of Weights and Measures.

By OSCAR OLDBERG, Pharm. D., Member of Revision Committee, New Edition, U. S. Pharmacopœia. Third Edition Revised, 12mo., cloth, $1.50 net, postpaid.

FROM THE MEDICAL RECORD.

"It is a standard work on the subject treated, a fair index of which appears in its title. The adoption of the Metric System of weights and measures in the Pharmacopœia, to the exclusion of all others, renders a thorough knowledge of that system imperative."

FROM THE MEDICAL NEWS.

"To those already familiar with the useful little book, it is unnecessary to speak well of it, and to those who are not fortunate enough to possess it, we would earnestly recommend its purchase, particularly if they are engaged in pursuits which bring them in contact with the metric system or with accurate measurements. The very large number of books intended to provide for similar wants may, perhaps, be useful, but Prof. Oldberg has surpassed them, as much that is usually uninteresting is presented in so clear a manner that one cannot fail to understand what he reads on a single reading, while the tables are models of completeness."

## A New Romance by ROBERT LOUIS STEVENSON.

# DAVID BALFOUR.

**Being Memoirs of his Adventures at Home and Abroad. 12mo, cloth, $1.50.**

*Mr. Stevenson's new book is a worthy sequel to his great masterpiece, 'Kidnapped.' It is more than a story of romantic adventure, with conspiracies and perils and heroic achievements on land and sea, for it makes David the hero of a love affair, the description of which reveals the author's genius in an altogether new light. The adventures of David and his Highland sweetheart carry them both into Holland and France, and supply fresh evidence of the author's wonderful power of spirited narrative and bold character-painting.*

NEW EDITION, UNIFORM WITH THE ABOVE.

## KIDNAPPED.

**Being Memoirs of the Adventures of David Balfour in the Year 1751. 12mo, Cloth, $1.25.**

*"Mr. Stevenson has never appeared to greater advantage than in 'Kidnapped.' . . . No better book of its kind than these 'Adventures of David Balfour' has ever been written. Mr. Stevenson confesses in a note his own great kindness for Alan and Davie, and half promises to tell what further befell them after their parting in Edinburgh—a promise which the friends they have already made long to see fulfilled."* —THE NATION.

## A New Book by ROBERT GRANT.

**Sequel to "THE REFLECTIONS OF A MARRIED MAN."**

# THE OPINIONS OF A PHILOSOPHER.

**With many Illustrations by C. S. REINHART and W. T. SMEDLEY. 12mo, Cloth, $1.00.**

*An unusually large circle of eager readers will be found waiting for Robert Grant's 'Opinions of a Philosopher,' for his 'Reflections,' to which this is a sequel, appealed to and made friends of a larger public than any book of its class in recent years. Every one who remembers at how many points, both tender and laughable, the story of Fred and Josephine's young married life in the 'Reflections' touched his own, will be anxious to follow the couple through their middle life. The illustrations reflect admirably both the grave and the comic elements in the story.*

IN UNIFORM STYLE WITH THE FOREGOING:

## THE REFLECTIONS OF A MARRIED MAN.

**12mo, Cloth, $1.00.**

*"Nothing is more entertaining than to have one's familiar experiences take objective form; and few experiences are more familiar than those which Mr. Grant here chronicles for us. Altogether Mr. Grant has given us a capital little book, which should easily strike up literary comradeship with 'The Reveries of a Bachelor.'"* —BOSTON TRANSCRIPT

# MACMILLAN & CO., Publishers, New York.

# The Nation.

NEW YORK, THURSDAY, SEPTEMBER 7, 1893.

## The Week.

THE latest canvass of the Senate shows a majority of at least twenty for repeal. This makes further delay in taking the vote more inexcusable than ever. It is absurd to stand on ceremony, out of deference for "Senatorial courtesy," with the little band of silver Senators who, in their capacity as "enemies of the public welfare," are blocking the progress of repeal. They have had their say many times over, and nobody cares to hear or read their dreary speeches again. The progress of events has settled their case, and the sooner they are made to realize this fact the better for them and for the country. They seem completely beyond the reach of public opinion, showing in this respect a denser insensibility than Peffer manifests, for he has had a foot or more cut from the length of his beard, and is in other ways bowing to public sentiment, as he is known to be opposed to delay by filibustering. He looms like a statesman and a sagacious patriot in comparison with Stewart, Wolcott, Vest, Jones, and company.

---

There will be no sorrow over the announcement that the Governors of the three new States whose Legislatures failed to elect Senators at their regular sessions will not call special sessions for that purpose, now that the Senate has refused to admit the appointees of the Executives. One Senator is quite as many as is deserved by straggling communities which had, as in the case of Wyoming, only 60,705 people when the last census was taken. It would have been a fortunate thing if the Nevada Legislature had got into the same sort of a tangle, so that we might be spared the spectacle of two Senators representing a total population which reached only 45,761 in 1890, and is much less now, by reason of the closing of many mines.

---

A Chicago professor, writing on the silver situation in Colorado, quotes "a prominent student of finance" as saying: "I have never since slavery days seen our American press so unfair as it is now on this silver question." We think we could make a shrewd guess as to the personality of this prominent student of finance, who is pained at newspaper comments on his views; but as to the charge of unfairness, we confess to being left bewildered. If it is unfair to invite the freest and fullest discussion, then indeed the press has been unfair in its treatment of the silver question. Certainly it would be hard to mention another subject on which all sides have been given so generous a hearing. Nothing, in fact, has been so pleasing to well-instructed editors as to give a silverite a chance to air his views in order to demolish them. To how many cranks editorial advocates of sound money have given space it would be hard to reckon up. No single feature of the education of the people on the currency question has been more striking than the detailed and patient examination of unsound views by those newspapers which have stood for an honest and stable standard of value. Just here is where the shoe really pinches, we believe. The silverites have been driven to explain and expound their views more in detail than ever before, and to quit their vague and frothy declamation about the crime of demonetization and the robbery of the debtor class; and as their definite propositions have been shown to mean necessarily repudiation of debts and a depreciated currency, they have been led to rail at the process of discussion as "unfair."

---

The Ways and Means Committee has done well in getting promptly at work and announcing that it will not give a longer time than until the 20th of September to hearings. Three weeks are quite as many as should be allowed for this purpose. We have had nothing but hearings on this question for almost a dozen years, first before the Tariff Commission appointed under the Arthur Administration, then before the Ways and Means Committee which framed the Morrison Bill, next the committee which brought in the Mills Bill, and finally the committee which reported the McKinley Act. It would be an absolute waste of time now to give two or three months to a repetition of all this. What the country wants is action on the tariff question—not more big books of testimony before a committee. The tariff is to be revised, and it is to the interest of all that the form which revision is to take should be known as soon as may be, that the business of the country may adapt itself to whatever changes are to come. It is to be hoped that the work may be pushed forward so rapidly that the bill may pass both branches of Congress and reach the President early in 1894.

---

On the very day that the Committee on Ways and Means began tariff hearings, a large number of iron mills and textile factories started up again. This was most ill-advised action, and the Republicanism of any manufacturer guilty of it will be open to suspicion. Is the country to be given to understand that rails can be made and cars built and hosiery knitted and cloth woven with the preparations for a new tariff going on ostentatiously at Washington? If such things can be, then is the protectionist faith vain and the *Tribune's* preaching vain. If the mills were shutting down, as it solemnly assured us a few weeks ago, solely on account of the vague talk about a new tariff, how can they take courage to start up again when the talk has passed into certainty with the appointment of the Committee on Ways and Means and its prompt buckling down to work? On the *Tribune* theory, this should have destroyed the last shred of confidence, and shut up all the rest of the mills instead of opening the closed ones.

---

The *Tribune* is ominously silent on this aspect of the tariff hearings, but it extracts solid comfort out of the remarks of the Bermuda onion-growers before the Committee. Never was there so complete and overpowering a demonstration of two main articles of the protectionist creed—namely, that all foreigners are filled with a burning desire to "dump" goods upon this unhappy land, and that the foreign shipper pays the duty. According to the *Tribune's* truthful figures, on one shipment of 10,000 boxes of onions to New York, 16 cents freight was paid per box, and a duty of 38 cents. Then the onions were sold "at an average price of 50 cents a box." If the Bermudans did not pay the duty, triumphantly asks the *Tribune*, who did? There is no telling what such people would *not* pay. They lost $400 on this shipment, reckoning in nothing but freight and duty, and counting the onions themselves as a pure gift. If that is the way they do business, we do not see why they would not pay any duties demanded of them. It is not surprising that their experience gave a "shock" to the Committee. Such a determination to sell goods at a great loss is too rarely met with not to startle the unwary.

---

Even protectionists, we should think, would be glad if some extinguisher could be clapped down hard on the Ohio Wool-Growers' Association. That body was first dangerous, then became ludicrous, and is now nothing but a first-class nuisance. It was politically dangerous as long as it was able to keep both parties in Ohio on their knees, and when it drove the whole Republican party into McKinleyism. But it was this very demonstration of its power that brought it into ridicule, for its boasted army of voters in Ohio turned out to be men in buckram, and the State was practically lost to the Republicans. But here it is again, with as brassy a front as ever, passing resolutions against free wool as the "colossal political crime of the age," and demanding "full and adequate protection for the wool industry." This means, of course, that such protection does not now exist, and that McKinley must do his work all over again. The real tariff-dis-

turbers are the wool-growers. They want the whole thing done over again at their dictation. The present Republican game of declaring the McKinley tariff to be supernaturally perfect, and asserting that it would be sacrilegious to touch such a gift of heaven, does not fool the wool-growers for a moment. They know that they are getting the lowest prices for their wool ever known—practically as low, according to the *Wool and Cotton Reporter*, as would be the case under free trade; and what they want is a tariff which will absolutely shut out all foreign wool. This is to bring protection into contempt, and therefore we say that good protectionists ought to bend their wits to the task of squelching the Ohio wool-growers.

---

Ex-Speaker Reed loses no opportunity to exalt the rules of his Congress, or to taunt the Democrats with wishing but not daring to adopt them, but he does not seem able to rouse much enthusiasm on the subject, even in his own party. The truth is, that the most dangerous and offensive part of the Reed rules—the part that lodged autocratic power in the hands of the Speaker—was particularly distasteful all along to many Republicans, who had too unpleasant an experience of the Speaker's tyranny in the Fifty-first Congress to care to expose themselves to it again. Speaker Crisp did well to bring out the essential differences between the Reed rules and those proposed for the present Congress. The roll-call, not the Speaker's count, is to determine the presence of a quorum, and it is the majority of the House, acting through the Committee on Rules, and not the occupant of the chair, that is to decide when debate and motions become merely dilatory and obstructive and must give way to a vote. The matter of closure was correctly put by Mr. Gladstone the other day when he said it was an evil, but an evil that might become necessary to prevent a greater one—the deadlocking of the legislative body. Closure is not to have the first place, but is to be kept in reserve in the background. The thing to put in front is freedom of debate, and the thing to emphasize is ample discussion. This is done, we believe, by the proposed rules of Congress, at the same time that an effective provision is made for protecting the majority against wanton filibustering.

---

The $100,000,000 of surplus that Mr. Cleveland left in the Treasury in 1889 has disappeared, and in the meantime there has been an addition to the pension rolls of $50,000,000 and a loss of revenue from the repeal of sugar duties of $50,000,000. On the top of this comes the silver panic, which affects the public revenues in the same way that it affects private revenues. The Government is one among many corporations carrying on business, and it must take pot-luck with the rest. The Government is finding out, as other solvent debtors do, that what it owes is payable at the rate of one hundred cents per dollar, while its income is reduced to seventy-five cents per dollar or less. There is a possible deficit of $100,000,000 in sight for the fiscal year ending next June, and an almost certain one of $50,000,000. The Secretary of the Treasury is now meeting the deficit out of the greenback-redemption fund, the $100,000,000 gold reserve. The "working balance" of the Treasury, the amount which ought to be on hand at all times, over and above the greenback-redemption fund, has disappeared altogether, or consists only of unavailable subsidiary silver. The public may infer that the sinking of the gold reserve from day to day represents the total deficit, but it does not. It represents that portion of the deficit which cannot be staved off. There are some bills that must be paid, there are others that can be postponed. The art of postponing was introduced by Secretary Foster. It cannot be discontinued by Secretary Carlisle until his working balance of $30,000,000 is restored.

---

The condition of the United States Treasury is certainly such as to require attention, but there seems to be some danger that an exaggerated impression may be created as to its prospects. It is true that a great falling off in revenue has taken place—nearly $13 000,000 during the last two months—while the expenditures have increased $5,000,000 during the same period. But it does not follow that these decreases or increases will continue, at least at anything like the same rate. The full details as to the increased expenditure have not been furnished us, but it seems that the disbursements for the army, for the navy, and for the Indians have all been materially larger than last year. These large disbursements are by no means of the most imperative character, and it is certainly to be expected that something will be done at such a time as this to prevent our expenses from increasing at the rate of $30,000,000 a year. We are not without hope of seeing a considerable saving from the revision of the pension list. On the other hand, it is altogether improbable that the revenue will continue to show any such falling off as of late. The internal revenue will suddenly start up as soon as the wheels of business are cleared of the currency entanglement, and as to the customs revenue, it seems to be forgotten that we have been importing more than $40,000,000 of gold this summer.

---

We would call attention also to the fact that while the revenue of the Government from customs has greatly declined, the decline in the amount of imports has been by no means in corresponding degree. Thus the imports at New York for the last week reported were valued at $8,541,000, against $9,306,000 for the corresponding week of last year, $8,792,066 in 1891, and $7,550,000 in 1890. There is nothing very startling about these figures. The decrease in customs revenue is explained if we turn to the figures showing the amounts of goods entered for warehouse and for consumption, and the amounts withdrawn from warehouse. There we find that in the week referred to there were, in 1892, goods to the value of $2,243,000 entered for consumption, while in 1893 the value of such goods was but $1,147,000. The figures for withdrawals from warehouse are respectively $613,000 and $576,000, making the totals marketed $2,857,000 and $1,723,000. But if we look at the value of imports entered for warehouse, we find that in 1892 it was but $496,000, while this year it is $1,055,000. Here is to be found the explanation of the sudden and extreme falling off of customs revenue, and the reason for expecting that it will be, to the present extent at least, temporary.

---

Mr. Worthington Ford, Chief of the Bureau of Statistics, has sent a letter to Secretary Carlisle giving his final views and estimates upon the tremendous mistake made in the compilation of the trade balance of the fiscal year 1893. He finds the true balance to be approximately as follows:

| | |
|---|---|
| Imports of merchandise..... | $866,400,922 |
| Exports of merchandise..... | 847,665,194 |
| Excess of imports..... ..... | $18,735,728 |

The original compilation made the imports $941,400,922 and the excess of imports $93,735,728. This startling blunder came about in the following manner. In January, 1892, an importing firm of Philadelphia complained to the Department of State that the American Consul at Messina charged one dollar for a currency certificate to accompany an invoice of olive oil, and asked why it was necessary to require a currency certificate on invoices of commodities imported into the United States free of duty or under a specific duty. The question, upon its face a reasonable one, was referred to the Treasury, and under date January 23, 1892, Mr. Spaulding, the Acting Secretary, wrote to the State Department suggesting that consular certificates showing the gold value of the currency in which the invoices are made out be dispensed with in all cases where the value of the currency did not affect the dutiable value of the merchandise. The State Department concurred; the consuls abroad were so notified, but the Bureau of Statistics at home was not notified, although one consul, Mr. Charles Heath, wrote to the State Department from Catania, Italy, in April, 1892, that the effect would be to deprive us of any accurate knowledge of the value of our imports. No notice was taken of Mr. Heath's warning, and the result is what we have seen—a mistake of certainly $75,000,000 and probably more in our trade returns for a single year.

One of the most encouraging signs of the times is the small amount withdrawn from the savings-banks under the thirty-day rule. It will be remembered that most of the city savings banks put in force their requirement of such notice on the 31st of July. The withdrawals up to September 1st have been quite insignificant, and the judgment of the bank officers is that relatively few more will be made. The immediate cause of this light demand is plain enough. First of all, the panic is over, and has been over for nearly a month. The nervous, unreasonable apprehension which encourages the locking up of savings funds is a matter of the past. For the shrewder class of depositors, who wished their money for the profit it promised—and this class has been astonishingly numerous during the recent panic—the opportunity for such use of currency has grown decidedly less inviting. The stock market no longer stands at panic prices; the premium on currency has quite vanished. It is doubtful if the average cool-headed savings-bank depositor could do better now, in the investment line, than to leave his money where it is. Not least important of all, Congress is moving steadily towards harmonious legislation under which a sound and honest standard of value shall be guaranteed. The savings-bank depositors, collectively, are among the largest lenders of money in the country, and they can trust their money to the loan market now with full assurance that it will be honestly repaid.

---

A powerful argument for the establishment of trade schools on the Auchmuty plan is supplied in some advance figures from the forthcoming census which the *Century* publishes this month. They have been collected by the Rev. Frederick H. Wines, who has charge of the statistics of pauperism and crime in the census, and their accuracy cannot be questioned. They show that out of a total of 52,894 white male prisoners in all the prisons, penitentiaries, and reformatory institutions in the United States in 1890, no less than 38,156 were native born; that of 20,101 of these native born, both parents were native, of 2,729 of them one parent was native, of 3,560 of them the nativity of one or both parents was unknown, of 11,766 both parents were foreign born. Only 13,869 of the 52,894 prisoners were foreign born. That is to say, nearly three-fourths of all the convicted male criminals in the United States are born in this country, more than half of them of American parents, and only a little more than one-fourth are foreign born. It also appears from Mr. Wines's statistics as to the occupations of these 52,894 prisoners at the time of conviction, that 31,426 of them had no trade whatever, and that 23,144 of those without trade were native born. In other words, three-fifths of those who became criminals through lack of occupation were Americans. Mr. Wines's figures show furthermore that nearly three-fourths of all these prisoners were between the ages of twenty and forty, the average age being less than thirty-two years.

---

For the proper background to bring out in its true proportions Mr. Gladstone's triumph on Friday in passing the Home-Rule Bill, we must look back to 1886. On June 8 of that year his first bill was thrown out by a majority of thirty, and the appeal to the country left him in a minority by more than one hundred votes. Many causes have contributed to bring about the historic victory which now has crowned his determined fight of seven years against tremendous odds. Some of them are wrapped up in his fascinating and impressive personality, and some in the general advance of Liberal ideas in England. But the main cause is undoubtedly the perception by the English people of the truth which Mr. Gladstone has made the burden of speech after speech—the truth, namely, that coercion always demonstrates its own failure, and that the only remedy left open is in the way of conciliation and yielding to the national aspirations of the Irish. That remedy may not prove successful, but if it does not, then there is no possibility of any other, and the whole problem of governing Ireland must be given up as insoluble.

---

We referred recently to the discreditable attempts of some of the so-called Conservative party in England to attract voters. An instance in point has just been reported in the London *Times*. The Secretary of the "Central Unemployed Organization Committee" requested Mr. Gladstone to receive a deputation of men out of work "who were anxious to lay before him definite and practical proposals for the solution of the unemployed question." Mr. Gladstone courteously answered that he would not be able to receive the deputation, but that he would be happy to consider "the definite and practical proposals." Of course this settled that question, as the last thing to be expected from the "unemployed" is anything definite and practical. But the application to Mr. Chamberlain drew out the answer of a genuine demagogue. With the representation that while 100,000 workingmen in London were unable, through no fault of their own, to obtain employment, no other matter than this should obtain the attention of Parliament, Mr. Chamberlain expressed his agreement. He declared that it was scandalous that "the time of Parliament should be wholly wasted over this miserable Irish controversy to the neglect of the real interests of the working classes." Of course he added that the blame for this lay wholly with the Gladstonians.

---

In commenting recently upon the principle of "betterment" in England, we criticised a bill introduced into Parliament at the instance of the London County Council on account of its failure to provide compensation for owners of property damaged by the contemplated public improvement. It is true that the bill makes no specific provision for such cases, but it is now pointed out by the Parliamentary Committee of the Council that the omission is apparent and not real. There appears to be a general statute providing that every person whose property is injuriously affected by any public work shall receive compensation, and this general statute is recognized by the bill in question. The only argument, therefore, which the opponents of this measure are still able to advance is, that the principle of assessing damages and benefits should be established by a general act applicable to the whole country, and not be limited to this particular instance. Upon this ground the House of Lords rejected the bill, but as the House of Commons seems determined to enact it, there is little doubt that the Lords will yield and allow a reform to be established to which the only objection is that it is not sufficiently extensive. It was with just such objections as this that Lord Eldon used to block attempts to improve the administration of justice.

---

The two-years' service clause of the new German Army Bill appears to have aroused considerable jealous attention in France. Just before the Parliament was dissolved, a Deputy moved that the men who were to enter upon their third year's service next November be allowed to go home, to the great advantage of French agriculture, to the saving of $4,000,000 on the army budget, and to the establishment of the principle of two-years' service "as in Germany." The motion had no chance of success, and was not, in fact, seriously discussed, yet it greatly stirred up some of the writers on military topics. They hastened to point out that the German Army Bill makes two years only the average term of service, the cavalry and artillery being held to the three years' period, the infantry being ordinarily obliged to serve no more than two years, while the sanitary corps and some other auxiliary branches of the service get off with much less time. Further, over and above all these details, there is the provision that "the Emperor may at any time order the further service of the men whose return home is due." This is the two years' service "as in Germany." Moreover, a glance at the figures of the recruits of the past three years in France and in Germany will show that if France were to drop to the two years' plan, she would have an active army of 365,000, as against one in Germany of 528,000. This, of course, would never do, and there is no likelihood that, in either country, agriculture will be given the extra pairs of hands it needs, or that the army expenses will be cut down.

*THE SILVER DEBATE IN THE SENATE.*

SENATOR SHERMAN'S speech a week ago was intended to aid in securing the early repeal of the silver-purchasing clause of the so-called Sherman Act. All that he said, we may be sure, was said with that end in view, and all that he left unsaid was equally intended to have the same effect. The speech will have the intended effect without doubt. The Ohio Senator dealt the silverites some staggering blows, from which they will not recover. He knocked all the remaining breath out of the lie that the silver-demonetizing act of 1873 was passed by stealth and fraud. He showed up Senator Stewart of Nevada as a champion of the gold standard in 1874, a year after the passage of the silver-demonetizing act. He proved that the Sherman Act, as it is called, is a better, or less harmful, act than the one which it superseded. He commended the President for his course in urging the repeal of the act, and declared his purpose to sustain him in that particular. Finally, he adverted to the necessity of strengthening the gold reserve and meeting a temporary deficit in the public revenues by an issue of bonds, saying that the Administration ought to have that authority, and that it had never been withheld from any administration under a like emergency. All this and much more of sound teaching did Mr. Sherman offer, with the authority of a real master, for all which he has our best thanks. There were some points in his speech, however, which were of a strictly partisan type, such as his animadversions upon the expected tariff changes. These must be discounted in the same way, if not to the same degree, as Mr. Voorhees's partisan harangue. We regret that Mr. Sherman's statesmanship did not this time take a loftier flight, but we have learned to be satisfied with something less.

The Senator maintained that the present financial stringency was not due to the so-called Sherman Act, but rather to the Baring crisis of 1890, to the recent Australian crisis, and to the preparations of Austria-Hungary to resume specie payments on the gold standard. If it could be said that the act bearing Mr. Sherman's name had brought on a financial panic, that would, of itself, be a bad epitaph, although undeserved. We do not wonder that he takes some pains to remove the imputation. It was the whole course of silver legislation and silver lunacy, beginning in 1878, that chiefly brought on the present panic—not the Act of 1890 in particular. If the Bland-Allison Act had not preceded the Sherman Act, the latter might have run on for several years without bringing us in sight of the silver standard. But it is certain, and has been certain from the beginning, that whenever the public should see or should strongly apprehend the advent of the silver standard, there would be a sudden clutching of money, a sudden withdrawal of investments, and a sudden and sullen determination on the part of the holders of money not to let it go until they could know what kind of pay they would get for it. This has been the talk of financiers ever since the passage of the Bland-Allison Act. Something very like this was foreshadowed by Mr. Sherman himself in his great speech of last year in the Senate, when he expressed his readiness to vote for the repeal of the act of 1890.

So many jokes were cracked by Senator Vance on Friday that it is hard to say what part of his speech was intended to be taken seriously. We presume, however, that that portion which repeats the oft told tale about diminishing the debt-paying money of the world is so intended. We presume so because we find it in another Populist discourse the same day—that of Gov. Tillman of South Carolina, who says in the Columbia *State:*

> "They [the capitalists] are now fighting to reduce the metallic currency by one-half by making a gold standard. It's the most gigantic scheme of robbery ever attempted, and the people ought to rise in their might and put a stop to it, hanging some of the men who are causing it all, if it is necessary. They destroy the debt-paying power of one-half the coin for the benefit of the debt-holders, bondholders, and capitalists, and then tell the bankrupt people who contracted these obligations under the bimetallic standard that this country is entitled to as good money as any other country."

We like Tillman's way of putting it better than Vance's, because it is more direct, more sententious, and more in downright earnest. This debt-paying argument is the last ditch of the silverites. They have been driven from one position after another till they have taken their final stand here. But not one of them has ever told us how he proposes to keep the two metals in concurrent circulation. Unless we can have them both in use as money at the same time under the conditions of free coinage, we cannot achieve the end which Vance and Tillman are aiming at. If we are to have gold to-day and silver to-morrow, and gold again next week and silver the following week, the debt-paying basis is not broadened in the least—it is only changed. In other words, we have no greater breadth of debt-paying basis under the Vance-Tillman plan, but we do have more frequent fluctuations. Until Mr. Vance can show a practicable method for putting bimetallism in force and keeping his basis from sliding, the fewer jokes he cracks on the subject the better for his reputation as a humorist. Under any arrangement possible for this country alone, bimetallism would be like the movable sidewalk at the World's Fair, and no business man would know where his next step would carry or where it would land him.

Senator Vance ventured the prediction that the passage of the Repeal Bill would cause an immediate fall in the price of silver at least equal to that which followed the action of the India Council. This is rather risky prophesying. The price of silver bullion fell 19 cents per ounce after the closing of the Indian mints, and recovered 12½ cents before the London pessimists had fairly put their forecasts upon record. The reason for the recovery was that it was suddenly discovered that somebody, after all, had uses for the metal. Even since the closing of the Bombay and Calcutta mints nearly $6,000,000 worth of silver has been shipped to India, and a further immense amount to China. The Indian imports have puzzled London in the extreme; yet they were, after all, intelligible enough. Indian natives have for centuries used silver in its bullion form to store their wealth and make their personal adornments, much as the English aristocracy used to put their fortunes into gold and silver plate, or as the veteran archer in 'Quentin Durward' used to twist a link or two out of his gold chain to pay his tavern reckoning. It would be difficult to give any other explanation for the continued heavy silver exports from London. The habits of a nation, fixed by the practice of centuries, will hardly change at the passage of a single statute. Not only is this heavy Oriental demand certain to continue, but at the present lower price the use of silver in the arts will undoubtedly expand. Meanwhile the poorer mines will close and the better mines will reduce expenses. Whether the end of this will or will not be a further fall in silver, Senator Vance is as little able to predict as any other watcher of the market. The price is at least holding just now extremely strong under the general expectation of the Silver Purchase Law's repeal.

*MORE PARTICULARS OF THE BERING SEA DECISION.*

THE text of the Paris judgment, and of the extra-judicial advice contained in the afterpart, presents important elements not included in the reports transmitted by cable. These reports led to inexact inferences in regard to the time and areas of exclusion. No American or Briton can pursue, capture, or kill fur-seals, at any time or in any manner, within a zone of sixty miles around our islands, including the usual marine league, nor,

> "from the 1st of May to the 31st of July, both inclusive, on the high sea in that part of the Pacific Ocean inclusive of the Bering Sea which is situated to the north of the 35th degree of north latitude and eastward of the 180th degree of longitude from Greenwich till it strikes the water boundary described in Article I. of the Treaty of 1867 between the United States and Russia, and following that line up to Bering Straits."

The area last described is larger than either Government had contemplated. Bering Sea is divided in the middle, and the exclusion extends over three degrees south of San Francisco. Under the award, the "regulations" can be modified or abolished by the two Governments, and it is adjudged that they "shall be submitted every five years to a new examination, so as to enable both interested Governments to consider whether, in the light of past experience, there is occasion for any modification thereof."

There is no allusion to damages for abstention during the pendency of the arbitration. It is understood that both sides withdrew all claims under that head. The findings of facts in regard to the seizures were agreed to in advance by the opposing parties and adopted in the award, leaving the sum to be paid by us as damages to be hereafter arranged. At the end of the judgment, the Tribunal made very significant declarations which bear on the need of better management of our own Pribyloff Islands.

The treaty authorized "regulations" to be made for Bering Sea outside our territorial limits if the Tribunal came to the conclusion that Mr. Blaine's contentions for our right to seize foreign vessels in that sea outside those limits was unfounded. Over our islands and their territorial waters our jurisdiction was and is complete. The Tribunal could not, under any circumstances, prescribe "regulations" there. But the end sought was comprehensive preservation of the fur-seal, and the Tribunal evidently felt that "regulations" were needed on our islands as well as in the open sea, in order that parity of interests might be submitted to parity of rules. All the more was that needed after we had told the Tribunal that our property right in all seals on our islands was so absolute that we rightfully could, if we saw fit, destroy all the seals found on our islands, and so destroy the whole Pribyloff fur-seal herd and industry. Therefore the Tribunal gave the following very significant advice respecting our management of our islands if we wish all nations to coöperate outside of our exclusive dominion:

"(1.) The arbitrators declare that the concurrent regulations as determined upon by the Tribunal of Arbitration by virtue of Article VII. of the Treaty of the 29th of February, 1892, being applicable to the high sea only, should, in their opinion, be supplemented by other regulations *applicable within the limits of the sovereignty of each of the two Powers interested and to be settled by their common agreement.*

"(2.) In view of the critical condition to which it appears certain that the race of fur-seals is now reduced in consequence of circumstances not fully known, the arbitrators think fit to recommend both Governments to come to an understanding in order to prohibit any killing of fur-seals, either *on land* or at sea, for a period of two or three years, or at least one year, subject to such exceptions as the two Governments might think proper to admit of. Such a measure might be recurred to at occasional intervals if found beneficial.

"(3.) The arbitrators declare, moreover, that, in their opinion, the carrying out of the regulations determined upon by the Tribunal of Arbitration should be assured by a system of stipulations and measures to be enacted by the two Powers, and that the Tribunal must in consequence leave it to the two Powers to decide upon the means for giving effect to the regulations determined upon by it."

If we refuse to follow these suggestions, to put a curb on the rapacity and brutality of the lessee of our islands as exhibited at Paris, and if the other Governments decline to give their adhesion to the "regulations" made by the Tribunal, then vessels under the flag of any of those Governments may kill seals in the places and vast areas from which the two treaty Governments have excluded themselves. Nothing will, in that event, be left to the two Governments but to tear up the "regulations."

There will be some curiosity to know why the American members of the Tribunal dissented from the "regulations," if they will confine their expositions to that. But the country has no longer any interest in further vindication, by Senator Morgan or Justice Harlan, of Mr. Blaine's "eloquent diplomacy"—that is the correct phrase, we believe—nor in the Blaine-Phelps-Tracy law of wonderland expounded at Paris—its "Book of Nature"; its heresies by Puffendorf; its fur-seal "husbandry"; its false analogies between fur-seals and such domestic animals as sheep and oxen; its limitations of property to the usufruct; its title to wild animals derived from the law of nature or nations, instead of municipal law; its right of England, growing out of the defence of a free swimming fish or wild animal, to visit, search, and seize our vessels on the high seas in time of peace as in time of war; its expanding our municipal law into a sort of omnipotent, self-defensive international regulation made by ourselves and enforceable by ourselves on the open ocean; and its violation of that freedom of the seas to vindicate which we waged a foreign war in 1812.

## *RESPONSIBILITY OF CRIMINALS.*

Mr Round, the Secretary of the National Prison Association, contributes an article to the September *Forum*, in which he maintains rather old-fashioned notions concerning the responsibility of criminals. So much has been said in recent years about the influence of heredity and the effect of environment, that it has really become somewhat doubtful whether punishment should not be inflicted upon a criminal's grandfather rather than upon himself, and an impression has come to prevail in some philanthropical circles that almost the only real malefactor is society. Mr. Round will have none of this mischievous nonsense. So far as physical degeneracy is concerned, he states that his examination of a thousand prisoners showed that one-fourth of them had not only a fine, but an exceptionally fine, physical basis of life and strength, the other three-quarters falling only a little below the average of ordinary humanity. His investigation as to heredity is not yet complete, but the 700 cases so far examined show that there is no such transmission of moral qualities as has been claimed, except through physical conditions. That is, neither vice nor virtue is inherited, although the feeble or robust condition of ancestors may produce in the descendant a constitution favorable to evil or good habits respectively. "Physical conditions likely to promote criminality aside," he says, "I believe that the child of the thief, apart from his environment and possible training, starts well nigh as fairly in the race of life as the child of the average citizen." In the same strain Mr. Round expresses his conviction that crime is not a disease, and that the criminal is not insane and irresponsible. His experience is that most men guilty of crime offend wilfully, and are quite capable of living honest lives if they choose. Exception will be taken to his conclusions, but he brings out a truth which has been disregarded by a certain class of theorists.

In a sense, however, society is responsible for the criminal. It is responsible where the administration of justice is so lax and so corrupt as to make those tempted to commit crime think that they can escape punishment. It is notorious, especially in the city of New York, that political influence is sufficient to prevent the arrest of a certain class of offenders, and that, even if arrested, these offenders will never be brought to trial. Even if brought to trial, the chances of acquittal are many and the delays are long. All these things indirectly encourage crime, making its punishment uncertain, and thus diminishing the fear of punishment. As to the character of the punishment, the administration of justice and not its theory is again at fault. As Mr. Round says, the severest punishment for the criminal is to be obliged to earn his living like an honest man, and the most dreaded term is the sentence for such a period as shall effect his reformation. Our laws make suitable provision both for the nature and for the term of punishment, but they are not carried out. The prisons have been turned over to politicians and their followers, and they have failed, from either hostility or incapacity, to apply the graded system ordained by the Act of 1889, while our judges have pronounced the indeterminate sentence in hardly a score of cases. Mr. Round emphatically declares, and we fear with only too much truth, that the prisons of New York "are run solely to make political capital for the dominant party, they are run in fear of the labor element, they are run to make places for 'low-down' politicians and rewards for political leaders." We have no disposition to minimize the guilt of crime; but if crime increases under such conditions, it is not just to throw all the blame upon the criminal classes.

It is true that in the Elmira Reformatory we have a penal institution constituted and conducted upon the most scientific principles. The whole theory of the school—for it is really a school—is that the criminal is responsible. From the beginning of the course to the end of it the aim is to furnish the strongest incentives to correct conduct and the greatest deterrents from evil ways. The physical training is intended to lay a basis for moral character, the healthy man being more responsive to healthy motives. As a result, the average detention of the

inmates before they are released on parole is only twenty-two months, the indeterminate sentence thus cleaving only to the worst cases. Of those paroled during the year 1892 less than 6 per cent. were returned to the Reformatory, while the number probably relapsing into criminal ways was about 11 per cent. In this instance society may be said to do its duty by the criminal. Under the management of Mr. Brockway this Reformatory has come to be regarded as a model not only in this country but abroad, and it is constantly visited by the most distinguished penologists of every land, who testify, after careful inspection, unanimously to its perfection. It is hardly necessary to say that the institution has so far been exempted from political control, but there are indications that the sight of so much patronage politically unavailable has become intolerable to our rulers. Should they succeed in bringing the Elmira Reformatory down to the level of our other prisons, it would be a sad day for this State, and in the truest sense a sad day for the criminal classes themselves.

## THE COLUMBIAN EXPOSITION—VI.

### FINE ARTS: THE BRITISH AND THE NON-FRENCH CONTINENTAL SECTIONS.

CHICAGO, July, 1893.

THE galleries of the British Section have a lifeless look, and a few good pictures are not enough really to break the monotonous succession of story-telling genres, bad portraits, classical subjects treated in a literary way, weak landscapes and marines that fill the walls. The English painters are almost the only ones represented, scarcely any of the Scotchmen who at Glasgow and Edinburgh of late years have been showing something like real live work having pictures here. The English painters in general seem to think of something else than painting, and art as they understand it seems to be considered as a means of instruction, like a child's history-book, or a pretty way to point a moral. Some of the younger men, such as Stanhope Forbes, Frank Brangwyn, Arthur Hacker, William Stott, Adrian Stokes, George Clausen, Edward Stott, W. H. Bartlett, and Frank Bramley, show that they know what the art of painting means, and of course among the work of the artists of more long-standing reputation a thoroughly good picture is to be found here and there. But the average of technical achievement is low, the literary and moral conception of art is generally prevalent, and eccentricity crops out in a good many places as a cloak for weakness. There are ix canvases by Mr. Watts, at least one of which, "Portrait of Walter Crane," is a fine work, whatever may be thought of the others. Sir Frederick Leighton's "Portrait of Capt. Burton," which has made the round of international exhibitions, is as good a piece of character study and as well modelled a head as any one could wish to see, and his "Garden of the Hesperides" possesses qualities of color and a distinguished beauty of composition that make it far superior to his other works here. Three good portraits by the late Frank Holl, the same number by J. J. Shannon, and Alma-Tadema's scholarly-looking pictures of Greece and Rome, bear comparison with the work of the French and the Americans. Prof. Herkomer's "The Last Muster" is made to do service again, and two portraits of women by him, though dry in *facture*, are notable for their dignity of presence. When Mr. Moore's vigorously painted marines, Mr. Bramley's excellent out-door picture, "For of Such is the Kingdom of Heaven," Mr. S. Melton Fisher's "A Summer Night," Mr. Stokes's "The Setting Sun," Mr. W. Reynolds Stephens's decorative "Summer," and landscapes by Messrs. Davis, King, Hague, and Leader, have been mentioned, there remains but little that need take our attention. One picture, however, "Forging the Anchor," by Stanhope A. Forbes, is so good technically that one wonders how it can be the work of an English painter. The color scheme deals with only blacks and grays and the reddish glow from the hot iron at the forge, but it is harmoniously and forcibly managed; the drawing of the numerous figures is good, and there are air, space, and tone in their depiction. We do not need to be told that Mr. Forbes studied in France, but, as in his picture "The Village Philharmonic" at the Paris Exposition of 1889, he has taken a subject in his own country, and the rendering of character in his types is not the least of the merits of his work. Another picture by the same artist, "Soldiers and Sailors," is a soberly painted work with figures out of doors, very good in values and well studied, but without the completeness of ensemble that makes "Forging the Anchor," all things considered, one of the best pictures at Chicago.

The German artists in many cases make an honest attempt to paint pictures to be looked at for their own sake, but, like the English, a good many of them are given to elaborate story-telling in genre work. A certain heaviness of hand affects their portrait-painting, and in historical composition there is a pomposity that evokes souvenirs of Baron Gros when it does not more directly recall the stilted airs of Cornelius and Kaulbach. Prof. von Lenbach of Munich has a reputation as a portrait-painter. He is sometimes spoken of, indeed, as a great portrait-painter, but if the "Portrait of Prince Bismarck" and the "Portrait of Pope Leo XIII.," both lent by the State of Bavaria, are fair specimens of his work (and we have every reason to think they are, from what has been published about them), they show again what has so often been shown before, that a painter who paints badly enough to becloud his intention may be rated a great artist. The picture of the Pope is muddy in color and has scarcely a bit of well-studied form in any part of it. In handling it is slippery, and such modelling as it possesses is made by lines and tentative scratches. The portrait of Bismarck is worse, and it is more disagreeable in color even than the picture of the Pope. In every school of art, especially in England, Germany, and the United States, where there are people ready to talk and write about art who know nothing whatever about it, and get a hearing from others who know no better than to think what they say must be true, some such painting as this from time to time is exalted. It may as well be called by its right name, however: it is humbug. The Emperor William II. has been painted on horseback in a creditable but rather stupid composition by Prof. Werner Schuch, on board a steamer hunting whales in a very good marine picture by Prof. Carl Saltzmann, and in a simple half-length portrait by Prof. Max Koner of Berlin. The last-named portrait, in spite of the lack of anything better than merely respectable color quality, is an excellent work. It is life-like, well placed on the canvas, firmly modelled, and spirited as well as dignified in general aspect. The dark-blue coat, the gray overcoat with scarlet facings, the cross on the chest attached to the lighter blue collar of the coat, and the grayish white gloves form a simple but effective costume. It is all well and surely painted, and if the picture is not the work of a great artist, it is at least so much better conceived and so much more intelligently carried out than the majority of the portraits in the German Section, that it ranks easily as the best. The only other that might dispute its supremacy is an excellent full-length seated figure of Kossuth by Mrs. Vilma Parlaghy. There is a good example of the work of Gabriel Max in "Katharina Emerich," but that he descends to tricks may be seen by examining closely the texture of the white counterpane on the bed, when it will appear that the paint has been "tamped" with some sort of an instrument like a seal, with a cross-barred pattern. "The Rolling Mill," by Menzel (the only work in the catalogue by one of the most celebrated of German artists), is in no way extraordinary, but a small picture, placed on an easel in one of the galleries, showing people seated at small tables under the trees, is notable for minuteness of detail. Uhde's "The Announcement to the Shepherds" is a big brown canvas, totally uninteresting in composition, sentiment, or color; and "A Parade in Presence of the Emperor," by Hans W. Schmidt, is a creditable piece of official military painting. The "Apotheosis of William I.," by Prof. Keller, is big and rather skilfully disposed, but its artistic interest is lost in the pretentiousness of the subject. "The Congress of Berlin," by Prof. A. von Werner, is a well-painted group of portraits—an unusually successful attempt in its class to make a picture. Among the numerous landscapes there is one good little picture that deserves to be noted for an atmospheric quality which very few of those in the galleries possess, and truthful sunlight effect in early spring on an avenue of trees before the leaves have come out—"Landscape: Spring," by Miss Fanny Edle von Geiger.

The Dutch exhibition, though small, is very creditable. The pictures, particularly the landscapes, show a good deal of individuality; and sober, forceful color characterizes the work of the school. Pictures by the late Anton Mauve, Hubert Vos, William and Jacob Maris, and H. W. Mesdag are notable, and there are five canvases by Israels. He is a painter of wide reputation, who does little to justify it, and if anything could be cheaper, more vulgar, and technically worse than a head by him called "Type of a Fisherman," it would be hard to imagine it. "Fisherwomen at Zandvoort" is almost if not quite as bad, and "Alone in the World" is one of his familiar interiors with figures, a little more muddy in color and clumsy in drawing than usual. There is a fine collection of water colors from Holland, including landscape and genre, marked by cleverness of handling, charming color qualities, and excellent style. The prominent names here, some of them new to us, are Stortenbeker, Weissenbruch, Bastert, Blommers, Vrolyk, Klinkenberg, Ten Cate, Kever, Ter Meulen, Miss Wally Moes, and Koster.

In the Belgian section the absence of work by Émile Wauters, who died recently, is noticeable, but most of the well-known painters are fairly well represented. The pictures present few points of difference from those sent by France except that the average of excellence is lower. "The Walk on the Dyke at Heyst-sur-Mer," by Jan Verhas, and "Summer Sun," by Evariste Carpentier, are

the two most interesting works by figure-painters; "The Departure of the Herd" and "Road through the Dunes," by Franz Courtens, and "Orchard in Zeeland," by Verstraete, are the best landscapes; and a picture of red poppies by Emma De Vigne is remarkably good flower-painting. Ten pictures exemplify the peculiar and inartistic methods of Jan van Beers.

There is little to note in the Spanish and the Italian galleries. In the former there is a very good portrait of a French student painted out of doors by Ramón Casas, and in the latter are three portraits by Boldini. "Portrait of Miss ——" is below his mark; "Portrait of a Lady" is exceedingly clever, and most satisfactory in every way except that the artist has given his sitter, rightly or wrongly, an air that suggests the *fausse grande dame*; and "Portrait of a Girl," a child in black seated on a sofa, though just a little too pronounced in coquettishness, is a marvel of skilful painting, delightfully simple and distinctively personal in style.

There is nothing of importance in the Russian galleries except Siemiradsky's immense picture "Frina." In the Austrian Section are Charlemont's pretty "The Pages"; Brozik's historical composition representing an incident in the Thirty Years' War—the Imperial Councillors Martinitz and Slawata thrown out of the window of the Château of Hradshine by order of Count Thurn—a much better picture than his "Columbus" in the Metropolitan Museum; Makart's "The Five Senses," and five excellent small pictures by the late August von Pettenkofen. Some good portraits by Canadian artists are shown in a small gallery adjoining the British Section, those by E. W. Grier, Robert Harris, and Sarah B. Holden being notably good; and in the Venezuelan Building is hung a serious, well-painted equestrian portrait of Simon Bolivar by Arturo Michalena.

The Scandinavian painters show themselves to be in touch with the new ideas that prevail in some artistic coteries in Paris, and not a few of their pictures bear the stamp of serious, intelligent search for truth. From Denmark there is some good work by Lauritz Tuxen and P. S. Kroyer, and a fine portrait by Bertha Wegmann; from Sweden we have an interesting exhibition of seven works by Anders L. Zorn, original and charming pictures of birds and animals by Bruno Liljefors, good landscapes by Kreüger, and a portrait by Björck, in which character is well rendered. In the Norwegian galleries are landscapes of decided merit by Prince Eugene, Sörensen, and Sinding. Here, too, is one of the best studies of nature exhibited by any artist at Chicago—"Behind the Mill," by Fritz Thaulow. A stream flows under the mill, coming directly forward on the canvas in a wide, whirling flood. The swift water, churned into foam in some parts, reflects the white walls of the mill in others where it is quieter, and it is all delightfully limpid and clear. The same artist exhibits also two pastels—"By the River" and "In March"—in which dark streams are seen running between icy, snow-covered banks. Both are carefully studied, and, like "Behind the Mill," express the aspect of nature with great charm and genuine poetic feeling. There is a good deal of originality in choice of subject shown by the Scandinavian painters, and their landscape motives are novel, but there is not much to denote more than the presence of a few good Paris-trained men among them who make use of intelligent methods in their work. There is little to justify a prophecy that a new school is about to appear in the North. Such men as Kroyer and Tuxen, who were among the best of Bonnat's pupils, and Zorn and Thaulow, who make their headquarters in Paris, do much to make the Scandinavian sections interesting; but, on the other hand, we have the methods of the French in painting out of doors exaggerated to the point of caricature by Larsson, Skredsvig, and others. The best that can be said of the Scandinavians so far is that they seem self-reliant and not afraid to strike out in new fields in their own countries; and this, at least, is a starting-point (as it was in the United States), beyond which earnest endeavor may accomplish much in the future.

William A. Coffin.

## FROM FLAGSTAFF TO THE GRAND CAÑON.

Portland, Oregon, July, 1893.

Probably the number of European visitors to our Columbian Exposition would have been much larger but for the fact that most of those who wished to come were desirous of combining with the trip to Chicago a sight of our Western scenic wonders, while the "magnificent distances" which separate these wonders double the price of a round-trip ticket. The difference in this respect between Europe and America is vividly illustrated in the new and admirable United States Baedeker, the publisher of which has printed in a corner of the map of this country a diagram of Switzerland on the same scale, for comparison. There we find in a country of the size of a single one of our smaller States an inexhaustible variety of natural attractions, whereas, in order to see our principal sights, we have to cross the whole country on half-a-dozen transcontinental railroads.

During the last six weeks, nevertheless, I have come across a considerable number of foreign tourists, generally in parties, in Arizona, California, and Oregon, and most of them were provided, as was to be expected, with the new Baedeker. At the Yosemite I was told that this class of travellers almost made up for the natural falling off in the number of visitors caused by the World's Fair. At only one place did I fail to meet any of them, and that was at what Capt. Dutton has called "the most sublime of all earthly spectacles," "a great innovation in modern ideas of scenery," and which is certainly the most stupendous and original of American spectacles—the Grand Cañon of the Colorado River in Arizona—characteristically American in being the biggest chasm in the world, just as Niagara is the biggest waterfall, Superior the biggest lake, and the Chicago Fair the biggest exposition ever held. The reason of this neglect of the Grand Cañon lies in the fact that it is only since last summer that it has been made readily accessible, and is therefore not as generally known and as much talked about as the Yosemite, the Yellowstone, the Columbia River, Puget Sound, and Alaska. Until last summer those who could not procure a wagon, camping outfit, and guides of their own, were able to visit the Cañon only from Peach Springs, whence they reached it in a not particularly impressive spot, and were able to see it only from below, as the road gradually descends to the river bed. Four years ago I wrote in my 'Pacific Coast Scenic Tour' that the projected new road from Flagstaff would rob the Cañon of some of its cathedral grandeur by bringing the visitor to the top instead of the bottom; but, after reaching the new point of view, I instantly changed my mind. The Peach Springs route will indeed never cease to be used, for it has charms of its own not encountered on the other route—a greater profusion and variety of cactuses, wonderful specimens of Arizona mountain architecture, a mysterious nocturnal creek, and the tributary Diamond Cañon, which realizes better than any accessible part of the Grand Cañon itself the popular idea of a cañon, as being a deep, dark, narrow chasm between two threatening walls rising perpendicularly to a height of half a mile or more. But to grasp the true grandeur of the main Cañon one must see it from the place opposite Point Sublime to which the new stage-road of the Atlantic and Pacific Railroad takes us.

The Atlantic and Pacific is the only railroad by which the Grand Cañon can at present be approached, but this is no drawback, since, like other parts of the great Santa-Fé system, it provides excellently for the comfort of passengers, especially in its eating-stations, which are all under the same management, and supply meals far superior to those usually served in transcontinental dining-cars or stations. Along this route, too, are to be found the most interesting remains of Indian and Mexican life and habitation (Santa Fé, Laguna, Acoma, etc.). Much of this can be seen even from the car window; and at the stations, where the Indians assemble to sell curios (pottery, dolls, walking-sticks made of the porous ocotillo cactus, etc.), it is amusing to see how their boys and girls have learned to dodge the wily kodakers by keeping in the shade of the Pullman cars until a dime or a quarter has been offered them to overcome their superstitious objection to photography which they share with the Mohammedans.

Flagstaff, where we get off for the Cañon, is a purely American lumbering town, with no Indian or Mexican features, unless it be the burros and the large number of dusty dogs which look as if they had never had a bath. Water is as scarce at Flagstaff as in most Arizona towns, and dogs and men must consider themselves lucky if they can get enough for internal use. What little there is is brought by the railroad company in water-cars from a spring half a mile away, and at the street corners you will notice little boxes with the inscription, "Leave orders for water." At the hotel towels are no larger than a small napkin, probably in order to discourage any extravagant bathing propensities on the part of guests. Nor is Flagstaff otherwise an attractive place, except for the young pine trees amid which it lies buried, and the imposing San Francisco Mountain to the north, snow-covered eight months in the year.

Before starting for the Cañon—for after that has been seen everything for a while seems an anti-climax—half a day should be devoted to an eight-mile drive in the opposite direction, to the cliff dwellings of the Walnut Cañon. The cañon itself is easily found, but a driver should be taken to show the way to the caves along its steep sides. The road is enlivened by numerous prairie-dogs, scampering in all directions for their holes as the carriage comes into sight. They are very destructive to grain-fields. All the fine trees along the road have been cut, and nothing used except the best part of the trunk—with the same American wastefulness that formerly led hunters to slaughter deer by the dozen and save only the best cuts. The road is for the most part level, and as Flagstaff lies at an elevation of 6,935 feet above the sea, it is natural that we should arrive at the top of the cañon, whence

there is a steep clamber down to the cliff dwellings, but not a dangerous one, there being evidence that even cattle have found their way to some of the caves, in search of grass. There are dozens of these Indian cliff dwellings on both sides of the cañon, like swallows' nests built along the precipitous limestone walls. They are not deep, but some are of considerable length, with cemented partitions, most of which have been unfortunately destroyed by unscrupulous relic-hunters. Whatever may have been the object for which these curious dwellings were excavated, it is clear that they can have been used only in winter, since in summer the only source of water, the brook at the bottom of the cañon, dries up.

Walnut Cañon is one of those extraordinary holes in the ground which in Arizona suddenly open before the astonished wanderer through forest or desert, and which constitute one of the unique features of our Southwestern scenery. Yet were it not for the cliff-dwellings it would scarcely arrest the attention, for it is only three miles long and a few hundred feet deep, whereas the Grand Cañon is 180 miles long and in some places more than a mile deep. The most impressive portion of the Grand Cañon is situated about seventy miles north of Flagstaff, and can be reached by stage in about eleven hours. The round trip is made three times a week (fare $20), the start being early in the morning; and as the hours before sunset are the best time in the day for seeing the Cañon, those who are in a great hurry can get a glimpse of its grandeur and return the next day. Others should devote at least two or three days to excursions along the brink. The trip from Flagstaff is somewhat fatiguing on account of its length, and the heat and dust; yet the dust is not as persistent and annoying as on the way to the Yosemite, and the heat is often mitigated by a brisk breeze, in which warm blasts from the Painted Desert of the Little Colorado alternate oddly with cool waves from the San Francisco Mountain. The road-bed is usually level and smooth, except here and there where we traverse one of those stony patches that abound in volcanic regions, and where the ground is roughened with igneous rocks burnt full of small holes—somewhat like the bark of trees in which woodpeckers have deposited their acorns.

For these rocks the San Francisco Mountain is, of course, responsible. It is an isolated extinct volcano, 12,794 feet in height, somewhat resembling Mount Shasta as seen from the south, and forms the pivot around which the Grand Cañon road turns, just as Shasta does for the Oregon and California Railroad. For several hours after leaving Flagstaff the road ascends gradually till it reaches a height of about 9,000 feet, only a few miles from the base of the mountain, where the air is delightfully alpine and exhilarating. Thence the ascent of the peak is occasionally made, the greater part of it being possible on horseback. The view obtained is chiefly of the illimitable desert, with a number of minor volcanic peaks and buttes, but no very high ranges, so that the ascent is less tempting to tourists in search of scenery than to students of science, who may find here the plants and animals of seven different life-zones, from the tropical sands of the desert to the arctic snow of the summit, with many curious commixtures and surprises, as, for instance, a humming-bird flitting across the very summit of the mountain!

There is hardly a moment on the whole trip to the Cañon when this grand mountain is not in view, now fully, and again with only its snowy summit peeping out between the tree-tops. Those who take their own team and camping-outfit, can make the complete circuit of the mountain by keeping to its left on the way home; but the stage has to retrace its course, on account of the relays of horses, which cannot be kept on both sides. Apart from the mountain there is not much to attract the attention *en route*, unless one is a stranger to the phenomena of the desert, or of the great pine forest, through which we drive more hours, in fact, than we do across the desert. A specimen of this wood (yellow pine) is on exhibition in the Forestry Building at Chicago, with this placard: "Arizona, known as the treeless desert, has 2,000,000 acres of pine like this, untouched by the axe." The abundance of these trees in the midst of the desert is, indeed, one of the principal surprises awaiting the visitor to the Cañon. They are fine stately trees, with plenty of elbow room, but not a few seem to have an insecure foothold in the sand, and strong winds have made them lean to one side; many others have been destroyed by the terrible lightning that often plays among them; and now the lumberman's axe is descending on them; yet it will take some time to exterminate 2,000,000 acres of trees. The absence of underbrush gives this forest a clean, park-like appearance.

Agreeable variety is provided by an occasional colony of the quaking aspen, looking very striking, with their pale-green leaves and snow-white trunks, almost a hundred feet in height, and straight as masts. According to Dr. Merriam, the porous soil of this region "supports a sparse growth of bunch-grass which is high enough after the rainy season sets in to conceal the rocky surface, and, at a little distance, to present the appearance of a meadow." But in the dry season grass is scarce, and the absence of flowers places this route in unpleasant contrast to the Yosemite road, along which there is a constant succession of new flowers. There are indeed a few cactus blossoms—some on the brink and along the walls of the Cañon—which try to atone by their brilliant crimson color for their isolation, but even cactus is scant here. In a region where even the sage-brush of the northern alkaline deserts finds its southeastern limit, one would expect an abundance of drought-loving cactus; but I fancy that the cold and snow of winter often prove fatal to it; for it must be borne in mind that we are here at an elevation of over 7,000 feet, and that the climate is entirely unlike that of neighboring California, where it rains only in winter, while this Arizona plateau, like Mexico, gets its principal rains in midsummer (provided it gets any at all), and in winter the snow often lies several feet deep.

Evidence that Arizona has not had enough rain for two or three years past had been painfully evident from the car-windows, and was still more so after we left Flagstaff. Every few minutes the skeletons of cattle were seen lying near the track, some with the dried skin still drawn over them; in one place there were eighteen of them in a group: they had evidently succumbed to thirst before they could reach the station that was to take them to Kansas. Along the stage-road from Flagstaff to the Cañon, I was surprised to find a number of grain-fields which get along without irrigation, and not a few cattle and sheep ranches, with many animals. Some cattle were also kept at the stations where we changed horses, and which consisted merely of a stable for the horses, a tent for the man in charge, and a lonely dog who was always delighted when the stage came. Water is usually piped to these stations, and there is enough for the cattle as well as the horses, but food is very scant, and the cattle have a dwarfed, lean, and rough appearance, looking as if they had licked each other all over and the hair had refused to be smoothed again. It is certainly not a paradise for animals—excepting lizards, of which there are many species; yet in the groves near the Cañon deer and antelope are said to be still quite abundant, and the Indians still come here to hunt. They used to call at the camp, too, until their visits were "discouraged." The omnipresent coyote, of course, abounds. We passed one only a hundred yards from us, and, instead of running, it stared at us boldly. Perhaps it had heard that the California authorities had just stopped paying a bounty on coyote scalps, most of which were imported from Arizona. These cowardly animals are sometimes so crazed by thirst that they rush up to a spring while men and cattle are drinking from it, and can thus be killed with a stick or stone.

HENRY T. FINCK.

## THE MEMOIRS OF GEN. BIGARRÉ.

PARIS, August 15, 1893.

AFTER the great Napoleon, shall we have all his brothers and sisters? and not only his brothers and sisters, his mistresses? M. Frédéric Masson has already published in the literary part of *Figaro* twenty-five articles under the heading, 'Les Femmes de Napoléon.' The series is not finished yet, and it will make a volume. I have before me the 'Memoirs of General Bigarré, aide-de-camp to King Joseph.' This last mention was necessary, for, as a general, Bigarré left no reputation. People will read these memoirs chiefly for details about one of Napoleon's brothers and his ephemeral reigns in Naples and in Spain. General Bigarré wrote towards 1830; he was at that time fifty-five years old. The manuscript was presented to the library of Angers.

The publisher tells us candidly that "the style is not correct, the phraseology is often strained or trivial; the *gauloiserie* will often shock the least prudish; the judgments are not very elevated. But, in spite of these reproaches, it seemed to us that the innate honesty of this rude and illiterate soldier, his sincere patriotism, his enthusiasms, even his prejudices, which are a faithful and curious reflection of his time, the importance of the events and the personages he had seen, were capable of pleasing and interesting a reader." And so they are. I opened the book with diffidence, and read it with pleasure; the part of the memoirs anterior to the Revolution has a special interest, inasmuch as Bigarré was a Breton, and gives us curious particulars as to his province. His father was seneschal of Belle-Isle-en-mer; he himself was born on January 1, 1775, and was the thirteenth child of the family. He very early imbibed military tastes, as the island was garrisoned by two Swiss regiments, Courten and Castella, which were replaced after four years by two other crack regiments. Bigarré was destined for the sea and made his first journey to Bordeaux at the age of twelve. He studied afterwards a little hydrography and mathematics at Lorient. He was only fourteen when the Revolution of 1789 broke out; he was allowed, however, to wear the new uniform of the National Guard, and he was the first to show at Belle-Isle the blue coat, with its white lining, and the pink collar and cuffs. "Everybody looked at me as one of the children of the brave Lafayette, as one of the defenders of the country."

His father sent him on a merchant ship to San Domingo, and while he was there he became a witness of the revolt of the colored population and of the bloody struggles which took place in the West Indies. On his return to France he found everything changed. The majority of the officers of the army and navy had emigrated; in the Normandy regiment which was garrisoned at Belle-Isle, there were twelve places of sub-lieutenant vacant. Bigarré's father obtained one for him at the age of eighteen. He was enchanted to wear the white uniform of Normandy. His first campaigns, alas! were made in Brittany against the Chouans and the Vendeans; his father and his brother were threatened every day with the guillotine, and he was obliged to fight the men who were the armed adversaries of the Terror. The war which he had to make resembled much that in which he had participated in San Domingo—a war of surprises, of ambuscades, of devastation. Bigarré was employed against the émigrés of the Quiberon expedition; he saw the unfortunate Sombreuil, who was executed, as well as all the émigrés who were taken prisoners at Quiberon. He joined the naval expedition which was sent by Gen. Hoche against Ireland. He was on the ship *The Rights of Man*, which had to sustain a terrible fight and was afterwards wrecked in Bantry Bay. Bigarré was one of the survivors of the Legion of France, which had been organized for Ireland, a legion of 2,600 volunteers clad in the uniforms taken at Quiberon. The Irish expedition was, on the whole, deplorably conducted. "England," says Bigarré, "rejoiced at our disasters. She saw Ireland escape a revolution which would have freed her; she was not ignorant that we brought to Ireland a government of her choice, arms for an army, and 12,000 picked men to rid her of the English yoke."

Bigarré, after this unhappy expedition, was sent to the army of Sambre-et-Meuse. We find him first on the Rhine, then going to Paris with his regiment to help the movement which has kept the name of the 18th Fructidor. This movement was the triumph, says Bigarré, of the Republican party over the irresolute and the inconstant. The three Directors, Barras, Rewbell, La Révellière-Lépeaux, turned Carnot and Barthélemy out of the Directory; arrested Pichegru; deported fifty-two Deputies and several generals. After the 18th Fructidor, Bigarré was sent to Switzerland, and afterwards to Bavaria. The account of his campaigns is oddly mixed up with the story of his numerous and necessarily short love affairs; he was eminently one of those warriors who were, in the language of his time, devoted equally to Mars and to Venus, and he would have us think he was as irresistible in the domain of love as on the battle-field. His fatuity is simply ridiculous, but his adventures somewhat relieve the tedium of military operations, though they have an unpardonable vulgarity and did not deserve to become a part of the memoirs. But it is clear that Bigarré thought that love and war were one and inseparable. In love, he says, as in war, "vaincre sans péril, c'est triompher sans gloire"—thus altering a classical verse,

"À vaincre sans péril, on triomphe sans gloire."

At the waters of Luxeuil, where he was sent for his health, he made the acquaintance of Mme. Bonaparte. He danced with her daughter, Hortense Beauharnais, who became Queen Hortense, and he was induced by the kindness of Josephine to write a letter to Bonaparte asking him for a place in the picked body called the Consular Guard. Bonaparte appointed him captain in the chasseurs of this guard. Bigarré had now many occasions to see the First Consul, who resided at the time at Malmaison. He now thought of marrying, and asked for the hand of a young lady whom he had known in Alsace at Colmar. This lady gave her consent, and they were married in 1802. Mme. Bigarré had seen much of Mme. Bonaparte at the house of Rewbell, who was her uncle, and was intimate with Hortense Beauharnais. Mme. Bonaparte had a small theatre at Malmaison, which became the rendezvous of the ambassadors, of the highest personages of state. The principal actresses were Hortense de Beauharnais, Caroline Bonaparte, Mme. Savary, Mme. Duchâtel; the best actors were Eugène de Beauharnais, Bourrienne, Savary, Lauriston, Marmont. Masséna had a fine estate near Malmaison. One of the best portraits of Napoleon represents him in the dress of the Consular Guard walking before Malmaison. In the famous portrait by Gérard (now at Chantilly) the Emperor also wears the green uniform of the Guard of the Consuls.

When the First Consul began to meditate the 18th Brumaire, he sounded Rewbell, the ex-Director, several times, who was living quietly at Arcueil. Bigarré tells us that Rewbell did not like the First Consul, and gave him to understand that he could not work on his side, but "that Bonaparte might count on his neutrality in case of extraordinary events."

"I knew well," says Bigarré, "the ex-Director Rewbell, since for three years I saw him every day either at his house in the Rue de Varennes or at his country house at Arcueil. I can attest that he was a man of much *esprit* and of great firmness of character. The First Consul knew so well that he was a statesman and a Frenchman *par excellence* that he several times sent word to him by Mme. Bonaparte or by Gen. Lefebvre that it only depended on him to become a minister."

M. Rewbell would never submit to pay court to the First Consul. He did not esteem Fouché nor Talleyrand, and would never consent to be their colleague. After having been Director, Rewbell died without leaving to his children any greater fortune than he had in 1789. "His eldest son was persecuted by the First Consul for having been a witness for Jerome when he married Miss Paterson at Baltimore, and for having brought to Gen. Bonaparte a portrait of his sister-in-law." We learn also in these Memoirs that the Rewbell family rendered many services to Mme. Bonaparte during the Egyptian expedition; she always remembered it, "but the austerity of Rewbell's principles constantly thwarted the good intentions of this generous woman."

The Consular Guard proved to be the nucleus of the Imperial Guard. Bigarré became a Colonel and commanded a regiment of the Guard at the camp of Boulogne and in the campaign which ended at Austerlitz. During the battle, a battalion led by him was charged three times by the Russian cavalry, and in the last charge lost its eagle; the man who carried the flag received twelve wounds before it could be taken from his hands. Bigarré was much mortified by the loss of this eagle. Napoleon reviewed Vandamme's Division, to which he belonged, on the 25th of December at his headquarters in Schönbrunn; and, on arriving before the Fourth, which was Bigarré's regiment, he spoke thus to the battalion which had no eagle: "Soldiers, what have you done with the eagle which I confided to you? You swore to rally round it, and to defend it at the risk of your lives. How have you kept your promise?" Bigarré came forward and said that his regiment had done its whole duty; he explained at length how the unfortunate event had taken place. The Emperor smiled: "Well, you shall have another eagle." He invited Vandamme and all his colonels to dinner; but Bigarré was so outraged by the reproaches of Napoleon that he sent his excuses and did not join the other colonels. In vain did Napoleon afterwards appoint Bigarré Officer of the Legion of Honor; he resolved to offer his services to Prince Joseph Bonaparte, who had been appointed King of the Two Sicilies, and waited quietly for the answer of the new King. Joseph readily accepted his offer, and Napoleon authorized Bigarré to enter his brother's service. When he took leave of him, before quitting France, Napoleon said to him: "Well, are you angry with me, since you leave my service?" "Sire, I beg your Majesty not to think it; in going to Naples I hope to serve you more actively than here." "Well, tell the King that he must give you a regiment of his guard to command, and remain always a good Frenchman."

Bigarré was now beginning a second life, as it were; he was separated from the Grande Armée and following the fortunes of Joseph Bonaparte. This portion of the Memoirs contains many interesting details, especially in regard to Spain and the popular movement against the French. The Memoirs end in the year 1812; we are not told if this volume is to be followed by a second one, or if Bigarré, for some reason or other, did not continue to write. In 1830 he could have had much more to say on the eventful period which separates 1812 and 1815.

# Correspondence.

## SILVER IN POLITICS.

To the Editor of The Nation:

Sir: The movement which will soon result in the repeal of the Silver-Purchase Law proves conclusively that the silver folly has hitherto flourished chiefly through the sufferance and indulgence of those who could not be brought to believe that such madness could count seriously against a nation "of boundless resources." Men like Senator Sherman have up to the present crisis been governed in their financial course, not by economical principle, but by supposed political expediency. The present policy would never have been forced upon the country by any amount of ignorant or interested agitation, had not the authors of political platforms, the editors of partisan newspapers, and leaders in the halls of Congress, indifferent to remote results, attempted to outbid each other in securing the Western or Southern vote. I think it safe to affirm that practically none of these men, after careful study, honestly judged the policy advocated in party platforms to be wise. Their insincere juggling with dangerous catchwords was of a piece with their usual treatment of the tariff and the so-called labor problems. It is upon them, therefore, that the blame for a disastrous and expensive experiment rests, and it is to be hoped that they have laid its lesson to heart.

There is, however, one ambiguous phrase which has lately become current, that leads me to fear that we are not yet out of the woods. The silver question, we are told, and rightly told, is not a party question. Does this mean that both parties may in the future contain both sound and unsound-money men?

Are the combined sound-money men of both parties to be steadily antagonized by the combined cheap-money men within the same organizations? Despite Mr. Bland's reappointment, let us hope not. Leaders must recognize that no party which is uncertain on the money issue can continue to direct public affairs. No matter what a man's opinions on the tariff, if he believe in the efficacy of depreciated currency, he should be driven into the Populist camp; for the cheap-money demagogue necessarily holds that as the first and chief article of his creed.

If a fearless and unflinching programme like this can be executed, we are assured of the leisure and moderation required for future exigencies. Aside from the invaluable educational work of this summer's difficulties, the proselytizing power of any idea will be seriously impaired if it is branded as the hobby of the "long-haired men and short-haired women" who gather under the banner of Senator Peffer and Mrs. Lease. Ideas, like men, are known by the company they keep; and commerce would certainly have little to fear from any doctrine that is the peculiar property of the Alliance. The business and laboring men who have hitherto "favored silver" have followed the guidance of a Senator, editor, or Representative, whose opinions, in turn, have been dictated only by the desire to court favor through the flattery of popular prejudice. The common people may be relied on, if their leaders remain true and genuine: Grover Cleveland's career proves that. A. F.

Louisville, Ky., August 28, 1893.

## JAY AND GARDOQUI.

To the Editor of The Nation:

Sir: In your notice of the last volume of Prof. Johnston's 'Correspondence and Public Papers of John Jay' you speak of Jay's "weakness with Gardoqui." You refer, of course, to his willingness to yield for a term of years the free navigation of the Mississippi, while still asserting the right to it, in exchange for liberal commercial concessions on the part of Spain. Jay may have shown weakness in that matter, but if so he was weak in good company. For example, Washington, who had visited the Western country the year before, wrote to Richard Henry Lee, President of Congress, August 22, 1785, as follows:

"However singular the opinion may be, I cannot divest myself of it, that the navigation of the Mississippi, *at this time*, ought to be no object with us. On the contrary, until we have a little time allowed to open and make easy the ways between the Atlantic States and the Western territory, the obstructions had better remain. There is nothing which binds one country or one State to another but interest. Without this cement the Western inhabitants, who more than probably will be composed in a great degree of foreigners, can have no predilection for us, and a commercial connexion is the only tie we can have upon them. It is clear to me that the trade of the lakes, and of the River Ohio, as low as the Great Kenhawa, if not to the falls, may be brought to the Atlantic ports easier and cheaper, taking the whole voyage together, than it can be carried to New Orleans; but, once open the door to the latter before the obstructions are removed from the former, let commercial connexions, which lead to others, be formed, and the habit of that trade be well established, and it will be found to be no easy matter to divert it, and *vice versa*. When the settlements are stronger and more extended to the westward, the navigation of the Mississippi will be an object of importance, and we shall then be able, reserving our claims, to speak a more efficacious language than policy, I think, dictates at present." (Works, ix., p. 119.)

## EVOLUTION MISUNDERSTOOD.

To the Editor of The Nation:

Sir: Taking up *Nature* of August 10, I find in it a certain inference from Darwinism which I have frequently seen before, and which thus far seems to have passed muster unchallenged, though certainly false; at least I have nowhere seen its validity denied.

*Nature* says that the *New Review* contains an article by Prof. Ludwig Büchner on "The Brain of Women," and proceeds to give from it the following extract:

"If we consider that for thousands of years woman, by reason of her subordinate social position, has received a different education from her male partner, and that her training has led her in quite another direction than his, that her horizon has been a more limited one, and, moreover, that every encouragement has been given to the play of her emotions at the expense of the activity of her intellect, and, finally, that this state of affairs has lasted from generation to generation through mother to daughter, then I say that from a physiological standpoint there should be no cause for surprise that, as a result, woman should differ from man, that her brain should be inferior to his, or at any rate should have developed on different lines, or, as we have been saying, that the fore part of her brain should be found to be proportionately less and the hind part proportionately greater than that of man."

Now, I submit that our natural qualities, aptitudes, propensities, come to us not through *one* parent but *both*, and that there is no such a thing as descent of natural faculties or deficiencies in line female only. It is too well known to require being insisted upon that the daughter will inherit aptitudes, peculiarities, features, form, etc., from father as well as from mother, and that the son will thus inherit from mother as well as from father.

Whatever, therefore, may be true of the deficiencies or excellences of the minds of women as compared with the minds of men, this result must be due to the natural course of development of the female organism as distinguished from the male, under like conditions.

Respectfully, Werner A. Stille.

St. Louis, August 26, 1893.

# Notes.

Harper & Bros. have nearly ready 'Essays in London and Elsewhere,' by Henry James, and 'The Work of John Ruskin: Its Influence on Modern Thought and Life,' by Dr. Charles Waldstein.

Books on the scenic wonders of the Pacific slope are multiplying fast. One of the latest is 'The Yosemite, Alaska, and the Yellowstone Valley,' by Wm. H. Wiley and Sara K. Wiley (New York: John Wiley & Sons). It consists of a series of papers reprinted from *Engineering*, descriptive of a journey of 10,000 miles, undertaken by the American Institute of Mechanical Engineers. It includes an account of the trip across the Union Pacific Railroad to Pike's Peak, Garden of the Gods, and other Colorado attractions, the return trip being made via the Northern Pacific. The style of these descriptions is frankly journalistic, often superficial, sometimes graphic, with plenty of spice in the form of drolleries and witticisms such as are apt to be perpetrated on such a journey. Some of the jokes and descriptions are repeated, giving evidence of careless editing, but, taken as a whole, the book is readable and calculated to stimulate the appetite of intending tourists. The best part of it is the chapter devoted to Alaska. The visit was made early in the summer, the result being sunlight twenty-one hours out of twenty-four at the northernmost point, and there was more snow and ice than are usually encountered on this trip. A good description is given of the Muir Glacier. Among the evidences of dawning civilization was an Indian brass band at Sitka. The young men "played surprisingly well, keeping the most perfect time." There are no fewer than 157 illustrations, some from photographs taken by members of the party, others familiar scenes that may be bought in the stores. Those of the Leland Stanford University will be new to most readers of books on the Pacific slope.

The 'Boston Illustrated' guide-book issued for some twenty years with periodic patching by Houghton, Mifflin & Co., has been written *de novo* by Mr. Edwin M. Bacon, and freshly illustrated by pen-drawings from one hand. Mr. Bacon's capacity for his task was exemplified in his admirable 'Dictionary of Boston.' He now takes up the city in the order of its quarters, and what he forbears to insert in the text often finds a place in the index, which abounds in statistics, historical notices, and such data as the price of board at hotels. This is a very satisfactory innovation. There is a new folding-map of the city, and sections of it are interleaved with the descriptive narrative.

The plural title of 'Les Moreau' in the series "Les Artistes Célèbres" (Paris: Librairie de *l'Art;* New York: Macmillan) holds good for but a few pages. The elder of the Moreau brothers, Louis-Gabriel, has almost no history, and M. Adrien Moureau's concern is with Jean-Michel ("Moreau le jeune"), the engraver and designer, who illustrated in the most prolific manner Ovid and Molière, President Hénault and 'Orlando Furioso,' Rousseau and Voltaire and Laborde, the great 'Monument de Costume' of 1789, and many another work. He was born in 1741, and faithfully caught the lineaments of the old régime in its downfall, and has recorded with his pencil the opening scenes of the Revolution, in which, though he still continued to produce into the present century, he underwent a change, like most things about him. M. Moureau is a candid biographer; he introduces many copies from Moreau's prints and from his unpublished sketches in the Museum of the Louvre.

A pamphlet 'In Memoriam' of the late Col. Charles C. Jones, jr., LL.D., historian, biographer, and archæologist (1831–1893), by Charles Edgeworth Jones, published at Augusta, Ga., records the literary productions of one of the most industrious writers of our time. Col. Jones was educated at three colleges—South Carolina, Princeton, and Harvard—and, after serving on the Confederate side in the civil war, he lived for a period of twelve years in this city and vicinity, practising law and composing work after work in his four favorite lines, viz., Indian antiquities, Revolutionary, Georgian, and Rebellion history and biography. With the more permanent publications were mingled addresses and newspaper articles to the total number of eighty. These were all of serious and mostly of high merit. We read of his father, a Presbyterian clergyman, that he was eminent for his "devotion to the cause of the evangelization and moral elevation of the human race." To Col. Jones himself we owe an essay on 'Negro Slaves and their Relations to the Confederate Government during the Civil War,' and the little volume 'Negro Myths from the Georgia Coast,' for which even "Uncle Remus" had left room.

The *Sewanee Review*, a quarterly journal of much promise issued by the Faculty of the Uni-

versity of the South at Sewanee, Tenn., completes its first volume with the current (August) number. In this number most to be remarked of the eight leading papers is one on "Features of American Slavery," principally from the point of view of the legal status. The tone is restrained and passionless, but the writer's candor and humane sympathies are apparent. Speaking of the stress laid by the laws on prohibiting the teaching of slaves to write, he surmises that the intention was to prevent "communication on the part of the slave with people at a distance." But there was a much nearer motive. Ability to write meant ability to counterfeit passes which would outwit the ignorant midnight "patterrollers," and so permit a freer intercourse between plantations or even pave the way to a fugitive's "enlargement."

There is an accent of truth in a biographical sketch, "An Abolitionist," in the July number of the monthly *Home and Country* (New York: Joseph W. Kay), which purports to give an inside view of the "Underground Railroad," not only as a receiver and forwarder of voluntary fugitives, but as an organized promoter of business by runners at the South. The branch which fell under the writer's observation was that of Ohio. He expresses his surprise that "no history of this remarkable body [U. G. R. R.] has ever been written," but Still's History and Smedley's (for Pennsylvania) and the Reminiscences of Levi Coffin (for Ohio) are well-known works, and Harriet Tubman's heroic adventures as a runner-off of her own color have also formed the subject of a memoir. We do not, however, remember to have read of any river scheme like that somewhat incredibly described by Mr. M. H. Peters, the magazine writer in question.

A fine analysis of the traits of the late Guillaume Guizot by his intimate friend M. A. Sorel, President of the Cercle St.-Simon, is given in the July Bulletin of that historical society. A man of the most ready and brilliant conversation, a scholar whose memory was extraordinarily sure and extensive, he died the writer of but one work, his 'Ménandre.' He had projected an edition of Montaigne, but his idea of preparation for it resembled that prescribed by Mark Pattison for the editing of Selden's 'Table Talk': "il y voulait faire entrer dans ce livre tout un siècle, tous les antécédents de ce siècle, toutes les suites dans les autres siècles." His end was attended with great suffering, which he bore unselfishly and stoically. His dying father had had Corneille read to him; he murmured Virgil's

"O passi graviora, dabit Deus his quoque finem."

His endurance of the operation on his throat caused the surgeon's assistant to exclaim, "This is a man of Utica." But Guizot wrote, as soon as he was able: "That youngster is mistaken; Cato was not of Utica, he merely died there."

The first Circular of Information from the Bureau of Education for the current year is a third, revised edition of Mr. Julius Ensign Rockwell's 'Shorthand Instruction and Practice,' an historical work of world-wide range, especially valuable for its statistics of instruction in shorthand in the United States for the year ending June 30, 1890, its chapter on the employment of stenographers in courts, and its comparative tables of shorthand alphabets.

A brief history of the Chilian Revolution of 1891 has just issued from the Office of Naval Intelligence at Washington (War Series No. IV., Information from Abroad). It is a report from personal observation by two officers of the *Baltimore*, Lieut. Sears and B. W. Wells, jr. The causes of the hostilities are stated, and the course of hostilities followed to the end, with maps and photographic views. The leading manifestoes of the two opposing parties are given in an appendix. The Hon. Patrick Egan cuts a modest figure, and the bias of our navy and the bullying of our Government have nothing to do with this narrative.

Among this year's notices of collegiate honors taken by women, mention should be made of the award of the mathematical fellowship (value $400) at Cornell University for 1893-94. There were twelve applicants, nine men and three women, of whom one was from Girton College, Cambridge. As it is stated that the candidates "showed very remarkable ability," Miss MacKinnon (a M. S. of the University of Kansas), to whom the fellowship was finally given, can enjoy the satisfaction of feeling that she has contributed her modest quota to a mass of cumulative proof of the mathematical quality of the feminine intelligence. Such proof is still further reënforced by the latest announcement from the examiners (or, as they are technically called, the "Moderators") in the Honor School of Mathematical Moderations at Oxford. No Oxford residence students went in for this examination, but four women from outside colleges were well placed; two graduates of Royal Holloway College securing a first-class, and one student each from the Royal Holloway and from University College, Cardiff, taking a third-class.

No more picturesque episode in the evolution of higher educational opportunities for women has occurred in our generation than the admission last year of two young Chinese women as medical students at the University of Michigan. These almond-eyed followers of Hippocrates are Christian converts who expect on their return to China to approach their fellow-country women as missionaries, under the persuasive and merciful guise of the good physician. They are officially reported as being "very intelligent, excellent students, having no trouble in doing the work of their respective classes. . . . Indeed, they are regarded as more than average students."

Apropos of the recent citation of Increase Mather's application in 1692 of the term University to Harvard, the following extract may be of interest. It is taken from Mather's 'Brief Account concerning Several of the Agents of New-England, etc.,' dated London, November 16, 1691. We have italicized the various denominations employed for the same institution:

"As long as that Countrey [New England] lay unsettled, as to the Civil Government, I could not do much for the *Colledge;* only I prevailed with a Gentleman of my Acquaintance, to bequeath a Legacy of Five Hundred Pounds to that *Society*. And now in this New-Charter, all Donations or Revenues granted to that *Academy*, are by the King, under the Great Seal of England, Confirmed. I humbly proposed to some great Ministers of State, That a particular Charter might be granted for the Incorporating that *School* for Academical Learning. Answer was made, That it should be so, if I desired it: But that a better way would be, for the General Court of the Massachusetts Colony, by a Law, to Incorporate their Colledge; and to make it an *University*, with as ample Priviledges as they should think necessary," etc.

—A singular quality is given to the tone of the September *Atlantic* by the fact that the number consists almost entirely of essays. The verse is cut down to a minimum, and the only portion of fiction allowed is an instalment of Miss Murfree's "His Vanished Star"—a novel so like several of its predecessors that one feels already familiar with its plot and its characters. Most of the essay matter is in the gently meditative manner. The authors discourse staidly of love and marriage, of wayside happenings on a Florida road, and of such of the vegetable contents of the woods and fields as small boys delight in. The subjects of other articles are, it is true, of more solid importance, but in nearly all the tone is oppressively courtly or gravely impersonal. The notable exception is a vigorous reply by President Walker to Prof. Shaler's singular assertion, in the preceding issue, that a technical school not connected with a university is in all probability an anomalous or impermanent growth. His opponent's argument turns the tables by reversing Prof. Shaler's assertion, and declaring that, however beneficial the association of the technical school with the university might be to the university, it may be questioned whether the technical school would be better off, "in view of the multitude of distractions which beset ordinary student life, and the frivolity of many of the interests which are there deemed of prime importance."

—In the September *Century* fiction is merely one of the elements of construction. It is for the most part mediocre, and the peculiar alertness, freshness, and vigor so characteristic of our best periodicals are here produced by a skilful blending of kinds of subject-matter. Thus we find articles in which statistics from the census of 1890 support inferences as to the results of unrestricted immigration and as to the relations between idleness and crime among our native-born population. Interesting, too, is the biographical and critical matter relating to Defoe and Webster, the compact sketch of W. J. Stillman's adventurous life, and the continuation of Salvini's autobiography. The longest article in the issue, as well as that best worth repeated reading, is Mr. G. E. Woodberry's "Taormina Note-Book." It is less a record of what a traveller saw day by day in one of the loveliest of Sicilian towns than an essay in which are embedded all the more permanent impressions made on the mind of a scholar and a poet by the wealth of associations that history and the muses have showered upon Sicily, and by its native beauty of sea and sky and mountain.

—The leading article in *Harper's* is Mr. Davis's account of still another side of English life—the picturesque happenings that attend a general election in the country. Mrs. Pennell describes with enthusiasm another out-of-the-way French town, this time Rocamadour, which she calls "an Albert Dürer town set in an Albert Dürer landscape"; and Col. Dodge continues his now somewhat bewildering enumeration of the peculiar characteristics which distinguish the various kinds of horses and horsemanship in Eastern lands. In addition there are interesting papers which concern directly American biography and history. Mr. Norton gives extracts from some twenty letters of Lowell's, most of which are taken from the forthcoming volumes of his correspondence. Like the letters published by Mr. Stillman, and such others as have found their way into print, these rank among the highest of their kind, so completely do they fulfil Lowell's own dictum that "a letter ought always to be the genuine and natural flower of one's disposition—proper both to the writer and the season—and none of your turnip japonicas, cut laboriously out of a cheap and flabby material." Ex-Senator Maxey tells the story of the colonization of Texas and its brave career as a republic until

it became a part of the Union. Mr. Janvier continues his interesting researches among the relics of bygone days in New York, by following the course of the old Abingdon road—which, it seems, was known in the last part of the last century as Love Lane—and the fortunes and transformations of the estate and village of Chelsea. The remaining articles are biographical sketches of Prof. Barnard, the astronomer, and of Daniel de Gresollon, Sieur de L'hut, the soldier, explorer, and adventurer for whom Duluth was named.

—The current number of *Scribner's* shows how far afield our periodicals often run in their pursuit of the fresh and interesting. Not reckoning in the fiction, scarcely one article deals with strictly American materials. The leading article and the frontispiece concern Isaak Walton. Mr. Sullivan describes with loving minuteness the manuscript of Thackeray's "Roundabout Papers," which the Harvard College Library now possesses by gift of Mr. Leslie Stephen, and finds the details of its composition characteristic of the author. Andrew Lang contributes a laboriously erudite epistle to Samuel Pepys, Esq., intended for a new edition of "Letters to Dead Authors." Austin Dobson, at home in all that pertains to the history of English literature and society in the eighteenth century, writes with consummate accuracy and charm of the home life of Samuel Richardson. Other articles deal with the evolution of modern clothing, with the proverbial tides in the Bay of Fundy, and with the life and trade of the machinist. The only contribution that deliberately casts in its lot with the people, fashions, and customs peculiar to these United States is Robert Grant's "Opinions of a Philosopher," which comes to an end in this number.

—The first part of 'Die Wahrheit über Emin Pascha' (Berlin: D. Reimer), by Vita Hassan, contains a fairly interesting account of affairs in the Equatorial Province from January, 1881, till the breaking off of communications with Egypt two years later. The author, an Italian by nationality, though an African by birth, was the medical officer of the province, and writes intelligently and with an evident attempt at impartiality of the events which came under his notice. Though his narrative, thus far, contains little or nothing that is new, he has much to tell of the manners and customs of the Sudanese Arabs which is curious and entertaining. His account, for instance, of the marriage ceremonies of the former is singularly graphic. In the latter half of the volume he sketches the history of the eastern Sudan from its conquest by Egypt to the fall of Khartum. He has little sympathy with Gen. Gordon, and criticises his first administration severely, as marked by blunders and disastrous to Egyptian interests. His final failure he ascribes to an overweening self-confidence. Of Emin there is, as yet, comparatively little said, and praise and blame are about equally bestowed. The general impression left is that his rule differed but little from that of an upright and enlightened Turk. When he saw oppression, he relieved it, if it was possible, but he seems to have been able to put few checks upon the savagery of his soldiers. Raids for cattle—and apparently for slaves—were not uncommon. The only instructions which Emin gave when they were made upon tribes with whom they were at peace were that they should be without damage to persons, houses, or fields. It may be remembered that the soldiers left by Emin, who have been recently stationed by Capt. Lugard in Uganda, are a serious menace to the welfare of the country through their raids. Emin is also described as being very suspicious and jealous of his higher officers, and several instances are given of his arbitrary or underhand treatment of them. On the other hand, he is represented as displaying high qualities as a ruler, and it is made evident that with better material to work with he would have accomplished far more than he did in developing the resources of the Equatorial Province. A portrait of the author, who died in March last, is given. The book is translated into the German from the French by Dr. B. Moritz, who occasionally adds an explanatory note or corrects an error in the original text.

—Of the two fragments of early Christian literature brought to light last year, the Gospel and the Apocalypse of Peter, the Gospel naturally attracts the most attention from students of Christian origins. In the Apocalypse, however, are several features of unusual interest for the student of social and literary history. This document, attributed by Harnack to the first half of the second century, far antedates all other extant Christian detailed and realistic descriptions of the torments of hell, and is thus the prototype of that species of literature, widely popular at a later date, of which Dante's 'Inferno' is the greatest example. The torments themselves are elaborations of fancies derived from Greek sources, perhaps the Orphica, and are chiefly interesting when looked upon as in the initial stage of centuries of service as the terror of all, both the wicked and the good, the awful background of death. From the sins for which these torments are inflicted we get a most instructive glimpse of the moral feeling which pervaded early Christian society. The growth of asceticism is foreshadowed by the severity with which sexual offences are punished. In regard to the rich and comfortable we find a vindictive tone which offers a striking counterpart to the bitterest utterances of modern socialism. This is the way in which the tables would be turned in the next world: "And in another place were jagged stones, sharper than swords or any spit, glowing with fire; and women and men clothed in filthy rags were rolling on them being punished. Now these were the rich that trusted in their riches and did not take pity on the orphans and widows, but regarded not the commandment of God." This picture is a very natural outgrowth of Luke xvi. 19–31 and James v. 1, or of what lay behind those passages. The next verse contains the earliest Christian condemnation of taking interest: "In another pool filled with blood and matter and boiling filth, stood men and women up to their knees; these were they who took usury and demanded interest on interest." The verse immediately following deals with those guilty of abnormal sexual offences, and thus, curiously enough, we find the same juxtaposition of sinners which is so striking in the eleventh canto of the 'Inferno':

> "E però lo minor giron suggella
> Del segno suo e Soddoma e Caorsa."

In the Apocalypse the collocation is not so apparently intentional, and the punishments are different, but with little choice in regard to painfulness. This passage in Dante probably strikes most readers as the very essence of mediævalism. In this point, as in many others, the mediæval view was nearer primitive Christianity than we realize. A mass of literature is rapidly accumulating about these two documents. Harnack's 'Bruchstücke des Evangeliums und der Apocalypse des Petrus' (2d ed., Leipzig, 1893) is probably the most complete edition. It contains the text, with introduction, translation, and notes, besides a detailed critical excursus on the Gospel and full indexes. Harnack is the authority for two or three of the more important historical statements given above. The English reader will find an English version with commentary in Robinson and James's 'The Gospel according to Peter and the Revelation of Peter' (London, 1892).

---

OHNEFALSCH-RICHTER'S KYPROS.—I.

*Kypros, the Bible, and Homer:* Oriental civilization, art, and religion in ancient times elucidated by the author's own researches and excavations during twelve years' work in Cyprus. By Max Ohnefalsch-Richter, Ph.D. With a letter to the author from the Right Hon. W. E. Gladstone. Two volumes. Vol. I.: Text; Vol. II.: Plates. London: Asher & Co. 1893. Folio, pp. ix, 530; 7, ccxviii.

RICHTER'S full report of his work in Cyprus is a welcome addition to the resources of the student of archæology. Coming after the other explorers, he is able to verify or correct and to use their observations, and thus to make his book in a sort a history of Cypriot research. With some of these gentlemen he has unnecessary tilts respecting questions of priority in discovery, but in general his tone regarding his work is quiet and not undignified, though in the nature of the case often self-assertive. What he has done may safely be left to speak for itself: he has not only made important discoveries, but (building in part on others) he has laid the foundation of a scientific arrangement of the material, without which the details will be of comparatively little value. The account of his excavations is given chiefly in the opening chapter of the first volume and in the explanations of the plates. The body of the work is devoted to an examination of Cyprian deities and cults, and their relation to Egyptian, Semitic, and Greek religious ideas and customs; it is, in fact, a contribution to the history of one side of the old Semitic-Greek religion.

The number of details with which the author has to deal is immense, and it is not strange that he does not always succeed in bringing them into orderly array. Nor is it surprising, though it is regrettable, that the costly English translation, printed at Berlin, is typographically bad; in addition to the errata given at the end of vol. i., many words are misspelt, the punctuation is often faulty, and there is inconsistency in the writing of proper names. In some cases also the translation appears to be incorrect. We do not forget that the difficulties in bringing out the work were great; nevertheless, in so important a book we have a right to expect accuracy of printing. On the other hand, the illustrations in the second volume are admirable in execution, and bring together materials from various quarters so as to allow of helpful comparison. Too much praise cannot be given to the author's patient industry and conscientious devotion. His reading is wide, his references to authorities are numerous and precise, and he is careful to assign to each his own. The explanations of the plates are full of matter, and the author's suggestions and hypotheses, scattered throughout the two volumes, are always interesting, if they do not always commend themselves as correct. The indexes and cross-references are good, but there is no table of contents.

The main object of the work is to exhibit

Cyprus as the meeting-point and distributing-centre of the ancient world, and to show how it illustrates and how it helped to form the religious framework of Semites and Greeks. The discussion is archæological-historical rather than theological-historical; it confines itself to showing the existence of certain representations of deities and cults in Cyprus, and does not attempt to examine into the origin of the religious ideas that underlie them. This limitation is perfectly proper: Richter's investigations are of the nature of a preparation for the theogonic history.

Among the points of special interest in his work is his description of the Astarte-Aphrodite cult. It has been held for some time that the Greek Aphrodite was of Semitic origin. The grounds on which this view is based are the Semitic coloring of the Greek goddess and the indication of Oriental origin in the earliest Greek notices of her. Richter has added nothing of great importance to this evidence, but he has traced the history of Astarte-Aphrodite images from the early fetish-forms to the final creations of Greek art. He is no doubt right in recognizing a close relation between the conic Aphrodite of Paphos and the quadrangular goddess of Athens. This progression of forms is what we should expect, and it is perhaps only in Cyprus that we could find it demonstrated. A noticeable feature brought out is the nose-ring in statues of the goddess; this is, however, chiefly interesting as an illustration of the general rule that religious form is imitation of social custom. The animals connected with the Cyprian Aphrodite are doves, hares, birds, and fishes. The relation between deities and sacred animals is one of the obscurest points of ancient religious history, and one on which the present work does not attempt to throw light. The author is concerned to prove only that this special combination arose in Cyprus. More generally, he holds that Cyprus was the birthplace of Aphrodite, in both her characters of love and of war, the spot on which the Greek feeling out of the crude Semitic material fashioned the exquisite form of the goddess of the Homeric poems and of the later sculptors.

This is, however, a small part of the theogonic and other work that he assigns to the island. He finds here the origin of the Harpies, the Sirens, the Erinnyes, of Heracles (out of the Babylonian Izdubar-Eabani), of one aspect of Athene, of the principal type of the archaic Græco-Phœnician Artemis, of the Carthaginian human sacrifice, and even of the Persian Anahita. For some of these combinations there is much to be said. Cyprus was, as far as we know, the first common dwelling-place of Greeks and Semites, and where else should we look for the most ancient figure of Aphrodite? The other cases adduced by Richter are less convincing. For the Heracles type we should perhaps turn more naturally to Asia Minor: there seems to be no need of localizing so old a Semitic custom as human sacrifice in Cyprus; and the derivation of a somewhat obscure Persian goddess from a Mediterranean island is precarious. In general, though we must credit Cyprus with a considerable share in the formation of ancient Greek mythological figures, and possibly also of old religious rites, it is wise, at the present stage of investigation, to wait for further light before making the very broad generalizations with which these volumes abound. Exploration is constantly revealing points of contact between ancient peoples hitherto undreamed of—witness, for example, the Amarna find. Egypt is coming into prominence, along with her great rival, Babylonia. Amid such a mass of social exchanges we must pause before undertaking to fix definitely the points of creation of special theological types.

True to his title, our author adduces numerous illustrations of Biblical things and customs. The sun-pillar (*hamman*), especially connected in the Bible with the worship of Baal, apparently as sun-god, is a frequent figure in Cyprus; whether it was originally and properly metallic in distinction from the wooden post, as Richter thinks, seems to be doubtful. Greater interest attaches to the wooden post, the *ashera* (translated "grove" in the King James version), which plays so prominent a rôle in the prophetical and historical books of the Old Testament. The word has called forth an animated discussion within the last three years. There is no doubt that it signifies the wooden pillar which stood by the shrine of Astarte, and was worshipped as a representation or symbol of the goddess. But it also appears in the Old Testament as the name of a divine being. Some scholars held that this use of the word was due to a late erroneous confusion between god and symbol; the discovery of the word in an Amarna inscription proves, however, that it is really the name of a goddess. What, then, is the relation between the ashera-post and the goddess Ashera?

Our author suggests an explanation as simple as it is obvious. The primitive representation of this deity, as of many others, was an aniconic, amorphous post. When, in process of time, more ambitious idols were introduced, the ancient fetish-form (as also in many other cases) retained its special sanctity, stood alongside of the shrine or image, and bore the name of the deity. An interesting illustration of the persistence of an old form is given in the lately discovered exquisite Artemis group (p. 312), now in Vienna, in which the goddess in her full Greek form leans on an archaic image of herself. The word *ashera*, in the sense of "post," is not to be derived immediately from a verb meaning 'to be straight or upright,' but is to be taken as coming from the divine name. Nor can we say with our author that Ashera is identical with Astarte; she is an independent deity (perhaps the female counterpart of Assyrian Ashur, Hebrew Asher) who in Canaan was probably merged into Astarte.

Cyprus affords examples of a widespread ritual practice generally referred to in connection with the enigmatical passage (Ezek. viii. 17) in which the idolatrous Jews are reproached with "holding the twig to their noses." We often see a goddess or an attendant smelling a flower, an act that appears to be religiously symbolical. It is not probable that this custom will avail for the explanation of the Bible passage in question, the text of which appears to be corrupt; but the custom itself is of interest as a survival of tree worship, a cult the peculiar treatment of which by our author we will speak of further on. His illustrations of Biblical and Homeric customs are generally apposite, but we have not space to cite further examples.

Richter makes a striking contribution to folk-lore in the instances he adduces of the preservation of old Græco-Phœnician customs in modern Cyprian Christian ceremonies. The festival of St. Lazarus (on the Saturday before Palm-Sunday), in which a Lazarus boy dies and comes to life, recalls the Adonis rites and the women weeping for Tammuz, as do the ceremonies of Good Friday and Easter Day. The cakes of meal, honey and oil, and the kolyva of nuts, almonds, figs and other fruits, seem to be not different from the offerings anciently made at the Adonia, and the kolyva even appear to be a survival of the worship of ancestors. In so many cases in religious ritual and in the dress of the people is such survival evident that Richter is justified in seeking for the explanation of ancient manners in those now in vogue. Cyprian women wear over their foreheads pins of gold or silver, the heads of which represent sometimes doves, but more generally various kinds of fantastic figures. But, whatever the shape of the head, the pins are always called *pesounia*, "little doves." Connecting this with the fact that the dove was sacred to Astarte-Aphrodite, Richter concludes that in ancient Cyprus the priestesses of the goddess, and other women in the character of her devotees, wore such pins with dove-heads. Whether or not he is right in this particular case, it seems probable that the present life of the Cypriots furnishes material out of which the old Græco-Phœnician life, on its social as well as on its religious side, may be reconstructed in not a few of its main details.

## BROWN'S VENICE.

*Venice:* An Historical Sketch of the Republic. With maps and plan. By Horatio F. Brown. London: Percival & Co.; New York: Putnams. 1893. Pp. xxiii, 434.

Mr. Brown has achieved a work long deemed impossible: he has written, within the compass of a single volume, a satisfactory history of Venice. The subject has tempted many historians, and some have grappled with it, but none has hitherto mastered it. The secret of Mr. Brown's success is his power to separate the essential from the accidental in the career of Venice. Hitherto, the picturesqueness or the melodrama of certain portions of that story has prevented historians from treating the whole symmetrically; but the first requisite for a historian is to see the totality—to know the stream of a nation's development from its source to its mouth—and this gift Mr. Brown possesses. He can afford to eschew florid descriptions of particular events who can trace with unerring keenness the progress of human destiny in the life of a whole people. So the reader will find in this book little enough about *bravi* and dungeons and all those other stage properties which romancers and poets have pitched upon as peculiarly Venetian; but he will find, instead, a clear account of the way in which Venice organized her government at home and extended her powers abroad.

Venice endured as a State for more than twelve hundred years—longer, that is, than any other Christian State, and almost as long as the See of Rome. What was more improbable than that a settlement of fishermen on a cluster of mud-banks in the Adriatic should grow to be a commonwealth unsurpassed in commercial prosperity, in political steadiness, and in real magnificence? After the Venetians had overcome their first difficulty—how to subsist at all on those mud-banks—the problem before them was whether to reach out for territory on the neighboring mainland or in the distant East. Fortunately, everything conspired to their expansion as a trading people, whereby they escaped the danger of being swallowed up in the innumerable quarrels which tormented northern Italy during the Middle Age. When the time came for them to seek territory in the Valley of the Po, they were already strong. Trade enriched them, dealings with many different races gave them experience, their contact with the Orient kindled their sense of beauty, their eminently

practical temperament discouraged internal broils. Thus, by the beginning of the thirteenth century, they had come to be one of the strongest Powers in Europe, and, in proportion to their size, by far the richest. Then desire of rule began to lead them astray. They sacked Constantinople; they waged an inevitable war with Genoa, a war from which they issued triumphant but weakened; they acquired great possessions in the Levant, and planted their power on the Italian mainland, and so excited the jealousy of Europe that she formed the League of Cambray against them. From the disasters of that League Venice never recovered. Outwardly, for two hundred years, she was splendid, but death was slowly numbing her vitals, and she had no strength left with which to resist Napoleon's *coup de grâce* in 1797.

But to the student of political systems the organism of Venice is even more significant than the story of her outward expansion, and it is on this side that Mr. Brown's book is especially satisfactory. He shows how the early spirit of the Venetians was democratic; how they chose a leader, or doge, but successfully prevented the dogeship from becoming hereditary in any family, and then proceeded to make of the doge a pomp but not a power. The Venetians dreaded most of all the tyranny of one man; escaping this, they then fell under the tyranny of a caste. Their oligarchy is one of the marvels of history. We see plainly how it developed out of the original democracy, but it is not so easy to see how it retained for 500 years the affection of its subjects. One of the characteristics of the career of Venice was its freedom from internal rebellion; compared with the long ages of quiet, the little conspiracies of Tiepolo or of Bedmar seem hardly more than the cocoons of some pestiferous insect on the bark of a millennial oak. And yet the mechanism of Venetian oligarchy was rigid, and its methods were arbitrary. The numberless checks against ducal ambitions, the establishment of committee to watch committee, the secrecy and espionage, should have tended to make the Government odious to all those Venetians who had no active hand in it; but such was not the case. The common seaman or artisan, or the merchant who, by the closing of the Great Council in 1297, was for ever excluded from the dominant caste, was not less devoted to Venice than were the Great Councillors themselves. Even for most of these real power was an illusion; they but registered the will of the Forty, who in turn revolved at the pleasure of the Ten; and, finally, by a further condensation, the Ten themselves were summed up in the Three.

In this way Venice overcame the difficulty, inherent in an oligarchy, of securing despatch and decisiveness from a multitude of advisers —a result which students who derive profit from historical parallels may compare with the expansion of the committee system and the exorbitant magnification of the Speaker in our own Congressional history. So far as Venice is concerned, this political development is described by Mr. Brown with a clearness which leaves little to be desired. What we should wish to have more fully illustrated is the way in which so autocratic and exclusive a government succeeded in inspiring the devotion of all classes of Venetians: we understand why it was obeyed, but the historian should explain how the oligarchy which could, and relentlessly did, compel obedience, caused itself to be beloved. That this was the case, no one can deny. A people as virile as the Venetians would not, for ages together, have upheld a government whose despotism was detested, and yet no people has surpassed the Venetians in civic disinterestedness: the nobles gave their lives and treasure to the service of the State; the bourgeoisie submitted to taxes which in an emergency amounted almost to confiscation; without a murmur the plebeians manned Venice's war-ships to fight her battles in all parts of the Mediterranean; her priests were Venetians before they were Romans; her great artists, like Tintoret, craved the honor of decorating gratuitously her monuments rather than accept rich rewards from foreign princes. How was it that the ideal Venezia came to exercise this supreme influence over the hearts and wills of all Venetians? Her political organization alone does not explain this.

Mr. Brown lays due stress on the capture of Constantinople by "blind old Dandolo" in 1204; if Venice had not thereby hopelessly shattered the already enfeebled Byzantine Empire, and had she not, in the fourteenth century, crushed her rival Genoa, it is possible, he thinks, that the Turks might have been kept out of Europe, and that Venice herself would not have been punished for her truculence by losing her rich possessions in the East. This is possible; but in history it is rarely profitable to speculate on what might have been; rather is it profitable to examine the conditions which, at a given time, caused a given policy to be embraced. This Mr. Brown does with great acumen, indulging but rarely in speculations. He agrees with the best critics of Venetian history in regarding the death of Mocenigo and the election of Foscari in 1423 as marking the high tide of Venetian power. After that Venice increased in splendor, and even in apparent power, but her organism had reached the limit of its growth, and what followed was an ossification which long concealed her inward debility. Indeed, the Venice that we know best, whether through her existing monuments (with the exception of St. Mark's), or through story and painting, is the Venice of this later period, and there could be no better proof of her original vigor than that it sufficed for nearly four centuries after she had passed her prime to give to her Government a semblance of stability which astonished all beholders, and to adorn her decline with works of incomparable beauty. That she fell was due not alone to the arrogance which led her to undertake foolhardy enterprises: no mortal wisdom could have foreseen that the voyage of the Portuguese Vasco da Gama to the Indies in 1497 (incorrectly given as in 1486), or of the Genoese Columbus to America in 1492, would cripple her commerce and ultimately work her ruin. For Venice those voyages, which have been of incalculable benefit to mankind, were in the highest sense *fatal*, like the plague from the effects of which Athens never recovered: they show how the career of a whole people can be blasted by an inscrutable destiny.

We have said that Mr. Brown has the historian's sense of totality, and we have indicated the general lines along which he has been most successful. Let us now make a few suggestions of changes which, we believe, would improve his already excellent work. Here and there, especially in the first half of the book, a page of statements concerning the general political condition of Europe, and particularly of Italy, would be of great help to those readers who do not carry in their heads a compendium of universal history. At present, as Mr. Brown has drawn her, Venice is too isolated; yet a paragraph would often suffice to show her organic relations with her neighbors. Mr. Brown takes for granted, for instance, that the reader knows all about the Exarchate of Ravenna, and the attitude of the Holy Roman Emperor towards Italy, and that of the Pope towards the Emperor. Our notion is that an historical work should be, if possible, self-explanatory, though the explanatory passages may be very brief. Further, we could not have refrained, had we been telling the story of Venice, from giving some account of her artistic development; not to do this is to leave out one of the most important clues to an understanding of Venetian character. No history of England, no matter how concise, would be well-rounded which should omit to describe the development of English literature. In the case of Venice painting, architecture, and sculpture took the place of literature, and ought to be chronicled in order that we may know that the Venetians were more than merchants, diplomats, and luxurious nobles.

A more serious defect is the change of method adopted by Mr. Brown in treating the history of Venice after 1530. Hitherto, he has written as an historian; henceforth, he writes as an essayist. The last two centuries and a half of the Venetian Republic, he says, are noteworthy on only three points: her losing struggle with the Turks, her conflict with Rome in matters spiritual, and the final development of the Council of Ten; and he proceeds to devote a chapter to each of these points. The result is that, instead of having a narrative in which these phases are treated simultaneously, generation by generation, we are carried through the Turkish wars to the peace of Passarowitz, in 1718; then we go back two hundred years, and pursue religious affairs to the death of Sarpi, in 1623; then we go back again to 1529, and take up the thread of internal politics, following it to the extinction of the Republic, in 1797. In other words, we have not a history, but three essays on three different topics, and the effect is unsatisfactory. One of the highest achievements of an historian is the production of a sense of simultaneousness; to bring up his episodes in detachments reminds us of the way in which De Long's Arctic explorers had to make seven trips backwards and forwards in order to drag their lifeboats and provisions over the ice-floe.

But, after making these deductions, we still repeat that Mr. Brown's is the best history of Venice that has ever come into our hands. Its style, indeed, lacks distinction of phrase, but it is straightforward and clear. We wish that he had given references to the passages which he quotes, and that he had provided a better index. These, and the correction of various misprints, should be added in the next edition.

---

*Science and a Future Life.* With Other Essays. By Frederic W. H. Myers. Macmillan. 1893. 12mo, pp. 242.

THE career of the author of this little volume shows how a deep interest in the problem of human destiny may transform the cast of a mind from the literary to the scientific, without at the same time damping the emotional ardor with which life began. In the second essay in this book, "Charles Darwin and Agnosticism," Mr. Myers quotes the well-known passage of Darwin's Life in which the great naturalist deplores the decay of his æsthetic and sentimental faculties: "Now for many years I cannot endure to read a line of poetry. . . . My mind seems to have become a kind of machine for grinding general laws out of large collections of facts; but why this should have caused the atrophy of that part of the brain alone on which the higher tastes depend,

I cannot conceive," etc., etc. Without comparing Mr. Myers to Darwin in the matter of "science," his case inevitably suggests the other contrast. His earlier essays and his poems were the fruit of an exclusively literary, æsthetic, and religious culture. His contributions to the Psychical Research Proceedings show him as a wide reader of neurology and collector and classifier of masses of rare and problematical facts. But now in this latest volume he reappears with that serenity and hope in definite methods of work which it seems the peculiar blessing of a scientific occupation to confer, but still with the old sense of life as an emotional "problem," and with unabated rhetorical fire.

The Essays (not counting a memorial of the late Prince Leopold) are five in number, and under their diverse titles have the same essential aim, which is to show, first, how disconsolately irrational is the view of the world which merely materialistic science and merely mundane history offer to the mind's acceptance; and, second, how probable certain kinds of neglected fact have made it that the world which science acknowledges is but an extract, and the history which we see about us but a fragment, of a larger universe of which we as yet know nothing definite, but which, if known, might satisfy our rational need. What Mr. Myers proposes is thus primarily not a dogma, but a method. Nothing could be further from him than to try to convict agnosticism of error on dialectic grounds. Others may do that: he seeks first to make the reader feel its insufficiency, and then to invite him to a practical channel of escape, by following which he has himself been cheered. In other words, he shows the agnostic horse the medicinal waters, but refrains, in these pages, from forcing him to drink. Hence the great persuasiveness of his writing. It does not challenge the resisting attitude, as so many onslaughts on materialism do. For, considered as a non-"psychical researcher," Mr. Myers is himself an acute case of agnosticism, and feels all the disconsolateness of which he writes. It is only as psychical researcher that he has recovered, and yearns over others that they should do the same. The following passages come as near as anything in the book to giving an expression of his positive faith:

"Of late years the induction of hallucination in sane and healthy persons during the hypnotic trance has begun to be recognized as an experimental method of great value in psychology. But comparatively few savants have as yet recognized the extreme variety and instructiveness of the phantasmal sights and sounds which occur spontaneously to normal persons, and which it is now for the first time becoming possible to study in a systematic instead of a merely anecdotic manner. . . . The study of cases of [a certain] type, many of which I have set forth elsewhere, has gradually convinced me that the least improbable hypothesis lies in the supposition that some influence on the minds of men on earth is occasionally exercised by the surviving personalities of the departed. I believe this influence to be, usually, of an indirect and dreamlike character, but I cannot explain the facts to myself without supposing that such an influence exists. I am further strengthened in this belief by the study of the automatic phenomena. I observe that in all the varieties of automatic action—of which automatic writing may be taken as a prominent type—the contents of the messages given seem to be derived from three sources. First of all comes the automatist's own mind. From that the bulk of the messages are undoubtedly drawn, even when they refer to matters which the automatist once knew, but has entirely forgotten. Whatever has gone into the mind may come out of the mind, although this automatism may be the only way of getting at it. Secondly, there is a small percentage of messages apparently telepathic—containing, that is to say, facts probably unknown to the automatist, but known to some living person in his company or connected with him. But, thirdly, there is a still smaller residuum of messages which I cannot thus explain—messages which contain facts apparently not known to the automatist nor to any living friend of his, but known to some deceased person, perhaps a total stranger to the living man whose hand is writing. I cannot avoid the conviction that in some way—however dreamlike and indirect—it is the departed personality which originates such messages as these. I by no means wish to impose these views upon minds not prepared to accept them. What I do desire is that as many other men as possible should qualify themselves to judge independently of the value of the evidence on which I rely—should study what has been collected, and should repeat and extend the observations which are essential to the formation of any judgments worth the name. . . .

"I place together, then—as I claim that history gives me a *prima-facie* right to do—certain experiments which have, so to say, gained general acceptance but yesterday, and certain cognate experiments which are on their way (as I think) to general acceptance on some not distant morrow; and I draw from these a double line of argument in favor of human survival. In the first place, I point to the great extension and deepening which experiment has given to our conception of the content and capacities of the subconscious human mind—amounting, perhaps, to a shifting of man's psychical centre of gravity from the conscious to the subconscious or subliminal strata of his being—and accompanied by the manifestation of powers at least not obviously derivable from terrestrial evolution. And in the second place, I claim that there is, in fact, direct evidence for the exercise of some kind of influence by the surviving personalities of departed men. I claim that the analysis of phantasmal sights and sounds, treated by careful rules of evidence, indicates this influence. And I claim that it is indicated also by the analysis of those automatic messages which in various manners carry upwards to the threshold of consciousness the knowledge acquired from unknown sources by the subconscious mind" (pp. 32, 35).

In other words, Mr. Myers writes himself down with decision as a "spiritualist," but it is hardly necessary to note how greatly his methods and temper differ from those which are usually associated with that name. But, be his spiritualism true or false, his merits as the first comparer and coördinator of these abnormal phenomena along their whole extent must always be acknowledged. What strikes one most in the present volume, after its felicity of style, is the breadth of the author's intellectual sympathies. The book may be cordially recommended to all who are interested in the higher aspects of contemporary thought.

---

*Life of Sir Richard Burton.* By his Wife, Isabel Burton. 2 vols. Appletons. 1893.

A LIFE of Sir Richard Burton by his wife promises to be interesting, though we hesitate, and wonder whether, in spite of his adventurous and romantic career, the interest can be kept up to the end of two such ponderous volumes. We pick up one of them, and, examining the binding, we discover on the front a faithful hound standing mournful by an imaginary grave: on the back, a hand, marked R. F. B., protruding from a cloud, and letting down a shower of glory on a weeping female form, at whom the head of a Chinese dragon makes faces from behind. We open and see a "Consecration" "to my earthly master"; and by the time we have finished the "Foreword" our curiosity is thoroughly aroused.

Unfortunately, it soon subsides as thoroughly, and without the satisfaction of finding anything new or noteworthy. Hitchman's biography of Burton, six years ago, gave a good enough idea of the man as viewed by an ardent admirer, and for whoever wants more there are his own eighty-odd publications. We should have been glad of a purely private life, a picture of his extraordinary character; and no one was so competent to give us this as the woman who stood by him in sickness and in health for thirty years, facing many of the same hardships and perils, lightening his toil, and sharing his disappointments. So she thinks herself, and indignantly answers those who have dared to doubt her fitness for the task. We are loath to criticise a labor of love, even when the love is not supplemented by good judgment. Absolute, unquestioning devotion is touching; we can sympathize with hero-worship, and are willing to overlook several instances of very questionable taste. What we complain of is not what Lady Burton tells us about her husband, but the mass of other things she inflicts upon us. Our attention is taken up not so much by what "he thought and did" as by what she writes. She says: "I have no leisure to think of style or polish, or to select the best language, the best English—no time to shine as an authoress. I must just think aloud, so as not to keep the public waiting."

We tremble at what might have happened if Lady Burton had had the leisure to shine, for, hurried as she was, two-thirds of what she has written might have been profitably omitted. The long appendices should have been kept for the new work she promises us, 'The Labors and Wisdom of Richard Burton'; the host of newspaper puffs belong only in her scrapbook; and much of the rest would burden any diary. To put it harshly, Lady Burton is very garrulous. She seldom travels anywhere—and she was travelling a good part of the time—without favoring us with the name of the hotel at which she stopped, and telling us how she liked it, what there is to see in the place, and how she got there. When she has a dinner party, or goes to one, we know who was present, we learn about her efforts in the cause of the prevention of cruelty to animals, we read her letters to Aly Sloper, etc., etc., etc. We can only be grateful for what we are spared. For instance, "I do not think that a list of the aboriginal tribes of Brazil at the time of its discovery (one hundred discovered by Cabral in 1500) would amuse my readers or fit in with my subject." Neither do we, but we lose something perhaps more attractive:

"One thing I always regret in writing is, that I could recite so many amusing and interesting things that would immensely please a very large portion of English people; but England is so very queer, and I am become convinced it is not the same England I used to know, that I do not like to venture them. They are not in the least risky, only amusing and adventurous, but, being very honest and straightforward, would be sure to tread upon somebody's corns; blame or sneers would be sure to crop up from some quarter or another, and make me regret it."

The perfect naïveté of the author of this passage at times lends a charm to what would otherwise be wearisome reading, while her earnestness and sincerity command our respect. This is not her first appearance, as she has written two books of travel, besides other productions which have never reached the public. She was not allowed to put her first attempt into print: "He thought I must study and copy many years before I tried authorship." On another occasion, "I now wrote a book called 'The Sixth Sense,' and was vain enough to think it very clever; but I was afraid it would do harm, and I took the courage to burn it." Her husband taught her "to write quite openly in the unconventional and personal style—what we *now* call the Marie

Bashkirtseff style." So be it, but Marie, even as a child, was never guilty of such a paragraph as the following: "On the 10th of December my publisher, poor Mr. Mullan, died, and my boys' books were returned to me, to begin afresh with another publisher, which was, unhappily, Mr. Bogue. On the 15th, Richard lectured at the English Engineers' Club, which was very well attended, much applauded, and was noticed largely in the foreign press, in most gratifying terms, speaking of him as dear and respected for his learning, merits, and philanthropy, and I had my third fête for humanity to animals."

The main facts of Sir Richard Burton's life are well known, and can be found in Hitchman rather better than in this work, though many pages of the two are entirely or nearly identical. His pilgrimage in disguise to Mecca, his discovery of Lake Tanganyika, and his translation of the "Thousand and One Nights" (which his wife never read unexpurgated, though it was copied by "a lady amanuensis"), are the three things for which he will chiefly be remembered. In spite of great achievements, his was a life of signal troubles and disappointments. He declared, "My career in India had been in my eyes a failure"; even the famous Mecca trip was but a part of what he had meant to do; the irregular Turkish force which he helped to organize during the Crimean war never saw service, and his various suggestions met with snubs; his expedition with Speke ended in a bitter quarrel between the two, and it was Speke who was chosen to go a second time and have the glory of discovering the sources of the Nile; his name was struck off the Army List without warning when he entered the consular service at perhaps the worst possible post, Fernando Po; when he did at last get a situation to his heart, the consulship at Damascus, after a while he was abruptly cashiered, though his conduct was subsequently approved and he was sent to Trieste, where he was left from 1873 till his death in 1890. For long years the place of Minister to Morocco was the goal of his ambition, but when finally a vacancy occurred, some one else was appointed. Even his request for permission to retire with full pension a little before his time, on account of failing health, was refused, though he was always generously treated in the matter of leaves of absence. His projects of gold mines or other undertakings in Africa, Brazil, Iceland, and the land of Midian brought him only bother and expense.

This is a sad record for a man of such great and varied abilities, of such energy and industry, who knew twenty-nine languages, who understood the East as few Europeans ever have, who was one of the pioneers of modern African exploration, and who wrote, on widely different subjects, works that will always have value. In spite of Lady Burton's protestations, we can see that, to a certain extent, he had himself to blame for his woes; but we will not undertake to say how much, or discuss his character as it appears in the pages before us. His views on many questions were original, outspoken, and sometimes startling, and not of a nature to recommend him to his official superiors. Comment on them will be more in place in connection with her next book, which we shall await with interest. In conclusion, we note that some of the poetry she has put in, both his and hers, has considerable merit. His "Legend of the Lakki Hills" might almost be mistaken for Byron, and the "Kasîdah" has fine lines, even if we can hardly agree with the sentiment that it is "the most exquisite gem of Oriental poetry that I have ever heard or imagined, nor do I believe it has its equal, either from the pen of Hafiz, Saadi, Shakespeare, Milton, Swinburne, or any other."

---

*The People's Money.* By W. L. Trenholm. Charles Scribner's Sons. 1893.

THIS work is intended for people of ordinary education and intelligence. It is the author's opinion that the inability to understand money and finance professed by many well-informed persons is unnecessary and inexcusable. He considers that no one who is capable of learning to read, or of comprehending the movements of machinery, need doubt his ability to obtain a clear and definite understanding of the financial system of the United States, and he thinks that, if the sequence of phenomena is carefully observed, but little time and effort will be required to master the whole subject of finance. That a general understanding of these matters is greatly to be desired may be conceded at once, and much of Mr. Trenholm's book is so clear in thought and simple in statement as to be universally intelligible. But the persistence of contradictory opinions concerning the most elementary principles of finance, and the clashing views of those who have made it a special study, appear to indicate the existence of more obscurity and difficulty than Mr. Trenholm is disposed to recognize. Not only is there a fundamental difference between bimetallists and monometallists, but back of this lies a more fundamental difference concerning value. The cost-of-production theory has been violently attacked, and there is as wide divergence of views concerning what money is as concerning what it ought to be.

That Mr. Trenholm has underrated the difficulty of his task may perhaps be proved by reference to some of his statements. Thus we find it laid down as "of course" that the burden of idle money is the same whether such money be of metal or paper. Probably Mr. Trenholm had in mind the burdens of banks or individuals, but he makes the assertion concerning the burdens of the community. Were it true, it would be hard to explain the cause of the substitution of paper for metal, and the incomparable elucidation of this change by Adam Smith would be entirely fallacious. Nor, so far as individuals are concerned, is idle money any more of a burden than other idle machinery. Mr. Trenholm does not recognize credits, such as checks and bills of exchange, as money, and in some of his observations upon bank-notes we are inclined to think he has confounded money with capital. His views upon the respective advantages of Government notes and bank-notes are peculiar, and to us, we must confess, unintelligible. We shall endeavor, therefore, to state them as nearly as possible in his own language.

The saving to a community, in Mr. Trenholm's opinion, from the use of paper money is about equal to the annual interest on the volume of such money less the expense of its issue and maintenance. This saving is less in the case of issues by Government than in those by banks, because the rate of interest upon Government debts is less than that upon bank loans. In other words, if the Government's credit is good, there would be a saving to the people in having the banks issue paper money, while if the credit of the Government was bad, there might be a saving in having it, and not the banks, issue the notes. The promoters of the Nicaragua Canal appear to have got hold of the converse of this argument in their ingenuous proposal that our Government should do them the trifling favor of writing its name on the back of their bonds. Mr. Trenholm seems to apply the term interest both to the rate charged the Government when it borrows and to the rate that the banks charge when they lend.

Mr. Trenholm further maintains that the increase of note issues tends to reduce the rate of interest on commercial loans. He declares that our people gain nothing from the issue of $346,000,000 of greenbacks, while the issue of bank-notes to that amount, based not on bonds but on commercial paper, would probably make 7 per cent. a maximum rate of interest throughout all our agricultural communities, except those in the newest States and the Territories, and would even there greatly reduce present rates for money. Under the system that prevailed from 1820 to 1860, he contends, the prevailing rates in communities that had banks were 6 per cent. for discounts and 7 per cent. for interest. He considers that his theory is established by the example of the Bank of Stockholm, which in twelve years reduced the rate of interest in Sweden from 8 per cent. to 3 per cent. He disapproves of the national-bank system for several reasons. The formation of a new bank in a country town under this system has the effect, he holds, of depriving that community of the use of more money than the new bank can issue, and thereby increases instead of diminishes the rate for loans. On the other hand, true banks of issue cheapen loans, because, if a bank can make a profit of 2 per cent. on its circulation, it can afford to reduce its rate of discount 2 per cent.

We have at hand figures only from 1845 to 1860, but it appears from them that the average rate of discount was for that period over 9 per cent., and it can hardly have been lower during the earlier years. The fact is not important, however, for the assumption that the rate of interest depends upon the note issues of banks is one that throws existing monetary science into confusion. We cannot take space to criticise it, but it seems to us to render Mr. Trenholm's book, in spite of much that is sound and well-put, a very undesirable guide for the class of readers to which it is addressed. Nothing better fitted to give a thorough grounding in this intricate subject has ever been written than Adam Smith's classical chapters. Whoever will be at the pains to master what he has said will be well equipped for grappling with our modern problems, and will be able to see through certain fallacies which have, we apprehend, perplexed Mr. Trenholm's argument.

---

*Pioneers of Science.* By Oliver Lodge, F.R.S. Macmillan. 1893.

THIS is a very handsome volume, printed upon the heaviest calendered paper, full of attractive cuts, written in an easy style, dealing with an important and absorbing topic, and the work of an eminent physicist. The puzzle is to conceive how so good a man was ever induced to write a book upon a subject of which he appears to know nothing—the history of astronomy. The first chapter contains a sketch of the life of Copernicus, of which Mr. Lodge says "we know very little." Speaking for himself and his three friends who read his proofs, this seems to be very true. For those who have read Prowe's great biography in three volumes, it is less true. Even before the appearance of that work, ten years ago, it would hardly have been admissible to say that "in study and meditation his life was passed." We now know that during most of his life he was an active mem-

ber of Parliament, dealing with the most practical subjects, as well as managing the extensive possessions of the bishopric of Regensburg, and, in fact, almost governing it. When he retired from politics, so necessary was activity to Coppernicus (we follow the orthography approved by Prowe), that he took up the life of a practising physician, and continued in it almost to the very end of his long life. It is true, of course, that he was a man of study and meditation, yet an inaccurate impression is conveyed by the statement that his life was passed in such occupations as if in them alone. How much better it would be if writers—and the recommendation particularly applies to English writers—when they know nothing would say nothing.

Dr. Lodge says: "His father is believed to have been a German." True, this is the belief, and it is founded on an accurate knowledge of the genealogy of the family, which, for a family of merchants, was locally far from obscure. Much is made by Dr. Lodge of the Copernican theory of the precession of the equinoxes; but so far as this theory differed from what was involved in the general statement of Hipparchus and Ptolemy, it was utterly erroneous. There was a certain *intorta corolla*, which was invented to account for falsified observations, reported at a time when authority overweighed the testimony of the senses.

The account of Tycho Brahe is not so bad; but when we come to Keppler, grave inaccuracies reappear. This astronomer is represented as suffering all his life from "bitter poverty." The truth is, his first wife was a rich woman, and he was always fairly well, often very well, paid. But, with an entirely cheerful and contented disposition, he made it his business to grumble, because his pay was always in arrear (as was everybody's), and that was the way to get it. When his wife died, the money, it is true, went to the children; but by that time Keppler was pretty well to do. The account of Keppler's work is certainly not so bad as some recent English statements, drawn purely from their writers' imagination; but it is needlessly confused. The whole book is upon this low level of almost simple ignorance.

When Dr. Lodge comes to the discovery of Neptune, he makes a diagram of the orbits of Neptune and Uranus, and describes straight lines between corresponding places of the two planets. This, he says in the legend, illustrates the direction of the perturbing force. He forgets that a perturbation that remained constant would not be a perturbation, that the only way it can be detected is in changing the elements of the orbit, and that the unperturbed orbit is really as much perturbed as the perturbed orbit. Consequently, the whole question of the discovery of Neptune rests upon considerations which cannot possibly be popularized. There are some things which demand serious study. In these cases, all that can be done for the general reader is to show him clearly that such is the case.

We wish we could counterbalance these strictures by reporting that the book does something to inculcate the sincere spirit of inquiry, or gives any general picture of the life of "scientific pioneers," even though inaccurate in details, or that it communicates information about the labors of these men not better, more easily, and more securely to be gathered elsewhere. We can say that it is a handsome volume, well suited to a person who wishes to know as much of the history of astronomy as he can gather in an hour or two.

BOOKS OF THE WEEK.

## *Gunston Institute for Girls.*

2928 P Street, N. W., Washington, D. C.
Mr. and Mrs. BEVERLEY R. MASON.

## *Educational.*

**SCHOOL OF INDUSTRIAL ART**
OF THE
**Pennsylvania Museum,**

BROAD AND PINE STREETS, PHILADELPHIA.
Seventeenth year begins Oct, 2, 1893.

Instructors: Howard F. Stratton, E. W. France, Charles X. Harris (Pupil of Cabanel), Charles E. Dana (Pupil of Luminais), Henry Plasschaert (Pupil of Academies of Brussels and Ghent), C. B. Finckel, M. D. Goodwin, N. d'Ascenzo, Julian Millard, Paul Lachenmeyer, Florence C. Fetherston, E. M. Hallowell, B. C. Algeo, Mary E. Slater, Wm. Roebuck, W. L. Turner, Helen A. Fox, A. C. Simons.

Technical instruction is intimately and continually associated with training in art. The Textile Department, furnished with 14 Power and 50 Hand Looms, with all appliances for Dyeing and Finishing, is the only School of the kind in America.

The following departments are in operation: School of Drawing, School of Applied Design, School of Textile Design and Manufacture, School of Wood Carving, School of Decorative Painting, School of Decorative Sculpture, School of Chemistry and Dyeing, School of Architectural Design.

Registration for year ending January 1, 1893, 365 students from 17 States, including Canada.

Graduates of the School are eagerly sought as decorators, modellers, designers, and superintendents of mills and other industrial establishments.

For circulars and all information address,
L. W. MILLER, Principal.

## MUSEUM OF FINE ARTS,

**Copley Square, Boston, Mass.**

SCHOOL OF DRAWING AND PAINTING.

The eighteenth year is now open.

Instruction in drawing from the cast and from life, in painting, modelling, and decorative design, and also in artistic anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell and Philip Hale (Drawing and Painting), C. Howard Walker and Mrs. William Stone (Decorative Design), B. L. Pratt (Modelling). G. H. Monks, M.D. (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the Museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

## ROXBURY LATIN SCHOOL,

**BOSTON, MASS.**

An endowed school with 140 resident pupils and 40 non-resident, prepares boys for Harvard and other colleges, and for the institute of Technology. Boys coming from a distance can find homes with teachers or others recommended by the headmaster. Examinations for admission to the lowest class June 24 and Sept. 16. A few vacant seats remain in each of the three upper classes. Tuition, $150. The school begins its two hundred and forty-ninth year with schoolhouse renovated and enlarged, with Physical and new Chemical Laboratory, and an increased staff of instructors.
By order of the Trustees,
WM. C. COLLAR, A.M., Headmaster.

## NEW ENGLAND CONSERVATORY OF MUSIC.

Founded by Dr. Eben Tourjée. CARL FAELTEN, Director.

**The Leading Conservatory of America.**

In addition to its unequalled musical advantages, exceptional opportunities are also provided for the study of *Elocution, the Fine Arts, and Modern Languages.* The admirably equipped Home affords a safe and inviting residence for lady students. *Calendar Free.* FRANK W. HALE, General Manager,
Franklin Square, Boston, Mass.

## *Educational.*

# Harvard University.

**LAW SCHOOL.**

*Terms of Admission after 1895-96.*

After the academic year 1895-96 the following persons only will be admitted as candidates for a degree:
1. Graduates of colleges of good standing.
2. Persons qualified to enter the senior class of Harvard College.

The following persons will be admitted as special students:—
1. Holders of academic degrees in Arts, Literature, Philosophy, or Science who are not admissible as candidates for a degree.
2. Graduates of Law Schools which confer the degree only after an examination upon a two-years' course of at least seven months each.
3. Persons who pass the examinations now required of those who are not graduates of colleges as a condition of their being admitted as candidates for a degree.

Special students who reside three years at the School and pass in due course the requisite legal examinations, will receive the degree of LL.B. (1) if they at any time during the course entitle themselves to enrolment as regular students, or (2) if they attain a mark within five per cent. of that required for the honor degree.

For circular containing a list of the colleges whose graduates will be accepted as candidates for a degree, apply to JOHN H. ARNOLD, *Librarian of the Law School*, Cambridge, Mass.

## UNIVERSITY OF TORONTO.

Applications, with testimonials, will be received by the undersigned for the position of Professor of Logic and Metaphysics in the University of Toronto, until the twentieth day of August next. Initial salary $2,500, with an annual increase of $100 until the maximum of $3,200 is reached. GEO. W. ROSS,
Minister of Education.

EDUCATION DEPARTMENT (ONTARIO),
TORONTO, 12th July, 1893.

## CHELTENHAM MILITARY ACADEMY

OGONTZ (NEAR PHILADELPHIA), PA. Represented by its graduates in Harvard, Yale, Princeton, Cornell, Amherst, University of Pa., Lafayette, and West Point. (Lehigh University and Trinity College added for '93-94,) 23d year. JOHN CALVIN RICE, Principal.

## Hackettstown Institute, HACKETTSTOWN, NEW JERSEY.

College Preparatory for Gentlemen. Ladies' College. Music, Art, Elocution. Best buildings of its class. Steam heat; electric lights. Location healthful, grand. Illus. Catalogue free. Rev. GEO. H. WHITNEY, D.D., Pres.

A Treasury of Reference for Writers and Readers of Current Literature. Edited by R. D. Blackman. 8vo.
This "Dictionary," comprising phrases and quotations from five languages, has run through twelve editions in England.

*RECENTLY PUBLISHED.*

**AN INTRODUCTION TO ENGLISH ECONOMIC HISTORY AND THEORY.**
By W. J. ASHLEY, M.A. Part II. Bringing the work down to the end of the Middle Ages. 12mo, $3.00.
"To the student of economics the book will have remarkable interest. The matter is not only well digested and arranged, but the style of the author is unusually clear and attractive."—*Boston Transcript.*
"He has made a contribution of genuine value to economic history, partly in positive knowledge, but principally, in our judgment, in disposing of a number of false assumptions which have of recent years been proclaimed as historical truths by a number of economic theorists."—*Independent.*

**THE SILVER SITUATION IN THE UNITED STATES.**
By Prof. F. W. TAUSSIG, author of "The Tariff History of the United States." (Questions of the Day Series, No. 74.) 8vo, Cloth, 75c.
"We do not hesitate to say that this book is in all respects as excellent as it is opportune. It is extremely concise in statement, but everything that is necessary is here. The book deserves to be read by the learned as well as by the ignorant, and the times should insure it the widest circulation."—*N. Y. Evening Post.*

**THE LIFE AND VOYAGES OF CHRISTOPHER COLUMBUS.**
By WASHINGTON IRVING (condensed by the author from his larger work). 12mo, fully illustrated. (No. 4 in the Library of American Biography.) $1.75.

**HARVARD STORIES.**
Sketches of the Undergraduate. By W. K. POST. 12mo, $1.25.
"The field is an immense one for any writer who starts to tell the good things of college life, and Mr. Post has certainly found some of the best things to tell. The sketches are so characteristic of the American college student that they will be as heartily enjoyed by one who does not know Harvard traditions and topography as by the most enthusiastic son of crimson."—*Chicago Times.*

**PRINCETON SKETCHES.**
The Story of Nassau Hall. By GEORGE R. WALLACE. With Introduction by Prof. Andrew F. West. Illustrated. 8vo, $2.00.
"The interest of a volume like this is not necessarily confined to those to whom the institution celebrated therein was an Alma Mater, but, when it is surrounded with learned associations, as in this instance, and radiant with the memory of remarkable men, it is an important chapter in the history of the country, upon which it sheds certain side-lights which are not to be found elsewhere."—*Literary World.*

**** *Notes on New Books, a quarterly bulletin, prospectus of the Knickerbocker Nuggets, Heroes, and Story of the Nations Series sent on application*

## Popular Science Monthly

FOR OCTOBER.

**Electricity at the World's Fair.** I. By CHARLES M. LUNGREN. (Illustrated.) Describes the enormous generators, the marvellous electric fountains, the electric railway and launches in operation, and other wonders of this most wonderful of exhibits.

**The Ural Cossacks and their Fisheries.** By Dr. N. BORODINE. (Illustrated.) A notably interesting account of a peculiar and systematic communal industry by the Cossack Fish Commissioner.

**The Duty of the State to the Insane.** By Dr. ANDREW MACFARLANE. An account of the system of caring for the insane recently adopted by the State of New York, together with some suggestions for the improved care of curable patients.

**A Characteristic Southwestern Plant Group.** By HENRY L. CLARKE. (Illustrated.) Describes those monarchs of the American desert, the century plants, cacti, and yuccas, and shows their quaint and characteristic forms.

*OTHER ARTICLES ON*

THE LIP AND EAR ORNAMENTS OF THE BOTOCUDUS (illustrated); CRIMINAL FESTIVALS; THE PROGRESS OF PSYCHOLOGY; HOUSEHOLD ARTS AT THE WORLD'S FAIR; THE PROBLEM OF COLORED AUDITION; SOME CHARACTERISTICS OF NORTHWESTERN INDIANS; SKETCH OF WERNER VON SIEMENS (with Portrait).

*50 cents a number; $5.00 a year.*

D. APPLETON & CO.,
NEW YORK.

## D. Appleton & Co.'s New Books.

**The Gilded Man**
**(El Dorado),**

And other Pictures of the Spanish Occupancy of America By A. F. BANDELIER. 12mo. Cloth, $1.50.

The author here describes the adventures and romantic episodes attendant upon the early Spanish explorations of our Southwest. The scene of the story which gives its title to the volume is laid in Venezuela, and the legend of *El Dorado* is for the first time told accurately in popular form. With this exception the tales relate to our own country. They include the stories of the mysterious "Seven Cities of Cibola," "El Quivira," and others of equal dramatic interest and historical value.

**Factors in American Civilization.**

STUDIES IN APPLIED SOCIOLOGY. A Series of Fourteen Popular Lectures and Discussions before the Brooklyn Ethical Association 12mo. Cloth, $2.00.

This volume is uniform with the two previous volumes of the series, entitled respectively "Evolution in Science and Art" and "Man and the State." The lectures are by well-known writers and speakers, the range of topics embracing all the more important sociological questions of the time.

**General Johnston.**

By ROBERT M. HUGHES. A new volume in the Great Commanders Series, edited by Gen JAMES GRANT WILSON. With Portrait and Maps. 12mo. Cloth, gilt top, $1.50.

The active and varied career of Gen. Joseph Johnston, the conspicuous part which he took in the Civil War, the differences of opinion between Jefferson Davis and himself and their effect upon the fortunes of the Confederacy, render the story of his life one of engrossing interest and great historical importance. The author has had access to unpublished documents and other sources of fresh information, which impart to his work a distinctive quality and a special and permanent value.

**On the Old Frontier.**

By WILLIAM O. STODDARD, author of "Crowded Out o' Crofield," "Little Smoke," "The Battle of New York," etc. Illustrated by H. D. MURPHY. "Good Books for Young Readers" Series. 12mo. Cloth, $1.50.

In this thrilling story Mr. Stoddard is at his best. He describes the vicissitudes of the settlers in western New York, which was the frontier of the last century, the homely yet adventurous existence at Plum Hollow Fort, the plottings of the Iroquois, their assemblage in the great Council House, and their final desperate raid. A boy is the hero of the book, and every American boy and girl should read it for its historical value as well as for its romantic interest.

**Camp-Fires of a Naturalist.**

From the Field Notes of LEWIS LINDSAY DYCHE, A.M., M.S., Professor of Zoölogy and Curator of Birds and Mammals in the Kansas State University. The story of Fourteen Expeditions after North American Mammals. By CLARENCE E. EDWORDS. With numerous Illustrations.

"It is not always that a professor of zoölogy is so enthusiastic a sportsman as Prof. Dyche. His hunting exploits are as varied as those of Gordon Cumming, for example, in South Africa. His grizzly bear is as dangerous as the lion, and his mountain sheep and goats more difficult to stalk and shoot than any creatures of the torrid zone. Evidently he came by his tastes as a hunter from lifelong experience."—*New York Tribune.*

**The Life of Sir Richard F. Burton.**

By his Wife, ISABEL BURTON. With numerous Portraits, Illustrations, and Maps, and two colored Plates In 2 vols. 8vo. Cloth, $12.00.

"The greatly extended memoir is a deeply interesting work, written in a style which forbids criticism, but delightfully entertaining, and containing very little which one would wish to have thrown out. Reading these two great volumes is living over again the campaigns in which Sir Richard engaged and entering into the adventures which characterized his life."—*Boston Herald.*

*For sale by all booksellers, or will be sent by mail on receipt of price by the publishers.*

D. APPLETON & CO.,
1, 3, AND 5 BOND ST., NEW YORK.

## Books on Silver and Financial Questions.

**The History of Bimetallism in the United States.**

By J. LAURENCE LAUGHLIN, Ph.D, Assistant Professor of Political Economy in Harvard University; author of "The Study of Political Economy," etc. With Sixteen Charts and numerous Tables. 8vo. Cloth, $225.

"Professor Laughlin's excellent work is timely and valuable. It reënforces the suggestions of political sagacity and business prudence by the warnings of scientific investigation and foresight."—*New York Times.*

"The book is not a treatise on the theory of bimetallism, but is a history of bimetallism, the theory being discussed only so far as the hard facts in the country's experience have directly borne upon some part of the theory."—*Chicago Evening Journal.*

**Financial History of the United States from 1774 to 1789,**

Embracing the Period of the American Revolution. New edition, thoroughly revised. By ALBERT S. BOLLES, Professor in the Wharton School of Finance, University of Pennsylvania; editor of "The Banker's Magazine." 8vo. Cloth, $2.50.

**Financial History of the United States, from 1789 to 1860.**

By ALBERT S. BOLLES. 8vo. Cloth, $3 50.

**Financial History of the United States, from 1861 to 1885.**

By ALBERT S BOLLES. 8vo, Cloth, $3.50.

"The difficulties, dangers, and triumphs of the Government's fiscal operations early in the war are well portrayed, and the wonderful course of the debt-paying outlined. The inception and progress of the national banks are described; also the system of internal taxation, the tariff, the whiskey frauds, etc. The book is the best financial history the country has thus far."—*Chicago Tribune.*

**Money and the Mechanism of Exchange.**

By W. STANLEY JEVONS, Professor of Logic and Political Economy in Owens College, Manchester. 12mo. Cloth, $1 75.

"Professor Jevons writes in a sprightly but colorless style, without trace of either prejudice or mannerism, and shows no commitment to any theory. The time is not very far distant, we hope, when legislators will cease attempting to legislate upon money before they know what money is; and, as a possible help towards such a change, Professor Jevons deserves the credit of having made a useful contribution."—*New York Financier.*

**Recent Economic Changes,**

And their Effect on the Production and Distribution of Wealth and the Well-being of Society. By DAVID A. WELLS. 12mo. Cloth, $2.00.

"A book of intense interest, and one that can be read and reread with advantage."—*London Spectator.*

"A wonderfully wide and full collection of facts and figures bearing on the question. It would be well if that part of the volume which specially relates to the fluctuation of prices in recent years could be put in the hands of every man whose political action is likely to be influenced by the heresy that gold is becoming scarce and inadequate in amount for the circulating medium, and that the scarcity is causing a decline in prices measured in gold."—*Chicago Economist.*

"The book is the best contribution Mr. Wells has ever made to economical and statical and social science, and one of the best that is to be found in any country or language."—*New York Evening Post.*

*For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,*

**THE REED SCHOOL.**
Mrs. Sylvanus Reed, Resident.
Mr. J. Ramsay Montizambert, M.A., Headmaster.
Boarding and Day School for Girls. Courses include all studies required at University entrance examinations. 30th year begins October 3.

New York City, 9 University Place.

**TEACHERS' COLLEGE, AFFILIAT-** ED with Columbia College, offers, to both men and women, university courses in pedagogy, leading to the degrees of A.B., A.M., and Ph.D.
Walter L. Hervey, Prest.

New York City, 120 Broadway.

**NEW YORK LAW SCHOOL.** "Dwight method" of instruction. Degree of LL.B. given after two years' course; graduate course now added. Tuition fee, $100. For Catalogues, etc., address
George Chase, Dean.

New York City, 423 Madison Avenue.

**J. H. MORSE'S SCHOOL.** Autumn term begins October 2. Thorough preparation for all Colleges. Principal at home after September 18.

New York City, 32 and 34 East 57th St.

**MISS PEEBLES AND MISS THOMP-** SON'S Boarding and Day School for Girls reopens Thursday, October 5, 1893.

New York City, 55 West 47th St.

**MISS GIBBONS' SCHOOL FOR GIRLS** Mrs. Sarah H. Emerson, Principal. A few boarding pupils taken. Reopens Oct. 4.

New York City, 22 East 54th Street.

**THE MISSES GRINNELL'S** *Day School* for Girls reopens Oct. 5. Primary, Intermediate, Academic, and Collegiate Depts. Kindergarten Oct. 10.

New York City, 183 Lenox Ave., near 119th St.

**THE MISSES MERINGTON.**—French and English School. Resident pupils.

New York, North Granville.

**SEM.**—*Sp'l offer, free tuit'n, no profit,* $50,-000 b'ld'g, good board, send st'mp, name *Nat.* 88th yr.

New York, Saratoga Springs.

**TEMPLE GROVE LADIES' SEMI-** nary.—Superior facilities for the higher Sciences, Philosophy, Languages, Music, Painting, æsthetic and social culture. 39th year begins Sept. 20. Address
Chas. F. Dowd, Ph.D., Pres.

New York, Sing Sing.

**ST. JOHN'S SCHOOL.**—*Rev. J. Breck-* enridge Gibson, D.D., Rector. The 25th year will begin September 19, 1893.

New York, Tarrytown.

**HOME INSTITUTE, A BOARDING** and Day School for Girls, will reopen Sept. 19.
Miss M. W. Metcalf, Principal.

New York, Utica.

**MRS. PIATT'S SCHOOL FOR GIRLS.** —The next school year begins Thursday, Sept. 21, 1893. Applications should be made early.

North Carolina, Asheville.

**RAVENSCROFT SCHOOL.**—*PREPAR-* atory Boarding and Day School for Boys. Head Master, Ronald McDonald, B.A., Oxford.

Ohio, Cincinnati.

**MISS ARMSTRONG'S SCHOOL FOR** Girls, Liddesdale Place, Avondale. Family limited. Circulars sent on application.

Ohio, Cincinnati.

**EDEN PARK SCHOOL FOR GIRLS.**— Thirteenth year begins Sept. 26. Resident pupils limited to ten. For circular address Mme. Fredin.

Pennsylvania, Bryn Mawr.

**BRYN MAWR COLLEGE**—*A COLLEGE* for Women, Bryn Mawr, Pa., ten miles from Philadelphia.—Offers graduate and undergraduate courses in Sanskrit, Greek, Latin, Mathematics, English, Anglo-Saxon, French, Old French, Italian, Spanish, German, including Gothic and Old High German, Celtic, Hebrew, History, Political Science, Physics, Chemistry, Biology, and Philosophy. Gymnasium, with Dr. Sargent's apparatus complete. Fellowships (value $525) in Greek, Latin, English, German, and Teutonic Philology, Romance Languages, Mathematics, History, Chemistry, and Biology. A fourth Hall of Residence will, it is hoped, be opened in the autumn, and will accommodate all applicants for admission.
For Program address as above.

Pennsylvania, Bryn Mawr.

**MISS BALDWIN'S DAY, BOARD-** ing, and College Preparatory School for Girls reopens September 28. For circular, address
Miss Florence Baldwin.

## Educational.

Pennsylvania, Bustleton, near Philadelphia.

**ST. LUKE'S SCHOOL.**

A HIGH-CLASS PREPARATORY SCHOOL FOR BOYS.

Illustrated Catalogue. Charles H. Strout, F. E. Moulton, Principals.

Pennsylvania, Chambersburg.

**WILSON COLLEGE FOR WOMEN.** —Fifty miles southwest of Harrisburg, Pa., in famous Cumberland Valley. Six trains daily. Border climate, avoiding bleak north. Classical, Scientific, and Special Courses. Music and Art. Large Music College and Art School. Music Department this year, 164, independent of free classes. Full Faculty. College Course, B.A. and B.S. degrees; Music College, B.M. Handsome park, large buildings, steam heat, gymnasium, observatory, laboratories, etc. No charge for board, etc., of distant pupils during Christmas and Easter vacations.
Rev. J. Edgar, Ph.D., Pres.

Pennsylvania, Chester.

**PENNSYLVANIA MILITARY COL-** lege. 32d year begins Sept. 20. Civil Engineering (C.E.), Chemistry (B.S.), Arts (A.B.). Also PREPARATORY COURSES in Science and Classics, under able instructors. Fine location. Ample equipment. Best sanitation. Pure water. Col. Chas. E. Hyatt, Prest.

Pennsylvania, Factoryville.

**KEYSTONE ACADEMY.** A refined school home for both sexes. Pure mountain air. Delightful Campus. Perfect sanitation. Thorough instruction. Charges moderate.
F. M. Loomis, A.M., Principal.

Pennsylvania, Germantown, 202, 204, 335 West Chelten Avenue.

**MISS MARY E. STEVENS' BOARD-** ing and Day School.—24th year. "Approved" by Bryn Mawr College. The Bryn Mawr entrance examinations are held in the school by an examiner from the College. School certificate admits to Vassar.

Pennsylvania, Philadelphia, 2045 Walnut St.

**WEST WALNUT STREET SEMI-** nary for Young Ladies—27th year. Is provided for giving a superior education in Collegiate, Eclectic, and Preparatory Departments: also in Music and Art.
Mrs. Henrietta Kutz.

Pennsylvania, Philadelphia, Chestnut Hill.

**MRS. COMEGYS AND MISS BELL'S** English, French, and German Boarding-School for young ladies reopens October 2. Students prepared for College. Ample grounds for outdoor exercise.

Pennsylvania, Philadelphia, 1350 Pine St.

**MISS ANABLE'S BOARDING AND** Day School for Young Ladies. Estab. in 1848. Opens Sept. 28.

Vermont, Burlington.

**VERMONT EPISCOPAL INSTI-** TUTE.—Boys' Boarding School. Military Drill. Our certificate admits to most colleges. Also business course. Accommodates forty-five boys. Catalogues.
H. H. Ross, A.M., Principal.

Germany, Echzell.

**INSTITUTE LUCIUS. BOARDING** School for Boys. Prepares for German gymnasium and Universities. Beautiful location. Best of references.

**UNIVERSITY OF VIRGINIA**

**CHARLOTTESVILLE, VA.**

**Session begins 15th Sept.** Full equipment and corps of instructors in Academical, Engineering, Law, and Medical Departments. Excellent Climate. New Gymnasium, with baths free to all students. For catalogues address

**WM. M. THORNTON, LL.D., Chairman.**

**St. John's Military School,**

MANLIUS, N. Y.

Rt. Rev. F. D. Huntington, Prest., Wm. Veebeck, Supt., 1st Lieut. W. P. Burnham, 6th Infantry, U. S. A., Commandant. Apply to Superintendent for circular.

*HAVE JUST PUBLISHED:*

### The French Revolution.

By THOMAS CARLYLE. Printed from new plates on fine paper, and illustrated with 34 portraits and reproductions of famous paintings. Photogravure frontispieces. Two vols., boxed. 12mo, cloth, neat gold line on cover, gilt top, per vol., $1.50; white back and corners, fancy paper on side, gilt top, per vol., $1.50; silk, full gilt edges, per vol., $2.50; half calf, gilt top, per vol., $3.00.

### Personal Recollections of John G. Whittier.

By Mrs. MARY B. CLAFLIN. With portraits. 18mo, unique ornamental binding, 75 cents.

Mrs. Claflin was one of Whittier's most intimate friends, and at her hospitable home the poet frequently stayed when he was in Boston. Her recollections are delightfully fresh and entertaining, and give a quite new picture of the Quaker bard.

### Glimpses Through Life's Windows.

By the Rev. J. R. MILLER, D.D., author of 'Silent Times,' 'Making the Most of Life,' 'The Every Day of Life,' etc. Selections from his Writings arranged by Evalena I. Fryer. With portrait. 16mo, ornamental binding, 75 cents.

### Famous Voyagers and Explorers.

By SARAH K. BOLTON, author of 'Poor Boys Who Became Famous,' etc. Illustrated with portraits of Columbus, Raleigh, Sir John Franklin, Livingstone, and others. 12mo, cloth, $1.50.

Mrs. Bolton's books are always written in a bright, fresh style, readable without inaccuracy, and never fail to interest and instruct her readers.

### The New Redemption.

By the Rev. GEO. D. HERRON, D.D., author of 'A Plea for the Gospel,' etc. 16mo, 75 cents.

"His influence on American thought ought to be and doubtless will be most salutary."—*The Rev. Robt. F. Horton, D.D., England, recent Yale Lecturer, and author of 'Verbum Dei.'*

### Imitation of Christ.

By THOMAS A KEMPIS. Illustrated with 15 drawings depicting scenes in the life of Christ, by H. Hofmann, Director of the Royal Academy of Arts at Dresden. 18mo. white and colors, gilt top, 75 cents. 18mo. full cloth, vellum, gilt top, 75 cents. 18mo, silk, full gilt, $1.50; 18mo, leather, flexible round corners, $2.00.

*Send for our complete Catalogue of new and important publications.*

## T. Y. CROWELL & CO.,

*46 East 14th St., New York.*

*100 Purchase St., Boston.*

*A Story of Massachusetts and Colorado.*

### A LITERARY COURTSHIP.

**Under the Auspices of Pike's Peak.**

By ANNA FULLER, author of 'Pratt Portraits.' Fourth Edition. 12mo, illustrated, $1.00.

"*An altogether charming little story.*"—Cleveland Plain Dealer.

"*The brightest, breeziest, most satisfactory bit of fun and romance which has come to our notice in many a day.*"—Chicago Interior.

"*It is a book to read and enjoy either alone or with pleasant companions, and to make the reader glad that the author has given us such a charming combination of humor, naturalness, and originality.*"—Public Opinion (Washington, D. C.).

*BY THE SAME AUTHOR.*

### PRATT PORTRAITS:

**Sketched in a New England Suburb.**

By ANNA FULLER. Third Edition. 16mo, paper, 50 cents; cloth, $1.00.

"*One of the richest and most worthy contributions to American literature of the past decade. With a pen positively photographic this skilful writer has limned the portraits of this New England family, Pratt by name and so thoroughly New England by nature.*"—Rochester Herald.

## G. P. PUTNAM'S SONS,

NEW YORK and LONDON.

# The Nation.

NEW YORK, THURSDAY, SEPTEMBER 14, 1893.

## The Week.

THE Senate's delay in coming to a vote on the Repeal Bill is in some respects unfortunate, but is, from other points of view, not without its compensating advantages, especially as there is now no real uncertainty that repeal will ultimately carry. For one thing, the delay helps to isolate the financial difficulty through which the country has been passing, and to show its precise nature. The trouble came about through distrust of the Government's intention or ability to maintain the standard of value unimpaired, and has been steadily disappearing ever since that distrust has been shown to be unfounded. So clear has the uncomplicated nature of the phenomenon now become that the most desperate of partisans have given up trying to read other causes into the panic. The *Tribune's* tariff gun, which was doing dreadful execution a few weeks ago, has been so effectually spiked by the great revival of industry in the face of active preparations to reform the tariff, that it was actually driven on Monday to fight the civil war over again, and to alarm the faithful with one of its old-time articles about the South in control of the Government. This is a thing to be grateful for, as well as amused over, since it proves that the revision of the tariff can be taken up with a free hand in accordance with the wishes and directions of the great majority of the people. In so far as the dilatoriness of the Senate has helped to bring this fact out in a clear light, it cannot be wholly regretted.

---

The speech of Senator Pugh of Alabama on the Silver Repeal Bill is the loudest wail and the plainest note of despair that has been uttered by the silverites since the debate began. When a man says that he is going to talk merely in order to consume time and to prevent a vote, he proclaims as loudly as possible the fact that he is in the minority. He avows, also, that the minority must rule. This is a doctrine which Pugh and his colleagues in Alabama proclaimed in 1861, with a sequel which we need not mention. The consequences now will be less serious, but far more speedy. Mr. Pugh may advertise his loquacity as much as he pleases. So may his colleague Morgan, whose wind power is far greater. So, too, may Senator Jones of Nevada, who has booked himself, in an evening paper, for a four days' speech. We all know what this speech is. The Senators know what it is, and they can retire while he is making it, as they retired while Stewart was making his. There is an end to reasonable debate, even in the Senate. There never was a time when a majority of that body could not pass a measure which they really wanted to pass. If they had had a majority of one, they could have passed the Force Bill three years ago. The majority of one happened to be against it. By that fact, and by that fact only, did it fail to become a law.

---

It is in the weekly record of bank deposits that the measure of private hoarding of money must be sought, and present testimony on this score is particularly encouraging. The Philadelphia Clearing-house banks, reporting on Monday, showed increase in deposits for the week of $1,271,000. The Boston banks show gain, on the same account, of $2,279,900. It sometimes happens that a great increase in bank loans, through the redeposit of the funds advanced, increases somewhat disproportionately the deposit total. But this has not been the case during the past week. Banks are nowhere loaning freely; in Philadelphia last week's increase was only $238,000; in Boston there was a decrease. This explains, too, the apparent shrinkage in deposits reported in Saturday's New York bank statement. Deposits decreased $222,400, it is true, but loans were contracted $3,200,100, and practically all of this contraction involved withdrawal of old deposits, so that it may be safely said that about $3,000,000 new deposits sought the New York banks last week. All this is encouraging in a high degree, and has been reflected in the prices of securities. Yet it would be very unwise to reckon on these factors without noticing the qualifying influences. None of the banks, here or elsewhere, have yet regained their normal condition, and they will not regain it until the question of the Silver Law's repeal is settled. There are outstanding now $37,000,000 loan certificates between the New York banks, $11,000,000 in Boston, and other sums in Philadelphia, Baltimore, and elsewhere. The aggregate amount of this emergency currency for uses between banks is almost exactly that of the season's gold imports. With confidence restored, the imported gold will quickly be employed to offset and cancel all the certificates outstanding. But much of the imported gold was borrowed in London, Paris, and Berlin, and any compromise on unsound currency would stop in an instant the renewal of such loans upon maturity. How quickly last summer's evils would return under such conditions may be imagined. It is noticeable that Europe still holds aloof from our investment markets. The passage of the Senate Repeal Bill will alone serve to bring the foreign investors and foreign money-lenders back to the United States.

The *North American Review* tries to be as much like a sensational daily newspaper as possible, and prides itself on the speed with which it puts upon the market articles on "timely" subjects. But, even at its shortest, the period which must elapse between the writing of a paper and its publication is sometimes long enough to leave the writer in a ridiculous position—for example, in the case of Thomas B. Reed just now. For the September number of the *Review* he wrote, some time in August, such statements as these:

> "Mills are stopping all over the country. . . . What can the mills do but shut down? . . . The manufacturers of this country do not know what is going to happen to them. Nothing but uncertainty is their lot, and uncertainty is the great paralyzer of business."

But while the *Review* containing this article is displayed on the news stands, the papers are every day printing long lists of the mills which have reopened as soon as the distrust caused by the silver crisis was removed by the assured repeal of the Silver-Purchase Act. This fable teaches that there is a type of partisan article which it is much better to print in a daily paper that cannot be easily looked up three or four weeks later, than in a monthly periodical which will be on sale three or four weeks later.

---

A number of manufacturers appeared before the Ways and Means Committee on Monday to protest against any change in the tariff. The burden of their talk was, in the words of Mr. Joseph Wharton of Philadelphia, Vice-President of the American Iron and Steel Association, that "the uncertainty with regard to future tariff legislation was now causing more distress than the financial conditions." Oddly enough, none of them seemed to appreciate the fact that all such arguments constitute the strongest possible reasons for the prompt enactment of the new Tariff Law to which the Democratic party is pledged. The people voted, not simply once, but twice, not by a bare margin on one occasion, but by overwhelming majorities in each of the two elections, in favor of a reduction of the tariff. The only uncertainty that remains is as to the details of this reduction. What is needed, therefore, is the framing of the new law with the greatest speed compatible with justice. Then business will know what to expect, not simply for one year or two, but for four years. The fact is not yet generally appreciated that the new Tariff Law, which ought to go upon the statute-book during the early months of 1894, will remain there for four years. Even if the Republicans should recover control of one branch or the other of Congress next year, the Executive Department will remain under Democratic control, and the

Low-Tariff Law cannot possibly be repealed in less than four years. Manufacturers will thus know exactly what to expect for a long period of time, and it is their interest, as much as the general public's, that they should have this knowledge as soon as possible.

---

We have received several copies of a circular, issued by the Protective Tariff League, asking manufacturers to send in statistics showing how many hands they employed in the week ending November 5, 1892, and how many in the week ending September 2, 1893. This is a very cunning device. The object evidently is to make it appear that all the shortage of demand for goods and all the lessened employment of labor in the financial panic is due to a tariff scare, although there has been no change of tariff, and although there was just as much reason in the latter part of November, 1892, to expect a change of tariff as there is now. There is one pertinent question on the cards enclosed in the circular which the League neglected to put, namely: Why did you not get scared and discharge your hands as soon as you knew that Cleveland and a Democratic Congress had been elected? The circular is as follows:

"DEAR SIR: The American Protective Tariff League is preparing its Industrial Census for the purpose of comparing business conditions as they existed the week before the election of Mr. Cleveland with the week ending September 2, 1893, or ten months after the election. All information received upon the enclosed cards will be regarded as *strictly confidential*, the data to be published in tabulated form by States or industries. Perhaps you cannot conveniently give answer to some of the questions asked. In that case, please reply to all that you can, and omit reply to those which you cannot give.

"*Please do not mention this undertaking* until the work is completed, beyond kindly handing the extra cards enclosed to some person or company that will give reliable reports. —Yours very truly,

"W. F. WAKEMAN, General Secretary."

---

Secretary Herbert has turned a particularly illuminating ray of light upon the "Chilian war" episode of the Harrison Administration in his letter to the Senate regarding the unpaid duty on a consignment of European shells for the navy, which has been lying in the Custom-house for a year or more. He shows that these shells, comprising 96 ten inch Firth armor-piercing shells, 60 twelve-inch Holtzer armor-piercing shells, 200 six-inch and 200 eight-inch Holtzer armor-piercing shells, and 550 ten-inch Hadfield common shells, were ordered by cable by the Navy Department in January, 1892, the emergency being so great that the mails were too slow to meet it. January, 1892, was a great month for the Harrison Administration. The news from Washington began with the first days of the month to be saturated with war rumors of the most stirring kind. All the navy-yards were said to be in a perfect fever of war preparation, the Navy Department was full of bustle and war talk, heavy shipments of powder and ammunition were reported as starting from San Francisco for Washington, and large consignments of gun-cotton were discovered on the way from Newport. War was in the air, and the number of warriors in the newspaper offices and clubs who were determined to "blow Chili out of existence" was on the increase hourly. It was on January 25 that President Harrison sent his "just-in-time" message to Washington, getting it published only a few hours before the answer of Chili disclosed the fact that there was no excuse for its deliverance. The whole affair, as it was viewed in the light of Chili's answer, was one of the most discreditable episodes in American politics. Viewed now, in the further light thrown upon it by this cable order for shells, it has a much more serious aspect, for there can be no doubt that the President was really preparing for a war upon Chili, with little regard for either the justice of his cause or the ordinary restraints of Christian civilization. He was actually collecting ammunition to begin an unjust and unholy war upon a weak and helpless nation.

---

The amusing aspect of the affair is, that when President Harrison's shipload of European shells arrived, he could not get them out of the Custom-house without paying duty, and the Navy Department had no funds at its disposal which could be drawn on for the purpose. If he had been a little more ferocious, or if Chili had been a little less prompt and manly in sending her answer to our "ultimatum," our Presbyterian President wou'd have had to start his war-ships for Chili, to "blow her out of existence," with no more powerful shells than our American manufacturers were able to invent, or he would have been compelled to ask Congress, as Secretary Herbert asks it now, to pass a resolution remitting the duty. Mr. Herbert makes the request as an "enemy of the protective-tariff system," but President Harrison would have been obliged to make it as a friend of the system in distress. The spectacle of Uncle Sam, brought to a standstill at the beginning of a war of his own provocation because he had not the money in one pocket to transfer to the other to enable him to pay duty on his foreign ammunition, would have been a rare one. We do not think that Congress ought to remit the duty. To do that would be to cast reflection upon the protective-tariff system. The bill ought to be sent to Benjamin Harrison, at Indianapolis, Ind., and he ought to use the shells as object-lessons in international courtesy and Christian civilization in his lectures on international law before the students of the Leland Stanford, jr., University.

---

It would have been gratifying to hear that the Grand Army of the Republic had taken a firm and patriotic stand upon the abuse of pensions, but its recent meeting showed that the claim-agent element is as potent as ever. Ex-President Harrison was shocked at the thought that "the moth of avarice, the canker of greed," might have eaten into the hearts of this generation and caused them to forget the services of the Union soldiers. As to whether these destructive agents had been operating upon the hearts of the old soldiers themselves he did not inquire, but the size of the pension appropriations would indicate that, so far as greed was concerned, the American people were not the guilty party. The retiring Commander-in Chief followed in the same strain, reminding the country that it would not now be in existence had it not been for the Union Army, and that upon the principle, "All that a man hath will he give in exchange for his life," the country was bound to give whatever the veterans demanded. The notorious Raum was present and reiterated these sentiments, which can scarcely be said to express love of country in its highest and most unselfish form.

---

With the passing away of Hamilton Fish at the advanced age of eighty-five we seem to close a book in the nation's history. He became active in public life when Andrew Jackson was a candidate for the Presidency, and, after filling various important offices and serving a full term in the Senate of the United States, he retired altogether, as he supposed, from public life shortly before the outbreak of the civil war. When President Grant called him from his dignified retirement to the chief place in his Cabinet, in 1869, he could not have had any adequate conception of the merits and abilities of the man whom he had selected for the office of Secretary of State. In fact, Mr. Fish was not his first choice for that place, or his second, and great was the surprise when the name was sent to the Senate—as great perhaps as that which greeted the nominations of A. T. Stewart for Secretary of the Treasury and Adolph E. Borie for Secretary of the Navy. Mr. Fish was already forgotten. He was past sixty and the generation did not know him. He obeyed the summons reluctantly, but he proved to be a statesman of a very high order, if not of the very highest. He had many severe trials, and he saw many days when he would have been glad if the honors of the State Department had never come to him. Probably his most difficult task was that of harmonizing Gen. Grant with the party which elected him, and in this he did not altogether succeed. Great patience and great tact were the indispensable qualities of a Secretary who had a San Domingo question and a Washington Treaty on his hands at the same time. It is Mr. Fish's crown of merit that the former did so little harm and the latter so much good.

---

In the report of the Comptroller of Customs at Georgetown, Demerara, for 1892–

'93, we find several tables relating to the operation in British Guiana of the McKinley reciprocity clause. They are summed up by the Comptroller himself as follows:

"If they prove anything, it is that the conditions of our commerce are such that, with the single exception of cotton-seed oil, trade has not been fostered between this colony and the United States by the operation of the McKinley stipulations for reciprocity. In certain articles, such as flour, kerosene oil, lard, and pickled beef and pork, the Americans had already a practical monopoly of our market. Increased consumption of these and similar articles can only follow upon an increase of population or purchasing power, such as may be expected to attend the development of the gold industry. By submitting to the terms imposed by the Washington agreement, the colony was enabled to continue to send its sugars into the American market; but it does not appear that the retention of this right has been productive of any material increase of trade. However vital the retention of this right may have been to a few individuals, the opinion seems to be gaining ground that, to the colony in general, it was not the absolute necessity that at one time it appeared to be."

What is thus true of British Guiana is true in general of all the countries with which reciprocity arrangements were made under the terms of the McKinley Bill. The main course of trade does not appear to have been sensibly affected in any direction by those vaunted "treaties" which were going to revolutionize commerce on this hemisphere.

---

The effectiveness of a little timely humor in high places was never better seen than in the Earl of Rosebery's speech on home rule in the House of Lords, and nothing was needed to make his hit complete but the pained air with which the Marquis of Waterford rose to protest against levity in such a presence. The noble Marquis would like to keep up the illusion that the Lords are a solemn gathering of the nation's wisest, struggling for the truth and the right; and no wonder he was grieved at Rosebery's intimation that they were only a lot of prejudiced dunderheads, for whose decision the country did not care twopence. Altogether, Rosebery's speech seems to have let in an unwonted breeze among the dry bones, and they will find it hard to pull themselves together again into anything like their former awful dignity. We would give something if a competent man could do the same kindly office for our Senate. "Senatorial courtesy" has been blown out to portentous proportions in the last few weeks, fairly inviting puncture by some deft hand. Then there is Peffer, posing as the great conservative to save the people from passing madness, and the silver Senators, with their muscles fairly cracking in their efforts to hold the country from plunging straight to ruin, and many more solemn dignitaries, to whom a humorous exposure would do a world of good. If a good hearty laugh could be roused on the floor of the Senate and in the country at the absurd figure which the opponents of repeal are cutting, it would expedite matters wonderfully.

The outbreak of riots in England will surprise no one who has watched the recent course of events in that country. The tendency has been marked to treat the labor-unions as standing for all laborers, and to ignore the existence of any rights on the part of laborers without the unions. The London Council has practically made it a rule that in all its contracts the requirements of the trade-unions shall be observed, so that it is idle for a contractor to attempt to employ free laborers. Very much the same attitude has been taken by Parliament, and that body has gone far towards adopting laws forbidding men to work more than eight hours a day at trades whose unions decide that such shall be the limit. Even Mr. Gladstone, although lamenting the former days when freedom of contract was cherished as a sacred right, now seems to feel that the demands of the unions must be conceded, stipulating only that they shall prove themselves to represent the majority of workmen. It should not have required much foresight to discern the consequences of this doctrine. If the demands of the unions are the demands of "labor," then when the coal-miners' unions order a strike, no one has a right to mine coal. For the Government to attempt to compel the union miners to let free laborers alone is inconsistent. Such conduct on the part of the Government implies that non-union laborers have a right to work upon such terms as they choose, but the attitude of the Government towards the unions has encouraged these bodies to expect different things. When it comes to the actual destruction of property, to the burning of the engine-houses, the wrecking of the hoisting and pumping machinery, the flooding of the mines, and the murder of miners who attempt to work against the orders of the strikers, of course the Government has to interfere and to meet force with force. But the pity of it is, that the course of the Government has been such as to foment the conflict. We have seen much the same thing in this country, and have to a certain extent established the principle that men have a right to work independent of trade-union orders. England has come to democracy late, and has yet to pass through some of our experiences. It remains to be seen whether she will establish that system of government upon the firm basis of the right to labor, or will attempt to base it upon monopoly.

---

The attack upon Siam by France is naturally seized upon with avidity by the Russophobists in England as proving the wisdom of their fears. The Hon. George Curzon, M. P., has drawn a startling picture of "India between Two Fires," and the danger of the supine policy that now prevails in the counsels of the Empire. Curiously enough his most effective opponents have been military men. Gen. Adye replied to him by saying that it is not necessary to assume in such discussions that both France and Russia are not to be trusted. He pointed out that Russia's conquests in central Asia add very little to her military strength. In mere extent of territory they compare with British India, but the population in the latter case is 250,000,000 and in the former 5,000,000. A Russian military expedition directed against India would have to cut loose from any substantial base of operations, and the idea of bringing any considerable force in fighting condition over the Pamirs is, in Gen. Adye's opinion, absurd. Gen. Chelmsford confirms this position, showing that if Herat must be defended by the English, it will necessitate the carrying their frontier 700 miles forward, only to put them in a strategical position much inferior to that which they now occupy. He adds that the fact that Alexander and Mahmud and Timur formerly invaded India with success does not necessarily prove that a Russian invasion would now have a like result. It is decidedly reassuring to hear army officers talk in this peaceable manner when civilians want to draw the sword.

---

Whatever personal jealousies and grievances may be animating the officers of the Brazilian Navy who have openly revolted against the President, it cannot be denied that they have a good *prima-facie* case against a Government which has been marked by autocratic and illegal methods. President Peixoto has been only less a Dictator than Fonseca, whom he helped to overthrow. His very title to the office he holds is clouded by his failure to order an election of a President, in accordance with the Constitution; and his recent veto of a bill aimed to correct this abuse of power seems to have been what precipitated the revolution. Then he has been guilty of the most outrageous interference in the State affairs of Rio Grande do Sul and Santa Catharina, where a civil war has been smouldering for several months. These facts would make friends of decent government wish the revolution all success were there any likelihood that a better successor might follow Peixoto. But the chances are that, as he walked in the footsteps of Fonseca, some other autocrat will copy his example. Meanwhile, the revolt of the navy comes to show, as the Chilian revolution showed, how dangerous an arm the navy may become to a South American dictator. Troops and garrisons he can keep his eye on and hold in subjection, and revolutionary agitators on shore he can clap into jail or shoot; but when the disaffected turn up in control of his men-of-war, and are able to steam up and down the coast and choose their own place for landing and establishing headquarters and fomenting insurrection, the case is alarmingly different.

*THE LORDS AND THE SENATE.*

It is a remarkable coincidence that the English House of Lords should be rejecting the Home-Rule Bill at the same time that the American Senate is about to pass the Silver-Purchase Repeal Bill. The latter is just as repugnant to the majority of the Senate, left to their own personal preferences, as the Home-Rule Bill is to the House of Lords. If they dared, they would defeat it. The Lords have thrown out the Home-Rule Bill with great contempt and by an overwhelming vote; and yet if a new House of Commons passes it again next year by a good majority, the Lords will have to accept it. It will then have the demonstrated popular demand behind it which the Repeal Bill in this country already has, and the Lords will give way just as the Senate is giving way now.

The coincidence recalls the real analogies which exist between these two second chambers of great national legislatures. They are historically analogous and related, whether we suppose the Senate to have been directly modelled after the House of Lords or not. There can be no doubt that the English colonists who built the system of American State government would not have made that system so almost universally bicameral had they not inherited the English tradition that such was the proper system. Out of the two chambers of the State legislatures grew the two of the Federal Government, though voices were not wanting in the Philadelphia Convention to urge, with Dickinson, that the American Senate should be given "as strong a likeness to the British House of Lords as possible," and the expositions of the 'Federalist' frequently show that a degree of likeness was thought to have been secured by the new Constitution.

At any rate, it is easy enough to trace an existing likeness, and to show how the actual Senate bears a strong resemblance to the actual Lords, both in point of personnel and removal from direct responsibility to the people, as well as in the methods which the people finally resort to in order to bring it to its senses. We might even say that the Senate exemplifies the hereditary principle of the Lords, since it is hard to see for what reason Pennsylvania sends Don Cameron to the Senate except that he is the son of his father. It certainly exemplifies membership on some other ground than popular choice. Quay and Hill and Murphy are in their seats with as little relation to the wishes of any body of constituents as exists in the case of the Marquis of Ailesbury. What possible dependence upon popular suffrage or sentiment can be made out in Stewart or Jones? They sit for the Nevada Mining and Milling Company, just as the Duke of Westminster sits for his own vast estates. More than a dozen Senators could be named whose personal interests would lead them to vote against repeal, just as the personal interests of English peers would lead them to vote against the principle of "betterment" or against any measure of land reform.

But the more interesting analogies are those which can be made out in the ways the American people and the English people have of bringing their second chamber to give them what they want. The general principle is laid down by Bagehot when he says: "But in truth it is idle to expect a second chamber, a chamber of notables, ever to resist a popular chamber, a nation's chamber, when that chamber is vehement and the nation vehement too." The two powers lodged in the hands of a Prime Minister to bring the House of Lords to terms are dissolution and the creation of new peers. After an appeal to the country and a second passing of a rejected bill, there is nothing for the Lords but ignominious surrender, and they dread this so much that when they saw it coming in 1846, on the repeal of the Corn Laws, even the Iron Duke advised them to give up in advance. If they did not give up, a Prime Minister would get from the Crown, as Earl Grey and Brougham in 1832 got from King William, a written promise to create enough new peers to overcome the obstinate majority.

Now we see both these powers practically at work upon the Senate to-day. For it to throw out the Repeal Bill would be as monstrous as for the Lords to reject a bill sent them the second time after an appeal to the country. There have been really two appeals to the country on this silver question. In 1890 the Senate passed a free-silver measure, which was beaten in the House by a narrow majority. Again in 1892 it passed one, and a new House defeated it by eighteen majority. Again this year still another House has spoken, and by a majority of 130 has told the Senate to listen to the voice of the people. It is Bagehot's case of a popular chamber being vehement and a nation being vehement too. The creation of new Senators is the people's threat in the background which is bringing light to many of the Senate. They know how expeditious is the American way of creating new peers. Our obstinate Lords are not simply given enough companions to outvote them, but are themselves put out in the cold. Whenever we create one Senator we kill another. The knowledge of this fact will make the vote for repeal, when it comes, unexpectedly large, as many Senators are now sure that if they stand on Senatorial dignity, or vote so as to keep their record consistent, or to feed fat their hatred of the President, it will be equivalent to saying—

> "As for me, hungry Oblivion
> Devour me quick."

*HOW TO INCREASE EXPORTS.*

In the thoughtful speech recently delivered by Senator Sherman upon the repeal of the act to which his name, in spite of his efforts to disown it, persistently clings, he took a comprehensive review of the financial situation of the Government. Among other judicious proposals he urged that the Secretary of the Treasury should have power to sell bonds whenever necessary to replenish our reserves, of which it is enough to say that it is exactly what should be done in order to put the credit of every enterprise in this country upon a substantial basis, and that the quicker it is done the better. He proceeded, however, to contemplate the possibility of an adverse balance of trade, and observed very properly that, in view of this contingency, we ought to encourage in every possible way the exportation of our products. Upon the importance of this the distinguished Senator was eloquent. "We ought," he said, "to pour the wealth of our country into the lap of all Europe, and sell them our products in order to avoid any difficulty." But here his statecraft came to a pause, and he very frankly declared, "I do not precisely see how this can be done." He professed his confidence in the ingenuity of the American people, but he was unable to discover how that ingenuity was to be exercised. He asserted that whatever could be devised to facilitate transportation should be done, but as to the nature of the expedient to be employed he admitted his ignorance.

In this attitude Senator Sherman indicates the perplexity which inevitably awaits every protectionist when he reflects upon the ultimate consequences of his doctrine. The only logical outcome of the doctrine is the extinction of foreign trade. It is a bad thing to import goods; we cannot export unless we import; therefore we will not export. But Senator Sherman is far too able a man to be satisfied with this Chinese theory of civilization. He understands that men desire to trade, and that it is good for them to trade, and yet he feels bound to cling to protective duties. He sees that it is of the utmost importance that our exports should be increased—of the utmost importance both to the people and to the Government; but he will not, and, being a sincere protectionist, he cannot, see that the only way in which this can be done is by increasing our imports. He insists upon the vital necessity of sending our goods to Europe, and sticks to a theory which maintains the vital necessity of taxing heavily the goods which we get in exchange.

The truth is, we are in the position of a farmer who sends a wagon-load of his products across a bridge to a market-town without paying toll, exchanges the products there for whatever he needs, and when crossing the bridge upon his return pays a toll of 50 per cent. upon the value of his purchases. Senator Sherman—and every protectionist—is bound to believe that the payment of this toll is somehow a profitable transaction for the farmer; but reason rebels when brought face to face with this proposition. It is too clear that the toll is a reduction of the profit upon the exchange of goods. Senator Sherman is

too intelligent a man to cry with Mr. McKinley and protectionists of that stripe, "The foreigner pays the tax!" He knows better than that, and he knows, moreover, that if the foreigner did pay it he would be by so much incapacitated for paying a good price for what he bought. Hence the Senator is brought to his present helpless state. He knows as an economist and as a statesman that our exports ought to be increased. He believes as a protectionist that our imports ought not to be increased. But our exports cannot be increased without increasing our imports, and when Senator Sherman gets as far as this he confesses that he is at the end of his tether. There may be some hidden resource in American ingenuity, but to the protectionist it is past finding out.

Senator Sherman is not a young man, but he is a sagacious man. Under the conviction that the Republicans "had no right to throw responsibility" upon an anxious President looking for a renomination, he concocted the Silver Act of 1890. He confesses now that that act has done us a mischief. He sees that it is eminently desirable to facilitate transportation, and he sees that by that act transportation was hindered. Most of our railroads have been in the habit of borrowing at low rates in Europe, and that act cut them off from their usual supplies of capital, and compelled them to borrow where they could at rates of interest that have become positively ruinous. Seeing that this was no way to facilitate transportation, he comes out openly in favor of repeal. Why should he not do with the tariff as he has done with the Silver Act? He knows perfectly well that the duties imposed by the McKinley Act are in many cases outrageously high. He knows that these duties were forced into the bill by the threats of a small and bigoted faction, in defiance of the protests of the most conservative Republican manufacturers, and in opposition to the best traditions of the Republican party. It is not to be expected that Senator Sherman should admit the McKinley Act to be altogether a bad act, any more than he admits the Sherman Act to be altogether a bad act. But as it is evident that the McKinley Act is doomed, it appears to be from every point of view wise for Republicans of Senator Sherman's calibre to avoid mere mulish obstruction to tariff reform, such as disgraces the Conservative party in England in its dealing with the Home-Rule Bill. Let them bend their efforts to the reduction of duties in such a manner as will cause the least uncertainty as to the future. When this has been accomplished, Senator Sherman will be enabled to see precisely how that increase of our exports is brought about, the manner of which is now hidden from his vision.

### *SOURCES OF REVENUE.*

It is now some thirty years since Mr. David A. Wells issued a pamphlet entitled 'Our Burden and Our Strength.' Our burden seemed at that time almost unbearable, and grave doubts were entertained as to the solvency of the Government. Mr. Wells showed that our strength was far greater than was commonly supposed, and that we should have no difficulty in carrying an even heavier load of debt than that already incurred. This essay was circulated by the Loyal Publication Society to the extent of 200,000 copies in this country and in Europe, and did much to establish the credit of the United States upon a solid basis. President Lincoln at once called Mr. Wells to Washington and placed him at the head of the National Revenue Commission, which brought order out of the chaos of tax-laws, and enormously increased the revenue while it diminished the burdens upon consumers.

Mr. Wells has now repeated his service to his country. In a pamphlet issued on Tuesday in the form of a letter to Secretary Carlisle, he handles the subject of taxes upon distilled spirits, malt liquors, and tobacco, with all of his old ability and with the same patriotic exultation in the abounding wealth of our people. He reviews our former experience in endeavoring to collect revenue from distilled spirits, showing that beyond a certain point an increase of the tax resulted in a decrease of revenue, and at the same time swelled the profits of the distillers by hundreds of millions of dollars. He recalls how a reduction of the tax from $2 to 50 cents a gallon put a stop to illicit distillation, how many industries requiring alcohol as a material at once revived, and how the revenue of the Government from this source rose in two years from about $22,000,000 to nearly $56,000,000. He does not remind us, but it is well for us to recall the fact, that this fortunate change was brought about by the unanswerable arguments from experience which he laid before Congress. The difficulties in the way of sound fiscal legislation were much greater then than now, but the wisdom of the policy recommended by Mr. Wells was so clearly demonstrated that it was irresistible.

After carefully reviewing the changes in the tax and the vicissitudes of the distilling industry, Mr. Wells concludes that a minimum tax of 330 per cent. upon spirits is dangerously near to or in excess of the maximum revenue point, and that "any increase in the existing rate will favor a recurrence of the disastrous and disgraceful results that characterized the period of experimental taxation in the years immediately succeeding the termination of the war." We cannot state the details of the argument advanced, but it appears to us irrefragable. It is especially to be noted that, whatever might be the case in the future, an advance in the tax upon spirits would be followed by a present decrease in revenue, whereas what the Government requires is an immediate increase.

Passing to the tax upon fermented liquors, Mr. Wells shows that it has been practically uniform at the rate of $1 per barrel of 31 gallons since it was first imposed in 1863. This tax is about 20 per cent. ad valorem, and amounts upon every half-pint glass of beer to about one-fifth of a cent. Under this moderate excise the product taxed has increased from 62,205,000 gallons in 1863 to 1,071,183,000 in 1893, which signifies an increase of consumption per caput from 1.86 gallons to more than 16 gallons, and an increase of revenue from $1,558,000 to nearly $32,000,000 Upon this Mr. Wells observes: "If it becomes desirable at this or any other time for the United States to materially increase its annual revenue by additional taxation, such a result cannot be obtained more certainly and with so little of expense, effort, or industrial friction, as by a moderate increase of the tax upon fermented liquors. The existing tax (20 per cent. ad valorem) is lower than upon almost any other industrial product entering largely into domestic consumption." At the same time, it seems, the brewing of malt liquors is an extremely lucrative occupation, while "it is also reasonably certain that, in the distribution of industrial products for consumption, there is no branch of business that returns a larger profit on the labor and capital employed than the retailing of malt liquors; a small retail-store often supporting a large family, besides paying high Federal and State licenses." Mr. Wells does not hesitate to maintain that if the tax upon beer were doubled, the revenue of the Government would be correspondingly increased, from $32,000,000 to $64,000,000 per annum.

As to tobacco, many interesting particulars are presented. Our internal revenue taxes upon tobacco are lighter than those elsewhere imposed, having been materially reduced in 1883. These taxes produce now about $32,000,000, the same amount which is derived from malt liquors. Had the tax remained unchanged, the revenue would now be probably $60,000,000. "Were the same ratio of taxation on tobacco as exists to day in the United Kingdom established in the United States, the annual revenue accruing to the Federal Treasury at the present time would be $85,000,000. If the rates existing in France were adopted, the annual revenue from this source would be $112,000,000." Mr. Wells, however, does not consider the effect of high taxes upon such articles as beer and tobacco in deteriorating their quality. It would, perhaps, not be detrimental to health were the beer-sellers to add sufficient water to their beverages to compensate themselves for the increased tax, but it would be a deplorable thing to see our people condemned to the use of the infamous quality of tobacco inflicted upon their subjects by the paternal governments of Europe.

It is hardly necessary to point out the bearing of Mr. Wells's pamphlet upon the reform of the tariff. That bearing will become the great subject of debate just so soon as obstruction to the popular will ceases in the Senate; and until that time it will be impossible and undesirable to fix the attention of the public upon any other theme than the repeal of the Silver Bill. When that shall have been brought about, our revenue system will be thoroughly revised, and for this work no assistance can be more valuable than that furnished by the facts and arguments that Mr. Wells has presented. Every one who wishes to have an intelligent opinion upon our fiscal policy will do well to study the information made available in this pamphlet, which the press has already widely republished.

## THE COLUMBIAN EXPOSITION.—VII.

### SCIENCE.

CHICAGO, September, 1893.

IN writing on Science at the Fair, one hesitates where to begin or what limits to set to the field to be surveyed. It is obvious that applied science must be almost exclusively left out of the question, and the discussion limited to the results of research as exemplified by exhibits, or to notices of the raw material for research here brought together for the first time and still awaiting study.

The various scientific congresses projected during the Fair, of which most were held in the latter half of August, have not differed from other less advertised scientific meetings, except in the paucity of their audiences and the prominence of the worthy but quite unscientific people who are responsible for the "World's Congress Auxiliary" and the addresses of portentous length in which visiting scientists were welcomed. Some of the congresses were better organized and attended than others, many very respectable or even valuable papers were read to scanty audiences, but, on the whole, the opinion about these gatherings seems to be that which was expressed by the student who, when asked what was the function of an obscure concatenation of muscular fibres in human anatomy, replied, "To perpetuate the name of their illustrious discoverer." These meetings were held miles away from the Fair grounds, they occupied time which could be better spent in other ways and which was valuable by reason of its costliness, if for no other reason, to most of those who were visitors in Chicago. No results adequate to the means and time called for were visible to the scientific eye, and so, for all practical purposes, these meetings were of very little importance. In several cases this was immediately recognized and adjournment was had to the Fair grounds, where, under the guidance of specialists, the members were intelligently introduced to the collections or appliances in which they were most interested, and kindred minds had opportunity of making personal acquaintance.

Before coming to the exhibits of studied and unstudied material, zoölogical, botanical, geological, and anthropological, a word or two should be said upon a subject which stands on the boundary line between the arts and sciences, relating to and more or less connecting them. We refer to the mode of presentation of material exhibited, relating to any field of research, in such a manner that the exhibitor's idea may be communicated to the observer clearly, effectively, and with the greatest economy of space, time, cost, and exertion to the parties concerned. This art or science is a new one, and the progress which it has made is due almost entirely to the efforts of a very few men in England and America. The pioneer in this field was the late Prof. Baird of the Smithsonian Institution, and the perfection to which it has been brought is chiefly due to his pupil and successor, Dr. G. Brown Goode. In England the late Henry Moore of the Liverpool Free Museum, Gen. Pitt Rivers, Dr. Sharpe, and Prof. Flower of the British Museum have been able workers. As in other scientific matters, there have been many contributors of detail and a few effective organizers. The old museums were, like most of those on the Continent to-day, vast repositories of material for students and heterogeneous curiosity-shops for the laity. The modern idea of the museum is not merely that of a storehouse for students, but eminently a school for the general public. As Goode has put it, the exhibit should comprise a related series of clear and comprehensible labels, illustrated by specimens. The Smithsonian or National Museum in America and the Pitt Rivers Collection at Bethnal Green in London were the first to illustrate this principle, to which the best administrators of the day have given a cordial welcome.

The first occasion on which the two methods were conspicuously comparable before the public eye was at Philadelphia in 1876, when the Government exhibit prepared on the newer lines was in striking contrast to the hotch-potch of many other exhibits. It is gratifying in the extreme to see how well the lesson has been taken to heart and how great the advance has been between 1876 and 1893, as illustrated by the presentation of the exhibits of both private and public collectors at Chicago. It is true that there are still many dreadful examples of outworn methods to be found here and there, but they are sufficiently in the minority to emphasize the rule, and, when of official character, are invariably foreign and from the less progressive countries. That progress is not confined to the northern hemisphere or to large countries, is fully exemplified by the admirable manner in which New South Wales has organized her exhibits, labelled and arranged them, besides printing clear and comprehensible guides to many of them. It is a matter of public comment among all those qualified to judge that none of our foreign exhibitors has surpassed, and few if any, have equalled, our progressive Australian friends in this respect. Japan, too, is conspicuous for her well-selected and judiciously educational exhibit, which no "museum-man" will pass without favorable comment.

In the general divisions of the Fair it is notable that the perfection with which this side of the work has been carried out is clearly proportional to the scientific character of the workers in the particular field. Thus, nearly all mining-men have more or less scientific training, and the Mining Building, as a whole, contains better arranged and more instructive material than any other on the grounds. Agriculture has felt the directing hand of science less, or at all events less generally, than any other profession, and so the agricultural exhibits appeal more to the idea of immensity or the puerile conceits of the uncultured than those of any other group. No great corporation has benefited more by the labor of scientific experts in its line of work than has the Pennsylvania Railway, and we find its special exhibit scientifically arranged and instructive in the highest degree; and so we might go on indefinitely to illustrate the point. Naturally the National Museum, as the source of the impulse which has moved so many others in the right direction, stands at the head, with the associated bureaus of the Government, in the display of the methods in question, but the great need of room and the small means supplied for the purpose of the present Government exhibit prevent this feature of it from being as prominent as it might have been under more propitious circumstances. That it is not without its effect is obvious from the crowds which swarm in the aisles of these exhibits from morning till night, evidently finding there not only what attracts but what interests them.

In zoölogy the Fair offers a rather meagre display, which is made still more obscure by being broken up into small exhibits, many of which are found in most unexpected places. The most representative general exhibit is that of Prof. Ward of Rochester in the gallery of the Anthropological Building. Here a very excellent series of specimens suitable for a teaching museum are brought together, well and clearly labelled and attractively arranged. The model of the mammoth here attracts much attention, and the taxidermy throughout is good, if not remarkable. There are a number of specimens of taxidermy exhibited by private persons, none of which needs special comment; the general average is poor and inartistic. The furriers in the Liberal Arts Building have here and there a well-mounted fur animal; a few may be found in the Leather Building; and small collections representing State faunas may be found in most of the buildings erected by the several States or foreign countries. Most of these are poorly mounted and very imperfectly labelled. Occasionally a rare creature may be detected among these forlorn representatives of their kind, as in the case of the Liberian hippopotamus, a mounted specimen of which is included in the exhibit of that little African State. The exhibit made by the State Museum of New York is creditable, clean and well labelled, one of the best of the minor collections.

The National Museum exhibits a mounted series showing examples of all the families and most of the genera of American mammals and a number of groups of North American mammals, accompanied by accessories indicating the natural surroundings of the species. Among these the most interesting are those containing the Rocky Mountain sheep and goats, the woodland and barren-ground caribou, and the Pacific sea-lions. A fine walrus might have been more life-like if the taxidermist had had a better guide than Elliott's caricatures of this unfortunate animal, which, in addition to extinction, seems to be doomed to posthumous misrepresentation. The most important among the exhibits in this series is the mounted skin of a very good example of the Alaskan sea-otter, perhaps the best existing specimen in any museum. A number of large African game animals are also shown, some of which are rare. Similar series, illustrating the American families of birds, reptiles, and batrachians, fishes, insects, etc., are also exhibited by the Museum, as well as two very attractive collections of the birds of Paradise and humming-birds. Several groups of species, formerly common but apparently now verging on extinction, comprise the Carolina paroquet, the wild pigeon, and the ivory-billed woodpecker. There are also spirited groups representing the

courtship of the prairie chickens, and the flamingo with its singular nests.

Such groups are not only æsthetically more attractive than the ordinary mounted bird on a plain perch, but they convey to the beholder some idea of the bird's habits and natural surroundings, so that the most careless can hardly go away without learning something new. Excellent examples of this sort of mounting may be seen in the American Museum of Natural History at Central Park, and in the British Museum, Kensington; but the restricted space and the small amount of money available at Washington have hitherto prevented the National Museum from extending to birds the treatment which has been so successfully applied to the larger mammals. The subject of fish and fisheries was so well exemplified at Philadelphia that the result at Chicago is something of a disappointment. Excepting for the fisheries of North America, the exhibition is small and mostly unimportant. The reason is not far to seek. The United States and Canada collectively have nothing to learn at present from foreign countries, and no foreign dealers in fish products have any reason for supposing that they can gain a foothold in our markets, except for sundry specialties like cod-liver oil. Consequently the commercial incentive is lacking, and, apart from such countries as New South Wales and Japan, which have made an exhibit as a matter of national pride and in evidence of the state of their industries, the foreign fisheries are very imperfectly represented. The Government exhibit is good, though less prominent than in 1876, and the practical rather than the scientific side of the Fish Commission's work is emphasized. The aquaria are useful in showing a good many unfamiliar salt-water fishes to the Western visitor, but the fresh-water aquaria have suffered from virulent attacks of the fish fungus (*Saprolegnia*) and are less successful. This exhibit, as a whole, is that of tanks of water with fish in them, and not aquaria in the strict sense of the word, which implies a balance of conditions between the water plants and the animals, as in a state of nature. Many of the State exhibits show more or less dilapidated stuffed fishes as a part of their faunal exhibit, but California has an excellent series of models, by Denton's method, of her chief economic species. These are well colored and properly labelled. New South Wales has a good series of alcoholic fishes in the same excellent order as the rest of her exhibits. The collection shown by Japan is more interesting from the economic or anthropological side than as illustrating the ichthyology of the empire. The shell fisheries are almost unrepresented in the Exposition except by the canned product. A few unlabelled and poorly preserved shells appear in the Brazilian exhibit, a few oysters and pearl shells in the collections of New South Wales and Mexico; Wisconsin shows a pretty series of fresh-water pearls in (of all places) the Mining Building; and Tiffany has a fine series of pearls in their natural state, beside those worked into ornaments—but this is about all that is visible in this line, excepting the series of shells contained in the Ward exhibit in the Anthropological Building. There are a few interesting models of fish traps and weirs in the collection shown by the Sultan of Johore in the Plaisance, but these objects belong under the head of Anthropology rather than that of Ichthyology.

Entomology is admirably illustrated by the collections in the Government Building made by the Entomological Bureau of the Agricultural Department. Probably no portion of the whole Exposition better illustrates the scientific modern method of presenting such matters to the public eye. The insect is shown fully labelled in all its stages and varieties, with its food plant and cocoons, with illustrations of its ravages when injurious, or beneficial methods of work when useful, supplemented by a small map showing its geographical range, and often, when of economic importance, accompanied by enlarged anatomical models. Nothing more clear, instructive, and satisfactory can be imagined. The experiment stations of the several States in the Agricultural Building show a collective exhibit which is very creditable, though less efficiently displayed than that made by the Government; and there are the usual miscellaneous collections of attractive butterflies, etc., to be found in many of the State exhibits and in those shown by foreign governments. W. H. D.

## THE MOST SUBLIME OF EARTHLY SPECTACLES.

PORTLAND, Oregon, July, 1893.

TEN hours and a half after leaving Flagstaff, we reached the Grand Cañon Station, which at present consists of a log-cabin (stored with bacon, hams, canned goods, and antidotes to thirst), besides a number of tents—a large one for kitchen and dining-room, and smaller ones for visitors, each tent having a board floor and a comfortable bed. The tents cost a dollar a day, and the same sum is charged for a meal, which will be found as good as can be expected under the circumstances. Through a lucky coincidence, two of the very few springs on the Cañon's brink were found right here, where the scenery is at its best. Standing beside them one cannot avoid recalling the sad stories of men who wandered along the edge of the Cañon for days and finally perished of thirst, within sight of the inaccessible river below, mocking them with the distant roar of its turbulent waters.

In speaking of the Walnut Cañon I said that one comes across it unexpectedly and without warning, in the midst of the pine forest. The same is true of the Grand Cañon. The forest grows up to its very edge, and although the camp is only a hundred yards from the brink of the colossal abyss, one might live there a year without suspecting its presence. The superintendent of the camp told me a story of a Chinaman who was brought there as cook. He saw how people constantly came and went, staying half a week or longer, and as he could not see anything extraordinary about the tent village, he finally, at the end of his first week, asked the waiter what brought so many people to such an out-of-the-way place. The waiter promised to tell him after the dishes were washed; then he took him up the hill—only a minute's walk from the tent. Arriving at the brink, the Chinaman threw up his hands in astonishment and awe; he could not fathom the mystery, and the exclamation, "What for?" burst from his lips. Thereafter he daily sat there for an hour. Yet no one needs to envy the Chinaman his sublime surprise: though you have read a dozen descriptions of the Cañon, and seen a hundred photographs, your astonishment—I had almost said consternation—will not be less than his. I have read somewhere of two Englishmen, one of whom, on reaching this point, exclaimed, "Well, I'll be damned!" while the other sat down and wept like a child. Their emotion was the same; they merely had different ways of expressing it.

Lessing intimates in his 'Laokoön' that Homer gives one a more vivid idea of Helen's beauty by noting the effect it had on the Trojan elders than he could have done by a lengthy enumeration of her charms. I feel inclined to follow this Homeric example, and not attempt a description of the Grand Cañon, after noting its effect on the Chinaman and the Englishmen. If you will look at photographs of different parts of the Cañon, you will understand how utterly hopeless such a task must be. The best and largest photographs of these scenes appear blurred and wanting in perspective and details, the reason being that the distances and dimensions are so gigantic, and the details so infinite, that no camera can possibly condense them, unless you take one detail at a time and afterwards enlarge it, as the minute kodak portraits are sometimes enlarged to life-size. What the camera cannot do, it is useless for the pen to attempt. A few hints may nevertheless be given as to what visitors may expect.

Many persons, on arriving at the brink, are prepared to peep down between two dark, precipitous walls, only a few hundred feet apart, with the Colorado River flowing a mile or more below as far as eye can reach on either side. The Grand Cañon is no such thing, at least from this point of view; it is instead a stupendous abyss, almost circular in appearance, more than twelve miles across from where you stand to the opposite brink, and extending to the right and left indefinitely, according to the elevation of your point of view. Unlike the Yosemite Valley, this huge opening in the ground has no snow peaks, cliffs, or domes along its sides, but has a level brink as far as eyesight extends; nor are the vertical walls adorned with waterfalls, as at the Yosemite—except after showers. Instead of having its mountains and cliffs and other architectural ornaments along its rim, the Grand Cañon seems to have *swallowed them all;* and there they stand, rising from the level of the river, which is almost sea-level, to where you stand, more than 7,000 feet above the sea. This is one of the unique, the marvellous, the amazing aspects of the Grand Cañon—that it is a conglomeration of scenic features such as you *might* expect to see from a mountain top, while here you find them buried in a big hole in the ground, so that you have to come to the very brink before you see them.

No less unique and marvellous are the dimensions of all the individual factors in this scene, which dwarf everything the most experienced traveller can have beheld before. Yet what the eyes show us of this grandeur is but a fraction of the reality. We have no standard of measurement for such cyclopean scenes. So much, however, is obvious at a glance that if we should pile the Hudson River palisades on top of the precipitous wall opposite us, they would add no more to its apparent height than a single brick would add to the tallest building in New York. And Mr. Charles Dudley Warner did not exaggerate when he wrote of the mount[illegible]n lying in the foreground below us, that "the great San Francisco mountain, with its snowy crater, which we had passed on the way, might have been set down in the place of this one, and it would have been only one in a multitude of such forms that met the eye whichever way we looked"; or of the Yosemite, that, "dumped down into this wilderness of gorges and mountains, it would take a guide who knew of its existence a long time to find it." The river, too, aids our imagination in grasping the grandeur which our senses cannot measure un-

aided. Far off to the right we see two short streaks of it. They seem like sections of a trout brook, but we know that they are part of a big river, and those who have been on its bank say that it is here as rapid and wild as the Niagara whirlpool. These two streaks are all we see from this point of the Colorado, which, for the rest of its sinuous course, is either hidden between the Cañon mountains or sunk far out of sight in the bowels of the earth.

Curiously sloping, terraced, and pinnacled are these subterranean mountains, as one feels tempted to call them—for we have only to imagine a roof over the Cañon to convert it into the biggest cave in the world. Fortunately it is not a cave, else we should lose the *ensemble* view, the constant changes of aspect produced by the varying illumination of sun and moon, and the exquisite color effects which add the touch of beauty to all this sublimity. The different rock strata, which here reveal the secrets of earth-building, have each their own color—red, gray, brown, purplish, in streaks and layers diverse. Close by, to your left, is a patch of brilliant red rock, which for all the world looks like one of the picturesque beds of crowded flowers one sees on the California foothills in spring. The purplish or brown colors prevail in the upper layers, while the lower slopes seem covered with green moss; but this moss is really a forest of shrubs and trees of respectable size. As the hour of sunset approaches, a bluish mist, or atmosphere, is cast over the whole, and modifies all the tints to a more sombre aspect. The abysmal mountains to the left cast their long shadows, and their summits assume the fantastic forms of temples and houses and castles of a race of giants—pagodas and Walhallas so deceptive and complete that little is left for the imagination to add to what the eyes can see.

To the right the view is even more varied and imposing, with more mountains rising from the Cañon, more dizzy palisade walls, and the two streaks of the river before mentioned. Beyond the brink of the Cañon, too, there is here a sight which, just before sunset, rivets the attention and makes an indelible impression. Far off in the distance are the faint outlines of the Navajo Mountain, in the shape of a watermelon; to its left, nearer the Cañon, a range of mountains of almost a chalky white, and between this and the Cañon lies a streak of desert which any one who did not know to the contrary would swear was a large lake, and which gives one a good idea of what a lake mirage must be like. After the sun has set, these phantoms disappear, but a new rosy hue is diffused over everything, like the Swiss Alpine glow. With the sun, too, disappears a sight, only a hundred feet to your right, to which I have never seen any reference, but which is more remarkable than the profile in the White Mountains, or any other rock-portrait I have ever seen—the image of a long-bearded old man with a most kindly and thoughtful expression. Every feature is perfect, and the face strikingly resembles Michael Angelo's Moses.

No visitor to this region should fail to place himself for a day or two under the guidance of Mr. John Hance, who has for nine years made the Cañon his home, and knows every accessible part of it as well as you know your own house. He has asbestos, copper, and silver mines—fifty-eight in number—in various parts of it, has one cabin on the brink, another part way down, and another by the river, with plenty of burros for himself and those who intrust themselves to his care; some of these animals were born in the Cañon and have never been out of it. There are now two roads to the river, and though requiring firm muscles and a steady head, even ladies have been down them. In winter Mr. Hance makes the bottom his home, in summer the brink. Down there he has seen butterflies and lizards play about him in the warm air when a storm had just deposited a thick layer of snow on the rim, only a few stray flakes of which reached the bottom. Major Powell, on his daring expedition down the river in 1869, encountered a temperature as high as 115 degrees in this abyss; and on September 13, 1889, Dr. Merriam found 80 degrees at the bottom, while at the top of the Cañon thick ice formed on a bucket of water. "In descending from the plateau level to the bottom of the Cañon," says the same writer, in a Government publication, "a succession of temperature zones is encountered equivalent to those stretching from the coniferous forests of northern Canada to the cactus plains of Mexico." And of the interior of the Cañon he says :

"It has ledges, terraces, and mesas, barren crags and grassy slopes, lofty mountains and deep valleys, cool hillsides clad in forests of balsam firs, and hot bottoms filled with subtropical thickets; it has arid stretches of sand bearing a scattered growth of cactus and yucca, and marshes and springs that never become dry and are hidden by the verdure of a multitude of plants requiring a moisture-laden atmosphere for their existence. Its animal life is as sharply varied and contrasted."

If you lack time or strength to follow Mr. Hance into this strange abyss, you must not fail, at any rate, to go with him to Bissell's Point, five miles east of the camp, or, better still, a mile less, to a sort of isolated buttress or rocky projection, whence you see straight down the abrupt wall and get a much more vivid impression of the awful depth of the Cañon than from the point near the camp. On this rocky projection are still seen fragments of pottery and other evidences that it was used by the Indians as a habitation of some sort. It could hardly have been a fortress, isolated though it be, for where could the water have come from in case of a siege? Perhaps it was a place of "religious" resort—Mr. Hance has heard traditions of the Indians bringing their prisoners to this horrible precipice, swinging them over it, to gratify their love of torture, and then dropping them, to be dashed into a thousand pieces, like the rocks he threw over by way of illustration.

Mr. Hance is as proud of the Grand Cañon as if it were his own creation, and if he could write down his experiences, they would perhaps make as interesting a book as Major Powell's long-expected volume on the Cañon will doubtless prove. He rarely leaves it for more than a few days at a time, and then longs for it as an exiled Swiss does for his avalanches. Summer and winter it is equally attractive to him, but for visitors he recommends May and June, October and November, as the best months; for then all weather chances are eliminated, the sky is sure to be blue, and there is usually a brisk breeze. Yet midsummer has its advantages too, especially in the cloud phenomena in the Cañon, in the sand-whirls spinning across the adjoining desert like water-spouts, in the sight of rain in the heated air that never reaches the parched ground, and in the terrific rain-torrents that have been compared to volcanic eruptions. Oddly enough, whereas in neighboring California the rain almost always falls at night, here it rarely comes except in the daytime. Yet even in the rainy season the air is always dry, and meat left exposed to it does not spoil. Although the heat by day is greater than in the tropics, the nights are usually comfortable; there are no mosquitoes, and the large flies which are quite troublesome during the day, vanish instantly at sunset. Were it not for these flies, the Cañon camp would be an excellent sanitarium, except for those whose heart is affected by so great an altitude, causing palpitation and loss of sleep in a prolonged stay. Probably ere long there will be a railroad to the Cañon and a hotel. If they are not built obtrusively, there will be no harm in them, for they will appear like mere toys amid nature's mammoth phenomena. The lover of dry, bracing air and perfect repose will find this an ideal resort, where silence is never broken except by the arrow-like whiz of a passing swallow, or the cooing of amorous turtledoves mingling with the forest music. Nowhere is man less obtrusive. Go a hundred yards from camp, and you might wander about for weeks and never encounter human habitation. A student of the sublime can profitably spend a month here. He will never get over the surprise of going up that unpromising hill and finding himself suddenly on a mountain-top, and beneath him "the most sublime of all earthly spectacles." HENRY T. FINCK.

## VENETIAN PICTURES RE-VIEWED.

VENICE, July 28, 1893.

AFTER an absence of fifteen years, I am in Venice again, and have been industriously picture-hunting for two weeks. Perhaps I am now in a position to give some systematic account of my impressions of the pictures of Venice; and these impressions, as those of a painter seeing with his own eyes and using such knowledge as his training has given him, may not be without interest for some of the readers of the *Nation*. I give them for what they are worth, not supposing that they settle anything, and leave the reader to make his own allowances for "personal equation."

First of all, then, the earlier men, the Vivarini and the rest, and even Gentile Bellini and the much-lauded Carpaccio, may, by all but the historical student of art, be entirely neglected. Carpaccio's St. Ursula series is an entertaining picture-book, full of historical costumes and "documents" for the reconstruction of a past Venice, but they are quite artless and childlike in both composition and drawing, and not very remarkable in color; and the traveller who follows Mr. Ruskin's advice and spends much time in reverential study of them, is likely to hinder his growth in any real appreciation of what painting is. The first seriously considerable artist of the school is Giovanni Bellini, and he holds his own well. There is no lovelier piece of early Renaissance work, of the somewhat hard and thinly painted kind, than the Frari Madonna; and the steady, strong growth in breadth and power and fulness shown in his other two capital pieces here, the Madonna of San Zaccaria and the "Saints Jerome, Christopher, and Augustine" of San Giovanni Crisostomo, is truly wonderful. The first of these, which can be seen to advantage only in the late afternoon, when the westering sun floods the church and lights up its dark corners, I did not truly see when I was here before, and the second I did not see at all, and they have considerably modified my view of Bellini. They are noble works of art, and, for the moment, almost incline one to accept Dürer's dictum that Bellini was, in his old age, "still the best painter of them all." The quality of most of the Titians here aids one to feel this. But though Bellini

has assumed new dignity in my eyes, even here there are reservations to make, and it is distinctly *not* true that, as the Baedeker quotes Ruskin, "John Bellini . . . united in equal and magnificent measures justness of drawing, nobleness of coloring, and perfect manliness of treatment, with the purest religious feeling." "Justness of drawing," even at his best, he had not. His Madonnas' faces are still enthralled by the Byzantine ideal, and, if sweet, are feeble; but even his more portrait-like accessory heads are thoroughly well drawn only when in profile, and his attempts at foreshortening are distinctly bad, while his treatment of the nude, as in the St. Sebastian of the large picture in the Academy, or the St. Christopher in the picture mentioned above, is meagre and primitive. The numerous works by him in the Academy are nearly all second-rate, and need not detain us.

Destructive criticism is fast reducing Giorgione to a myth, and there is nothing here to help one to a belief in him. There is said to be a picture by him in the Palazzo Giovanelli, which is inaccessible, and there is an "Apollo and Daphne" in the Seminario Patriarcale which the guide-book pronounces "genuine but retouched," but which is certainly greatly inferior to many of the pictures now taken from him. For the rest there is nothing worth seeing in this little collection.

And now we come to the greatest name in Venetian art and to the greatest disappointment of Venice. In Venice one has to hold with both hands to the memory of the splendid portraits, the wonderful small canvases with single nude figures, that one has seen elsewhere, to retain one's respect and veneration for the name of Titian. He has only one great canvas in the Ducal Palace, for which I am humbly thankful, but the churches are full of his altar-pieces, and they are almost all of them pompous and uninteresting and (let me risk the word) mediocre. Many of the lesser men show better than he. Palma's "Santa Barbara" is better than almost any of the Titians here, and Bonifacio and Paris Bordone and Pordenone and even Lorenzo Lotto are often more interesting. His "Doge Grimani" not only shows "want of feeling and coarseness of conception," as Ruskin very justly remarks, but is badly composed and not well painted, and is quite unpleasant in color. His "Assumption," in the Belle Arti, is usually labelled his masterpiece. It is clumsy and posed in its arrangement, the figures are common in type and (several of them) badly drawn, the color is bright with the brightness of stained glass, thin and lacking in quality. Tintoretto's "Miracle of St. Mark," which hangs near it, eclipses it utterly. Some of the nude baby bodies are adorably painted, and in them only does Titian show himself. It is so with picture after picture. From the early "St. Mark" in the Salute, much bewhiskered and theatrical and surrounded by stumpy, big-headed saints, to the melancholy mouldiness of the Pietà in the Academy, his last work, of which the color and texture resemble nothing but old cheese, there is hardly a really fine work—hardly one that is *felt*—that seems painted with conviction. The "Peter Martyr," which was probably the best of the lot, is gone, but the "St. Lawrence" is here, and the "Annunciation" in San Salvatore, and the "Presentation of the Virgin," and "San Giovanni Elemosinario"; and the guide-books give long quotations about them from Crowe and Cavalcaselle, in which all the adjectives are exhausted in the effort to convey an idea of their transcendent grandeur and beauty. The tourist looks and wonders and tries to admire and doesn't, and imagines that art is a strange sealed book. The "Presentation" is flat and hard and commonplace, and the others are grimy and brown and woolly, and commonplace too.

One is almost tempted, finally, to wonder if it is not Titian's very mediocrity which has contributed to the universal acceptance of his work and the overwhelming dominance of his name. No; Titian was unquestionably a very great painter, and even in Venice one may see it occasionally. The "Pesaro Madonna" is a fine picture, and there is one other even finer. But the "Pesaro Madonna" might seem nearly as cold and pompous as some of the others were it not for the portraits, which save it; and when one's eye lights on the little head in the corner—is it a boy's or a young woman's, that fair head with its mild, steady glance and the white silk sleeve and shoulder telling so finely against the flesh?—one has surprised Titian's secret. He was purely a painter, and above all a portraitist, and his heart was not in these big canvases, painted because altar pieces were in demand. It is not lack of "religious feeling" that makes them inferior—he surely had as much as Veronese, who is superb—but lack of decorative feeling. Instead of regretting that Titian was employed so much in painting portraits of kings and emperors or easel-pictures for their cabinets, what we should regret is that he was ever employed at anything else. He was the greatest of portrait-painters and of the painters of the nude. Give him a limited space and a model, and he is unsurpassable. But his grand "machines," his *tableaux d'apparat*, are mostly failures. In the Scuola di San Rocco, on the staircase, high over a door and nearly invisible, is a little picture of two figures not over half life-size, an "Annunciation," which is the one Titian in Venice to which the much-abused word "masterpiece" might be fairly applied. It is badly dried in and somewhat browned, but, fortunately, has never attracted the attention of the restorer. It is a pity that it cannot be taken down and cautiously, *most* cautiously, cleaned and placed in a good light somewhere. It is one of the loveliest and most delightful pictures I know. I got up on a ladder and studied it, close to, at my leisure. This is Titian, Titian at his best, the absolute painter—as charming in sentiment as it is consummate in quiet mastery of execution, and nothing else in Venice seems quite as perfect as this.

Perhaps the strangest genius in the roll of great artists is Tintoretto. A great genius he unquestionably was, yet no other great painter sinks so low. If Titian is often mediocre, Tintoretto is often, perhaps most often, downright bad—bad with a thorough, uncompromising badness that is surprising. His bad pictures are at once vulgar in conception, sprawling and disorganized in composition, lumpy and exaggerated or actually feeble in drawing, insufferably careless in execution, and black, dirty, and unpleasant in color. And the very worst of his bad pictures are collected together in that museum of vast daubs where the faithful flock of Mr. Ruskin goes to worship, the Scuola di San Rocco. The public ought to be warned against that humbug, and the guide-books reformed. My Baedeker tells the tourist that the Tintorettos in San Giorgio Maggiore are "daubs redounding to the painter's everlasting shame"; why should it print, as approving, Mr. Ruskin's statement that the worse daubs of the Scuola make it "one of the three most precious buildings in Italy," bracketing it with the Sistine Chapel; and that "whatever . . . the traveller may miss in Venice" he should give *it* "unembarrassed attention and unbroken time"? I say, with due deliberation, that, with the exception of the little Titian mentioned above, there is not a picture in the Scuola di San Rocco that has any value other than as an awful warning, or that is worth five minutes of the time of any one but the professed critic and historian of art.

The first thing that strikes one about these pictures is that they are in the most wretched state of preservation—or rather of *un*preservation. The blues have faded to ashy whiteness, and the other tints have blackened, until any merit they may have possessed is lost for ever. They are mere wrecks. But they are not wrecks of great pictures. They never can have been anything but scrawled and sloppy sketches, without dignity or seriousness of any sort, and painted like the scenery of a small theatre. I have not my books at hand, and do not remember the story exactly, but they were painted for nothing or next to nothing, and in a prodigiously short space of time, and they show it. Neither do I find them more powerful or interesting in conception than in execution. The "Massacre of the Innocents" is, as my companion remarked, "about as interesting as an average Salon picture." The Madonna of the "Annunciation" is inconceivably coarse in type and careless in execution, and the cataract of cherubs rushing over the transom is theatrical rather than dramatic. As for the wonderful meanings which Mr. Ruskin has found in these pictures, one can account for them only on the ground that the pictures are so dim and black that one can fancy anything in them. He sees in the "Baptism" a second horizon opening under the river bank and the Spirit carrying away Christ to his temptation, where there is absolutely nothing on the canvas but the reflection of the sky in the water. But it is useless to go on. Only remark that I do not except even "The Crucifixion," Tintoretto's "masterpiece," from the indictment. It is slightly better than the others, but only slightly. It has all the faults of the *baroque* in architecture and sculpture, and one is puzzled to understand how that hater of the *baroque*, Mr. Ruskin, should admire it in painting.

There are many more bad Tintorettos in Venice, but we may pass them by and occupy ourselves with the good ones, which are in considerable numbers too, fortunately, and which are almost as astonishingly good as the bad ones are bad—so good as to leave one wondering how the painter who was capable of such work could ever have been guilty of the others. One is not only puzzled but exasperated by the man. Perhaps the best of them all is the "Pallas driving away Mars" in the Anticollegio of the Ducal Palace. Tintoretto has four smallish pictures in this room, which the guide-book does not even give a star to, yet these *are*, if you like, masterpieces. The "Bacchus and Ariadne" is the best known, and is, in part, superb, but the figure of Ariadne has faded and lost its glazes, and is clay-colored and cold. Her head can never have been anything but mean and characterless, and it is only the floating figure that is of Tintoretto's very best. How shall one describe the "Pallas and Mars"? Titian plus Correggio is as near to its formula as one can come, but there is much in it that is neither Titian nor Correggio, and which no one but Tintoretto could have done. The fulness and glow of color is Titian at his best, but Titian with a difference—Titian inclining to the blue and green of the scale and away from the red and yellow. The richness of light and shade, the glow of the lovely knees

and rounded arms, and the transparent depths of shadow, are like Correggio, but a Correggio of more daring invention and shorn of the affectations and prettinesses adored of schoolgirls. The lithe suppleness of full-muscled form, the adorable distinction of the delicately poised heads, with their shining braids of golden-brown hair, the firm hands, with their square-ended fingers—these are Tintoretto and none other; one of the first painters of all time when he took the time to be so.

There are two other Tintorettos in the Ducal Palace that no lover of painting should fail to see, "Saints Jerome and Andrew" and "Saints Lewis, Margaret, and George with the Dragon," in the ante-chamber of the Chapel. They are high up over doors, of the quiet, *gray* type of Tintoretto's work, and might pass unnoticed, but they are masterly in every touch, and show, perhaps, more colorist's power in their grayness than many a gorgeous Titian. This style of coloring in a subdued half-tint of grayish quality, neither golden nor silvery nor black, was one in which Tintoretto did much of his best work, witness the "Crucifixion" in San Cassiano—a noble picture and infinitely superior to the "Crucifixion" of the Scuola di San Rocco. The "Paradiso" is "the largest oil-painting in the world," and, for me, that is almost its only distinction. It is not very bad, but it is too big to be very good. Probably no one else could have done it as well, but *no one* could hold a picture of that size together, or paint that vast concourse of figures with more than occasional felicity. Of the other Tintorettos in the Ducal Palace the less said the better. They are of varying degrees of badness almost to the very worst.

At the Madonna dell' Orto are the two big and turbulent compositions of "The Last Judgment" and "The Golden Calf," wonderful in their way, but not beautiful; the "Presentation," of which one-half is magnificent and the other intolerable; and, smaller than these, but still a large picture, "The Miracle of St. Agnes." This, even more than the "Marriage of Cana" at the Salute, though that too is a superlatively fine picture, especially in its row of female heads, is an example of Tintoretto's marvellous power over light and shade. It is held together like a small Rembrandt, and has as much depth and luminosity and sense of values, with finer color. The composition is dignified and the types noble, and the only fault to be found in it is in its upper portion, where the flight of kicking, blue angels reminds us a little too much of the painter's capricious moments. Finally, there is the astonishing "Miracle of St. Mark" at the Academy, which is quite unlike any other Tintoretto or any other Italian picture that I know of. It is not without its faults; occasionally the drawing is careless and more often turgid; and, while the color is brilliant and gorgeous in the highest degree, the tone is not as perfect, the unity not quite as thorough, as in some of his quieter canvases. What distinguishes it particularly and places it among the world's great masterpieces is its amazing virtuosity. It seems to have been painted throughout *alla prima*—at one jet—with no under-painting and very little glazing, in a method more suggestive of Rubens or Hals than of any Italian work. The handling is less flowing and slippery than with Rubens, less abrupt and chippy than with Hals, the tone more full and transparent than with Velasquez; but the instantaneous touch, the economy of means, the marvellous precision, place him with these three as one of the unapproachable technicians—one of the few who have made the mere material endlessly delightful to the lover of painting. The broad modelling of the nude foreshortened body of the slave, with its impasted lights sliding imperceptibly into its thinly rubbed shadows; the extraordinarily living head of the old man at the left (said to be the master himself), painted with a few sharp countable yet liquid touches; the magnificent sweep of the brush as it places the lights in the mass of drapery on the back of the executioner and unerringly models the brawny forms beneath; the painting, with three or four flowing strokes apiece, of the broken implements in the foreground—these things, added to a feeling for style and grandeur of form truly Italian, and a color-sense as truly Venetian in its richness, make this picture a "miracle" indeed. How *could* its author have been guilty of the shameless scurrying of the Scuola?

Before leaving Tintoretto, let me record a small discovery of my own which may not be without interest. In the Museo Civico there are two small canvases, between two and three feet high, which are either sketches for or copies of "The Last Judgment" and "The Golden Calf," it doesn't matter which. Looking at these, I was struck with a curious identity between two figures, one in either picture. It was not at all the identity of two figures copied from the same drawing, but the identity of a statue seen from two different points of view. One figure is nearly upright, flying upward and seen from the back; the other is falling head first and strongly foreshortened; but the relative positions of the limbs, the turn of the head on the shoulders, the peculiar angle of the feet, are unmistakably the same. On further looking I found a third figure in which the same pose occurred, drawn from still a third point of view and with an alteration of the action of one arm. There is a well-known story of how Tintoretto studied foreshortening and light and shade by means of small wax models hung up by threads in different positions and in different lights. Here was the proof of the story, and I felt that I had caught the painter in the act. He had used the same *maquette* twice if not three times in composing these two pictures, and with a result so different, pictorially, that only accident disclosed the fact.

It seems to me that Veronese has hardly yet had full and complete justice done him. He is apt to be brought in a poor third or fourth after the other great Venetians are done with, and dismissed by the critic with a little grudging praise or a bare acknowledgment that he "shows as yet no trace of the approaching period of decline," or that he "maintains the best traditions of his school." When will the critics learn, what the painters have always known, that Paul Veronese was one of the most astonishing geniuses for painting—one is almost inclined to say *the* most astonishing genius—that ever lived? It is true he is not a good subject for writing about. The most ingenious inventor of meanings would have difficulty in finding any meaning in his splendid works. The "subject" is nothing to him, and he has no discoverable "thoughts" and no "sentiment" other than the sentiment of beauty. He is contented with painting, and he expresses only the glory of life and the beauty of the world, the pomp of color and the joy of light and air. Even his technical merits are difficult to write of, for his manner is so natural and simple that he seems to have none, his handling so quietly masterful as to be unnoticeable, his light and shade so perfect as to escape comment. He seems to me the most Greek of modern artists, without shade of morbidity, joyously serene, content as the Greeks were with the perfection of craftsmanship and the perfection of art. Considering the amount of his production, it is wonderfully even in quality. He is never commonplace—still less is he ever bad; he is only not quite at his best sometimes. Sometimes his opulence approaches confusion, sometimes his color is less ringingly true than at others. Some of his pictures have embrowned too much, and here and there there is a yellow or a pale blue that, one judges, has faded or has not changed with the gilding of the other tones, and so jars slightly; very rarely there is a doubtful bit of drawing or a weak head. A few of his pictures have a vinous tone that is not quite pleasant. But at his best what a magnificent *tempérament de peintre!* What mastery of composition, what perfection of tone, what thoroughness of draughtsmanship, what felicity of touch! He is a very giant among the painters. After him the Deluge; but with him, for a moment, the art of painting reached its apogee. To imitate him is fatal, but no one ever did or ever will paint so well. He is magnificent in the Louvre, superb in San Sebastiano, triumphant in the Ducal Palace, but, to my personal feeling, nowhere so glorious as in his "Martyrdom of St. George" in the Church of San Giorgio in Braida at Verona. It was a sensation to remember for a lifetime when the sacristan drew the curtains and the picture burst upon one. It was like a splendid hymn of victory—one wanted to shout aloud and sing. If painting can produce such an effect as this, it does indeed deserve its place among the foremost of the arts. There are a blue and a red in the picture almost pure from the tube, apparently, yet so exquisitely just in their relation to each other and to all the colors about them as to be worth a kingdom!

After 200 years a sort of bastard son was born to Veronese. Tiepolo is of the eighteenth century, is rococo; he is *coquet* rather than sumptuous, amusing and immensely clever rather than grand; but one feels that the blood of the great decorator is running in his veins. In the "Antony and Cleopatra" of the Palazzo Labia there is a more wilful resemblance to Veronese than elsewhere, an attempt at his pomp of arrangement, and an imitation of his costumes. It is remarkably able, but perhaps less individual and less charming than others of his works. The great ceilings of the Gesuiti and the Pietà are Tiepolo pure and simple. Nothing of the eighteenth century is so characteristic of the epoch, or, in its way, so fine. Tiepolo is as delightful as Watteau or Boucher, while enough of the old Venetian glory hangs about him to make him greatly their superior in power. His great breadths of sky, with masses of cool or dun-colored clouds, perfect in harmony of tone; his audaciously foreshortened angels, with their long, elegant legs hanging out of swathes of voluminous drapery; the creamy light of a naked breast or shoulder, and the floating half-tint that obscures a graceful arm; the pale coloring of the whole relieved by an occasional snapping black—these make up a ravishing operatic heaven, a sort of celestial ballet. In the ceilings of the Scuola dei Carmini he seems even more delightfully impudent. One imagines a conclave of devout Carmelite monks gazing aloft in spiritual meditation at decorations that seem made only for the boudoir of a powdered marquise of undoubtful reputation—at a St. Agnes, type of innocence, with her lamb, too innocent to know that her voluminous skirts cover neither her legs nor her breast—at rollicking she-angels soaring

overhead in complete carelessness of the laws of perspective—and one is lost in wonder and admiration at that preposterous century. Tiepolo had an enormous talent. His knowledge is prodigious, and his audacity equal to anything. He lacks only a certain gravity and largeness—the magnificent seriousness of the great painters—to rank among the greatest. He is the last of the old masters and the cleverest of the moderns. KENYON COX.

## THE NANTASKET POSTMASTERSHIP.

TO THE EDITOR OF THE NATION:

SIR: I wish to call the attention of your readers and the public generally to what seems to me to be a flagrant case of removal for political reasons and a manifest inconsistency with the spirit of civil-service reform.

The Postmaster at Nantasket, Mass., a Republican, but in no sense an offensive partisan, was appointed by President Arthur, held his office through the whole of Mr. Cleveland's first term and through Mr. Harrison's term—in all, up to the present time, about nine years. When he was appointed to the office (a fourth-class postmastership), it was a small one, but it has increased during his term, in part through his efforts, until the number of letters is double what it was when he was appointed. He has conducted the office in a businesslike way, and that he has given general satisfaction to the patrons of the office is shown by the fact that nine-tenths of them then resident there, without regard to party considerations, signed a remonstrance against his removal as soon as it was understood that there was another applicant for the place. In addition to this remonstrance a number of well-known business men of Boston, Democrats and Republicans, who, as summer residents, are patrons of this post-office, wrote letters stating that he ought to be retained in office. He has just been removed to make way for a Democratic applicant, an Irish-American, in many respects a worthy man, but who, from lack of education, could not perform the duties himself, and is therefore unfit for the place, while he is so much engrossed in the business of stabling, teaming, ice, expressing, etc., that even if he were capable, by reason of education, of properly filling the position, he would not have time at certain seasons to do so, and must therefore get some one else to do it for him. His only object in applying for the place is ascribed by his neighbors to a personal feeling against the present incumbent, and a consequent desire for his removal. His application for the place was endorsed by the Democratic town committees of Hingham, Hull, and Cohasset—the three towns which are served by this post-office—and I am told by no one else, so that it seems to be a clear case of politics vs. fitness. Politics have prevailed, and as the Postmaster at Boston, to whom this matter would probably be referred, is now an Irish-American, it might be suggested, by one inclined to suspicion, that race and religion have had their part in it too.

Now it may be said that the person on whose head rests the responsibility for this removal was not informed of these facts, but the answer is that if he was not, every opportunity was offered him for being so, and that he ought to have informed himself. I am a Democrat myself, and a thorough believer in Mr. Cleveland and in his desire to promote the cause of civil-service reform, and it is for this very reason that I wish to give these facts publicity, so that the traitor in the camp, whoever he may be, may be found, if possible, or at all events his further career arrested. I may further say that my relations with the newly appointed Postmaster have always been pleasant, and are so still, and that I have no desire to injure him in any way, nor complaints to make about him, excepting his application for this place.

I think that everything that I have stated can be authenticated by proof such as would satisfy a court or jury. FIAT JUSTITIA.

BOSTON, September 8, 1893.

## THE BOOMERANG IN THE TARIFF.

TO THE EDITOR OF THE NATION:

SIR: It is of some importance to note the steady change of opinion that is going on among the business community in spite of all the efforts and assumptions offered by party leaders. Business men have a way of looking at facts that affect their interests which defies these efforts, although they appear at times to put up with a great deal of humbug when they consider the country and not themselves individually concerned.

The writer, in the course of his travels recently, has had one or two evidences of this change that is going on offered him which will bear mention. One was the case of a manufacturer of woollen goods who had a special line of trade which was controlled mainly by English manufacturers before the McKinley Bill went into effect. He admitted that, in making up that bill, a provision was inserted to protect his line of goods, so that he got a net benefit of 50 per cent. above the regular market price for the English product as it was being sold in this country. With this protection he calculated that he was able to control the trade, but it seems that the result proved otherwise, for before the benefits of the new tariff could be received, each manufacturer in this country who was to be benefited by this change in the tariff entered the market and took orders at a reduced figure, so that they forced their own competitors to do the same if they were to secure their share. The result was that the American manufacturers were filled up with orders for a long time at prices much below those which they could obtain safely under the perfect working of the McKinley tariff on their goods. Since that time, competition has increased by this forced protection and the encouragement offered the American manufacturer, until now the selling price for these goods is so far below what is profitable that the price is no longer an inducement for orders, and the manufacturer admits that he is in condition to get more desirable orders abroad than at home. In fact, he contemplates going into the English market to sell at the same price and find a market for his entire product, rather than to stay at home and be satisfied with the sale of half of his output, which is the only alternative now left him.

Almost the same experience was reported by another manufacturer of paper of a special grade heretofore furnished by English manufacturers. Under the McKinley Bill the provisions made to protect were sufficient to advance the price so that the American manufacturer found it an object for him to make this line of goods and undersell the English manufacturer in this market; but along with this capacity to furnish an equally good article came the necessary competition, until today the market price for the home product is so reduced that there is no longer any question in the mind of the manufacturer as to his ability to compete with his English neighbor without tariff restrictions. In fact, his home market has grown so undesirable, and his output is so restricted by the overproduction, that he, too, was forced to admit that the tariff had helped him in a wrong way by overdoing the business at home.

These two instances are the most recent ones that have come to my notice. They are fresh, and can be vouched for, and probably represent many others not so well known to me. They ought to be simple and conclusive evidence as to the working of an unfair protective tariff made for the exclusive benefit of a class who, after all, are unable to profit by the privilege extended to them. They prove that the tariff business has been advocated to a most unreasonable extent, and that no one has suffered in the end more severely from it than the protected manufacturer himself. We can well believe from these instances that many who advocate protection in such a wholesale way, do not realize the actual working of the system as it affects our home industries; otherwise, they would advise a much more moderate protection, to say the least, and would brand such high-tariff advocates as McKinley and the leaders of his party as frauds who do not fairly represent the best interests of the country. It is a well-known fact among paper-manufacturers of this country that the prices afforded by the American market today for ordinary grades of printed papers is so reduced, under a tariff that prevents the outside manufacturer from entering this market, that the American producer is no longer able to depend upon his own home market for the sale of his entire output, but is already compelled to go abroad for orders at better prices. Every large American manufacturer in these grades of paper also alleges his ability to make an article superior to foreign manufacture—for good and sufficient reasons—chiefly the almost limitless supply of raw material, at the lowest cost at which it can be produced, the item of labor comparing favorably with the same item in Europe.

Under these circumstances we are hearing less and less from the manufacturer about the horrors of European competition. The present condition of business has proved to the most ardent high-tariff man that the cost of labor could hardly suffer more serious reductions in this country than it has already sustained. It also suggests the fact that another element pertaining to the price for labor may lie in the ability of that labor to *earn more or less*, and that this, after all, may be the only difference between the wages paid in this country and in the lowest-paid sections of Europe. When this fact is established in the minds of many who have supported the McKinley tariff, that piece of foolishness will no longer have a supporter, and we shall see manufacturers in all lines of business advocate and sustain the policy of that party which will state things as they are, and give us the protection which comes from a freer market without the fear of being condemned as advocating "free trade," whatever that may mean. BENJ. SPAULDING.

BOSTON, September 8, 1893.

## GOLD AND SILVER IN BRAZIL.

TO THE EDITOR OF THE NATION:

SIR: Here is a bit of the history of gold and silver in another country. The observations quoted below are from John Luccock's 'Notes

on Brazil,' one of the most trustworthy books ever published regarding that country for the period of which it treats. Luccock was an English merchant who lived and travelled in Brazil from 1808 to 1818; his book was published in London in 1820. On pages 583-584 he says:

"Silver is the only description of bullion which the Treasury finds itself obliged to purchase. Formerly the royal fifths of gold were much more than sufficient to supply both Brazil and Portugal with a circulating medium; but so soon as the native metal of Brazil bore a premium in the markets of Europe, the country was nearly drained of it, and silver, in the shape of dollars, was sought for to supply its place. These dollars had previously circulated, in small numbers as a foreign coin, at the rate of 750 reis each. The Treasury purchased them at that ratio, recoined them, and sent precisely the same quality and weight of silver into circulation, at the rate of 960 reis. This circumstance, as was indeed clearly foreseen, caused the Spanish dollar to advance to 915 reis, and the country has been inundated with them at the advanced price. Estimating the gold which the Treasury has exchanged for these dollars at the rate established by law, it appears that the country has paid a premium upon every million of dollars which it has received, not less than 21,120 contos of reis; in other words, the people have paid so much more for the silver than they can sell it for again. It may be said, indeed, that, during the same period, gold has borne a premium, and that, in consequence, the silver has not actually cost so much as, at first sight, appears to be the case; yet, even if we take this into consideration, it will be found that the Brazilian Treasury has very simply given what is intrinsically worth 22 for that which will produce to it no more than 17, thus making five-seventeenths of the whole transaction against the country. Yet, as these notes are designed to represent the state of things, rather than its attending evils and the cure for them, perhaps sufficient has been said upon a subject which relates almost exclusively to South America."

JOHN C. BRANNER.

STANFORD UNIVERSITY, September 2, 1893.

## THE GENESIS OF A PANIC.

TO THE EDITOR OF THE NATION:

SIR: Senator Teller is reported, in our press despatches, as stating in the Senate that, "during the three weeks of the session, he had not heard anybody suggest an intelligent reason for the present financial condition. Nobody had analyzed the question as to whether the cause was or was not the 'Sherman Act.' He challenged any Senator to tell him, and to tell the American people, that he believed the people had brought about a panic because they were afraid of their money"—and more to the same effect. I do not come within the category of persons so challenged, but as I recollect all the panics we have had, from and including that of 1837, and have watched the present one pretty closely, and, I may say, participated in it by anticipation, I should like to offer the Senator an explanation of its cause suggested by my own experience and apprehensions.

Some time since I held a lot of United States 4 per cent. bonds, for which I had paid a considerable premium. The interest was, by law, payable *in coin*, but, by unvarying practice of the Government, in *gold coin*. While the Bland-Allison Law was in force, I noticed that the receipts of the United States Treasury were in various sorts of money, but the outgo invariably in gold. Under this practice it was easy to see that the ultimate result must be the exhaustion of the gold in the Treasury, and I watched pretty attentively the newspaper reports of the diminishing balance. When it fell to twenty millions, above the hundred reserved for the greenbacks, I felt that we were within measurable distance of the time when, having no free gold for the purpose, the Government would be forced to pay the coupons in silver, and, knowing that as soon as that occurred, gold would go to a premium and bonds fall correspondingly, I thought it time to "stand from under," and so I sold my bonds.

At about the same time an estate of which I had charge held a lot of United States currency sixes. I did not at once realize that their value would follow the same rule as that of the others, and for a time retained them, but it did not take me many months to study out that result, and I sold them too. Time has proved that I was right in both instances. I cannot doubt that the same fear that impelled me to sell caused their subsequent fall in market value.

The habit of watching the Treasury statements, once formed, the practice continued. I saw the gold balance continually falling, even more rapidly under the so-called Sherman Act than under the Bland-Allison Law. How could it, in fact, be otherwise? We were buying 54,000,000 ounces of silver bullion per year, for which we had no use, and paying for it in silver certificates, which on presentation were redeemed in gold; and this on a steadily falling market. The process could not fail to speedily exhaust the gold in the Treasury, and it was clear that some fine day, and that quite soon, the Government would have to pay out silver for its coin obligations, with the inevitable results I have indicated above.

I only wondered that the people did not begin at once to hoard gold in view of the crisis so evidently approaching. I had occasion to make two or three long leases at that time. When the lessees would agree to it, I reserved the rent in ounces, pennyweights, and grains of gold. In one case where the tenant flinched from that, I reserved the right, in case the rent were paid or tendered in any other money than gold coin, to change the terms of the lease, and make it payable in pounds sterling. All this cost me some trouble which I would rather have dispensed with, but I did it because, to use Senator Teller's expression, I was "afraid of my money"—afraid, in other words, that silver was presently to become the money of the country instead of gold.

Finally, when the insane purchases of 4,500,000 ounces of silver per month brought the free gold in the Treasury down to zero, and even began to encroach on the greenback reserve, I perceived that great numbers of people had suddenly awakened to the same view of our financial situation that I had been taking as much as two years before, and they exhibited it by drawing their money out of the banks and locking it up in safe-deposit vaults. When a great many persons suddenly and simultaneously experience the same fear of evil near at hand, it assumes the form of a panic, and spreads as such among people who catch it without knowing what they fear. Here the fear evidently was that, by the mere ordinary progress of events in their existing course, we might any morning find gold at a premium and all dues collectible in depreciated money, with the financial convulsion that such a change would precipitate. A clique of unscrupulous fellows like those who rode the tempest on Black Friday, which we all remember, might at any moment force such a crisis. Hence the sudden haste to hoard money—gold, of course, primarily, but, as the Government is practically pledged to redeem all outstanding currency in gold, therefore currency as well. The bank in which I do my business had a safe-deposit department; it rented twenty-seven vaults on the first morning that the panic set in. Men drew their money up stairs and locked it up down in the cellar of the same building. It was well known that our banks with a single exception were sound, and that there was more money in the State than ever before, but the alarm became universal, and people got "afraid of their money," *i. e.*, afraid that silver was presently to become the measure of value instead of gold, and they wanted to call in all outstandings before the plunge was made.

The President's proclamation convening Congress, and the prospect of ceasing to purchase silver before being swamped by it, had a decided effect in allaying panic. The great majority given by the House in favor of simple repeal (which can scarcely fail to act on the doubters in the Senate) contributed to the same end, and I feel convinced that the moment the Senate concurs in that action, the *panic* will be at an end, and money will promptly begin to return to its old places of deposit and again fill the channels of trade. There will still be a scarcity of money, because we are at one of those periodical general settling times which a panic always brings about, and until accounts have all been squared and the weak houses weeded out, the effects of the panic will not cease; but the panic itself will end with the repeal of the Silver-Purchasing Act, for the world will thereby be assured that the standard of values will remain unchanged, and people may lend without fear of being repaid in depreciated currency. J. T. D.

MENLO PARK, CAL., Sept. 4, 1893.

## CRIME AND THE ENGLISH LANGUAGE.

TO THE EDITOR OF THE NATION:

SIR: The figures of the statistics of pauperism and crime which the Rev. F. H. Wines has gathered, and upon which you commented briefly in the *Nation* of last week, are suggestive in many more directions than that indicated in your brief editorial. The results which Mr. Wines now gives to the public, covering a much wider area and embracing a more extended sphere of inquiry, are precisely accordant with results which the writer worked out in some private investigations begun several years ago covering three of the Northwestern States. Then, as now, it appeared that the general and widespread conviction that our criminals were gathered from the ranks of our immigrant foreign populations was wholly without foundation in fact. It is but one more of the cases where our customary self-appreciation has overreached itself.

Another interesting fact in connection with these figures is the part which the English language plays in the matter. It may, I presume, be assumed with perfect safety that the natives in the tabulation used, as a general practice, the English language. It may also be assumed that a large part of the foreign criminals used the same language. This is inferred from the fact that in at least one State the English-speaking population (foreign) furnished more than one-third of the inmates of penal and charitable institutions, though it constituted but 8 per cent. of the population. Hence by far the larger part of the criminals included in Mr. Wines's statistics were able to use and understand the English language.

Now it must be remembered that not a few students of the question of immigration have strenuously advocated the English language as a test for intending immigrants. The *Nation*, if I am not mistaken, advocated this

policy, though I remember it afterwards saying that the suggestion was "academic" and not "practical," whatever that may mean in such a connection. But here the utter absurdity of the use of English as a test is apparent to every one, and more so since it is based upon an inquiry of national dimensions. I have no hesitation in saying, after some years of careful investigation, that in this country particularly the amount of literature published which is calculated to provoke crime is something enormous. Most of it, too, is in the English language rather than in some other, as is frequently supposed. There seems to be not much reason for doubting that this has a great deal to do with the "native" preponderance of criminals—or, rather, we should say, the English-speaking preponderance.

Taken in connection with Prof. J. J. McCook's tramp census and other recent investigations, it seems to appear that the "dangerous" elements are not from the ranks of non-English-speaking foreigners or their children.—Yours truly, A. A. BERLE.

BRIGHTON CONGREGATIONAL CHURCH,
BOSTON, September 9, 1893.

## THE PARLIAMENT OF RELIGIONS.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "H. W. S. C.," in the last number of the *Nation*, makes a most violent charge of bigotry against the Archbishop of Canterbury, based upon an entirely incorrect statement of a recent utterance of the Archbishop's touching the proposed "Parliament of Religions" to be held in Chicago in connection with the World's Fair. The Archbishop, as representing the Church of England, was requested to take part. His letter declining to do so was, therefore, not an intruded opinion, but one made necessary by the circumstances. This letter displays the opposite of anything approaching bigotry, as your readers may see for themselves if they care to refer to it in a recent number of the *Churchman*. The Archbishop spoke of the originators of the Parliament in the kindest terms, and was quite willing to attribute to them the most sincere motives; but, speaking for his own branch of the Church, he declined to participate because, in their opinion, Christianity could not consistently put itself in the position of one among other religions in such an assemblage. He furthermore expressed the opinion, which many share with him, that a great gathering, such as the World's Fair, is hardly the best field for valuable explorations into spiritual regions. I may add that the Episcopal Church in this country is taking no official part in the "Parliament" or "Congress," for much the same reasons.

Even if your correspondent is of a contrary opinion, it would seem, to say the least, in poor taste to fling mud at the guest who politely and conscientiously declines one's invitation. I am sure that those having the "Parliament" in charge would be quick to disavow such intolerance of mere difference of opinion. If the "Parliament" does accomplish good results, so much the better, but there is no excuse for hounding thoughtful and honest men with a cry of bigotry because they think the contrary.

I am, sir, etc., obediently yours,
ARTHUR RYERSON.

DARK HARBOR, ME., August 28, 1893.

## CAINE'S ANNALS OF YORK.

TO THE EDITOR OF THE NATION:

SIR: Assured that you desire to be just in all critical remarks passed on books, I venture to ask you to grant me a few lines to make one or two brief statements *re* a recent criticism of 'The Martial Annals of the City of York' (*Nation*, p. 461).

(1.) I only refer to Ingulphus *in a note*, and only then with some indication that he is *not* wholly reliable.

(2.) I cite 'Monastici Anglicani, etc.,' and correctly so, for I desire to direct attention to a *particular edition* of the 'Monasticon,' viz., the first (1655–1673). The second volume of this edition (1661), from which I have copied my illustration, is titled as I describe it. This again is a footnote.

(3.) It was no part of my task to give an account of the Anglo-Saxon army or the feudal system. I only refer *en passant* to these matters, and quote a book known in military circles.

(4.) Thierry is surely not given as *the authority* on Norman matters, but, as is clear, chiefly because of the *aptness* of the extracts borrowed from him.—I am, sir, yours respectfully,

CÆSAR CAINE.

14 RADIPOLE ROAD, FULHAM, S. W., July 25, 1893.

[As an act of courtesy we violate our rule not to print replies to our reviews. We were entirely just to Mr. Caine on all the points to which he refers.

(1.) Errors remain errors whether made in a footnote or elsewhere. Mr. Caine uses Ingulph, on page 16, without any indication that this chronicler is unreliable. Here is the note in full: "The Jews appear to have settled in England as early as the ninth century. Witlaf of Mercia, about 833, granted by charter certain lands to the monks of Croyland. This charter distinguishes between possessions which had come to the monks through Christians and those which had been bestowed on them by Jews. *Ingulphus*, ed. Birch, *Lat.*, p. 16."

(2.) The title of the edition of 1655–1673 is 'Monasticon Anglicanum,' though 'Monastici Anglicani' is also used on the title-page of the second volume. The proper way to direct attention to this particular edition would be to give the date of publication. The use of the sub-title 'Monastici Anglicani' will not help any one in the British Museum or elsewhere to find or identify the edition cited by Mr. Caine.

(3.) What Mr. Caine's task was does not concern us. He gives some account of the Anglo-Saxon army and of the feudal system, and we have a right to pass judgment on this part of his work. We are still decidedly of the opinion that his crude account of these institutions is not based on the best authorities. Harrison's 'Volunteer, Militiaman, and Regular Soldier' may be "known in military circles," but that does not make it a trustworthy guide for the history of the Anglo Saxon army.

(4.) What we said of Mr. Caine's use of Thierry is quite correct; the reader may convince himself of this by glancing at pages 62–71. It is not at all clear that Thierry is cited "because of the aptness of the extracts."—ED NATION.]

# Notes.

THE New York Shakspere Society will issue directly in its Bankside Edition "The Tempest," as the initial one of the archaic texts of the seventeen plays first printed in the Heminges and Condell Folio of 1623. As in the case of the preceding twenty volumes, only 500 copies of the new (uniform) series will be printed.

Little, Brown & Co., Boston, will publish during the autumn a volume of the speeches of William E. Russell, Governor of Massachusetts, edited by Charles Theodore Russell, jr., and prefaced by T. W. Higginson.

Stone & Kimball, Chicago, have in press 'Prairie Songs,' a first book of verse by Hamlin Garland, and 'The Holy Cross,' a story by Eugene Field.

'Old and New Lights on Columbus,' by Dr. Richard H. Clarke of this city, is to appear this month, the author being his own publisher.

The Scribners announce 'With Thackeray in America,' by Eyre Crowe, Thackeray's secretary and amanuensis on this six months' journey. Mr. Crowe also made numerous sketches of men and scenes by the way, and 121 of these will be reproduced with the volume.

Longmans, Green & Co.'s autumn list embraces 'Eskimo Life,' by Fridtjof Nansen; 'Madoc: An Essay on the Discovery of America by Madoc ap Owen Gwynedd in the 12th Century,' by Thomas Stephens; 'Discovery of Lakes Rudolf and Stephanie,' in Eastern Equatorial Africa in 1887–'88, by Lieut. Ludwig von Höhnet, companion of Count Samuel Teleki, with many illustrations; 'Politics in a Democracy,' by Daniel Greenleaf Thompson; 'Practical Essays on American Government,' by Prof. Albert Bushnell Hart; 'Leonidas Polk, Bishop and General,' by William M. Polk, M.D., LL.D., in two volumes; 'Life of Edward Bouverie Pusey, D.D.,' by the late Cannon Liddon—the first two volumes of four; 'Side Lights on Church History,' by the Rev. William Bright, D.D.; 'St. Paul and His Missions,' by the Abbé Constant Fouard; 'Greek Vase Paintings: Select Examples,' edited by Jane E. Harrison; 'An Enchanted Castle, and Other Poems,' by Sarah Piatt, with 'Little New World Idyls' and 'Idyls and Lyrics of the Ohio Valley,' by John James Piatt; Björnson's drama, 'Pastor Sang,' translated by William Wilson; 'The Man from Blankley's,' by F. Anstey; 'The Diary of Col. Peter Hawker,' in two volumes; and 'A First History of France,' by Louise Creighton.

Macmillan & Co. have in preparation 'American Bookplates,' by Charles Dexter Allen; 'Synthetic Solid Geometry,' by Prof. N. F. Dupuis of Queen's College, Kingston, Canada; 'Pain, Pleasure, and Æsthetics,' by Henry Rutgers Marshall; and 'Chronological Outlines of American Literature.'

'Comic Tragedies,' the actual plays of Miss Alcott's "Little Women"; 'Helpful Words,' prose extracts from the writings of Edward Everett Hale; and poems by the same writer, 'Fifty Years,' are on the eve of appearing from the press of Roberts Bros.

T. Y. Crowell & Co. have nearly ready 'Personal Recollections of John G. Whittier,' by Mrs. Mary B. Claflin.

A manual for the study of English versifica-

tion, to which an increasing attention appears to be given in collegiate courses, is furnished by R. F. Brewer under the title 'Orthometry: A Treatise on the Art of Versification and the Technicalities of Poetry,' with a new and complete Rhyming Dictionary (G. P. Putnam's Sons). The work is lumbering, and follows the established methods of analysis without originality of thought or treatment, but is exhaustive on the old lines. The subject is one that lends itself to an uninteresting manner with a facility seldom more fatal than in the present instance.

Dr. Lorimer's 'What I Know about Books and How to Use Them' (Boston: James H. Earle) is mainly directed to the clerical mind, and contains the usual advice, with references to the best-known books, good and bad, without distinguishing between the two classes. The persons who can profit by such counsel must be in that primary stage of inquiry with respect to literature in which exhortation can hardly direct them wrong, and this little volume may perhaps take the place of a publisher's circular for such minds.

"The Book-Lovers' Library" adds to its welcome volumes of curious lore one on 'Literary Blunders: A Chapter in the History of Human Error' (Armstrong & Son), under the capable editorship of Mr. Henry B. Wheatley. The topics treated are the blunders of authors, scholars, and translators, errata, misprints, schoolboys' blunders, and foreigners' English. Some of the anecdotes are well known, and few of the new ones are likely to become famous, but the collection as a whole is characteristic of the trials and temptations of the literary craft.

Mr. William Watson's 'Excursions in Criticism: Being Some Prose Recreations of a Rhymer' (Macmillan) collects in a small volume some very tenuous journalistic essays upon recent books or writers, for the most part, which are more remarkable as showing how a poet's style may be subdued to the thing it works in, such as the English weeklies, than as shedding light on Coleridge, Keats, or Lowell, or as displaying any acute penetration of Hardy, Hutton, or Dobson. The papers do not at all exceed the average of reviews in English critical organs, if indeed they reach such a level.

Students of Tennyson may well be grateful for so thorough and trustworthy a study of one of his principal works as is Prof. Harold Littledale's 'Essays on Lord Tennyson's Idylls of the King' (Macmillan). The main attention is given to an exhaustive account of the sources of the different idylls, with large extracts from the originals; but the allegory is closely followed, and there are many notes in detail upon words and phrases, and literary parallelisms, particularly with Spenser, Milton, and Shelley. The best authorities have been followed and are referred to, and good taste and sound judgment pervade the whole. The volume is indispensable to the close study of the poetic work with which it deals at once frankly and fairly.

The series of "Laurel-Crowned Letters," which is issued by A. C. McClurg & Co., Chicago, and makes an excellent epistolary library, now includes 'The Best Letters of William Cowper,' edited and introduced by Anna B. McMahon. The material for selection was rich, and the resulting volume presents the amiable and humble temperament of Cowper with that charm which has won for that recluse spirit so long-continued and widespread a fame.

Volumes which undertake to comprise the cycles of all centuries in a little space are usually disappointing, and Mrs. Anna Swanwick's 'Poets the Interpreters of their Age' (London: Geo. Bell & Sons) is no exception to the rule. The author writes of literature in its entirety from the Aryans and the works of the late-found Accadians, through Hellas, Rome, and mediæval Christianity down to Tennyson, omitting (she regrets to say in her preface) America only. The result is a disjointed series of chapters, mainly outline and rhetoric, without a sufficient emphasis on the ideas that controlled and differentiated the successive epochs of literary history. A treatment so vague and blindly comprehensive is especially to be deplored if its purpose is to inform the minds of students but slightly acquainted with history and literature.

A wholly different work is Prof. Hugh Walker's 'Three Centuries of Scottish Literature' (Macmillan), in two volumes, which sets forth clearly and in order the nature of Scotch literary culture, the phases of society and politics through which it advances, and the character of its principal monuments. Scotch poetry often appears, in books of English literature, as a kind of temporary godsend when the stream shrank in its English bounds, and it is fairly to be said that the story of the Muse who spoke to Burns has never before been told for its own sake or with such close and honest attention. The substance of poetry and prose involved, especially in the earlier stages, may be differently valued by critics, but it is at least characteristic of a strong and peculiar genius in the people, and the struggles of the intellectual life beyond the Tweed, resulting in the most brilliant provincial literature ever known, form an episode engaging to the student on many accounts. The style and manner of treatment are excellent, and the work should become standard.

A second edition of Julia Cartwright's 'Sacharissa: Some Account of Dorothy Sidney, Countess of Sunderland, her family and her friends, 1617–1684' (Scribners) recounts the history of the Sidney family and its connections in an agreeable if somewhat lord-and-lady manner, and the entire work is a convenient repertory of relationships, family letters, etc., which are nowhere else so easily accessible. Unfortunately there are fewer letters than might be wished, so that the work has not the charm of Dorothy Osborne's letters, though it is meant to be a similar biography. Dorothy Sidney herself is often lost sight of, but the story continues with the lives of other members of her family, whose careers were all interesting, sometimes romantic, and constantly illustrative of the dark mixture of the Dudley, with the mild and intellectual Sidney, blood. The picture of the times is well given, especially on the social and official side, and the changes of family fortune dependent on the State are emphasized. Dorothy Sidney's personality remains vague, but her life itself was a meeting-point of so many important men and women as to serve well for a centre in such a narrative. Lord Halifax, her son-in-law, is presented more naturally as an honest gentleman than the world is accustomed to read of him, but of the other characters there is little to be said, their portraits being well known.

Mr. Francis H. Underwood's sketch, 'The Poet and the Man: Recollections and Appreciations of James Russell Lowell' (Boston: Lee & Shepard), is elaborated from an article in the *Contemporary Review*, and is not a reissue of the author's well-known biographical sketch published several years ago. It is partly biographical, partly critical, and, as a whole, may better be described as "a tribute" than otherwise. Mr. Underwood's relations with Lowell were those of a friend and literary associate, and his narrative is well informed as to facts and his eulogy well tempered with discretion. The volume contains little that is new.

The late Horatio Bridge, whose contributions to the biography of Hawthorne in *Harper's* we noticed on their appearance, made of these and other materials a book, 'Personal Recollections of Nathaniel Hawthorne' (Harpers), in which he recorded in a desultory way anecdotes of Hawthorne's younger days, and gave an impression of his family life by means of letters. The biography of Hawthorne, however, throws little light upon his genius, and must be read as that of a seemingly unliterary man if it is to be interesting. The present memoir is no more than a contribution, as has been said above, to a biography yet to be written that shall do justice equally to the manhood and to the genius of a peculiar New Englander.

We are sorry that we cannot more approve the late Mr. Symonds's 'Walt Whitman: A Study' (London: John C. Nimmo). The eulogy of Whitman, upon whose poetic genius Mr. Symonds explicitly stakes his reputation as a critic, was expected, and it is natural that the author should desire to spread the influence of one to whom he professes himself so much indebted. But he brings forward certain ideas, of which traces not to be mistaken were discernible in the last volume of essays by him, more openly and, as he admits, uselessly; and these ideas are a constituent of Whitman's poetry which, if it is needful for the student to comprehend, it is by no means necessary for him to make a covert evangel of. The morbidity often to be observed in Mr. Symonds's works is here given full play. We cannot see that his analysis and résumé of Whitman's ideas reveal anything of intellectual or moral power, or do much to clarify them or give them coherence; but the American mind labors under an incapacity on this subject, and we feel sure it will grow more dense in this respect in proportion as it penetrates what Mr. Symonds adumbrates in his most original chapter.

Mr. Frank Bolles's 'At the North of Bear-camp Water; Chronicles of a Stroller in New England from July to December' (Boston: Houghton, Mifflin & Co.) is, in some sort, a sequel or companion volume to his 'Land of the Lingering Snow,' which we commented upon favorably at the time of its appearance. The second book is like unto the first, but with less freshness and more of the day-of-the-month and time-of-the-clock in it. The scene is the neighborhood of Chocorua, and the papers will be pleasant reminders of old, and possibly guides to new, fields for those acquainted with the region; for others there is monotony in the interest.

We have just received the prospectus of the new Anglo-Norman Record Society, which undertakes, in the first instance, to print monastic records from the manuscripts still subsisting in England and France. The charters and chartularies of religious houses contain much information which is not to be found in the chroniclers, and their publication will certainly be a great boon to historians. Many well-known scholars, such as the Bishop of Oxford, J. Horace Round, F. W. Maitland, and Maxwell Lyte, have already given their adhesion to the scheme. It also deserves support from historians and libraries on this side of the Atlantic. The annual subscription is two guineas, which should be sent to W. A. Lindsay, Carlton Club, Pall Mall, London, S. W.

'Das Deutsche Sprachgebiet in Europa,' by H. Nabert (Stuttgart), gives us a brief account

of the fortunes of the German language. The author begins with the history of the very varying limits in which it has been predominant, at one time as far east as the interior of Russia, at another only westward of the Elbe. He then describes the struggles for existence or supremacy which German is carrying on in several lands to-day; and, like most other writers on questions of nationality, he is violent, declamatory, and totally unable to grasp the principle that what is sauce for the goose is sauce for the gander. Though his view of the future is rather gloomy, he would have been justified in making it gloomier still, for German is doomed to disappear at several points where it is now spoken. To offset what is going on in Belgium, Italy, Russia, and Austria-Hungary, Herr Nabert finds some consolation in Switzerland, but we have difficulty in reconciling this with the last Swiss census, according to which French is gaining ground. The second half of the pamphlet is philological.

Dr. Frank Zinkeisen's 'Anfänge der Lehngerichtsbarkeit in England' (Berlin: Sayffaerth) deals with the difficult subject of feudal jurisdiction, especially that of ecclesiastical lords. Such jurisdiction is first legally recognized by royal charter, not under Edward the Confessor, as Henry Adams asserts, but under Cnut; and grants of this sort become frequent under the Confessor. Probably the feudal judiciary developed rapidly under Ethelred the Unready. Dr. Zinkeisen also rejects Mr. Adams's definition of socn, and thinks that the term referred to jurisdiction as well as to revenue. After considering the extent and nature of the feudal judiciary in Anglo-Saxon times, the author follows its history to the end of the twelfth century, dwelling particularly upon the kinds of cases tried by the manor courts. The early history of manorial tribunals has been heretofore neglected, and hence Dr. Zinkeisen's valuable contribution to the subject is very welcome. His work exhibits much critical study, and is scholarly throughout.

—*McClure's Magazine* for September contains "Among the Gorillas: A Voice from the Wilderness," by Mr. R. L. Garner, now in Africa in pursuit of the speech of monkeys. Mr. Garner writes from his cage in the heart of the jungle, near a grove of plantains, about a mile from the mission Ste. Anne, Fernan Vaz, little more than a degree south of the equator, not far from the Gaboon River, in a locality of which he says: "Here the monkey revels in the plenitude of wild fruits, and the pheasant finds a safe retreat from crafty woodsmen, while birds of diverse kinds invoke the spirit of nature with the voice of song." Gorillas wander all around him and occasionally venture within a few yards of the cage, so that his opportunities are all that could be expected. What he has gathered will best be indicated by several items in his own words. "At this moment I hear one [a gorilla] tearing a plantain-stalk within about thirty yards of me. I can only hear one voice, but as they do not talk much when alone, I presume there are more of them not far away. He is uttering a low murmuring sound which seems to express pleasure, but I am not yet able to translate it into English. Time and patience, however, will accomplish that, and much more. It is a fact worthy of notice that some of the sounds uttered by the gorilla and chimpanzee are identical with certain sounds in the native language, and it is quite as easy to find letters to represent them. One word in N'Kami, meaning *yes* or *assent*, is exactly the same as one sound that is much used by the chimpanzee, but is not within the scope of any known system of phonetic symbols. The same is true of the word for *five* in one dialect of Kroo speech." "As far as it can be said that the gorilla has any form of government, it is strictly patriarchal, and there are reasons to justify the belief that they [*sic*] have some fixed ideas of order and justice." "I have had the pleasure this afternoon of hearing three others howling in different directions, one of which appears to be a very large one."

—Chimpanzees receive as much attention as gorillas. We are told that "the most novel and singular thing known of the chimpanzee" is that it has music and dances similar to those of the negroes. "The chimpanzees have a similar fête, and set to similar music." "The performer makes a peculiar humming vocal sound while he beats on his mysterious drum with great zeal, during which time all the others go through a series of frantic motions which resemble a dance." "When the music ceases, the dance ends for a time, and all the group join in a loud, wild shout." Mr. Garner has seen what he believes to be the chimpanzee drum. "It is a peculiar spot of sonorous earth, of irregular shape, but usually about two feet in diameter, and formed of clay superimposed upon a soil resembling peat." "I have examined one of these with much care, and I am inclined to believe it is artificial, as it is isolated from all similar clay, and appears to have been kneaded." The description applies to subsoils thrown up by burrowing animals. A large portion of the article is built on hearsay of the native gossips. Listening to the voices in the thickets, guessing at the subjects of conversation, and guessing at the identity of the talkers, we fear Mr. Garner will sit in his cage for a long time before he learns the language, whatever he might do with it if he got it.

—The correspondent of the London *Times* in Uganda, after an extended journey through the country, comes to the conclusion that the population "has been vastly overestimated." From the ravages of war, pestilence, and famine during the last few years a good four-fifths of the country is uninhabited. As the plague is still raging in certain places, this desert region seems likely to increase rather than diminish. Having visited the principal stations of both Catholic and Protestant missions, he is compelled to admit that the working system of the French priests, viewed from a practical standpoint, is much superior to that of the English clergymen. The difference appears to be that the latter put religious instruction before everything else, while the former impress upon their converts the dignity of labor, and, instead of teaching them to read, set them to work clearing and cultivating land, making roads and bridges, or train them to the various handicrafts. In regard to holding the country, he maintains that its abandonment would simply indefinitely postpone the suppression of the slave-traffic, now confined to the Sudan and the region west of Lake Tanganyika. Forty of the principal Protestant chiefs, we may add here, have just publicly proclaimed their intention of abolishing domestic slavery in their territories. This reform, if carried out extensively, will be of the greatest possible advantage to the country, which is now impoverished by the *corvée*, or the system under which the chiefs call upon the people to labor upon their lands without food or pay. While the present commercial prospects of Uganda are poor, the construction of a railway to the coast would vastly improve them, and eventually this district would become the centre of Equatorial African trade.

—The leading article in the last number of the *Historische Zeitschrift* is a very interesting study, by Prof. Pöhlmann of Erlangen, on "The Romantic Element in the Communism and Socialism of the Greeks." He notes that, after the Peloponnesian war, Greece, in the midst of a high material and intellectual civilization, exhibits a scene of hopeless social dissolution. The contrast between rich and poor becomes more marked, a proletariat comes into existence, and the developing commercial spirit gives rise to strong class feeling. This change took place in a century when philosophical thought was conspicuously active. It was inevitable that the increasing social inequalities and the consequent disorders should become the subject of speculation. In some respects the situation was strikingly like that of France in the later eighteenth century. As in France, so in Greece, thinkers sought a remedy in a return to nature, an ideal nature, which they described in detail, but whose existence they took little pains to verify. Man in this state of nature possesses virtues impossible, perhaps not even esteemed, in an artificial society. What the American Indian was to the French philosophers a hundred years ago, the Scythian became to the Greek philosopher—the natural, uncorrupted man living a plain life, animated by a lofty spirit of justice, in a society where all property was held in common. Early Greece, also, was idealized as early Germany was in the last generation. Isocrates pronounces the Sparta of Lycurgus an imitation of oldest Athens. This romantic tendency found abundant expression in political fiction, most of which is no longer extant, but in such forms it has been more or less familiar. Pöhlmann shows that it exerted a more subtle influence, permeating, in fact, no small portion of the historical literature of the third and fourth centuries B. C. Isocrates, in his memorial orations, idealized ancient Athens. Dicæarchus remarks that the theory of the state of nature developed to such a degree that the myths of the Golden Age, stripped of what seemed "too fabulous," were combined into a new history of early man.

—The most notable example is the abundant literature of that period on Lycurgus and Sparta. As a non-commercial State, Sparta was idealized by Athenian thinkers just as Jefferson and his followers idealized an agricultural society. The early history of Sparta, about which Herodotus and Thucydides say very little, for the good reason that they knew little, writers of the later period describe with great fulness. We get a pretty complete idea of the contents of these later works from Plutarch's life of Lycurgus, which was largely drawn from them. Plutarch candidly acknowledged that there was nothing certainly known of Lycurgus. The contents of his narrative bear many traces of the political romance. In this ideal Sparta, the moral and political theories of the third-century reformers become realities thrown back into a distant past, of which the present is a degeneration. The picture of the Sparta of Lycurgus, then, as drawn by Plutarch from his romantic authorities, is not based on genuine legends, but is a pure Utopia, an ancient 'Looking Backward.'

—The sixtieth birthday of the distinguished traveller, geographer, and geologist, Baron von Richthofen, has been made the occasion

for the publication, by a number of his former pupils, of several important dissertations on topics cognate to geography, each of which may be said to have been inspired by the broad learning and genius of the master. These papers, which are issued from the house of Dietrich Reimer of Berlin, as a *Festschrift*, are an exposition of German scholarship of a strikingly high and varied order, and eminently reflect the versatile mind of the scholar to whom they are dedicated. As a geographer, Richthofen's name will generally be associated with those of Klaproth and Alexander von Humboldt, for to these three, more than to any other investigators, are we indebted for that broad conception of structural detail which has permitted, even in the absence of some necessary data, of the construction of the modern map of East Central Asia. It is not surprising, therefore, to find among the fourteen essays here grouped together three which deal distinctively with the Asiatic continent, one, by Dr. Max Blanckenhorn of Erlangen, on the structural lines of Syria and the Red Sea, which recognizes Suess's *Senkungs-Theorie* in explanation of the trough of the Red Sea; a second, by Dr. Hans Fischer of Leipzig, on the map of eastern Asia; and a third, by Dr. Wegener of Berlin, on the geography of Central Tibet and the relationships of the Central Tibetan Mountains. Mr. Henry Yule Oldham, a son, we believe, of one of the late superintendents of the British East Indian Survey, contributes an essay on the "Discovery of the Cape Verde Islands," in which he establishes the claims of Cadamosto to be the true discoverer, and assigns July 25, 1456, as the probable exact date of the discovery. Among the other notices may be mentioned those of Drygalski (on the Greenland fjords), Dr. Hettner (on the influence of rainfall upon the vegetation of the tropical Andes), and Dr. Schott (on the dimensions of oceanic waves). The analyses of observations by the last-named investigator make it clear that the "mountain-high" waves of the tourist and average navigator fall into the dimensions of comparatively a few feet—from twenty to thirty, or thereabouts. A wave fifty feet in height is a very extraordinary occurrence, and approaches closely the extreme limit of magnitude; the *Challenger* expedition, in their long cruises across the Atlantic, Pacific, and Southern Oceans, met with no waves which measured more than twenty-three feet.

—The first part of volume iii. of Quain's 'Anatomy' (Longmans) deals with the central nervous system, and offers abundant evidence of the determination of its author (Prof. Schäfer) to make the tenth edition of this favorite manual surpass all previous editions and other English works upon the subject. The text has been largely rewritten, and there are numerous new and original figures. The important results attained by Ramón y Cajal and others by the Golgi method are quite fully set forth; special improvements relate to the subdivisions of the cerebellum, the cerebral fissures, and the blood-supply. The "Recent Literature" embraces hundreds of titles, and it is refreshing to note references to the observations of American anatomists, W. Browning, Dalton, Donaldson, Dwight, A. J. Parker, Spitzka, and Wilder. Detailed criticism must be reserved for another occasion, but two undesirable features may be noted. The explicit declaration on p. 124 as to the complete circumscription of the lateral ventricle is not borne out by any of the figures, and the student is more likely to be misled by the latter than set right by the text. The nomenclature is so much better than usual that the still numerous inconsistencies and redundancies impress one as particularly needless. If *insula* is adequate at all (as at the top of p. 155), why should the student be perplexed with *island*, *island of Reil*, and *central lobe* excepting as synonyms? Since *thoracic* is used (p. 10) and is unmistakable, why apply *dorsal* to that region of the body, and why retain for the nerve-roots the ambiguous, antiquated, and discredited *anterior* and *posterior*?

## COLERIDGE.

*The Poetical Works of Samuel Taylor Coleridge.* Edited with a biographical introduction by James Dykes Campbell. Macmillan & Co. 1893. 8vo, pp. cxxiv., 667. With portrait.

Mr. James Dykes Campbell thought that there were two things wanting: first, a complete collection of Coleridge's poems, printed according to his own latest revised text, and arranged in some settled order; and, secondly, a fairly complete and accurate narrative of the events of the poet's life. His attempt to supply these wants is the result, he tells us, of many years' labor of love. The life prefixed to the poems appears to us to evince the industry to which the author lays claim, and to be, moreover, very sensible and fair.

No man's character, moral and intellectual, was ever more distinctly written on his face than was that of Coleridge. His complexion, Hazlitt says, was clear and bright, his forehead was broad and high, as if built of ivory, with large projecting eyebrows, beneath which his eyes rolled like a sea with darkened lustre. His complexion Hazlitt compares to the pale, thoughtful complexions of Murillo and Velasquez. His mouth, according to the same observer, was gross, voluptuous, open, eloquent. His chin was good-humored and round. But his nose, the rudder of the face, the index of the will, was small, feeble, nothing—like what he has done. To this Carlyle adds: "He [Coleridge] shrinks from pain or labor in any of its shapes. His very attitude bespeaks this. He never straightens his knee-joints, he stoops with his fat, ill-shapen shoulders, and in walking he does not tread, but shuffle and slide." An observant lady said that Coleridge never could make up his mind on which side of the footpath he would walk.

No one, however mistrustful of metaphysical speculation, can question the philosophic genius betokened by the forehead; no one can question the poetic genius betokened by the eyes, the benevolence betokened by the chin; equally certain is the total want of will, of the power of self-direction and of perseverance, denoted by the nose. The life of the philosopher and the poet is a long record of plans dreamily formed, and either not completed or abandoned altogether. Over all hovered the idea of some philosophic work which was to be a grander counterpart of Bacon's 'Organum,' and to effect a greater revolution of thought, but which, unhappily, never attained the first stage of realization; and of an equally magnificent poem which remained in the same visionary state. It was said by some one that 'The Friend' was a long and desultory introduction to a work that was to come. Pretty much the same thing might be said of Coleridge's productions altogether, including his conversation. A field strewn with the fragments of stone which were to have formed a temple, is the happy simile of his biographer.

As to his life, it is a most unhappy record of weakness and of the faults which mere weakness produces—neglect of duties, including those of a husband, promises unperformed, failure to fulfil engagements, fits of abject indolence alternating with spasmodic activity, debt, disguised mendicancy, and indulgence in opium. The opium, Coleridge persuaded himself, was taken as an anodyne under the pressure of severe pain. Southey, his connection, and, it appears, the medical man to whom he made his confessions, took a less charitable view, and ascribed the habit not to ailments, but to inclination and indulgence. The man was at times conscious of his own weakness, and has given expression to it in the "Lines on a friend who died of a frenzy fever induced by calumnious reports":

> "To me hath Heaven with bounteous hand assigned
> Energic Reason and a shaping mind,
> The daring ken of Truth, the patriot's part,
> And Pity's sigh that breathes the gentle heart.
> Sloth-jaundiced all! and from my graspless hand
> Drop Friendship's precious pearls, like hour-glass sand.
> I weep, yet stoop not! the faint anguish flows,
> A dreamy pang in Morning's feverish doze."

We have said that Coleridge was conscious of his own weakness, but his genius devised a curious apology for it. In explanation of his having for some time persistently refused to write to his poor wife, he says: "The moral obligation is to me so very strong a stimulant that in nine cases out of ten it acts like a narcotic; the blow that should rouse stuns me." Thus the cause of his failure to perform his duty was his extraordinarily strong sense of it!

Coleridge had the misfortune, which in his case must have been great, to be, like most English boys of his time, too soon transplanted "ere his soul had fixed its first domestic loves." He was sent to a boarding-school when he was only nine, and when a character like his specially needed the support of domestic affection and guidance. Naturally he pined for his home; it would come back to him in his dreams, and he would wake weeping for it—so says Lamb, and we can well believe him. Lamb's picture of the inspired charity boy at Christ's Hospital "winning the casual passer through the cloister to stand still, entranced with admiration, to hear him unfold in deep and sweet intonations the mysteries of Jamblichus or Plotinus, or recite Homer or Pindar in Greek," we have always been inclined to class with the pictures of Alice W——n, Sarah Battle, and other charming figures in the fancy portrait-gallery of Elia. If we found it easy to believe that the boy spouted Jamblichus or Plotinus, we should find it difficult to believe that the casual passer-by stopped to listen to him. However, there is no doubt that Coleridge was a very precocious philosopher as well as a precocious poet. He has himself told us that he imbibed the scepticism of Voltaire, and drew a flogging upon himself by retailing it to his master. That he was already eccentric is also certain, since he wanted to be apprenticed to a cobbler, and actually induced the cobbler to apply to the head-master, who received the application with assault and battery.

We next have Coleridge at Cambridge, where he is found in company which indulges in draughts less philosophic than those of Jamblichus and Plotinus. As the party is on its way home from a carouse, two of them fall into a gutter, and one generously calls out to his companions to save the other man, as he himself can swim. Coleridge at the same time plunged into politics, heterodoxy, love, and debt. From debt it appears he tried to extricate himself by a lottery ticket. But the most extraordinary incident of this period of his life is his enlistment, under the name of Silas

Tomkins Cumberbatch, in the King's Regiment of Light Dragoons. This escapade appears to have been variously ascribed to love and debt; but it seems not unlikely to have been a freak of the same errant fancy as the proposal to be apprenticed to a cobbler. How S. T. C., alias Silas Tomkins Cumberbatch, got along as a light dragoon is still a mystery. We are told that he bribed his comrades to clean his horse and accoutrements for him by writing their love-letters. He could not bribe them to stick on his horse for him, though he might bribe them to clean it, nor could they take his place on parade, where he must have managed in some way to go through his drill. However, at the end of two months he was released. The college authorities only admonished him, and those of Christ's Hospital, from which he had an exhibition, were ignorant or kindly blind.

This was the period of the French Revolution, when all young men of genius and unencumbered by wealth were looking for the new heavens and the new earth. In Coleridge's ardent brain the general ferment took the form of "Pantisocracy." He pledged himself to evolve a scheme which should have "the tactical excellence of the mathematician with the enthusiasm of the poet." Twelve gentlemen of good education and liberal principles were to embark with twelve ladies, fixing themselves in some delightful part of the new back settlements of America. The labor of each man for two or three hours a day would suffice to provide for the colony. The fruits of their labor were to be common property; there was to be a good library, and ample leisure for study, discussion, and education. It was left an open question whether the marriage contract should be capable of dissolution if agreeable to one or both parties. There was, of course, to be perfect freedom of religious and political opinions. A contribution of £125 from every gentleman would suffice. The scene of the Pantisocratic Utopia was to be the valley of the Susquehanna, which had been recommended as suitable for the purpose from its "excessive beauty and its security from hostile Indians and bisons." "Literary characters," said this informant, "make money there, and the mosquitoes are not as bad as our gnats."

Southey was drawn into the scheme, and in probably a more practical sense than Coleridge, whose Pantisocracy, we may be sure, was the merest vision. The vision, however, had two serious and substantial consequences. In the first place, a rich aunt, hearing of it, turned Coleridge out of her house on a wet night, and never would see him again; in the second place, to provide himself with a partner, he married Miss Sarah Fricker, and this at a time when he was or fancied himself to be in love with Miss Mary Evans. The result was domestic unhappiness and bad conduct on Coleridge's part. The biographer tells us that the marriage was made in Bristol, not in heaven. That might be, but duty and right feeling exist in Bristol if seraphic harmony does not. The marriages of men of genius are notoriously rather a sad chapter in biography, and we are called upon to make all the allowance which justice will permit for the tendency of genius to idealize and the almost inevitable wreck of the ideal. Walter Scott, however, had been caught at a rebound, after disappointment in a first love, by a woman not suited to be his wife, and yet, being a man of sense and honor, he made her a very good husband.

The progress of the French Revolution destroyed the illusions alike of Coleridge, Wordsworth, and Southey. Coleridge's change of mind was avowed in that fine poem, the "Ode to France":

> "The Sensual and the Dark rebel in vain,
> Slaves by their own compulsion! In mad game
> They burst their manacles and wear the name
> Of Freedom, graven on a heavier chain!"

It does not seem, however, to have been so much by the atrocities, extravagances, and blasphemies of the Reign of Terror that these men were shocked and converted, as by the treatment received from Republican France by other nations which had thrown themselves into her arms, and especially by the Swiss Republic. They all remained true to liberty, but Southey became, perhaps, more of a Tory than the other two. In their allegiance to liberty they were confirmed, and saved from the danger of apostasy, by the turn which the Revolution took when it embodied itself in a military despot and oppressor of mankind. Even a Russian or German despot might be the object of Liberal sympathy when he was defending the independence of his nation; much more might the Spanish people in their uprising against a rapacious invader.

"The youthful enthusiasts," says Coleridge in his 'Biographia Literaria,' "who, flattered by the morning rainbow of the French Revolution, had made a boast of expatriating their hopes and fears, now, disciplined by the succeeding storms and sobered by increase of years, had been taught to prize and honor the spirit of nationality as the best safeguard of national independence, and this again as the absolute prerequisite and necessary basis of popular rights."

Coleridge changed his religion as well as his politics, and probably under much the same influence. He set out as a Unitarian, and a Unitarian preacher, in which capacity, it seems, he was great. Hazlitt, at least, describes him as "launching into his subject like an eagle dallying with the wind," his voice as "rising as the steam of rich distilled perfumes," and his concluding prayer as "floating in solemn silence through the universe." As a Nonconformist he was, of course, an advocate of the separation of Church and State. Afterwards he became a Trinitarian and a thorough-going believer in the Established Church. He tried to give Anglicanism a religious philosophy. This was pouring new wine not only into a very old but a very alien bottle, since the Anglican system was the creation of statesmanship, not of spiritual aspiration. Coleridge, however, shares with Bishop Butler an exceptional eminence among Anglican writers as a theologian in the proper sense of the term, in contradistinction to the preacher, commentator, or ecclesiologist, having essayed to explore philosophically the nature of God and the relations between God and man. It is impossible, in reading Coleridge's highly spiritual and even unctuous dissertations, not to be sometimes crossed by the recollection of the opium and of the neglected duties of life. But the man's conscience never was extinguished, while his interest in theological speculation was always profound and sincere. As his biographer says, "His will was congenitally weak, and his habits weakened it still further; but his conscience, which was never allowed to sleep, tortured him; and, after many days, its workings stimulated the paralyzed will, and he was saved."

We cannot here attempt to deal with the poems. There is plenty of evidence that had Coleridge chosen to dedicate himself, as Wordsworth did, to poetry, which was probably his highest mission, he would have been a very great poet. As it is, the fragmentary production falls lamentably short of the manifest power. We all admire the two poems on Genevieve, the "Ode to France," and, in a different style, the "Lines to a Young Ass," which shows what a poet can make of a very unpoetic subject. But high above all the rest rises "The Ancient Mariner," with "Christabel" and "Kubla Khan" in its train. We cannot help feeling that these three are of the sort of products of imagination which would be stimulated by opium, and the surmise is strengthened by Coleridge's inability to finish "Christabel," which he unquestionably tried hard to do. The burlesque epistle from Talleyrand to Lord Grenville, printed in the *Morning Post*, and the "Devil's Thoughts," of which a part was written by Coleridge, the rest by Southey, show that Coleridge possessed humor, which is seldom found apart from sense. We are, therefore, not surprised to be told that when he fitfully took to journalism for bread, he could lay aside his metaphysics and write practical editorials.

In the last years of his life Coleridge is described by Carlyle as "Sitting on the brow of Highgate Hill, looking down on London and its smoke-tumult like a sage escaped from the inanity of life's battle, attracting towards him the thoughts of innumerable brave souls engaged there." Under the care of Gillman, the propensity to opium, if it had not been eradicated, had been reduced. This seems to have been the great scene of Coleridge as a talker. Carlyle gibes at Coleridge's talk, its solemn iterations of "om-m-mject" and "sum-m-mject," its discursiveness, vagueness, and want of anything like practical wisdom. To the discursiveness Keats also is a witness.

"I walked with him," says Keats, "at his alderman-after-dinner pace, for near two miles, I suppose. In those two miles he broached a thousand things. Let me see if I can give you a list—nightingales, poetry, on poetical sensation, metaphysics, different genera and species of dreams, nightmare, a dream accompanied with a sense of touch, single and double touch, a dream related, first and second consciousness, the difference explained between will and volition, so many metaphysicians from a want of smoking, the second consciousness, monsters, the Kraken, mermaids, Southey believes in them, Southey's belief too much diluted, a ghost story, good morning. I heard his voice as he came towards me—I heard it as he moved away—I had heard it all the interval—if it may be called so."

Miss Martineau, in her dry, smart way, described the utterances of the great seer as "a survey of society from his own balloon in his own current," and as "involuntary speech from involuntary brain-action, like that of Babbage's calculating machine." Carlyle, however, admits, what nobody can deny, that Coleridge exercised an immense influence over minds so considerable as those of Hare, Sterling, and Frederick Maurice. It is probable that he did this largely as a talker. Unluckily, while he had many worshippers, he had no Boswell. Take away Johnson's Boswell, and, barring his Dictionary, he would be a second-rate author. To indolence like that of Coleridge the mere manual labor of writing is highly distasteful, and his thoughts would flow more freely and perhaps be better expressed in conversation. The excellence of his lectures is well attested, and he lectured best without notes. If we could be carried back for an hour to Gillman's parlor at Highgate, we should know better what Coleridge was.

## OHNEFALSCH-RICHTER'S KYPROS.—II.

*Kypros, the Bible, and Homer:* Oriental Civilization, Art, and Religion in Ancient Times Elucidated by the Author's own Researches and Excavations during Twelve Years' Work

in Cyprus. By Max Ohnefalsch-Richter, Ph.D. With a letter to the author from the Right Hon. W. E. Gladstone. Two volumes. Vol. I.: Text; Vol. II.: Plates. London: Asher & Co. 1893. Folio, pp. ix, 530; 7, ccxviii.

RICHTER devotes more than half his book to an explanation of the transition from the lowest tree-worship to anthropomorphic image-worship. He adopts in general the conclusion of Voigt (in his 'Dionysus'), "that the god was first venerated as immanent in the fir-tree, and that then the erection, in the sanctuary, of felled fir-trees brought about the transition from dendromorphic to anthropomorphic form in the worship of the Spirit of Vegetation." Richter, however, would not confine the process to the fir-tree. His discussion, treating of the sacred tree on Cyprian antiquities, of Cyprian tree-worship as compared with that of other Eastern lands, of endendric and dendromorphic deities, and of the figures and cults of Tammuz and Adonis and other gods of vegetation, has a value independent of the theory it maintains. The facts are correctly stated, but his interpretation of them is doubtful. Out of the tree-fetish (in which dwelt the god), says Richter, came the plank-idol, more or less resembling the human form; or, from a little forked tree-trunk, we have a carved image, in which the legs are formed by the fork of the trunk, the knags become stumps of arms, and three twirling branches are so trained or pruned as to assume the form of a human head with two pierced ears, a nose, and holes for the eyes (p. 108); and in other cases we find gods growing out of trees, or half-dendric, half-human. There are also the myths in which gods are born out of trees.

That the early man would often choose wood to fashion idols out of is obvious, and it is not unlikely that accidental resemblances in trees to the human form might sometimes suggest anthropomorphic images; such a suggestion is made or adopted by Réville in his 'Prolégomènes.' But when we look at early idols the world over, and consider the development of religion on the psychological side, it seems obvious that this explanation is insufficient to account for the genesis of anthropomorphic images in general. Man, on emerging from the lowest stratum of culture, in which animism or fetishism is his natural religion, conceives his deities more and more in his own image, and necessarily tends to give them his own shape. Anthropomorphism of outward form is only a concomitant or a part of anthropomorphism of thought. Whether in wood or in clay, the savage tries to make his idol human, and utilizes the tree-forms that happen to resemble the human shape; they do not teach him anthropomorphism, but lend themselves to his natural anthropomorphic idea. Zoömorphic god-forms, in like manner, issue naturally out of totemistic zoölatry. If the god is animal, he takes an animal form, and if human, a human form. The immanence of the deity in the tree or other object is a part of the old animism which survives into much later stages of culture. The figures of gods issuing from trees are doubtless often representations of mythical stories, and suppose, as do the myths themselves, a more or less completely formed anthropomorphic conception.

Richter's theory inverts the true order of the ideas. A similar inversion is contained in his explanation of the amalgamation of tree-worship and fire-worship:

"The inflammability of trees," he says (p. 103), "the occurrence of forest fires, and the custom at religious festivals of deliberately setting fire to trees, early resulted, among the most widely different peoples, in a relation being established between Tree worship and Star or Fire-worship, or in the amalgamation of both. We need not, therefore, be surprised to find Tree-worship, Sun-worship, and Fire-worship interwelded in the case of the Sun-god Mithra, whose cultus, of Persian origin and already appearing on the cuneiform inscriptions of Artaxerxes II., was in later times so highly developed among the Romans, and played so particularly important a part in Roman military quarters on German soil."

It is unnecessary to point out the crudeness of this view. Richter, admirable as explorer and archæologist, is less happy in his theories of general religious development.

His classification of Cyprian archæological material is valuable, though it must for the present be regarded as tentative. The Græco-Phœnician period, he holds, begins not later (and perhaps a good deal earlier) than the time of Solomon, and to the preceding native period he would assign an age hardly less than that of the primitive culture of Babylonia and Egypt. The first of these dates rests on the votive inscriptions to Baal Libanon (found in Cyprus on Mount Muti Shinoas) in which occurs the name of a King Hiram, believed by Euting to be the contemporary of Solomon, but by the editors of the 'Corpus Inscriptionum Semiticarum' supposed to be a later king. However that may be, the general evidence goes to show that the Greeks were in Cyprus at an early date, and that they soon adopted Phœnician and Assyrian-Babylonian religious and artistic ideas. For the later Assyrian influence we have a mark of time in the statue of Sargon II. erected by him at Kition in the latter part of the eighth century B. C. But Babylon probably made itself felt in this region, through the Phœnicians, much earlier. The griffin and the cherub, apparently creations of the Mediterranean Valley, are found distributed over the Western world at an early date. Cyprus seems to have been the storehouse, not the laboratory, of these conceptions.

The classification of the immense mass of remains collected in the island must be the work of time, but Richter has begun the task in the right way. The cylinders he divides into archaic Cyprian cylinders with rude and realistic designs not traceable to any definite originals; Babylonio-Assyrian; Hittite; Cyprian cylinders copied from or affected by Babylonio-Assyrian originals. This arrangement is adopted by Dümmler and by Furtwängler (in his article "Gryps" in Roscher's Lexicon), and appears to be correct, though the details may be affected by future investigations. We unwillingly forbear further mention of these objects (which are satisfactorily treated in the explanations of the plates) in order to call attention to the relations between Cyprus and Homeric Greece.

Richter makes frequent comparisons between objects found at Hissarlik and Mycenæ and those found in Cyprus, for the purpose of showing that the three sets represent the same period and the same school of artistic decoration. The resemblances between them are so striking that some connection between the three places must be assumed, and most archæologists recognize therein a Semitic influence on early Greek art. It is unnecessary, indeed, to call in such influence to account for everything—there are some general features that may reasonably be regarded as independent originations in different centres; but there are particular points of identity that can hardly be explained except by the supposition of borrowing. Richter's special contention is that much of the artistic work of the Homeric time was actually produced in Cyprus.

Agamemnon's armor is said in the 'Iliad' to have been a present from King Kinyras of Cyprus, and was presumably thought of as fashioned by Greek workmen in the island. Richter then further suggests that the Gorgon-head was of Cyprian-Greek origin. "The Greek goldsmith working in Kypros in the seventh century B. C. used, combined, and transformed all kinds of heads of divinities, which he saw as ornaments of dress or on sun columns and stelæ, and derived from them the Gorgoneion" (p. 209). On this Mr. Gladstone remarks:

"It may be worthy of note, with reference to the Gorgoneion, that while the shield of Agamemnon associates it with Cyprus, the only other mention (if I remember right) of the Gorgon in Homer is in the Underworld of the Eleventh Odyssey, which is, as I conceive, altogether exotic, that is to say, Phœnician, in its character."

The probability of this origin for the Gorgoneion may be granted, the precise form being found nowhere else, though suggestions of it occur in Babylonian and Egyptian demon-heads. Richter goes on to say that, as Agamemnon's arms came from Cyprus, it may reasonably be concluded that the shield of Achilles, which is called the work of Hephaistos, came from the same place. True, no such shields have yet been found in Cyprus; the shields most like the Homeric description are those from the Zeus-grotto at Gortyna, Crete. But the subjects, composition, and arrangement of the shield of Achilles as described by Homer correspond more nearly to the designs on Cyprian Græco-Phœnician bowls than to any others. And, as Cyprian bowls have been found among Cretan votive offerings, the Cretan Zeus-shields, our author suggests, may at some future time be traced back to Cyprus as their place of manufacture, perhaps even to Tamassos and Amathus, in whose environs copper was cast from the ore. While there is a certain amount of conjecture in these combinations, it seems probable that we have to recognize a close relation between Cyprus and Homeric art. It cannot be doubted that the Greeks in Cyprus were affected by Babylonia, Phœnicia, and Egypt. But it is a delicate task to distinguish between Greek and other elements in works of art, and this is the task to which Cyprian archæology has now to address itself.

Another interesting remark of Richter's is that the dove-cups found at Ayia Paraskevi and elsewhere are the prototypes of Nestor's dove-cup (Il. xi. 632 ff.) and of the silver dove-cup found by Schliemann at Mycenæ (p. 275), in which the decorative has come to outweigh or replace the sacral character.

We have touched on a few only of the details given in this monumental work, which is a conscientious attempt to classify and interpret the Cyprian antiquities. A mere mention of the illustrations of the old Hebrew and Greek cults would more than fill the space at our command. In addition to his archæological work proper, the author helps to clothe the old religious forms with life. The spectacle of the shrines, altars, sacred trees, deities, and festivals of ancient Cyprus gives a new reality to the worlds of Homer and the Bible. The plates alone, with the attached explanations, are a great contribution to our knowledge of the subject. It is matter of congratulation that the author has found the means of bringing out the work in so satisfactory a form. Of his relations to other Cyprian explorers it is unnecessary to say anything except that he

seems anxious to do justice to all; he makes on the reader the impression of being scientifically and otherwise conscientious. We wish him success in his further prosecution of the work of exploration, and in his attempts to illustrate the religious and artistic life of Semitic and Greek antiquity.

## RECENT FICTION.

*Many Inventions.* By Rudyard Kipling. D. Appleton & Co.
*Made in France.* By H. C. Bunner. Keppler & Schwarzmann.
*The Refugees.* By A. Conan Doyle. Harper & Bros.
*A Border Leander.* By Howard Seely. D. Appleton & Co.
*Heather and Snow.* By George Macdonald. Harper & Bros.

MR. KIPLING'S latest volume, 'Many Inventions,' sustains his reputation as an excellent story-teller. His is the gift of presenting an incident with the positiveness and certainty which command and reward attention—the essential gift of all masters of the only art which, since the dawn of time, has been really popular. Never in any age or country has the story-teller lacked a legion eager to cry, Hail! and loath to say, Farewell! Therefore, if general admiration and applause have any significance, he is of all men most blessed, and should be, by way of civility, the most grateful. Mr. Kipling, seen through his works, is not grateful, and is preëminently discourteous. He goes out of his way to say nasty things which are not true about women, the most appreciative part of his public, about members of his own craft who have mostly given him unstinted praise, and in fact about all the world, except the British subaltern, in whose person he discovers the one man among ten thousand. His unpleasant remarks are usually quite aside from the matter of his tale, and unless he calmly regards them as gems of wise or beautiful thought, they must be taken as irrepressible outbursts of a disposition neither amiable nor gracious.

This lack of judgment or of self-control renders Mr. Kipling ineffective and unconvincing as a serious critic of life, for which reason the composition entitled "One Side of the Question" could be spared from the volume without diminution of his fame. With the stories the case is quite different. Excepting "Love of Women," of which the incidental amusement does not compensate for the coarseness of the cause, all add to his distinction. Every situation is vividly imagined and rendered with great force and precision. The pages are alive with those phrases and single epithets which can compel the dullest soul to make to himself a vast picture of horror or hilarity, of misery or riot. There is no compromise with the easy middle way of adventure or emotion, and no deference to a taste for the commonplace and a delight in the tamer virtues. There is, in a word, no feebleness in either idea or execution. Naturally the only insistent moral note is masculine and direct—the exaltation of courage, physical and moral, particularized in fervent patriotism. It is flippant to smile at a virtue held by ancient philosophers to have been of all virtues that least open to the reproach of self-interest, yet, when patriotism is given full and free expression, nothing can make a man appear more ridiculous—at least to other nations. Mr. Kipling's patriotism is so solemn that it is easy to imagine him taking the "Englishman" song in "Pinafore" as an admirably serious composition. However wrong the British nation may be in internal administration, as opposed to other nations it is always right. Especially wrong and sinful is that nation which is, or wishes to be, a Republic—witness the essay on democracy prefacing the story "Judson and the Empire." As for the United States, it is well known that Mr. Kipling has long been at odds with it, as a body, both politic and social. The United States had the misfortune to offend him, and he has ever since been calling names. It may be because the United States as a unit takes no notice, or because the exasperatingly good-natured people, heedless of his wrath, continue to buy his books, that he is goaded to observe in "His Private Honour," "Ortheris, being neither a menial, nor an American, but a free man, had no excuse for yelping." On the other hand, this may be only one of the nasty things which, as we remarked before, Mr. Kipling seems forced by the law of his being to utter.

The only story in an entirely new scene is "The Record of Badalia Herodsfoot." Here Mr. Kipling seizes the coster when he is vigorously "jumpin' on his mother" or wife, and when no joy is so remote from his intention as that of "lyin' barskin' in the sun." Badalia is a person of singularly direct vision and speech, and heroic according to her light. The story of her life and death resembles for brutality both of fact and language some passages in 'L'Assomoir,' but there is one vast difference: though the people are flagrantly immoral, they are not unclean, and though Mr. Kipling gives their depravity its worth, he does not linger lovingly upon lust. The fear of appearing to gloat, or to wish to make others gloat, over vice which is properly repulsive has probably much to do with our novelist's reluctance to recognize its existence. Mr. Kipling's art is fearless. In such case he does well to trust it, for it rests on a solid foundation of racial inheritance common to the coster and himself. In the practice of vice and crime, the one, because he is an Englishman, is brutal rather than bestial, and, in their delineation, the other, for the same reason, has no inclination to emphasize sensuality or to exaggerate its significance.

Another phase of this fundamental racial difference is noticeable in Mr. Bunner's 'Made in France,' which is a collection of ten stories adapted from the French of Guy de Maupassant. Somewhere in the volume just noticed Mr. Kipling tells about three men who, meeting on a ship, proceed to make acquaintance by telling the stories common to the human race, forty in number—thirty-nine that can't be told to ladies and one that can. If English people generally, outside of the literary class, have any strong conviction about De Maupassant, it is that he has told those thirty-nine stories over and over, told them with infinite variety of scene, circumstance, and character, and told nothing else. When they read Mr. Bunner's version, they will suspect that a good man has hitherto suffered great injustice. Mr. Bunner has selected ten situations; he describes them as ethical situations—which must be taken to mean that they are neither immoral nor indecent, without implying that, in order to see the point, one is obliged to reflect on any involved question of duty or conduct. By this judicious selection and by a careful repression of suggestions and jokes not permitted in modern English literature, Mr. Bunner presents a purged and purified De Maupassant—one whom an American father can confidently recommend to his daughter and by whom no Sunday-school would be disgraced. To say that he has presented the whole or the half, or the concentrated essence, of De Maupassant, would be to go very wide of the truth, and to create an impression as false in its way as is that of the French author's total depravity.

Mr. Bunner, in his prefatory essay, gives us to understand that there is some sort of connecting link, not quite capable of definition, between De Maupassant's tales or groups of tales which makes it necessary to read many before one can fairly judge any. The immediate object of his work is to present one such group and make clear what he calls the author's "inspiration" to those who cannot or will not read him in the original. De Maupassant, like any other prolific writer, cannot be measured by one story, and no sensible person would think of trying it, but there are few story-tellers whose attention seems for the moment to be so perfectly restricted to the matter in hand. The finality of each incident, the feeling given that it is all over, that there is nothing more to be done or said or thought about it, is the most obvious proof of the positiveness and completeness of his art. If he has any inspiration separable from a great talent of immense range, abundantly characterized by the qualities and defects of his nation, it is shrouded in mystery, nor does Mr. Bunner make it clear by his thorough and efficacious denationalization. A theory underlying French fiction is that there is nothing in life too indecent to be expressed, and that if you should have any doubts, you must at once get rid of them by expressing in one way or another all the indecencies which you have known, have heard, or can possibly conceive. This theory, as every one knows, is not the foundation of English fiction or of any form of English art worthy of the name. De Maupassant was far from being abandoned to indecency, but he wrote very few stories in which his wit, his invention, or his marvellously close observation were not used to illustrate the national theory. Mr. Bunner's adaptations are done on the English theory, which hampers him terribly in his proposed revelation. With the aid of De Maupassant's outline, he has written a very entertaining volume, but one through which the original author is not nearly so distinctly seen as in close translations, even if there something of the merely literary force be lost.

It is now easily possible to write an excellent novel without either a plot or a hero, but there still remains one kind to which both are essential—the novel of adventure. Of first importance in that is continued movement towards a climax, and one figure always in high relief. In Mr. Conan Doyle's novel 'The Refugees' there is a very serious breach of continuity, and through the first half the hero is quite cast in the shade by personages who, however great in reality, ought here at least, for the sake of art and interest, to be content with a more obscure position. What Mr. Doyle sets out to tell is the tale of the persecution of a Huguenot family resident in Paris during the last half of the seventeenth century, of their flight, and their subsequent adventures in Canada. What he really devotes most attention to for more than two hundred pages is the relation between Louis XVI. and Mmes. de Montespan and de Maintenon. The defence of Mme. de Maintenon against two centuries of more or less calumnious aspersion is very interesting—too interesting, for it detaches the mind from the sufferings of the Catinat family, and enfeebles curiosity about the subsequent perils of the fugitive Huguenots. Concerning Mme. de Maintenon, while wishing her to appear well, Mr. Doyle was hardly wise in

selecting for his strongest impressions scenes in which, to the modern intelligence, she could not but appear ill. We cannot quite believe in her wholesome influence on the King when we see her urging him to sign the revocation of the Edict of Nantes—an act by which his kingdom really lost more of solid advantage than it ever gained by his brilliant wars or astute diplomacy. Then, contrasting her with Mme. de Montespan, it is possible to think no better of a woman so fanatical, so unscrupulous about means to an end, than of one of laxer virtue disinclined to make trouble by meddling with affairs of state.

Having dropped the King, the court, and the courtesans, and packed the Huguenots off on the *Golden Rod*, Mr. Doyle launches into a series of romantic and exciting adventures, with the glory of leadership divided between a polished French soldier, Capt. de Catinat, and an ingenious son of the American wilderness, Amos Green. Many of the incidents and descriptions are derived almost literally from the Jesuit Relations. Mr. Doyle has made excellent selections from historical material well adapted for romance, overflowing as it is with picturesque contrast of race and condition, and with instances of rare individual heroism. He has so much to tell that this last half is a little hurried and breathless, thus further justifying complaint against occupying so much space in discussion of comparative irrelevancy.

In the short Texas story, 'A Border Leander,' the honor falls to a very active and ingenious heroine. It is the classic tale of love laughing at family feuds and ready to risk death for its own gratification. Fortunately for the issue, Miss Tanqueary's mind was eminently practical and her muscle invincible; though not averse to idle dalliance with the hereditary enemy of her folks, Ike Angevine, she distinctly recognized the frivolity of prolonged indulgence of sentiment within range of the Tanqueary shot-guns. The cleverness and promptness with which she removed herself and Ike from a dangerous neighborhood are much to be admired. Mr. Seely has narrated the adventure with appropriate dash. The rather grim humor of the characters is nicely marked, and the slight sketches of scene are touched with poetic grace.

The motive of 'Heather and Snow,' by the veteran novelist George Macdonald, is, like that of all his works, to illustrate the beauty of sound Christian faith and its value in the conduct of life. The Scotch farmer, Barclay, and his family, are well chosen for his purpose, because they exemplify the sweetness and gentleness of Christ's teaching, unimpaired by the interpretations of John Knox. So perfect a character as Kirsty Barclay is not exactly common, but, considering her inheritance and her surroundings, she is neither unnatural nor improbable. The picture of an absolutely unselfish character is well drawn, without pose or exaggeration, and repays one for reading a book in some respects dull and tedious.

---

*The Story of my Life, from Childhood to Manhood.* By Georg Ebers. Translated by Mary J. Safford. D. Appleton & Co. 1893.

It is a relief to know that Georg Ebers, for the time at least, has abandoned the archæological novel in order to write the history of his own life. For whatever doubts may be entertained as to the merits of his representations of Egyptian life in the time of the Pharaohs, he certainly knows how to write the life of a German of the nineteenth century. The first instalment of his autobiography, which lies before us, covers the period from 1837 to 1863, and is, apart from its personal interest, which is by no means small, a most remarkable record of some of the most remarkable events in German history of that time.

Probably the climax of the whole book is the account of the Berlin revolution of 1848, which Ebers, then a boy of eleven years, witnessed in all its fierce horror; and it is refreshing to hear a man of undoubted loyalty and conservatism, an enthusiastic admirer of the present German Empire, speak of this uprising with unreserved sympathy for the popular cause, and with a deep, though repressed, indignation at the part played in it by the monarchy. The account of the famous 18th of March is truly thrilling, and is illumined by a great many little touches which bring the events before us with wonderful vividness.

On the morning of the fatal day the King, as will be remembered, had at last granted the Constitution and promised freedom of the press. In the general rejoicing which followed the promulgation of this decree, little Ebers and his brother, too, were to have a part; they had been invited to a children's ball which was to take place in the afternoon. They were eagerly expecting the tailor, who was to bring some new blue jackets made for this occasion. At last, at three o'clock, he came:

"Our mother was present when he tried them on, and when she remarked that now all was well, the man shook his head, and declared that the concessions of the forenoon had no other object than to befool the people; that would appear before long. While I write, it seems as if I saw again that poor little bearer of the first evil tidings, and heard again the first shots which interrupted his prophecy with eloquent confirmation.

"My mother turned pale. The tailor folded up his cloth and hurried away. What did his words mean? What had happened? The answer was a rattle of musketry. We leaned out of the window, from which we could see as far as Potsdamerstrasse. What a rush there was towards the gate! Three or four men dashed down the middle of the quiet street. The tall, bearded fellow at the head we knew well. It was the upholsterer, Specht, who had often worked for us, a good and capable craftsman. But what a change! Instead of a neat little hammer, he was flourishing an axe, and he and his companions looked as furious as if they were going to revenge some terrible injury. He caught sight of us, and I remember distinctly the whites of his rolling eyes as he raised his axe higher and shouted hoarsely: 'They shall get it!'"

We regret that we cannot quote the description of the scene of battle itself, which the boy visited the morning after that terrible night, or the "procession of the dead" before the King, or the solemn funeral service in the Friedrichshain. But we must at least indicate Ebers's own judgment about these revolutionary struggles by inserting the words with which he closes this chapter:

"During those spring days, no matter by what hands—among them were the noblest and purest—were sown the seeds of the dignity and freedom of public life which we now enjoy. To me and, thank heaven, to the majority of Germans, life deprived of what was conquered in those days would seem unendurable."

As this volume ends with the publication of the author's first novel, 'An Egyptian Princess,' we may look forward to another equally interesting part, dealing with his subsequent literary career and with the impressions produced upon him by the great events of 1866 and 1870.

---

*The Wilderness Hunter.* By Theodore Roosevelt. G. P. Putnam's Sons.

Probably no American is better qualified than Mr. Roosevelt to write on such a subject as this, for he has himself hunted and killed every variety of game native to the United States, has lived on our so-called frontier, has known the peculiar life, thought, and action of its people, and, above all, possesses a true appreciation of nature, animate and inanimate, and the literary ability to relate what he has seen. He has studied the habits of the game while hunting it; at the same time he has noted with interest and intelligence all the sights and sounds peculiar to the wilderness, and, having the eye of a naturalist, has not allowed the habits of the smaller birds and animals to escape unnoticed in his pursuit of a larger quarry. So many books on hunting have been written which fail to show anything but the natural Anglo-Saxon blood-thirstiness, that it is refreshing to have a writer pause to cover his sinister motives with the cloak of a fine cloud effect, or glorify them with the splendor of a flaming sunset. Time and opportunity come to few men, engaged in the active work of life, to see and do what our author has seen and done. Our country still has the unexplored places, the peculiar life, and strange characters, not to be found in the earth's older regions, which belong to a nation's youth and are so dear to romance and adventure, and Mr. Roosevelt has seen and written of these things in a straightforward style, without either coldness or sentimentality, devoting most of his time to action, and leaving the romance to others.

Yet herein lies one of the faults of his book. It is egoistic. He has a great deal to say of the country, of its wild life and its beauties, but, except in a general way, he tells little of the men. In a hunting trip he is the central figure, and his opinions are always exact and perhaps a little intolerant. He draws the line too closely between what is sportsmanlike and unsportsmanlike. No one who possesses any of the instincts of a sportsman for a moment defends indiscriminate slaughter of game, for the mere sake of killing, and such sport as is obtained by being paddled up to a deer in the water to shoot it with a shotgun, or by running the poor beast down on the crust, is universally condemned. Yet the man who has chased a moose on the snow, alone, for three days, would be surprised to find that his feat was not as sportsmanlike as the half-hour's stalk of an elk; and one who loves the shotgun better than the rifle may resent being told that he is not as manly and as much of a true sportsman as he who hunts only larger game.

It is unfortunate that the illustrations of this book are not better. Few of them are good, and some are very bad. In a picture of two elk fighting, another looks on, which seems like the spectral restoration of some long extinct species. In another, of "A Cowboy and Bear Fight," not only is the horse ill-drawn, but the bear looks like a large, fat Newfound land dog without a tail. This is particularly unworthy the excellence of its surroundings, for the chapter "In Cowboy Land" is one of the most delightful in the book, ranking with that on "Hunting Lore," and, like that, reserved for the close of the narrative.

---

*Lake St. Louis, Old and New, Illustrated; and Cavelier de la Salle.* By Désiré Girouard. Translated from the French by D. H. Girouard. Montreal. 1893.

M. Girouard is author of several pamphlets of local research, 'Le Vieux Lachine et le Massacre du 5 Août, 1689,' 'Les Anciens Forts de Lachine et Cavelier de la Salle,' and 'Les Anciennes Côtes du Lac Saint-Louis.' The substance of these pamphlets is incorporated

in the present book, which is throughout local in character, being the result of very extensive and varied research concerning the neighborhood of the author's residence, near La Chine, a few miles above Montreal. Old and new are mixed in a rather promiscuous manner, from learned discussions as to the exact location of La Salle's house or cabin to accounts of modern buildings entirely void of historic interest. The illustrations are numerous and good, though equally heterogeneous, consisting of portraits of early colonial celebrities, of ancient buildings or their ruins, and of modern churches, new post-offices, dwellings, etc., totally uninteresting to any but those immediately concerned. M. Girouard very candidly and very justly doubts the genuineness of any of the so-called portraits of La Salle. As to the question of the origin of the name of La Chine, he shows plainly that it is not of earlier date than 1669, when La Salle made his first attempt to find a western path to China, and incurred ridicule in consequence.

M. Girouard has been untiring in research into notarial papers, deeds, and other documents, and he is minute to a fault, filling whole pages with the names of the *habitants*, or peasants, of La Chine and other places, sometimes to the exclusion of more important matter. The translation leaves much to be desired, and is occasionally misleading, while the mechanical execution of the volume is excellent.

## Charles Scribner's Sons'

*NEW PUBLICATIONS.*

A NEW ROMANCE

*By ROBERT LOUIS STEVENSON.*

### David Balfour.

Being Memoirs of His Adventures at Home and Abroad. 12mo, cloth $1.50.

Mr. Stevenson's new romance promises to be the literary sensation of the year. It is a brilliant and worthy sequel to his wonderfully popular story, "Kidnapped," and is a tale of love as well as of thrilling adventure, revealing the author's genius in a wholly new light."

### Kidnapped.

Being Memoirs of the Adventures of David Balfour in the Year 1751. New Edition, uniform with "David Balfour." 12mo, cloth, $1.25.

"Mr. Stevenson has never appeared to greater advantage than in 'Kidnapped.' . . . No better book of its kind than these 'Adventures of David Balfour' has ever been written."—*The Nation.*

### The Opinions of a Philosopher.

By ROBERT GRANT. With many illustrations by C. S. Reinhart and W. T. Smedley. 12mo, cloth, $1.00.

Mr. Grant's brilliant and witty "Reflections" won extraordinary popularity; and this new book, with its scores of clever illustrations by the two celebrated artists, continuing the experiences in middle life of the hero and heroine of the earlier book, promises to achieve an even greater success than that.

### New Books in the Cameo Edition.

Robert Louis Stevenson's VIRGINIBUS PUERISQUE, AND OTHER PAPERS, and Andrew Lang's LETTERS TO DEAD AUTHORS, each with an etched portrait, and the latter also having four additional letters, will soon be added to the well-known Cameo Edition. In advance of this publication, a Limited Large Paper Edition of 212 numbered copies, printed on Holland paper, with uncut edges, is now issued at $7.00 *net* per set.

### The Court of Louis XIV.

From the French of IMBERT DE SAINT-AMAND. With four portraits. Famous Women of the Valois and Versailles Courts. 12mo, $1.25.

A series of extremely valuable and entertaining portrait studies, intimate and piquant, of the clever and dazzling beauties of the Court of "le Grand Monarque," in the author's most fascinating style.

### The Creeds and Platforms of Congregationalism.

By WILLISTON WALKER, Ph.D., Professor in Hartford Theological Seminary. 8vo, $3.50.

An historical and critical survey of the most important Congregational creeds and platforms, illustrated by notes and comments which have a high value for the light they throw on the origin and growth of this denomination.

### New Library Editions.

**Thomas Nelson Page's Works.** 4 vols, in a box, $4.50.

**George W. Cable's Novels** 5 vols., in a box, $6.00.

Both Mr. Page's and Mr. Cable's books long ago acquired the distinction of classics, and the appearance of the works of each in a handsome uniform binding is in response to a wide demand for library editions befitting their character and their position in the front rank of American literature.

### A History of French Painting.

By C. H. STRANAHAN. With reproductions of 16 representative paintings. New and Cheaper Edition. 8vo, $3.50.

"The volume, as charming as it is useful, is unreservedly commended to all who love art on either its historical, its technical, or its sentimental side."—*Chicago Tribune.*

### Stories of Italy.

Fifth volume of "Stories from Scribner." Paper, 50c.; cloth, 75c.; half calf, $1.50. With Stories by F. HOPKINSON SMITH, T. R. SULLIVAN, JOHN J. A'BECKET, and GRACE ELLERY CHANNING.

"We commend them to all, not only for the excellence of the reading, but for the refined taste with which they appeal to the eye."—*Boston Saturday Gazette.*

**GOOD** Food - - -
Digestion - -
Complexion -

are all intimately connected—practically inseparable. Though the fact is often ignored, it is nevertheless true that a good complexion is an impossibility without good digestion, which in turn depends on good food.

There is no more common cause of indigestion than lard. Let the bright housekeeper use

**COTTOLENE**

**The New Vegetable Shortening**

and substitute for lard, and her cheeks, with those of her family, will be far more likely to be "Like a rose in the snow."

COTTOLENE is clean, delicate, healthful and popular. Try it for yourself.

Send three cents in stamps to N. K. Fairbank & Co., Chicago, for handsome Cottolene Cook Book, containing six hundred recipes, prepared by nine eminent authorities on cooking.

Made only by

**N. K. Fairbank & Co.,**

Chicago, St. Louis, Montreal, New York, Boston, Philadelphia, San Francisco, etc.

# MACMILLAN & CO.'S NEW BOOKS.

*Just Published. A New Book by PROFESSOR GOLDWIN SMITH, D.C.L.*

## THE UNITED STATES.—A Political History: 1492-1871.

By GOLDWIN SMITH, D.C.L. 12mo, $2.00.

"In an octavo volume of three hundred pages, which the Macmillans have published, Prof. Goldwin Smith has outlined the political history of the United States. The author tells us in his preface that the book is intended for English, rather than American readers, but it is certain to be very widely read on this side of the Atlantic.

"With the possible exception of Mr. Bryce, the author of 'The American Commonwealth,' Mr. Goldwin Smith is known to be better qualified to treat the subject of this work, than any of his English fellow-countrymen. He has lived for many years in this country and in Canada, and has been a deeply interested student of American institutions.

"It is probable that Americans will dissent from some of his conclusions, but they will recognize that the divergence of his opinions from their own is due to his point of view, which is that of an Englishman who regards the American republic as the great achievement of his race, yet at the same time desires to do justice to the mother country and render to her the gratitude which she seems to deserve. Considered as a literary composition, the work can scarcely be too highly praised. It is a marvel of condensation and lucidity.

"In no other book is the same field covered so succinctly and so well. Of the five chapters, the first deals with the Colonial epoch, the second with the Revolutionary period, the third and fourth review the history of the Federal Government to the outbreak of the Civil War, and the fifth depicts the era of rupture and reconstruction. We have marked certain passages for extract, but the truth is that almost every page is enriched with striking comments that cause the reader to carefully reconsider, if not to change, his views of historical persons and events."—*New York Sun.*

*By the Same Author.*

**Bay Leaves.**
A Collection of Translations from the Latin Poets. 16mo, $1.25.

**A Trip to England.**
New, Revised Edition. 18mo, 75 cents.

*NEW YORK, THURSDAY, SEPTEMBER 21, 1893.*

## The Week.

PRESIDENT CLEVELAND, with characteristic bluntness and force, held the obstructionists of the Senate up to public view in their true light in the following passage of his address at the Capitol centennial exercises on Monday:

"If representatives who here assemble to make laws for their fellow-countrymen forget the duty of broad and disinterested patriotism, and legislate in prejudice and passion, or in behalf of sectional or selfish interests, the time when the corner-stone of our Capitol was laid and the circumstances surrounding it will not be worth commemorating."

There is nothing behind the delay in the Senate except "sectional and selfish interests," and the whole country understands that fact perfectly. The President speaks in this instance, as he has spoken in so many others, for the whole people, and it will not be many days before the partisans of various kinds who are vainly opposing the inevitable accomplishment of repeal will find this out.

---

The anti repealers are still filling the air in Washington with rumors of difficulties in the way of unconditional repeal. They are sure that there will have to be a compromise of some sort, and they are finding great comfort in the partisan disturbance which has been precipitated, quite foolishly, in the House over the Federal election laws. Why any Democratic member of the House should think that the present was a favorable or necessary time to raise this bitterly partisan issue, we are unable to comprehend. Nothing but a traditional propensity to blunder can account for Mr. Tucker's proceedings. But at the same time we are not prepared to believe that there is in the Senate any Republican who will be capable of the ludicrous conduct of changing his intention to vote for repeal of the Silver-Purchase Law because the Democrats of the House are proposing to repeal the Federal election laws. He would have a nice time explaining his vote to his constituents were he to do so.

---

It will be wise for the business world to view with equanimity the noisy demonstrations which will be kept up in Washington till the Senate is brought to a vote, for there is nothing in them but the bluster of despair. There are at least forty-eight Senators, the Philadelphia *Ledger's* Washington correspondent declares, who will vote down all amendments and compromises and insist upon unconditional repeal. That is a clear majority of eleven, and the *Evening Post's* correspondent's estimate, which is similar to that of the President, puts the majority in favor of repeal on the final vote at from 20 to 25. Under these circumstances all talk about the obstacles in the way of repeal, whether the source be the silver attorneys on the floor of the Senate or in the lobby, or the high-tariff fanatics who would rather see the repeal defeated than have the tariff reformed, or the Democratic Cleveland haters who care for nothing in the world so much as the failure of any policy that he advocates, or the champions of the defunct Force Bill—all such talk is equally inconsequential. There is nothing within the power of the opponents of repeal except delay, and they are exhausting that power with every day's use of it. It is a great pity that they cannot be brought up with a round turn at once, but that their doom is sealed cannot for a moment be questioned.

---

The desperate condition of the cause of bimetallism is indicated by the proposal of Senator Faulkner. So far as we know, this is about the only intelligible plan that has been presented for the use of both metals as actual currency, and it has the merit—although this will not recommend it to the advocates of free-silver coinage—of not being dishonest. But regarded as a practical scheme, it is astonishing. In the first place, it proposes to change the customs of the vast majority of our people by compelling them to carry coin in their pockets instead of paper money. It is true that other peoples are accustomed to carry about an assortment of precious metals, but the American people is not used to this practice, and it is a serious matter to face the sentiment expressed in the classical *Nolumus leges Anglicæ mutari*. In the second place, his proposal would bring on the dreadful evils which so affect the imagination of bimetallists, arising from there not being enough gold to go around. By the withdrawal of all paper money except the old greenbacks of denominations under $10 from circulation, gold coins of the denomination of half-eagles and quarter-eagles would be forced into use. No one would carry in his pocket five pounds of silver when a quarter of a pound of gold would do the work just as well, and the result would be a sharp demand for gold. But this is the very bugbear of the bimetallists converted into a dire reality. There is no very fierce struggle for gold at present, but if we are actually going to use it in place of our five-dollar and two-dollar and one-dollar notes, there may be something of a scramble. This, of course, is upon the supposition that the "parity of the metals" is to be maintained; that is, that any one tendering the United States Treasury a silver dollar will be able to get a gold dollar in exchange, or at least that all dues to the Government may be paid in silver. Otherwise Mr. Faulkner's proposal means the silver standard. Again, we see that this measure provides no revenue for the purchase of silver, nor does it provide any means for putting in circulation $200,000,000 more silver dollars. It really amounts to nothing but the Bland Act of 1878, with an added provision intended to make people carry silver dollars in their pockets, and with a promise of the termination of the folly after a few years. But as the country is sick to death of it now, this promise has little cheer.

---

A proposition well worth considering is that introduced in the House last week providing for the annexation of the Territory of Utah to the State of Nevada. The present condition of Nevada is a reproach to our system of government. It has two members of the United States Senate, and one of the House of Representatives, although its population has been dwindling for years, and had sunk as low as only 45,761 souls in 1890. Utah, on the other hand, is growing steadily and rapidly, the increase in population between 1880 and 1890 having been almost 50 per cent., and the total in 1890 having been 207,905, or more than four times Nevada's. Probably by this time the number of inhabitants is not far short of a quarter of a million. The time is rapidly approaching when Utah must cease to be a Territory, and there could be no better way of its gaining the advantages of Statehood than through a union with Nevada. There would then be one commonwealth which would always be sure of a population large enough to justify the prerogatives of a State, while the scandal of Nevada's condition grows worse year by year.

---

We regret to observe that there is a disagreement between Mr. McKinley and the *Tribune* as to the desirability of "cheapness." The former stands manfully by his original position, first proclaimed in 1890, that "cheap and nasty go together," that "cheap merchandise means cheap men, and cheap men mean a cheap country," for he said in his speech last week at Akron:

"They [the people] have had quite enough of the 'cheap' era which was ushered in by the Democratic victory. They will soon discover, if they have not done so already, that 'cheapness' is not the highest aim of American citizenship."

The *Tribune*, with that catholicity in editing which distinguishes it, commends the speech as a whole in one extremely able and luminous leading article, and in another leading article, equally able and luminous, only a column's distance away from the first, claims that McKinley pro-

tection has given us the very "cheapness" that McKinley denounces, saying:

"When Mr. Cobden was advocating free trade in England fifty years ago, his great argument was that prices would be cheapened, and that the working classes would be fully employed at higher wages. The tariff hearings are demonstrating that both of these objects have been secured in the United States under protection."

---

It is very plain from Mr. McKinley's latest statement of his silver position that he has changed it very little from what it was in February, 1891, when he said in a speech at Toledo: "During all of his [Cleveland's] years at the head of the Government he was dishonoring one of our precious metals, one of our own great products, discrediting silver and enhancing the price of gold." Last week he said:

"We do not want to strike down either gold or silver. We want to use both metals; but we insist now, as we have always insisted, that the one shall be at a parity with the other, to the end that we may have the use of both; that each shall be the equal of the other intrinsically, as well as in legal-tender and in debt-paying power. The silver product of the country, one of the most important we have, *should not be discriminated against*, but some plan should be devised for its utilization as a money which will insure, not the displacement of gold, but the safe and *full use of both*, as exchanges among the people."

There is very little difference between that kind of twaddle and the "defence of silver" which Peffer, Stewart, Teller, Jones, and Wolcott are making in the Senate. McKinley has weakened the force of his indictment somewhat by changing "dishonoring" to "discriminating against," but otherwise he is unshakably for silver.

---

What civil war is doing in the way of cutting off our coffee supplies from Brazil, Mr. Harrison's proclamation of retaliatory duties against Colombia, Venezuela, and Hayti has been doing all along. If those countries were free to send us the coffee they would like to, the present blockade in Brazil would afford them a fine chance to make extra large shipments and make good the Brazilian shortage. But we have deliberately shut ourselves off from that mode of relief. Coffee-consumers feel the Brazilian war very keenly, and are hoping that it will soon be over, so that they can get their coffee as cheap as before; but we have never seen any considerable indignation on their part on account of the arbitrary tax which did what they now lament to see war doing. The whole thing is a rather neat reminder of the way customs duties act, and are designed by protectionists to act, precisely like war. Indeed, it is a well-settled principle with protectionist expounders of economic history that there are only two possible explanations of an era of prosperity—protective taxes or war-taxes. Mr. Blaine was the pioneer here, and his discovery that the Mexican war was all that kept the country from going to ruin under the revenue tariff of 1846 had a great run. Since then it has become axiomatic that, if the country was prosperous at any given time, the cause was a protective tariff, or, if that did not exist, then the equivalent blessing of a bloody and long-continued war.

---

It is pleasant to remember, in reading the account of the "Cherokee boom," that this must be the last of these chapters of mingled childishness and savagery. The public lands are now all opened to settlement, and there will, therefore, be no more rushes into new territory. The historian of the future, who will know that land has been a drug in the market on this continent for two hundred years, and can be had almost for the asking in all but a few favored localities, will be sorely puzzled by the Oklahoma and Cherokee "booms," unless he is familiar with the American passion for speculation—that is, for getting hold of something to be unloaded rapidly on somebody else. If he imagines the boomers to be intending cultivators of the soil, how absurd the sneer at the slowness and conservatism of the agricultural mind, with which our literature is filled, will seem to him. How different the mounted boomer, galloping to the scene of his projected toil, will seem from the dull, plodding farmer of contemporary fiction and journalism.

---

There is something very startling in the increase of that form of lawlessness known as lynching in the South. It has three distinguishing features: (1) the victims are always negroes; (2) the murderers are never punished; (3) simple murder often fails to satisfy the lynching parties, and they resort to torture and such forms of mutilation as would be expected only of our most savage Indians. Last Friday morning we had the account of the lynching of two men and two women, negroes, in Mississippi. A white man's family had, it was charged, been poisoned. Suspicion pointing to one negro, he was arrested, but was lynched by hanging before the inquest was concluded. The two women were discharged by the Coroner's jury, but were hanged at once. A second negro man, against whom there was suspicion, was found hanging to a tree the next morning. Monday's story, which comes from Louisiana, tells of four negroes killed by a mob because they would not disclose, if they could, the hiding-place of a negro murderer. There is the less excuse for these murders in the Southern States because in all of them the machinery of the law is in the hands of white men, and if the accused negroes are guilty, the law furnishes an adequate means for their punishment. There remains, however, in the South a feeling that punishment under due process of law is too dignified for a negro accused of a crime committed against a white man. A Southern correspondent of the *Evening Post*, discussing a few weeks ago the reasons why the Southern States attract so few immigrants, placed the frequency of lynching at the head of the list of causes. It may be that not until the South learns that lawlessness is a pecuniary loss, will public sentiment suffice to put an end to this form of it.

---

The brutality of our system of dismissing officials in the civil service receives another signal illustration in the treatment of Henry A. Thomas, Superintendent of Mails in the Boston Post-office. Mr. Thomas entered the office as a clerk in 1873, at the age of seventeen, was promoted to the Superintendency of Mails in 1889, and soon afterwards was offered the position of Superintendent of Foreign Mails at Washington, which he declined. No complaint has ever been made that he was not an efficient officer, but it is asserted that he has been so offensive in his political activity outside of the office as to forfeit any claim to retention. We do not enter upon this phase of the case. Indeed, for our present purpose, it may be admitted that there was ground for not continuing him permanently in the place. What we call attention to now is the manner of his dismissal, which was in this form, the notice being received on a Friday, to take effect on the following Sunday:

"POST-OFFICE DEPARTMENT,
OFFICE GENERAL SUPERINTENDENT
RAILWAY MAIL SERVICE,
WASHINGTON, D. C., Sept. 14, 1893.

"*Henry A. Thomas, Superintendent of Mails:*

"SIR: An order has been issued discontinuing your pay and services as Superintendent of Mails in the Boston, Mass., Post-office. To take effect September 17, 1893.

"Very respectfully, JAMES E. WHITE,
General Superintendent."

It would be a gross outrage for a private employer to turn into the street, with only two days' notice, a man who had served him faithfully for twenty years, even if he had come to the conclusion that the interests of his business would be promoted by a change in the place. The outrage is no less gross when the employer is the Federal Government.

---

The sessions of the "Parliament of Religions" at Chicago last week have undoubtedly served as a great object-lesson in toleration, and have also brought out, to some extent, the fact that the essential unity of all Christian sects, and of so-called heathen religions as well, is to be found in an ideal of humanity which all praise and all confess they do not realize. More than this we do not see that the Parliament has accomplished or could accomplish. It was thought that valuable statements of different beliefs would be made by the gathered representatives of different faiths and nationalities, but it was evident that this could not be done under the rule that nothing should be said by any speaker to injure the sensibilities of any other. With the polemic element thus perforce left out, there was little else for the various delegates to do than to echo Cardinal Gibbons's remark that, though they differed in faith, they could all stand on the platform of charity and benevolence. The very willingness to

make such a colorless and tolerant statement of irreconcilable theological views might easily be taken as a sign of decaying vitality, as well as of increasing good-nature and regard for the opinions of others. It is impossible to imagine John Knox toning down his views in any presence, least of all in that of theological opponents. To him the Chicago Parliament would have been a splendid opportunity to bear his "testimony," which he could never have forgiven himself for not embracing.

---

According to latest advices it appears that the costly undertaking of turning Manchester into a seaport is rapidly approaching completion. Five miles of quay are already laid; the ship-canal, thirty-five miles long, connecting the city with the tideway of the Mersey, is expected to be open for traffic early next year. One-third of the distance is already open to shipping This gigantic undertaking was begun in 1887. The cost has amounted to £15,000,000—some £300,000 was sunk in Parliamentary expenses. The canal is capable of passing through vessels of as large tonnage as the Suez Canal. To carry the four important lines of railway which intersected its course over it, has necessitated the construction of viaducts seventy feet high. Six swing-bridges and a high-level cantilever bear main roads over its waters. Elaborate arrangements have had to be made for its intersection by the Bridgewater Canal. The original plan was to level it through on the high-water line of the Mersey; but that was abandoned, and a series of locks now bring the canal at Manchester up to the level of the city, sixty feet over Liverpool. The locks and bridges are opened and shut by hydraulic power. Vessels by the aid of electric light will be passed through by night as easily as by day. Mr. E. Leader Williams is the engineer of this new wonder of the world. There has been considerable jealousy between Liverpool and Manchester with regard to the canal; but, as in most such cases, it is more likely to promote the advancement of both cities than lead to the decadence of one. In any event, Liverpool may have the satisfaction of knowing that, so much has the cost exceeded the first estimate, that not one penny are the original Manchester shareholders likely to get back out of the enterprise.

---

The city of Paris with its environs boasts nearly one-twelfth of the total population of France, yet it does not escape the charge, which lies against so many other great cities, of being a huge maw into which the best of the national life is sucked. Only in the slightest degree is it the parent of the energy and distinction which it displays on so great a scale. In the political field, scarcely one of the distinguished men of the time is Paris-born. The President of the Republic is not, nor is the President of the Senate or of the Chamber; not one of the ten Cabinet Ministers, neither of the Chief Justices nor of the Attorney-Generals of the higher courts, reckons Paris as his birthplace, nor does the Governor of the Bank of France. Somewhat similar results are obtained by scanning the lists of distinguished scholars, artists, journalists, soldiers. From the provinces have come a disproportionate majority of the men whose success in life makes Paris famous. Such facts are more striking in the case of the French capital, whose preponderance over the rest of the country has been so long established, than they would be in a newer country, where the headlong rush to the cities is a comparatively recent thing.

---

That M. Paul Leroy-Beaulieu was defeated as a candidate for the French Legislature at Lodève in the Department of Hérault, and that too by a Radical Socialist, is not a cause for rejoicing, but there are some encouraging features in the vote. The successful candidate obtained 7,250 votes, but M. Leroy-Beaulieu had 6,302. When it is considered that he stands for orthodoxy in political economy, for free trade, for freedom of contract, for the right to work, and against protection, socialism, labor monopolies, and governmental meddling in general, it must be admitted that he ran surprisingly well. As was said of John Mill when he stood for Westminster upon a full and frank declaration of all his views, the Almighty himself couldn't be elected upon such a platform, and M. Leroy-Beaulieu has come nearer to success than we supposed possible. The political future of France is certainly covered with a dark cloud, but if the principles represented by this distinguished statesman and economist really command the support of nearly half the population, as would be indicated by this vote, there is no need to despair of the Republic.

---

The expulsion of Italian laborers to the number of 800 or 1,000 from the region of Aigues-Mortes has had consequences which might have been foreseen. There has been no rush of French laborers to take the places left vacant, and the operations in the salt-pits have been brought to a standstill. It seems to be the case in France, as it is in this country, that certain kinds of work must be done by imported laborers or they will not be done at all. There is other work of a preferable character sufficient to occupy all the inhabitants, and even high wages will not tempt them to relinquish their usual occupations. Moreover, it is frequently the case that certain kinds of work are extremely fatal to some races, while others can engage in them with impunity. The cultivation of rice in the Carolina swamps cannot be carried on by white men, but the negroes appear to be unaffected by the malarial poison so deadly to the whites. It has often been said that the Central Pacific Railroad could not have been built but for the aid of the Chinese, and most of our present enterprises requiring large forces of strong manual laborers would be greatly hampered if the Italians were not available. It now appears that the Italians employed in the vineyards in the southern part of the Department of the Gard, which are surrounded with marshes, have fled in terror at the reports of the treatment applied to their fellow-countrymen at Aigues-Mortes, and that no substitutes have been found. The Italians are said to be exempt from the fever which prevails about these marshes, while the French are not. However, the chauvinistic view is that it is better to let the salt-pits be closed and the vineyards be abandoned, provided France be preserved for Frenchmen.

---

Brazil has been a sore trial during the past four years to those enthusiastic souls who thought that all that was needed to make a country a republic was to call it so. There was great rejoicing in this country in 1889 when a military intriguer bundled the Emperor out of Brazil and set himself up as an autocrat under the name of a President. We had to listen to much effusive talk about the disappearance of the last remnant of tyranny from the sacred soil of America, and the reception of Brazil into the "sisterhood of freedom." But it was not long before the truth appeared, that the Brazilians had simply exchanged a cultured and mild-mannered and progressive Emperor for a rough and lawless soldier; and when he in turn fell before new intriguers, it was with some difficulty that the pæans in praise of Brazilian republicanism were again lifted. Now that the time has come around for a new "President" to be elected by the biggest guns in the harbor of Rio de Janeiro, the illusion has pretty much vanished, and we hear little about the blessings of a military oligarchy masquerading as a republic. It would be hard for any one to point out what Brazil has gained by the fall of Dom Pedro except an enormous increase in public expenditures, a condition of sporadic anarchy, and great harm to the real republican movement. There was such a movement in Brazil, directed by intelligent and law-abiding men, and it doubtless would, in time, have brought about a republic by peaceable means. The Emperor himself freely recognized this, and used to say that when the country was ripe for a republic, he would not stand in the way of it. But in an evil day the agitation was taken up by a set of military adventurers, who have made republican institutions synonymous with force and trickery, and so have put back the real progress of the country in the idea and practice of self-government. The experience has been a calamitous one for Brazil, but it will not be entirely fruitless if it leads men to learn once more the old lesson that liberty and self-government are not to be found in names and forms.

### *THE TARIFF HEARINGS.*

THOSE who had doubts of the necessity or wisdom of the tariff hearings granted by the Committee on Ways and Means must have given them up by this time. It has been a very useful exhibition, on the whole, which the protected manufacturers have made before the Committee, and one which forms a fitting preliminary to the preparation of a tariff bill such as was ordered by the people last November in the teeth of the manufacturers.

The comic view of the hearings it has been left for the *Tribune* to take. With admirable gravity that waggish journal has kept up the pretence that the interested manufacturers were dispassionate students of economics, who had gone to Washington solely in the interests of truth and for the good of the whole country. Following up their "testimony" from day to day, it has kept its readers holding their sides while it has pictured the astonishment and dismay of the Democratic members of the Committee at the novel and powerful arguments which they were compelled to listen to, so it humorously chose to assume, for the first time in their lives. It was, indeed, delicious to conceive of the Committee as a lot of novices who had never before heard of the doctrine that it is the foreigner who pays tariff taxes, that protection is the great system of thaumaturgy which guards against the evils of low prices by making them still lower, and who were just the men to be bowled over and left speechless by the ratiocination of John Jarrett and W. C. Cronemeyer.

We are not able ourselves to treat the hearings with such levity. Upon us the impression made by them has rather been one of melancholy. To see such fatuity, such political and economic blindness, such undisguised selfishness, persisted in and put on exhibition and urged as a rational basis for the fiscal policy of the nation, is as depressing as it is to see proofs of the vitality of any other form of ignorance and superstition. At the very moment when negotiations are closing for putting the Lake Superior iron-ore mines into the hands of a gigantic Trust, and when the negotiators are boasting that they will be in a position to make a profit of more than one dollar a ton, Mr. Ely, their representative, goes to Washington to inform the Committee that if the duty of seventy-five cents a ton is removed, the mines will all be closed and general ruin ensue. Democritus himself could not see anything in that to laugh at. Nor could he in the bearing and arguments of almost all the men who appeared before the Committee. They came forward, one after another, with their unsupported assertions, with their undigested figures respecting the cost of production and the wages of labor, and with their gratuitous prophecies, and seemed to expect that the Committee and the country would never suspect them of prejudice or self-interest.

It seems inconceivable that intelligent men, even if warped by private interest, could any longer imagine that a tariff bill was to be drawn up in that old-fashioned, simple-minded way. For McKinley it was enough, as he privately assured the friends who wondered at his credulity in 1890, that the manufacturers asked for a duty, to prove that they could not get along without it. But we have had three years of education in human nature since then, and that pastoral simplicity is possible no more for ever. The changed standpoint from which the whole question is now to be discussed was very well brought out in the hearing of September 8. A manufacturer of cotton-bagging and binding-twine was arguing against putting any of his products on the free list and was asked about the Cordage Trust. He admitted that combination to be a bad thing, but thought the difficulty might be met by the Committee's making a loud threat to put bagging on the free list if the Trust did not immediately dissolve. Anyhow, he said, he was as much entitled to protection as were the manufacturers of woollen goods or any other articles. Asked if it was fair to compel the farmer to pay higher rates for his bagging when he had to sell his products in the markets of the world, the manufacturer replied that such a query "opened up the whole question of protection," and that he must decline to discuss.

This "testimony" very happily put side by side the old way of looking at the tariff and the new. If a tariff bill is to be a general setting forth of food in a trough, there is, indeed, no reason why one pig should be favored above another, and it is impossible to say that a porker in the shape of a Trust must be shoved aside just because he has not limited himself to his snout and forefeet, but has insisted upon getting into the trough bodily. But if the wisdom of the whole process is once admitted to be doubtful, if "the whole question of protection," which Mr. Stevens, the bagging manufacturer, fought so shy of, is really to be discussed in connection with tariff taxes, then the affair is wholly different. In such case the determining factors are the good of the people as a whole, the needs of the Treasury, and the encouragement of commerce in its broadest sense. A tariff bill based on such factors is precisely what the Committee on Ways and Means has to prepare, and we repeat that the hearings which they have given the men whose only idea of a tariff is of a law for their special benefit, have had their value as exemplifying the way the thing used to be done, in contrast with the way in which the country has now decided that the thing shall be done.

### *A FORETASTE OF SOCIALISM.*

WHATEVER differences may exist among persons of socialistic leanings, there is one fundamental assumption which they agree in making. They must hold that our legislators and administrative officers are somehow endowed with a kind of collective or corporate wisdom by virtue of which they can determine what individual men should do with better results than if the determination were left to the individual men themselves. Government, or the forcible control of men by their fellows, is not, upon this theory, intrinsically undesirable and to be defended only because we are not yet sufficiently developed to regard one another's rights without compulsion. It is rather something good in itself and to be extended, to the diminution of individual freedom and to the increase of the dominion of the majority. It is difficult to see how this theory can find support in the experience of the past; monetary history at least is certainly not in favor of it. From the earliest times men agreed to measure the values of the goods and services which they exchanged in the precious metals, which they weighed out in small pieces for that purpose. Partly for convenience, partly from greed, governments came to undertake the business of stamping the weight upon these pieces, and very soon proceeded to defraud their subjects in the operation. They falsified both weight and quality, and there is scarcely a government in operation that has not at some time engaged in this sort of stealing.

In the course of time the dealings of merchants upon credit developed bills of exchange and promissory notes into money, and their governments proceeded to borrow the idea with even more fraudulent results. They had stamped false representations upon coins which yet had some intrinsic value, but now they were able to put the same stamp upon pieces of paper that had no intrinsic value at all. The history of the inflation and repudiation that governments were able to practise through this device is a long and dismal one, and the chapter is far from being closed. Many governments are insolvent now, and it is highly probable that several more will be added to the number before this generation has passed away, perhaps even before this century is ended. So far from regulating the contracts of their subjects with greater wisdom than the subjects could manifest, governments have not only meddled disastrously with those contracts, but have shamefully and notoriously dishonored their own.

We do not see how any one can find any better support for the assumptions of socialism in our present financial experience than in the financial history of the past. Had they been left to themselves, the people who are engaged in business would have had no trouble about a standard of value. They would have based their contracts upon definite weights of gold or silver as they preferred, and would have accepted paper in place of metal only in so far as it commended itself

to the judgment of each individual as a satisfactory equivalent. But the assumed superior wisdom of the Government did not let them do this. It compelled them by force first to accept paper as equal to coin, and then to accept a certain weight of silver as equal to a certain weight of gold. This was embarrassing enough, but for a time the natural loyalty of the people gave effect to these arbitrary decrees, and the dollars of paper, of silver, and of gold were practically equivalent. But this did not satisfy the Government, and it enacted a law which presently satisfied the people that this artificial parity could not be maintained, and that the intrinsic value of the silver dollar must become the standard of all exchanges. So soon as this opinion came to prevail we know what happened; and the people are now imploring their Government to terminate this exhibition of its superior wisdom, and allow them a portion of that freedom of contract which both natural rights and constitutional law pronounce theirs. They have succeeded in bringing a portion of their rulers to yield to their arguments and entreaties; but the Senate so far refuses to be moved, and stands squarely upon the socialistic assumption that it knows what is good for the people better than they know themselves.

If the assumption of the superior wisdom of rulers finds little support in their financial practice, it finds less in their theories. Whoever will be at the pains to read the speeches now in course of delivery in the Senate will be amazed at the pure folly of most of them. They are not only disfigured by ignorance of history and disregard of logic which would disgrace an intelligent schoolboy, but they are filled with talk which would be thought to indicate want of mental balance in Bedlam. Their authors babble of colossal crimes and universal conspiracies, and seem wild with nightmare terrors at the thought of allowing people, the most enterprising as well as the most conservative, to make contracts on a gold basis even if they are unanimous in desiring it. Their credulity, if they are sincere, about the plots and purposes of the bankers and capitalists of the world would make Cotton Mather blush for his scepticism, and their visions of the woes that will follow the repeal of the Sherman Act are scarcely less dreadful than those of the Apocalypse. Meanwhile, the gentle Socialist, with this spectacle before him, talks glibly of the necessity of committing our railroads to the care of the Government.

It is idle to think of getting the control of the standard of value away from the Government. It is there, and there it will stay. But it is absurd to maintain that Government has displayed superior wisdom either in regulating our money or in talking about its regulation. It is impossible to deny that if the matter had been left to be settled by the free agreement of men they would long before this have worked out a sound system of currency, just as they have worked out sound systems in other departments of business. They would not have got themselves into such a scrape as they are now in, and if they had they would have got themselves out of it a great deal quicker than Congress can do it. Be this as it may, it seems strange for any one to deny that it is a terrible thing to have the very basis of all credit at the mercy of such men as are now delivering speeches in the Senate of the United States. Doubtless many people are drawn towards socialism as an ideal, thinking perhaps more of regulating the affairs of others than of having their affairs regulated by others; but if they look at the practical working of the theory as illustrated today in our own Government, they may experience some revulsion of feeling.

## *LORDS VS. COMMONS.*

THE division in the House of Lords on September 8 closed for the present the Home-Rule episode in British politics. The majority against the bill was, of course, very large, but one of the most curious features of the crisis was the eagerness of the Gladstonians to have the adverse majority as large as possible, so as to make the Peers, as a body, a more conspicuous mark for Radical indignation. There could, in fact, hardly be a better justification of the attacks made on them than has been afforded by the debate and division on the Home-Rule Bill. Six months' work of the Commons has been nullified in two nights by men for whose opinions nobody in England cares "tuppence," and who make no pretence of understanding the question.

Some anti-Gladstonians who do not attempt to defend the competence of the Lords to pass final judgment on a measure like the Home-Rule Bill, say that in throwing it out the Lords are performing their real function under the Constitution —that is, the function of making delay and compelling the Ministry to submit the measure to the country by a dissolution. Even if they admit that the principle of home rule was approved of by the constituencies last year — which they try to avoid — they maintain that the public knew nothing of the details of the bill, which in a measure of this sort are all-important, and the Lords, therefore, in compelling the Ministers to submit the bill itself as passed by the Commons for popular approval, are doing their appointed duty. This has a very plausible sound, but its untenableness from a constitutional point of view was very fully exposed by Lord Playfair. This view of the function of the Lords assumes that the Swiss referendum has a place in the British Constitution, and that Parliament is a body not of legislators, but of delegates with a "mandate" to draft bills and submit them to the popular judgment. It would be difficult to fish out of the various amendments proposed for the British Constitution by reformers during the past hundred years, one more opposed than this is to the theory of the powers of Parliament, and of the relations of Parliament to the voters, hitherto held by all English politicians since 1688. Nothing more democratic and more democratizing, as Lord Playfair pointed out, has ever emanated even from the Tories in the days of their greatest distress. Suffice it to say that in England Parliament has for two hundred years been "omnipotent"; that no bill has ever been submitted to the people for approval after passage by the House of Commons; that it is the principle of a measure which, under the British Constitution, the voters are called on to adopt or reject, and that the embodiment of the principle in legislation has always been left to the majority in both houses.

The idea that the House of Lords has any power to compel the Ministry of the day to dissolve and go to the country, or has, in fact, anything whatever to say about dissolution, is equally novel. The one function which usage has left to the Lords since the passage of the Reform Bill is the function of imposing further consideration in the Commons by refusing to pass a bill sent up to them. The notion that besides the imposing this further consideration they could insist on the Ministers submitting a bill to the constituencies by a general election was never heard of till now, and, if adopted, would introduce one of the most startling and far reaching changes ever made in the machinery of the British Government; for, of course, nobody of ordinary intelligence can doubt that the submission of the Home-Rule Bill to the popular vote would become a precedent, and that a similar demand would be made in the case of all important measures. Thus the "mother of parliaments" would be speedily converted into a mere drafter of propositions for plébiscites, and the destruction of representative institutions which this would involve would be very rapid.

Apropos of this, Lord Rosebery, in his shrewd and amusing remarks, drew attention to the large part the Lords play in democratizing English institutions, while persuading the country squires and the old ladies that they are the great bulwarks against the assaults of democracy, and he instanced their passage of the extension of the suffrage in 1867 and of the County Councils Bill two years ago—measures to which, as levellers, the Irish Home-Rule Bill cannot even approach. No Irish Parliament could hold a candle to the London County Council alone as an engine for the upheaval of the ancient Constitution of the realm in Church and State. It is not as yet quite in working order, but when it is, it must, as the concentration of the hopes and fears, greed and illusions, of 5,000,000 of the most powerful bit of the English democracy, speedily make Mr. Gladstone himself seem "a stern and unbending Tory."

Lord Herschel met the constitutional objections to the passage of the bill with unanswerable force. There was nothing finer in Chatham than his turning on the Opposition, when they cheered his statement that the majority in Ireland was "disloyal." "Ah, you cheer that," he said in substance, "you are pleased with it, proud of it—pleased that, after ninety years of your rule, the majority of a community at your own doors detest it, and would fain be rid of it." It was a happy catch, of which he made brilliant use. Lord Rosebery was equally fortunate in his retort to Lord Muskerry, one of that deplorable class, the Irish "representative Peers," who go about the world abusing and deriding the majority of their countrymen, and yet, though discussing Irish affairs as Irishmen, have little more connection with the Irish people than with the Bretons, and just as little authority to speak in their behalf. "Lord Muskerry," said Lord Rosebery, "says he knows all about Ireland, but what does Ireland know about Lord Muskerry?" These two remarks, few words as they contain, go almost to the heart of the Irish question.

## THE COLUMBIAN EXPOSITION—VIII.

### BOTANY—MINERALOGY—GEOLOGY.

CHICAGO, September, 1893.

THE Forestry Building at Jackson Park contains much that appeals to the scientific botanist as well as to the economist or commercial man. In the matter of woods it is probable that a wholly unrivalled collection of woods of the world might be gathered from the exhibits in the various State and national buildings, together with those in the division of Forestry. Apart from their botanic and economic interest, these specimens appeal strongly to the æsthetic sense. No natural product can exceed in intrinsic beauty some of the fine slabs cut from burls of redwood, maple, walnut, and the like, which are to be seen in the Forestry and California Buildings especially, as well as in numerous other places. Many of the sections of large trees retain a notable proportion of the dignity which characterized them on their native mountain side, and no more impressive central object could have been chosen for the Government Building than the massive Sequoian pillar which is erected there. The exhibit of living plants in the greenhouses and Horticultural Building seems somewhat disappointing, though containing much that is good. There is a grievous lack of good labels; and if there are rare and interesting plants not common to the average large greenhouse, no means have been taken to direct public attention to them. Like every assemblage of ornamental plants, the collection is attractive, but, so far as I have observed, in no way particularly distinguished.

The chief deficiency felt by every visitor to the Fair who has special interests is the lack of any general subject-catalogue or directory. The presence of so many State and national buildings, most of which contain a more or less synoptic exhibit, has resulted in the scattering of small local collections in all parts of the grounds, so that the botanist, for instance, must visit thirty buildings before he can assure himself that nothing of importance in his specialty remains unseen, and even then unexpected discoveries are constantly being made. A few countries or States have adopted the plan of posting, with each division of their exhibits, an announcement as to where all the other divisions are located. If this plan had been generally followed, and a small handbook with a subject-index prepared from the posters, for visitors, much good would have been done and many disappointments avoided.

Systematic botany is poorly represented outside of the Government bureaus and experiment stations. In the Woman's Building a few dried plants are shown, and small herbaria compose part of several State exhibits. A few fossil plants may be found in the collection shown by the United States Geological Survey, and I noticed some, unlabelled, in the miscellaneous collection contained in the Costa Rica Building. To descend to the more humble forms, of which so much has been said of late, edible and poisonous fungi are exhibited by the Division of Microscopy, Agricultural Department, and a large series of cultures of bacteria by the Bureau of Animal Industry and the Marine Hospital Service. These are well displayed and attract much attention. The illustrations of the vertical or zonal distribution of plant and animal life made by the Division of Ornithology and Mammalology, Agricultural Department, are instructive and interesting, and the same may be said of the exhibit of the Division of Vegetable Pathology, in which the fungoid diseases of plants, their nature, area of distribution, and remedy, are fully exemplified.

In the present Exposition for the first time the mining industries have been recognized as a group of the first importance by the devotion to their uses of one of the principal buildings. This recognition is sufficiently just, not only because the group is a natural one, but on account of the great prominence it attains in the United States, the first mining country in the world. That it has been duly appreciated is obvious from the excellent manner in which the exhibits have been classified and labelled, and the ingenious devices which have been adopted by many of the exhibitors to illustrate their respective industries.

Many of the State buildings contain collections illustrating their mineral resources and geology, but the most satisfactory display is made by those who exhibit in the Mining Building. A few notes on the more striking features of these localized collections may be of use to the visitor. Arizona displays a remarkable series of azurites and other copper ores, and fine sections of agatized wood. Her material is well labelled and neatly arranged. In the Colorado collection specimens of crystallized gold are particularly noteworthy. The Mexican exhibit is poorly labelled. It contains attractive specimens of rose garnet from Xalostoc, beautiful in color and unusual in size. Montana has a fine display of ores and the notorious silver statue, which has more artistic merit than one would have expected from a production represented as making a pile of buzzard dollars equal in weight to the same number of gold double-eagles. In the collection from Utah the display of Gilsonite asphalt is worth attention. Among the riches of California are displayed semi-transparent sheets of the so-called "onyx" marble, of exquisite beauty, a delicate gray infiltration resulting in the most tender landscape effects, like the melting mists of Japanese artists. They come from San Luis Obispo County, and are not equalled by any of the other exhibits of this material which I have examined. South Dakota shows some beautiful agatized wood, phosphate of uranium in particularly pretty crystals, and fine calcite crystals from the Black Hills. Some handsome red freestone and quartzites appear among the building stones. The Harney Peak tin mines are in evidence by large masses of ore, though for some occult reason the owners of these mines go on spending fabulous sums upon them without producing anything very remarkable in the way of tin.

Missouri has a noteworthy collection of zinc ores, as well as the metallic product, illustrated by an excellent relief map of the State. The State Geological Survey coöperates with an excellent synoptic collection well arranged and labelled. From Michigan, as one would expect, comes a grand series of iron and copper minerals. Specimens of a green serpentine from Ishpeming are handsome, but the rock seems too faulty to prove of commercial importance in decorative work. The exhibit of British Columbia is noticeable for its excellent system and clear labelling. Brazil, on the other hand, offers the most complete illustration imaginable of how not to do it. She has a large, well-situated space, plenty of case room, and an extensive and, apparently, well selected and neatly trimmed series of minerals. These must have cost great labor and much time to prepare. They are put in trays with badly written Portuguese labels, *the labels under the specimens*, where they cannot possibly be read even by those who might understand them. The cases are dusty and forlorn; the time and expense devoted to this exhibit have been almost absolutely wasted for want of a little common sense.

Canada offers an excellent, well-displayed collection, in which the apatite minerals, micas and asbestos are especially fine and the gold noteworthy. New South Wales has an admirably systematic exhibit of her mineral resources, presented in the best manner. Ohio has a neat and well-arranged display, and the New York exhibit by the State Museum is very creditable in contents, arrangement, and labelling. Kentucky has a good exhibit with a creditable relief-map of the State. West Virginia has a really grand display of coal, coke, and mineral oils, well labelled. The exhibit of Pennsylvania is admirable and illustrated by many excellent relief-maps.

The use of the relief-map is becoming very general as a self-explanatory guide to the character of the country represented, and one notes with pleasure the gradual abandonment of the exaggerated vertical scale which gave rise to so many false ideas. The most satisfactory maps of the Exposition are those in which the vertical scale is to the horizontal as not more than three or four to one, and the few old-style maps which appear among the many give, in comparison, the impression of caricatures. Other means of illustrating the geology of mining operations and the ramifications of mines are shown by various devices. In one form the excavations are represented by solid bars of wood of small size built up upon one another like a puzzle, and supported by strips of a different color. The most ingenious method observed consists in recording in color, on separate thin sheets of glass, the position of the excavations in the section the particular sheet refers to; and also indicating on each the surface contour of the ground. These sheets are placed side by side in a frame, and the view obtained by looking through them impresses one as the most satisfactory way of grasping the scheme of subterranean works which has yet been invented. In the Michigan exhibit the Cleveland Cliffs Iron Mining Company

gives an instructive geological section of one of its mines, in which the native materials proper to the separate strata are used, and the timbering of the excavations is shown in miniature. A very suggestive exhibit is a monument, about thirty feet high, composed of different mineral substances in cubes, the larger below, with a gradual diminution upward, designed to portray the average amount of each particular mineral mined in each second of time during the year in the United States. The size of the cubes depends upon calculations made from records of the mineral product collected by the United States Geological Survey, and presumably refers to the latest figures.

Considering the Exposition as a whole, the most prominent feature in which it differs from that of 1876, in this department, apart from mass of material and style of presentation, is in the superior utilization of decorative minerals. The agatized woods of the West are now sliced into thin sections of varied color and sometimes of remarkable beauty, to be utilized in ways which twenty years ago would have been quite impracticable. The travertine marble, or "Mexican onyx," has become an important decorative material; and as no two pieces are alike, it offers a constant and agreeable variety. A very pretty form of this mineral, cloudy-white with rosy veins, is shown in the gallery from newly opened mines in Lower California. The variety from California has been already mentioned, and the best-known form, from Mexico, combines the most delicate cloudy greens and browns with translucent white. The excessively hard quartzite or jasper rock, of varied reds and browns, is now cut into polished columns suited to the most luxurious interior decoration. The increase in the facilities for working hard materials may be noted in every cemetery, where granite is rapidly supplanting the softer marbles and sandstones formerly almost universal.

In the department of Geology, properly speaking, the Fair is not especially rich. Several of the State surveys make creditable exhibits, among which New York, Pennsylvania, Illinois, and Missouri are noteworthy. In the Government Building the United States Geological Survey shows a representative series of rocks and fossils of the United States, a restoration of the skeleton of *Dinoceras*, and an important series of relief-maps, illustrations, photographs, and transparencies of geological scenery. A collection from the mines of Alaska, which is unfortunately obscured by its position in the gallery where very few visitors go, would probably repay more study than it is likely to receive. In the department of crystalline minerals and gems, the National Museum makes a small but typical display, with the addition of series illustrative of vulcanology, glacial phenomena, and the features associated with the limestone caverns which are so extensively distributed in the United States.

One of the most interesting exhibits to the average visitor is that of the De Beers Diamond Mining Company of South Africa. A large quantity of the diamantiferous rock has been brought to the Exposition, and daily a portion of it is crushed, washed, and worked over, while in the same division of the building a number of Tiffany's diamond-cutters are at work on the rough gems, of which a fine series is shown. In this connection it may be mentioned that the Tiffany exhibit in the Liberal Arts Building contains a number of fine specimens of precious and semi-precious stones, in various conditions, including both the rough and the fully cut gems. These are well worth examination. With them is Col. Hamlin's celebrated necklace of cut tourmalines, lent for the occasion, and to our mind a far more beautiful and desirable object than the large yellow diamond which may be seen close by, and which has become the property of a Chicago magnate, at the cost of a small fortune. The Hamlin tourmalines are nearly all derived from New England, near the town of Paris, Maine, and embrace nearly every tint which that beautiful and variable gem assumes. The carefully cut and beautifully set stones which compose the necklace are the gleanings of thirty years or so, and, both as gems and as American gems, they form an entirely unique collection.

Lovers of the unusual may be interested to know that in the building devoted to the State of Washington is the largest single block of coal ever mined, if the claims of its owners be correct. It is to be regretted that its quality is not as exceptional as its size, as it belongs to the group of semilignitic bituminous coals so widely distributed west of the Rocky Mountains. W. H. D.

## THE HOME-RULE BILL.

LONDON, September 2, 1893.

THE Government of Ireland Bill was introduced by Mr. Gladstone into the House of Commons on the 13th of February amid wintry frosts and fogs. It was with us through a lovely spring, as the trees burst forth into leaf and the rhododendrons gladdened our eyes in the parks. It was with us throughout an all too glorious summer; and now the curtain falls on the last act of the drama while autumn is in the air and skies, and dead leaves are thick under foot in Kensington Gardens. The third reading was passed this morning by a majority of 34, and the bill was at once committed to the House of Lords, where it will be rejected next week by an overwhelming majority.

To dwell here on the details of the measure would be needless and inappropriate. It is an honest effort to separate, as to government in Ireland, what is exclusively Irish from what appertains to the Empire—relegating the former to legislative assemblies in Ireland, chosen by the Irish people, retaining the latter under the immediate control of the Imperial Parliament. Regarding both internal and external affairs there are many restrictions which are to a certain extent galling, evincing as they do a want of confidence in the Irish people. These have, however, been frankly accepted by the Irish members, nor would the Irish people desire to transgress the assigned limits. Their action will, it is believed, belie the necessity for such restrictions, which, indeed, must be regarded more as a politic concession to Conservative prejudice and opposition than as an indication of mistrust on the part of Mr. Gladstone and his followers. Theoretically this new charter is sadly circumscribed compared with that of Grattan's Parliament of 1782–1800. But practically it would be far freer. The ambiguities of the relations between Great Britain and Ireland under that constitution would be now impossible. The world is smaller and compacter than it was one hundred years ago, political life is more definite, while thought has widened. The *Esto perpetua* of 1782 sank in the suspicions, bloodshed, venality, and intrigues of eighteen years later. The consummation of the establishment of a constitution such as has now been offered us by the House of Commons, might not be hailed in the dramatic spirit prevalent before the Terror had sobered Liberalism; but there is every reason to anticipate that that constitution would be what is termed enduring. By 72 of the 103 Irish members it has been formally accepted as a closing of the strife of 700 years. From nine others, the Redmondite wing, the assent has been less complete.

Regarding general principles and structure the bill comes out unimpaired. A few immaterial amendments proposed by the Opposition were accepted. By the Government itself extensive alterations were made on three points. The rights of the present civil service in Ireland, upon being relegated to an Irish Government, to continuance in office or to sufficient pension, were more clearly defined, established, and provided for. The "in and out"* clause was abandoned with the substitution of the continued presence of eighty Irish members in the Imperial Parliament for all purposes. Thirdly, the financial arrangements were altered. As the bill originally stood, the internal Irish taxes (in round numbers £4,500,000) were left to be collected by Ireland for her benefit, while the impost or customs taxes (some £2,250,000) were to be handed over to the Imperial Government as Ireland's contribution to Imperial charges. Under this scheme, it was estimated that Ireland would have a surplus of £500,000 over her present income. But a mistake in the calculations of the Government officials was detected: Ireland's internal revenue had been overestimated by £350,000, which would by so much diminish her anticipated surplus of £500,000. It was also seen that there would be considerable complications of accounts between the Imperial and Irish treasuries, and perhaps the determined threats in Ulster of refusing to pay taxes to an Irish exchequer had something to do with the arrangement ultimately embodied in the bill. This was that the Imperial Government should collect all general taxes relating to Ireland, calculated at £6,786,000; that it should retain one-third of this amount (£2,267,000) as Ireland's share of Imperial charges, and return the balance (£4,524,000) to Ireland, as her revenue. These calculations are based upon the revenue returns of the past four years, which show that the gross revenue of the United Kingdom has been £95,000,000, and the net for Imperial purposes £63,000,000. It will be observed how exceedingly small is Ireland's present estimated capacity to bear taxation in proportion to Great Britain's. In the matter of income tax on trades and professions, Great Britain is assessed on a return of £300,000,000, Ireland on but £9,000,000. For death-rates Great Britain is assessed on £207,000,000, Ireland on £12,000,000.

There was no fiercer contention than over these money clauses. The Government maintained they were fair. Mr. Chamberlain and his followers declared the taxpayers of Great Britain were about to be fleeced for Ireland's as well as their own destruction to the extent of fully £500,000 per annum. The Irish stated that, while prepared to buy home rule at almost any price, they considered £2,250,000 per annum as an Imperial contribution quite beyond the bounds of reason—indeed, they questioned whether, considering the past relations of the countries, a substantial annual subsidy was not due to them. They were in the end appeased by the promise of a committee to inquire into the financial relations of the coun-

*The original arrangement under which the Irish members should be retained in Parliament for Imperial, while precluded from interfering in British, affairs, has been styled the "in and out" proposal.

tries, with, moreover, after a stated period, if found necessary, a modification of the terms now proposed.

The bill has taken 82 days to pass—nearly twice as long as any previous measure, and that before the introduction of closure. The passing of the Constitution of 1782 for Ireland occupied 2 days; that of the Union, 13 days; the Reform Bill of 1832, 47 days; the Land Bill of 1881, 46 days. This Government of Ireland Bill occupied as much time as collectively the passage of the Union, the great Reform Bill, the repeal of the Corn Laws, the disestablishment of the Irish Church, and the establishment of the Dominion of Canada. There were 182 divisions, the time spent in which amounted to eight working days of eight hours each without meal hours, and in which members walked some ten miles. The more days elapsed, the bulkier grew the amendment papers. The discussion, proceeding unchecked at the same rate, would have terminated probably in time for the Christmas holidays of 1894. In Committee on the Bill there were 459 speeches favoring the measure, occupying 57 hours, and 936 speeches against it, occupying 153 hours. Upon clauses 3 and 4 alone there were put down 326 amendments.

The avowed object of the Opposition was not fairly to discuss, but, in the words of one of their own spokesmen, "to make the bill detestable." On the 10th of July the Opposition voted for the retention of 103 Irish members for Imperial purposes only. The same evening, in another division, it voted for their total exclusion. Next day the same party voted that forty should be retained for all purposes—on another division forty-eight; two days later, for the retention of the "in and out" clause and eighty members, and again for 103 Irish representatives. As was well said this morning by Mr. Morley, if, according to their convictions, it was the patriotic duty of the Opposition to obstruct, it was, according to our convictions, the patriotic duty of the Government to closure.

"In order," says the *Times*, "that our readers may better appreciate the effect of Mr. Gladstone's 'gagging' policy, we print below the text of the Government of Ireland Bill as amended in Committee, in such a fashion as to show at a glance how large a portion of the measure has been forced through without the shadow of debate. The only clauses or parts of clauses which the House of Commons has had an opportunity of discussing are those printed in italics."

The contrast presented by the seven columns which follow is, to the uninitiated, striking enough, the italics forming but a small proportion of the whole. But we must consider the relative importance of the several clauses, and the days subsequently spent on the report stage. Many minor details were unquestionably passed without debate, but the following, comprising the main principles involved, were amply discussed: the establishment of an Irish legislature; its powers, exemptions from powers, and disabilities; the Irish Executive; representation in Imperial Parliament; financial relations; status and future of judges and civil servants; the police. This is, however, only one of the many questions connected with the passage of the bill which can be much better understood by those who have heard the debates than by the outside public. It is especially one of those upon which it will be easier to prejudice than assure the electors of the United Kingdom.

So much for the manner in which the bill has been carried. The consideration of its prospects I propose postponing to another letter. Yet, before concluding, I feel impelled to quote two passages from this final debate which appear to me to go to the root of the whole controversy. One from Mr. Gladstone's speech:

"Are we, then, bound to admit that, after the seven hundred years of the British connection with Ireland, after England, during the whole of that time, has occupied a dominant, and Ireland a subsidiary position—that, after all that, with all the responsibilities of superiority upon us, the result of our treatment of Ireland is this—that we have brought her to a state in which she cannot undertake without danger and ruin the very responsibilities which, in every other country, have been found to be within the capacity of the people and to be fraught with the richest benefits to them?"

The other from Mr. Morley. Speaking of Mr. Balfour, on the opposite side of the table, and of himself, he said that both had, he believed, endeavored to regard the situation in Ireland with a "clear and steady gaze." In their diagnosis of Irish maladies there was considerable agreement. It was only when they came to remedies that they differed:

"Our disagreement can be stated in a sentence. The right honorable gentleman is for a persistence in the conditions which have produced that state of things now baffling and confounding us. I, and those with whom I have the honor to act, are in favor of a resort to those conditions, those maxims, and those principles of government which the English-speaking race have tried all over the globe, and have never tried without finding in them healing and virtue."

Mr. Morley is, of all the actors in this great drama, the one that has inspired me with feelings of the profoundest respect and admiration. He would not be human if, occupying the position he does, and burdened with its responsibilities, he had not been, as I believe he has been, to an appreciable degree "captured" by the permanent officials in Dublin Castle. But his grasp and power of exposition of great principles, his balanced fairness, his administrative ability, are beyond all praise. I can think of no instance in our time of a man who had won such a position in the serene atmosphere of literature and philosophic thought, stepping down, from overflowing desire to serve his kind, into the arena, too often alternately dusty and muddy, of politics. Men say he can never be regarded as a politician in the "highest" sense of the term. So much the worse for politics. It is said that the march of democracy will tend more and more to eliminate such men from public life. So much the worse for democracy. D. B.

## THE MEMOIRS OF GEN. BIGARRÉ.—II.

PARIS, August 30, 1893.

WE left Gen. Bigarré when, in a fit of anger with Napoleon, after Austerlitz, he asked permission to enter the service of King Joseph Bonaparte. I had first resolved to abandon him and not to follow him to Naples and Spain; but, on reading over this second part of the Memoirs, it seemed to me interesting to study the work of Napoleon and the French Revolution outside of France, and to note what were the sentiments of the peoples which had been disturbed by the French armies. I had always heard from the men whom I had known as survivors of Napoleon's time, that the French became, on the whole, popular wherever they went; but I took such declarations with many grains of allowance. The testimony of Bigarré, attached to one of Napoleon's brothers, has some value in this question of French influence outside of France, especially as he writes without any partisan spirit, and does not give himself out as the representative of the ideas of the Revolution.

Let us follow him first to Naples. He crossed the Alps, and arrived in Milan on the 10th of November, 1806. Prince Eugène Beauharnais was Viceroy, and Milan was his capital. "The Royal Guard of Italy was at least as fine as the guard of the Emperor Napoleon. The luxury of the court and of the city enriched commerce and agriculture. The Lombards regret now [this was written after the Restoration] sincerely the good time of the splendid reign of a viceroy who was always a good ruler to them." This is confirmed by all the notes, letters, and writings of Henri Beyle. Bigarré saw Joseph at Milan, who gave him a letter to carry to Pope Pio VII. At Naples he found the high nobility quite loyal to King Joseph. "This nobility, which owned all the territory of the kingdom, showed itself very devoted to the new sovereign, and inspired him with the greatest confidence; he admitted it to the head of his Cabinet, of his council, of his armies, and to all the offices of his household." By Napoleon's order, all the aides-de-camp of Joseph were French; but he had only two Frenchmen in his household. Bigarré was appointed colonel and aide-de-camp to the King; he commanded the first Neapolitan regiment of the line. His regiment was quartered at Capua; the officers belonged to the poorest families of the nobility. "It was not rare to see in a Neapolitan regiment of two battalions more than thirty married officers, who were followed from garrison to garrison by their wives and children. This life absorbed their meagre salary, and the chiefs had no scruple in robbing their companies so as to find the means to satisfy their own needs." Bigarré, who had strict notions on finance, found it very difficult to extirpate these habits.

He had to make a few expeditions against the brigands, and to take his part in a popular movement in Naples. A Marquis Palmieri had attempted to assassinate the King, and on the day of his execution a Capuchin told the people from the scaffold that Palmieri was a martyr, and promised indulgences to those who should follow his example. At the same moment, some soldiers who were around the scaffold were stabbed with poniards. Palmieri, who already had the rope round his neck, contrived to escape. He was, however, seized again, but the Capuchin was never found. Forty-two lazzaroni, taken with poniards in their hands, were summarily executed. King Joseph "wished to reign over the Neapolitans only by justice. It cost him much to be forced to employ rigorous means, but English malevolence and the perfidy of Queen Caroline were so active and sanguinary that several times he was obliged to stop the effusion of blood by sacrificing a few brigands armed for assassination." Bigarré speaks in glowing terms of the character and the intellect of Joseph; he confesses "that he had all the *galanterie* of Henri IV.; but it is not true that he ever lost in the society of the *beau sexe* a single hour claimed by the Council of State or the Cabinet."

When Joseph was made King of Spain, he ordered Bigarré to join him at Madrid, and to take, on his way, Napoleon's orders at Bayonne. The capitulation of Gen. Dupont at Baylen had forced Napoleon to take the field himself in Spain. The Emperor left Bayonne for Toulouse, where Bigarré witnessed a reception which Napoleon gave to a deputation of monks. "Irate with these monks, who passed for the instigators in Spain of the insurrection against the French, he said to them

very dryly and with an air of ill humor: '*Messieurs les moines*, if you dare to meddle with our military affairs, I promise you that I will have your ears cut off.'" Joseph Bonaparte was denounced by the priests, all over Spain, "as a sovereign without any religious principles and of bad conduct. He was represented in many caricatures with a red face, a fat body, having a bottle in each hand and a crucifix under his feet." It was Bigarré's belief that "Joseph suited very well the great masses of the cultured Spanish proprietors, but the priests saw in him a second edition of his brother Napoleon, and dreaded the system of government adopted in France."

Napoleon conducted the campaign with his usual rapidity. From Astorga, he ordered Marshal Soult to pursue the English army, under Sir John Moore, and to prevent, if possible, its embarking at Corunna. Bigarré was sent to Marshal Soult by King Joseph, and made the journey from Madrid to Astorga, with two soldiers only and his valet, at a time when all Spain was in insurrection. "I met everywhere burned villages, bodies of dead men and horses, broken carriages; not a man was seen in the villages. The English retreat was so rapid that all the luggage was abandoned on the road to Corunna. I am sure I saw at least four thousand of their horses with bobtails, which they had hamstrung." Bigarré heard at Santiago the details of the affair of Corunna and of the death of the English general. Who does not know the fine poem:

> "Not a drum was heard, not a funeral note,
> As his corse to the rampart we hurried"?

Bigarré, who was in constant danger from guerillas on his way to Soult, says that he would rather have fought a battle every day than to ride as he did from Madrid to Santiago. As a volunteer on the staff of the vanguard and of Marshal Soult, he participated in the campaign in Portugal. Soult attacked the formidable line which defended Oporto, the second town of Portugal, situated on the Douro. The storming of Oporto was a terrible affair; the bridge over the Douro was the scene of a horrible carnage. Marshal Soult succeeded, by a few acts of great severity, in saving the town from pillage. He remained in Oporto forty-two days, entered into communication with the Bishop of Braga and some Portuguese of distinction, and made them understand that Napoleon did not wish to annex Portugal to Spain; Portugal was to remain independent.

"He advised them to exercise some pressure on the Emperor, so as to obtain from him the authorization to throw off the yoke of the family of Braganza; and as the Bishop of Braga, very influential in the country, saw nothing to hinder Marshal Soult from himself becoming the sovereign of this rich country, he invited Gen. Ricard to throw money to the people of Oporto, and to incite it to cry, 'Viva el Rey Nicolas.'" Soult's projects did not, however, please some of his subordinates; two colonels were even accused of being in communication with the English General, Arthur Wellesley.

One day Soult sent for Bigarré and said to him:

"I am in the most embarrassing position. I have before me twenty thousand Englishmen who are in want of nothing. A Portuguese corps of as many men is on its way to cross the Douro. Gen. Silveira, with twenty-five thousand men, is behind me; the whole Portuguese population waits only for a signal to join all these armies. I am without communication with Spain, and, if I credit the rumors in circulation, the French Army has been obliged to evacuate the Peninsula. In this state of things, not being able to remain at Oporto, I have determined to retreat to Spain."

The retreat was difficult. Soult fortunately met Marshal Ney at Luzo. At Madrid, Bigarré saw Joseph Bonaparte, who everybody believed had been killed, and resumed his duties of aide-de-camp. Marshal Victor, by his victory of Medellin, had given a new lease of power to Joseph, whom Bigarré found holding a magnificent court. He accompanied him to Andalusia, and says that "the noble Andalusians exhausted their invention to manifest their love and devotion to the new King of Spain; some sent him a dozen magnificent horses, others placed at the disposal of his Majesty their wives, their daughters, and their homes." We are obliged to think that Bigarré had but a poor knowledge of the Spanish language, and did not understand the true meaning of the expression, so commonly used, "á la disposición de Usted." He adds: "The people, quite as effusive as the clergy and the noblemen, was beside itself for joy when it gazed upon the King every moment of the day. *Il se vautrait devant lui* as soon as it saw him on horseback in the streets, or at the balcony of the palace of the Alcazar." Nevertheless, Bigarré could not help seeing a vague disquietude on the faces of the priests and the monks. They sang the "Te deum," but said with a low voice, "Paciencia."

Joseph visited Cadiz, Malaga, Granada, and, in this military promenade, he encountered everywhere the same enthusiasm. Meanwhile the guerilla war continued in all the provinces of the north. "The guerillas did more harm to the French troops than the regular armies throughout the Spanish war; it is certain that they assassinated no less than a hundred men a day. In five years they thus killed 180,000 Frenchmen without having lost more than 25,000 men, for these undisciplined bands never fought in the open field unless they were more than five to one." The guerillas attacked chiefly the soldiers who came back from the hospitals and the sick soldiers who lagged behind the columns. Joseph often felt the uncertainty of his position. One evening he had, on his uniform, his hat, his sword, his orders, at least eight millions' worth of diamonds. "You see all this?" said he to Bigarré. "Well, I would willingly abandon it, leave this fine palace and all its treasures, to go and live at Morfontaine as a French prince, with my wife and children, rather than be a King of Spain without independence."

Independence was the dream of Joseph; he meant by it independence of his brother Napoleon. The Emperor was willing to give crowns to his brothers, but he never ceased to treat them as subordinates, as his lieutenants; their armies were to be his armies, their treasury his treasury. The correspondence of Napoleon is extremely instructive on this point. On the whole, Napoleon was right: Joseph, Louis, were nothing without him; they were mere satellites; their power could not survive his power. They were but *figurants* in the great drama in which Napoleon was the supreme actor. Posterity will care less for them than for the marshals who surrounded the Emperor, who fought with him a hundred battles, and were to him what the *preux* were to Charlemagne.

# Correspondence.

## TALLEYRAND AND RANDOLPH.

To the Editor of The Nation:

Sir: On my return to England to-day, after two months' absence, I read for the first time two interesting paragraphs in the *Nation*, June 29, concerning a MS. of Talleyrand discovered among the Hamilton papers—a diplomatic opinion on the Fauchet despatch No. 10, which "certainly," says one paragraph, "makes short work with the skilfully woven but inadequate defence of Randolph made by Mr. Conway." To pronounce a defence inadequate does not prove it so, and on that score I might be content to await still some argument against my position, as I have waited five years since its publication. As, however, your justice will no doubt allow me space to plead against the summary sentence, I avail myself of the opportunity because the Fauchet-Randolph affair is invested with fresh historical interest by the Talleyrand MS., an interest likely to be increased by other documents (unpublished) discovered since the publication of my Life of Randolph.

With regard to the Talleyrand MS., the *Nation* conjectures: "If this opinion reached Washington, it is not strange that he should have cut loose from Randolph." But permit me to remind you, as Washington reminded Randolph, that it was Randolph who cut loose from the President. Let me also call your attention to a letter, cited in my chapter on "Mr. Wolcott," of July 30, 1795. It was written by Wolcott, Secretary of the Treasury, to Hamilton in New York, and proves that Hamilton was kept in ignorance of the existence of the intercepted despatch until after the explosion; consequently he could not have submitted the despatch to Talleyrand until too late for any opinion of the latter to affect the case. Another letter of Wolcott to Hamilton, of November 16, 1795, enclosed a copy of the Fauchet despatch, which was probably not in Hamilton's possession until then.

It is said in the *Nation* of Talleyrand's opinion that "there is no reason for supposing that it was biassed against Randolph." But it may be seen in my Life of Randolph (p. 233) that Talleyrand had strong grounds for animosity towards Randolph. Talleyrand had brought from London a letter of introduction to the Secretary of State (Randolph), apparently from Jay (though Jay denied having written it). Knowing that any attentions paid to Talleyrand would be offensive to France, Randolph did not honor the introduction, and by his advice the President declined to receive Talleyrand, who seems, indeed, not to have met any member of the Government in Philadelphia. A letter in the Duc de Broglie's Memoirs of Talleyrand proves his expectation of meeting the President, and the disappointment could not fail to be humiliating. He was fully informed that his exclusion was due to Randolph's advice. It was while still smarting under this humiliation that Talleyrand wrote the critique on the Minister who had been the means of that humiliation. Randolph had acted from purely public motives, and a magnanimous man would not allow any personal grievance to influence his criticism; but Talleyrand was without magnanimity; he is rightly pronounced in the *Nation* (July 6, p. 16) an adept in duplicity, coldly relentless, despicable in meanness.

According to your abstract of Talleyrand's critique on Fauchet's despatch, there are traceable in it the characteristics ascribed to him in the succeeding number of the *Nation*, just quoted. In my Life of Randolph, documentary evidence is given that Hamilton's honor was not admitted to the secret of those who in Philadelphia were hunting down Randolph. His submission of the despatch to Talleyrand suggests that he was not satisfied about the treat-

ment of Randolph (who had done Hamilton a great personal service). Unfortunately Hamilton did not understand French, and Talleyrand was able to pay off the fallen Secretary, who had humiliated him, by reading into the Fauchet despatch just what would turn a man of honor completely against Randolph. Assuming your résumé of Talleyrand's manuscript to be correct, he boldly falsifies Fauchet's despatch, making it incriminate Randolph on a point where it does not refer to Randolph at all. Talleyrand is thus summarized in the *Nation* on the point referred to: "What these confessions [of Randolph] were, Fauchet does not directly state; but he says they were of such a nature that they could not be made to Randolph's colleagues, who had a known bias for the Government and passions and interests with its chief. Is there a country on earth, says Talleyrand, where such confessions would not be regarded as a ministerial crime (*délit*) of the first order, etc." One can imagine the horror of Hamilton at this evidence of a Cabinet Minister concealing things from his colleagues because of their loyalty to his and their chief (Washington) and to the Administration in which he holds high office! But there is not the shade of a shadow of any such statement in Fauchet's despatch (which is printed verbatim in my Life of Randolph, in the original French). There is not a sentence that by any interpretation could suggest that Randolph had concealed, or was concealing, anything from his colleagues. The statement of Talleyrand is a travesty of what Fauchet says about his own colleagues in the French Embassy, of whom there were two. He explains to his Government at Paris that he had not communicated Randolph's confidences to his (Fauchet's) colleagues ("Je ne les ai point communiqués encore à mes collègues"), because of their bias, etc. Nothing is said of Randolph's colleagues, or of his or their "chief." On this pure falsification of Fauchet's despatch is based Talleyrand's only substantial charge of treachery against Randolph, and, having given credit to it, I do not wonder that the *Nation* finds it making short work with my defence of Randolph.

As for what Talleyrand says about the "overtures," alleged by Fauchet to have been made to him by Randolph, there appears nothing at all which affects my statements on that point. Granting that they were made (preposterous as the supposition seems), it is mere assumption to call them "corrupt propositions." That begs the question. They would not necessarily be any more corrupt than the overtures made by our patriotic fathers to France for money to defeat the English.

I hope, in the near future, to bring all question of Randolph, based on Fauchet's despatch, to an end, by the publication of extracts from the documents already alluded to as discovered since my 'Life of Randolph' appeared. There are other despatches of Fauchet, the most important being those intercepted along with No. 10, for which Randolph inquired so anxiously, and for which many have searched. I could not, even if prepared, deal with these documents at the close of a letter already needing your indulgence, but add my conviction that had they not been suppressed by Randolph's pursuers (who had them in Philadelphia), their whole case against him would have been quashed. Fauchet bitterly confessed his discovery that Randolph's "précieuses confessions" were all pretended.

MONCURE D. CONWAY.

LONDON, August 29, 1893.

[It would require more space than we can now afford to show that we spoke advisedly.—ED. NATION.]

## THE "RUINS" OF JAMESTOWN, VA.

TO THE EDITOR OF THE NATION:

SIR: A gentleman formerly of Dayton, Ohio, now a resident on the banks of James River, has become the owner of the site of James City, the first port in English North America. With commendable energy he has built a new steamboat wharf, improved the old Ambler plantation house, and given the old graveyard to an Antiquarian Society. Last month a newspaper writer possessing the peculiar gift of Capt. John Smith of seeing what no one else ever saw, reported that there had recently been discovered several long and narrow brick passageways under the earth, supposed to be used by the early colonists as hiding-places from the Indians. The manager of improvements at Jamestown, contradicting this Munchausen story in the Virginia *Gazette*, printed at Williamsburg, writes: "Let us have the truth regarding Jamestown and nothing but the truth."

The truth is, there are no ruins of old Jamestown visible. The ruins seen by the traveller as he ascends the James River are of a fortification that was above the town. An old earthen fort in the town was demolished more than two hundred years ago. Francis Moryson (also written Morrison), as agent for Virginia in the days of Gov. Berkeley, went to England and applied for aid to build a fort, but was unsuccessful. After the attack by Dutch ships-of-war an association was formed and a contract made with Drummond and Howe to build a defence. On the 27th of May, 1673, in consequence of a complaint made to the General Court, the contractors mentioned that they had brought bricks to the site, but had not commenced the work. Clayton, the Rector of Jamestown, as late as 1686 refers to the new defences in a letter to Robert Boyle, the philosopher. He writes that "they have built a silly sort of fort, that is a brick wall in the shape of a half moon, that seems little better than to shoot wild ducks or geese."

Additions were made by Gov. Andros; and James Blair, who, after Clayton's return to England, became Rector, and whose name is inseparably associated with the founding of William and Mary College in 1697, wrote that the fortifications were above the town. His words alluding to Andros were:

"He has thrown away a great deal of money in raising an old fort at Jamestown, and in building a powder-house, and in making a platform for great guns. I never heard one man that pretended to understand anything of fortifications, that upon sight of these works did not ridicule or condemn them as good for nothing, but to spend money. The guns are so placed that they are no defence of the town, which, *being much lower in the river*, might be taken by the enemy's shipping without receiving the least assistance."

EDWARD D. NEILL.

ST. PAUL, MINN., September 4, 1893.

## NILE CORVÉE AND EGYPTIAN PRISONS.

TO THE EDITOR OF THE NATION:

SIR: On July 16, the *Pall Mall Gazette* published an interview with Sir C. Scott-Moncrieff, in reference to that question of the Nile *corvée* which was discussed in the *Nation* of April 21 and November 17 of last year. It challenged me to show that this forced, unfed, and unpaid labor existed, at any rate in a form which was in any sense a hardship. "Mr. Cope Whitehouse claims that we have in no wise abolished the *corvée;* but he will find it hard to get round Sir Colin Moncrieff's evidence." To this I responded that I had no intention of trying to "get round" the statement of the former Under-Secretary of State for Public Works in Egypt, and said, quoting verbatim the summary given by Sir C. Scott-Moncrieff:

"It is absolutely false to say that, 'distinct from the *corvée* and entirely independent of it, there obtains in Egypt a system of voluntary State labor, organized entirely by the villagers themselves, who do their work ungrudgingly and in a patriotic spirit'; the whole subject is regulated by the Khedivial decree of August 6, 1885, passed on the demand of Sir C. Scott-Moncrieff himself."

Now, could there be more conclusive proof of the shameless effrontery and impudent falsehood of the assertion that the Nile *corvée* is a form of voluntary and patriotic service, gladly rendered in true fraternal spirit, than the following quotations from the English organ in Cairo, the *Egyptian Gazette*, August 16, 1893?

"The *corvée* labor for watching the Nile banks was called out yesterday." "We hear that the prisons are now full again. An additional strain on the resources of the prisons has been furnished *in former years* by the men who are sentenced to imprisonment for refusing to conform to the regulations in force for providing labor for watching the Nile banks. These men have been sent in, *from fifty to one hundred at a time*, to the Mooderiyeh [provincial] prisons. Provision for the contravention cases [misdemeanors] in connection with the *corvée* will have to be made this year independently of the Mooderiyeh prisons, which are incapable of accommodating *the extra numbers resulting from this cause.*"

As the result of my efforts, payment of half wages (10 cents a day) is to be made in two districts. Let no one be deceived. Out of one hundred thousand "free" inhabitants of Egypt compelled to work for three months, not two thousand will get any wages at all. Apply this text to a score of other pretended reforms, and the value of an Englishman's evidence as to what he claims to have done in Egypt will be treated with the scorn it deserves. England wishes to be deceived, *decipiatur;* but that does not apply to America.

COPE WHITEHOUSE.

LONDON, September 4, 1893.

# Notes.

FORDS, HOWARD & HULBERT will shortly issue 'The Pilgrim in Old England: Being a Review of the History, Present Condition, and Outlook of the Independent (Congregational) Churches in England,' by the Rev. Amory H. Bradford, D.D.

'The Speeches and Addresses of William McKinley' is in the press of D. Appleton & Co., who announce also 'The Gilded Man (El Dorado), and Other Pictures of the Spanish Occupancy of America,' by A. F. Bandelier; 'General Johnston,' by Robert M. Hughes, in the "Great Commanders" series; 'The Personal Recollections of Werner von Siemens'; 'The Brontë Family in Ireland,' by Dr. William Wright; 'The Development of Mind in the Child,' by Prof. W. Preyer, of Jena; 'The Credentials of Science the Warrant of Faith,' by Prof. Josiah P. Cooke; 'Miniatures from Balzac's Masterpieces,' selected by F. T. Hill and S. P. Griffin; and 'Duffels,' a new story by Edward Eggleston.

Pegasus in harness is perhaps too violent a metaphor, but a delicate talent engaged upon

piece-work—that is the impression one receives from the dainty little volume, called 'Picture and Text,' in which the Harpers have reprinted some half-dozen short essays by Henry James. With two exceptions, they are strictly of the obligato sort—magazine articles on artists, intended as accompaniments to a selection of their works or to an engraved portrait, an introduction to the catalogue of a special exhibition, etc. It has never been Mr. James's method to say bluntly what he thinks, and here we have again the leisurely circumlocution, the unfinished hints at meanings, the maze of parentheses, the pretty choice of words, that mark the master's technic. The danger of this habit of writing around a subject—of the art of not saying it—to the writer himself is obvious. How far it may lead him even from grammar is shown in a remarkable sentence on page 49, where, in the labyrinth of clauses, Mr. James absolutely forgets that his subject is "the eighteenth century," and couples with it the verb "are."

'Clear Round' (London: S. Low, Marston & Co.), by E. A. Gordon, consists apparently of letters written by a mother to her children during a journey around the world. They are marred by the constant endeavor to enforce some religious truth in connection with the descriptions of strange scenes. The information, too, is sometimes very queer. For instance, writing of the muskrat, Mrs. Gordon says: "Chicago, on the south of Lake Michigan, means the 'city of the skunk,' and there the rats are so powerful that they have tunnelled through the marble wainscots and floors of the City Hall" (p. 33). The water of Lake Superior is "so intensely cold that if a ship founders the passengers have little chance of life, for they are instantly benumbed" (p. 28). The "firewater" with which the Americans have "killed off thousands" of Indians, is a "mixture of rum, tobacco, vitriol, and bluestone" (p. 37). The chief advantage of the projected railway from Winnipeg to Hudson Bay is that by this route it is "fifteen thousand miles nearer Liverpool than by New York" (p. 54). Grizzly and cinnamon "bears' forelegs being shorter than their hind, they escape pursuit by turning somersaults down hill and rolling themselves into a ball" (p. 81). The account of Japan, though not so entertaining as that of this country, is well written, and offers many attractive pictures of out-of-door life in that land. The chapters on China, India, and Egypt tell an old story and will hardly awaken much interest. There are a few fair illustrations, and an inserted map of the Canadian Pacific Railway.

'Round the Black Man's Garden' (Edinburgh: W. Blackwood & Sons), by Zélie Colvile, F.R.G.S., is a bright, chatty account of an unusual journey. Starting from Suez, this lady went as far as Zanzibar in coasting steamers which touched at various ports in Asia and Africa. Suakin was being besieged by Osman Digna, and this made the two or three days' stay there somewhat exciting. From Zanzibar Mrs. Colvile sailed to the east coast of Madagascar and crossed the island by way of the capital. The description of this part of the journey forms by far the most interesting chapter of the book. The peculiar scenery, the methods of travelling, the paths, the natives, are delineated with great vivacity, as is also a strange ceremony in the palace, the Feast of the Bath, during which the Queen is supposed to bathe in the presence of her people. Mrs. Colvile lays much stress on the peculiar mixture of civilization and barbarity among the Hovas, the ruling race in Madagascar. When she gets upon the more familiar ground of Kimberley and Pretoria, the interest of her narrative naturally slackens, but it revives again when she reaches the west coast of the continent. Here she visited some of the most interesting ports, going as far south as the Gaboon River. As was to be expected, her account, especially of Liberia, contains little that is encouraging, so far as the negroes are concerned. There is an excellent route-map and one of Central Madagascar.

The Librairies-Imprimeries Réunies (Paris) have brought out another volume of Victor Hugo's 'Toute la Lyre,' not a very happy title. Happily this is the last of the series, though by no means, it is to be feared, the last of the posthumous volumes, the poet's literary executors having apparently resolved to publish every line of Hugo's manuscript they can find. There is nothing in the present volume that adds to our knowledge of Hugo as a man or that presents him in any new aspect as a poet. There is not even anything equal to some of the second-best pieces in 'Les Contemplations'; and since nothing will be added to the poet's fame by the verses here collected, their publication can be accounted for only by the mania which Brunetière has named "la fureur de l'inédit."

The publishing house of Charpentier started, two or three years ago, a series of novels intended to be so absolutely pure that they might be read even by young girls. Some very charming volumes have appeared in this series, and its success has apparently stirred rival publishers to emulation. It is now thought desirable to have a home literature which shall rival the rich literature of England—if possible. The "if" is significant, as the perusal of 'Cœur Fermé,' by C. Troussart, in Armand Colin & Cie.'s collection for young unmarried women, will prove. It is the ordinary French novel of married life toned down so far that the heroine is actually pure and entertains merely a platonic affection for another gentleman than her husband. But scenes and incidents are much the same as in the ordinary romance of the day, and the morality of the book is not easily discernible. Possibly it lurks somewhere, deftly concealed by art.

A "History of Elections in the American Colonies" is contributed to the Columbia College series of studies by Mr. Cortlandt F. Bishop. The subject is sufficiently technical, but Mr. Bishop has collected many details which have color as well as significance for the student of our political development.

The study of the Basque language has not yet obtained recognition at any of the universities either abroad or on this continent. Some scholars have taken it up in connection with other linguistic work; very few have given it concentrated or continuous attention. One of these few is Mr. E. S. Dodgson, who has recently published at Alençon a small pamphlet, 'The Basque Verb Found and Defined.' The whole work, of which this is but a small portion—another portion appeared in the *Revue de Linguistique* for 1890 and 1891—is a concordance of the forms of the Basque verb occurring in the New Testament of Jean de Leiçarraga, printed at La Rochelle in 1571. The present pamphlet confines itself to the three Epistles of St. John. Other portions will follow as Mr. Dodgson proceeds with his work. The citations from the text are accompanied by the corresponding words of Calvin's French version of 1565, on which Leiçarraga based his translation. The great complexity of the verb in Basque makes it, in a way, the open-sesame to the language. Mr. Dodgson's work, when completed, will be of no little value to the Basque student.

In the *Harvard Graduates' Magazine* for September, first number of the second volume, the most notable paper is President Walker's Phi Beta Kappa address of June last, on College Athletics. It takes what we may call a soldier's view of the advantages of the peculiar physical and moral discipline of our college sports, while curiously belittling the college ideals of Gen. Walker's own generation which fought with him in the civil war. These men are generally held to have acquitted themselves pretty well without the aid of tournaments and "records," and it is not just to say that with them "speech-making, debating, or fine writing were [was] the be-all and the end-all of college training." Their object in going to college was the cultivation of the intellect, primarily for its own sake, and this is still the noblest excuse for the existence of colleges. Such an aim was not due to the "transcendentalism" or "sentimentalism" of this or the preceding century, but was the wholesome unbroken tradition from the beginning of our colleges. It is athletics which have reversed the natural order of things, so that, by Gen. Walker's own confession, "it will soon be fairly a question whether the letters B.A. in the college degree stand more for Bachelor of Arts or for Bachelor of Athletics." Gen. Walker points out two evils to be abolished: organized cheering, and the further pursuit of athletics (*i. e.*, of "glory") by members of the professional schools.

The Henry M. Phillips prize of $500 will be awarded by the American Philosophical Society of Philadelphia in 1895 to essays handed in before January 1, 1895, on the following subjects: (1) The sources, formation, and development of what is generally designated the Common Law of England; (2) the theory of the State, treated historically and upon principles, with a discussion of the various schools of classical, mediæval, and modern thought upon the subject; (3) the historical and doctrinal relations of the Roman law and the English law, illustrated by parallels and contrasts. The essays must be sent, with motto and sealed envelope containing the writer's name, to Frederick Fraley, President of the Society, at No. 104 South Fifth Street, Philadelphia. They may be written in English, French, German, Dutch, Italian, Spanish, or Latin; but an English translation must be appended to the foreign writing.

—Virginia and half of the States in the Union combined show no more cities of over 20,000 inhabitants than are to be found in Massachusetts. This fact is not readily apparent from the census bulletins thus far issued, as in none of them are cities having a less population than 25,000 ranged according to their populational rank. The fact is also so surprising that few persons will believe it without proof. But there is no place at all with so many inhabitants as 20,000 in nine States, viz., Vermont, Florida, Mississippi, Nevada, Montana, Idaho, Wyoming, North Dakota, and South Dakota. Nine States again have each no more than one town numbering over 20,000 people. Those States are New Hampshire, Delaware, Maryland, West Virginia, North Carolina, South Carolina, Louisiana, Arkansas, and Oregon. Four other States, viz., Maine, Nebraska, Colorado, and Washington, count each only two cities that have passed the 20,000 limit. These three classes of States amount to twenty-two, that is, to half the whole number of the United States, and seventeen is the total of their cities

with each a census upwards of 20,000. Twenty such cities, however, are in the roll of Massachusetts. These are Boston, Worcester, Lowell, Fall River, Cambridge, Lynn, Lawrence, Springfield, New Bedford, Somerville, Holyoke, Salem, Chelsea, Haverhill, Brockton, Taunton, Gloucester, Newton, Malden, Fitchburg. Three cities of this size, and no more, appear in the census of Virginia, viz., Richmond, Norfolk, and Petersburg.

—This comparison is too suggestive to need any remark concerning the strange distribution of our people, and the modern trend to urban residence, preëminently in manufacturing, free, commercial States and those long settled. It is further worth notice that the twenty cities just mentioned in Massachusetts are a larger number than can be discovered in any other State, though five States have a larger census. While the population of Massachusetts is three-fourths of a million less than half that of New York, her cities of the 20,000 class are more by two; those in Pennsylvania are only sixteen, those in Ohio ten, in Illinois seven, in Missouri four. Bulletin No. 116, in which cities are set down according to population, stops at No. 124, La Crosse, the smallest over 25,000. If continued to the smallest over 20,000, like that of 1880, it would have enabled us to compare the growth of the decade much more easily. To know the *relative* size of cities is most important. Every town likes to think itself equal to its superiors and superior to its equals, and no vulgar error is more rife. The most effectual cure for such "thinking of ourselves more highly than we ought to think," is to ascertain how many towns in the country are larger than our own, and what town is next smaller and next larger than that.

—The Training School for Nurses in Kyoto, Japan, is one of the best enterprises instituted and maintained by the American missionaries. Its seventh annual report has lately reached us, and we see at once that the work has passed beyond the stage of experiment. The text of thirty pages is reinforced by nine full-page reproductions of photographs showing the grounds, edifices, floor plans, the front page of the *Doshisha Hospital Messenger*, and, in one group, the Committee, staff, pupils, and employees. The veteran medical missionary of nearly twenty years of service, and profound student of Buddhism, John C. Berry, is in charge, but the best work in training the Japanese women is done by Miss Eliza Talcott. Abandoning the old and visionary idea of quickly converting the Japanese nation *en masse*, the purpose is now to thoroughly transform the individual. In the hospital connected with the Doshisha University patients are treated (and the medical and surgical statistics are here given); but, besides the influence that may be exerted upon them while in the wards, the various alumni of nurses and nursed are kept in unity of purpose (*doshisha*) by the *Hospital Messenger*. This newspaper is devoted to hygiene, practical nursing in the home, hospital news, religious instruction, temperance, whereabouts of the nurses, etc. Candidates for the School of Nurses must be at least twenty-two years of age, measured by Western style, which means from the day of birth, and not from January 1, or New Year's day. After a month of probation and examination in the fundamentals of a plain education, the candidate, if quick in perception and careful in observation, is matriculated. The curriculum is one that satisfies very rigid requirements. The students take solemnly a modified form of the Hippocratic oath. Of the thirty-six graduates of the school, some have married or died, but twenty-six are still active nurses, unable to supply fully the demand for their services. A study of the twenty or more faces of the young women in the present classes, arrayed in their snowy caps, aprons, and dresses, is very suggestive, and helps to confirm the almost impregnable optimism of those who have been educationally connected with the Japanese. A class of ten was graduated in June. The hospital treated over a thousand more cases than in the previous year. We notice that except two missionary clergymen on the Advisory Committee, and two American ladies, all the members of the staff, employees, and committee, are Japanese, among whom are several graduates of American universities. Besides the voluntary work of the nurses in district and village evangelization, it is becoming a feature of some of the native Christian churches to employ a district nurse as part of the organized work of the congregation in practical religion.

—The question of an elevated stage in the early Greek theatre cannot be considered settled by the completed report of the excavations at Megalopolis which have lately appeared in an elaborately illustrated quarto. This theatre is interesting for various reasons, and particularly because it was supposed to afford evidence of a fourth-century stage, elevated four or five feet above the level of the orchestra. No remains of such a stage are found; but its existence, or at least the use of a temporary wooden platform, was inferred from the architectural conditions. Mr. Ernest Gardner still adheres to this opinion, but his coadjutor, Mr. Loring, adds a final note in which he declares that the technical evidence for a fourth-century stage derived from marks of tooling in the various structures of the building, does not seem to him so conclusive as he had supposed when he signed the report. Since, therefore, the two experts who are most familiar with the technical evidence disagree, the matter remains *sub lite*. A curious exception is found in the later proscenium at Megalopolis (which the excavators have called the "proscenium of Vitruvius") to the ordinary rule in Greek theatres. The proscenium here has no central door, no exit upon the orchestra, and is the solitary instance known in which this deficiency occurs. Dr. Dörpfeld has hitherto maintained that the central door in the proscenium clearly served as an exit for the actors upon the level of the orchestra, and that the object of the proscenium wall was therefore simply as a scenic background, not, as Mr. Haigh and many others suppose, to support an elevated stage. The English excavators point to the proscenium at Megalopolis as an important exception, tending to show that Vitruvius was correct in his surprising statement that the Greek stage, or λογεῖον, was not less than ten or twelve feet high.

—A small pamphlet by Mr. Edward Capps of the Chicago University gives a very clear résumé of the many opinions which have been advanced in connection with the Greek stage, and discusses a new interpretation which Mr. Louis Dyer has lately given to this much vexed passage of Vitruvius. Mr. Dyer quotes the commentary of Fra Giocondo, a Florentine architect, writing about the year 1500 A. D., and deduces from his diagrams and from the language of the Roman architect the conclusion that Vitruvius conceived of the Greek theatre as having a long narrow proscenium or masked front, from the centre of which projected a narrow movable platform for actors (the pulpitum, or λογεῖον), to which he wrongly gave the same height as the proscenium. Such a platform of a moderate height has been suggested by many scholars, and would be a convenient solution of a perplexing problem. Mr. Capps holds, however, that Mr. Dyer's understanding of Giocondo is strained and improbable, and one cannot help agreeing with him in this belief. Mr. Capps concludes that there is no other way of understanding Vitruvius than as meaning what Mr. Haigh and most scholars have actually taken him to mean, viz., that the Greek stage was ten or twelve feet high, and consequently that the actors performed on a perilous ledge, varying from six to twelve feet in width. Mr. Capps dares to call this "a discreditable blunder." From so irreverent an accusation Vitruvius may, perhaps, shield himself behind the proscenium at Megalopolis.

## A TEXT-BOOK OF ENGLISH HISTORY.

*English History for American Readers.* By Thomas Wentworth Higginson, author of 'Young Folks' History of the United States,' and Edward Channing, Assistant Professor of History in Harvard University. Longmans, Green & Co. 1893.

Mr. John Fiske has already contributed no little towards making the general public understand the significance for universal history of the great political experiment in which this country is engaged; and it is as an attempt to propegate another great idea—the continuity of English and American history—that the book which has just appeared from Col. Higginson and Prof. Channing calls most loudly for our attention. The authors justly remark in their preface that since "it is not the practice of American readers, old or young, to give to English history more than a very limited portion of their hours of study," "such readers will use their time to the best advantage if they devote it mainly to those events in English annals which have had the most direct influence on the history and institutions of our own land." Accordingly they "have boldly ventured to modify in their narrative the accustomed scale of proportion." They have done wisely. We may go further and add that the very fact that they are not themselves Englishmen gives them a certain aloofness, a certain independence in their view of recent events, such as those who are connected with either of the great English political parties find it hard to maintain. The book may therefore be of value to Englishmen, as well as to Americans, as expressing the opinion of intelligent outsiders. The gift is here given them of seeing themselves as others see them—for instance, in regard to the Irish Land Laws.

Excellent, however, as the work is in conception, one could wish that the execution had been such as to arouse more enthusiasm. One could wish that the style were more vigorous: that there were more glow, more movement, more consecutive interest in the pages. As the elimination of the unimportant has gone so far, one could wish that it had gone further—that no fact had been mentioned simply because it was important, unless the context showed *why* it was important. Yet the merits of the work are so considerable, the reputation of its authors so high, the mechanical execution of the book, and especially the illustrations, so attractive, that it is certain to be widely used. Not that it is quite evident for whom it is intended. The preface speaks of "readers old or young"; and there are occasional reflections above the youthful mind,

But the scanty space given to the explanation of principles, and the simplicity of the language, which occasionally even condescends to the phraseology of the nursery, lead one to conclude that, like the earlier work of one of its authors, it is addressed to "young folks." It would, indeed, be a pity if it should prevent the use among those at all capable of benefiting by them of either Gardiner's 'Student's History' or Green's 'Short History.' The first of these is the thoughtful journeywork of a man who, in his own period, the seventeenth century, is a really great historian; the second is at any rate literature. Neither contains much that the intelligent young man about to enter college ought to find unintelligible; and he will have no difficulty himself in adapting what he finds there to the needs of an American.

This history, however, of Messrs. Higginson and Channing will doubtless find its way into the hands of thousands of young folks; and as that is so, and the publisher will certainly be bringing out further editions, it will be well to call the attention of the authors to a number of blemishes which in an ordinary school-book one would pass over without notice. And first—to get over the most distasteful part of the task—concerning a certain number of mistakes in unessential matters of fact. "The head"—we must understand the *ecclesiastical* head, for the sovereign is *the* head—"the head of the Church of England" has not "ever since" Augustine's time "had a palace" at Canterbury (p. 16); his palace is at Lambeth. If the Conqueror "inscribed the names of the Norman knights who fought" at Hastings "*on*" Battle Abbey (p. 25), that is a fact quite unknown to Mr. Freeman. To state that Edward I. "confirmed the charters" at Ghent "with the additional promise that he would not *lay a tax* without the common consent of the nation" (p. 54), makes the King concede more than he did, and ignores the distinction which Dr. Stubbs has dwelt on between the language of the real *Confirmatio* and that of the document known as *De tallagio non concedendo*. It is inacurate to say that "the English navy has been powerful and famous ever since" Henry V. (p. 81), and inconsistent with the truer statement (p. 132) that at the time of the Armada "England had nothing properly to be called a navy." Cranmer was not appointed archbishop of Canterbury after Warham "resigned" (p. 104), but upon Warham's death. "Six statutes, called the Six Acts, passed in 1539" (p. 108) instead of the "act of the Six Articles"—already corrected in the index—should not be allowed to remain in the text. Rogers, one of the Marian martyrs, was not a bishop (p. 117), but a canon of St. Paul's.

Then there are a few passages which, defensible in themselves, are pretty sure to lead the average young reader astray. The first would perhaps hardly matter. In telling the story of Alfred and the cakes our authors say:

"She said to him, according to an old ballad—

> 'There, don't you see the cakes on fire!
> Then wherefore turn them not,'" etc. (p. 18).

The youthful mind will be apt to think that these are the actual words of an old ballad, while, as a matter of fact, they are Mr. Freeman's own verse translation of a Latin distich which he conjectures to be based upon a ballad. He will be a clever boy, also, who understands the statement that each gild "took full charge of all goods made by its members" (p. 75) in a correct sense. Sadly mistaken would the reader be who drew from the words "Nor would Elizabeth consent to the marriage of the clergy" (p. 123) the natural conclusion that during her reign it was not allowed. "Parliament still has the substantial control of Canada in its own hands, and by merely passing an act can any day alter this whole arrangement," *i. e.*, the present self-government (p. 299), is true in much the same sense as it would be to say that the Electoral College could exercise freedom in choosing a President, or that the Queen could employ her power of veto. And, to fall back once more on trifles, to describe army purchase as "the system of allowing officers to choose their own rank by purchasing a commission" (p. 320) will call up the picture of ensigns leaping into majorities, and lieutenants suddenly becoming colonels; and the miserable system was not quite so bad as that.

From these we pass to a number of statements which are perfectly clear in themselves, and for which some sort of ground can be shown, but which we may not be without hope that the authors will see their way to modify on further consideration. As before, we will take them in the order in which they occur, without regard to their relative importance. That the ancient "Britons were good farmers and raised large crops of grain" (p. 4) would seem, to put it moderately, a somewhat too general statement, when we remember the contrast which Cæsar expressly draws between the inhabitants of "the maritime part" and the rest of the population. We must not quarrel with the statement that, when the English tribes settled down, "the affairs of the township were arranged at a meeting of the male freeholders" (p. 13), for that delightfully simple view of constitutional and social antiquities has of late become the accepted creed of the text-book writers, and still occupies the field; but we may criticise the further statement that, "after Christianity was introduced, this 'town-moot' or 'town-meeting' *took charge of* the religious affairs too, and did this under the name of 'parish'" (p. 14). Probably the township area became for ecclesiastical purposes the parish, but it is not till very long "after Christianity was introduced" that there is any evidence of the town-meeting "taking charge" of "religious affairs." To lay down that "at first the freemen had a right to attend the meetings of the Witenagemot" (p. 15), though loyal to Freeman, is in the teeth of Stubbs, in whose judgment most scholars certainly now acquiesce. Then, the balance-of-trade idea seems a little antedated (p. 74), and the distinction between the earlier and later Middle Ages in that respect not sufficiently borne in mind.

"Henry IV. was really a usurper, and ruled *merely* as being the King elected by Parliament" (p. 77), and "the Duke of York's right to the English crown was better than that of the reigning king" (p. 84), are surprisingly Legitimist utterances, and will puzzle the young folks who have duly perpended the dictum that, by the manner of Richard the Second's fall, "it was established that the nation might depose the King if it wished" (p. 72). The evils of "maintenance" and "livery," closely connected as they were, should not be absolutely identified with one another (as on p. 78). The account given (p. 85) of the significance of the restriction in the reign of Henry VI. of the right of suffrage to forty-shilling freeholders follows Green with fidelity; but it might be well to reconsider it in the light of Stubbs's discussion of the point. The explanation of Puritanism (p. 125) dwells only on the Vestiarian Controversy, and hardly brings into sufficient prominence the question of church government. From the reference to the "disregarding" of the Petition of Right (p. 157), and the use of the word "tax" without explanation (p. 154), we gather that our authors have failed to follow Mr. Gardiner's argument as to the adroit but scarcely justifiable contention of the parliamentary opposition concerning tunnage and poundage. The Resolution of 1629 as to religion our authors limit to a declaration against the introducers of "new ceremonies" (p. 157), and of course the sturdy common sense of American young folks will sympathize with the opposition; but the persons actually condemned were "whosoever shall bring in *innovation* in religion, or by favour seek to extend or introduce Popery or *Arminianism* or other *opinions* disagreeing from the true and orthodox church," and no narrative approaches completeness which does not explain the extent to which the church movement which the Puritans opposed was, with all its faults, a movement towards greater intellectual freedom. The second word italicized may be especially commended to the attention of Methodist readers.

Two paragraphs which need more than a word of criticism we have kept to the last. To state the characteristics of the reign of Elizabeth is a crucial test for an historian, and Messrs. Higginson and Channing have not been notably successful. The passage runs:

> "Elizabeth gave to England a long period of comparative peace, at a time when *great inventions and discoveries were coming into common use*, and while England's *commercial rivals were engaged in the most destructive of all wars*, those for religion. . . . This period of growth also enabled England to take that *lead in commerce* and the arts of peace *which she has ever since maintained*. Elizabeth's reign, too, is renowned as the time of Shakespeare and the other writers of the Golden Age of English literature. *More important, perhaps, than the progress in these various directions* [*i. e.*, including literature] *were the reforms in the administration* of the Government" (p. 121).

One would like to know what the "great inventions" were. Can gunpowder and the printing-press be meant? If so, the chronology is somewhat at fault. The implied contrast between war and commerce is current with modern radicals; but, as Mr. Seeley has shown, it is historically untrue. In Elizabeth's time Spain, indeed, suffered, but France soon recovered; and it was to the wars of religion, which enabled it to conquer the Portuguese East Indies, that Holland owed in great measure its commercial greatness. That England did not "take and retain" a lead in commerce is sufficiently proved by Adam Smith's celebrated observation with regard to the position of the Dutch at the date of the Navigation Act. And it would be interesting to hear what were the reforms in the administration that can be compared for importance with the glorious new birth of English literature.

The other sentences to which we referred are among the last in the book, and occur in a paragraph wherein the authors are laboring, very properly, no doubt, to impress upon their young readers that while England ought to be *most* interesting to Americans, other countries ought to be interesting also:

> "At present our commerce is chiefly with England, and it is the English influence which is most strongly felt in our social habits and, to some extent, in our literature. On the other hand, *we draw* our art from France and *our science from Germany almost as completely as if England did not exist*." (P. 326.)

Is not this protesting a trifle too much? Putting on one side the strong feeling of union between the great religious bodies on this side of the water and the other; putting on one side

also the community of law, which is so great that in the Harvard Law School more regard is paid to English decisions than to those of any American States but Massachusetts and New York—and both these the authors would perchance put under "social habits"—what is to be said of the sentence as to science? Of course, it is sufficiently true to make as an after-dinner remark; every one knows how our would-be professors troop off to Germany. But to teach it in print to young folks in the age of Darwin and Spencer, of Lyell and Mill, of Huxley and Kelvin—not to mention such popularizers as Prof. Drummond with his worshipping audiences—shows hardly that perfectly balanced judgment which we have a right to look for.

But these criticisms have been concerned with more or less remediable matters of detail. With the general teaching of the book but little fault can be found. If it shows no remarkable freshness; or depth of philosophical insight, it at any rate presents the current Whig view in an unobjectionable form. James I. and Charles I., Strafford and Laud, are of course held up for the detestation of young folks in the usual way. It does not seem to have occurred to our authors that although, with the growth of an opulent middle class, a contest between Parliament and the monarchy was bound to come, although it was well that Parliament should triumph in the end, although the contest was embittered by the duplicity of Charles, nevertheless it would hardly have been well for England had the Opposition triumphed in 1629; that the subsequent history of Cromwell and the Independents shows defects in the government of Parliament and the Presbyterians almost as grave as in Tudor rule; that it was not until well-nigh a century had passed that the Cabinet was evolved and Parliament became capable of ruling. That this was a case in which, as so often in history, both parties were justified in struggling for a principle, and that the result was the better because of the struggle, is an idea which does not seem to have dawned upon them. And perhaps it is hopeless to expect the short text-book ever to be absolutely impartial and scientific. For impartiality means carefully guarded sentences; and carefully guarded sentences are not wont to be brief.

## THE EMPIRE OF THE TSARS.

*The Empire of the Tsars and the Russians.* By Anatole Leroy-Beaulieu. Translated from the third French edition, with annotations by Zenaïde A. Ragozin. Part I. The Country and its Inhabitants. G. P. Putnam's Sons.

It is unnecessary for us, at this late day, to enter into a detailed discussion of the merits of M. Leroy-Beaulieu's great work, especially as we reviewed it adequately when it first appeared. We need only repeat here that it is the most extended, and, at the same time, the most satisfactory, of all the serious efforts made by foreigners to explain the phenomena of Russian life, politics, and character. Hitherto the great bulk of the book has deterred publishers from issuing a translation in English, and its valuable contents have, accordingly, remained inaccessible to the general public. It is somewhat surprising that it should have been thus neglected, when so many inaccurate and trivial works on the subject have flowed in a stream from the press, even when we consider that Mackenzie Wallace's capital volumes have, in a certain measure, filled the gap. But M. Leroy-Beaulieu's work is, in many respects, superior to Wallace's, though it does not supersede it; each is the complement of the other. Having thus stated broadly its merits, and assuming more intimate knowledge on the part of those who are acquainted with the original, it remains for us to consider this annotated translation of the first volume, which treats of the country and its inhabitants, and the author's preface to the American edition.

It is worth while to quote one or two of the author's remarks from his preface, as they bear upon the methods employed in the translation. He says:

"One thing I cannot too much impress upon my readers, and that is that we are not justified, we Westerners, in applying to Russia the same rules as to Europe or America. To do this would be the height of ignorance and unfairness. . . . Russia is neither Europe nor Asia, she is a world by itself [*sic*], situated between Europe and Asia, and, in a way, belonging to both. . . . Even tourists, as, with their habitual presumptuous flippancy, they steam by express across the Russian plains, are struck by this anomaly. . . . However remote this ponderous Russian people may appear to us, however backward its civilization and its institutions may seem to us, this newcomer among nations has already manifested an original genius in all branches of human activity—in arts, in science, in letters. . . . Let us, then, whether we call ourselves Neo-Latins or Anglo-Saxons, beware of the inane race-pride which is too often aired by the Teuton on the Elbe and the Vistula, towards the Slav. The Slav has by no means had his final say—indeed, he has scarcely yet lisped his first words. Because he is different from us, and because nature and history have retarded his development, we are not to pronounce him doomed to everlasting inferiority. Such presumption may bring its own punishment. To show us that he has in him the stuff that goes to make a great people, all the Russian Slav needs is a chance and a couple of centuries' credit."

In these remarks M. Leroy-Beaulieu shows his usual discrimination and judgment, which have kept him from useless details in the body of his work, and which hint at the necessity for fulness of explanation and illustration to enable non-Russians to comprehend the unwonted situations and strange people. It is a great pity, therefore, that the translator of what will probably be the only issue of this important work, did not grasp the author's spirit. She confesses frankly that she has abridged the book throughout—"persistent compression," she terms it. In many cases, the result is a lack of clearness, if not absolute obscurity, a lack of precisely the delicate little touches the value of which the author so well understands, in bringing out the salient points of his pictures for those who come utterly uninformed to the subject. It is difficult to quote these often intricate cases, but, in the line of important and apt illustrations which have been omitted, we may point to that which shows the necessity for the study of racial, national character, on p. 138. The omissions are made to allow of space for the annotations. The question arises, Are the annotations, taken as a whole, equal in value to what they replace? It is, no doubt, very interesting to read the comments of an intelligent Russian on the author, but some of the notes are superfluous. Others are very good, such as that on p. 152, controverting one of the author's very rare errors on ventilation; those on pp. 70, 136, concerning German compulsion in the Baltic Provinces, and religious tolerance; that on p. 100, which contains an enlightening statement of Russian beliefs and hopes; and that on p. 249, setting forth why Russia's severance from Europe, at a critical period, which threw it back for centuries, was really a blessing instead of a curse, as is usually assumed. The appendices are generally of value, especially those on pp. 13, 237, which deal with N. Danilevsky's book, 'Russia and Europe.' While conceding the worth and interest of the translator's notes, we must think that it would have been better to give the whole of the text. The bulky volume, which is already much larger than the French, would not have been overweighted thereby. The addition of four maps, not contained in the original, must be heartily commended as a very valuable aid to study such as this book merits.

Of the translation in a technical sense, there is much to be said, both good and bad. The language is fluent, varied, the rendering is free, yet rarely too free. But there are marks of haste or carelessness, such as, p. 48, "the region round Odessa, before it bore the name of New Russia, received from its Serbian colonists that of New Siberia" (meaning Serbia). On p. 42, China is represented as striving "to wrest from the Russian colonists the possession of Siberia." To the heedless omission of the word "Eastern" before Siberia is due the serious misrepresentation of this sentence. Likewise, on p. 48: "These small Oriental colonies, some of them scarcely inferior in the matter of agriculture, have given their first impulse to the navy and to commerce." Had the missing words, "in the South," been added at the end of the phrase, it would not have seemed, as it now does, falsely, to apply to the whole empire. There are occasional very misleading errors of translation, such as naming the willow tree, which is not conspicuous among the notable trees of northern Russia, in place of the alder, as correctly stated by the author; the enormous alder trees being a distinctive feature in the landscape and of great value for certain uses. Again, the translator falls into the curious mistake of saying that the peasants' "staple food consists of rye bread *broken into* the *shtshi*," instead of "black bread, porridge [*gruau*], and *shtshi*." Her comments on food in general, and *shtshi* in particular, justify this quotation of her carelessness. "The child suffers from the difficulty of breathing the air" represents exactly the opposite of the author's meaning—taking out-door exercise.

But the most serious defect of the translation, and one which will be avoided, it is to be hoped, in the remaining volumes, is that arising from insufficient familiarity with the English language. Granted that it is a feat of which any foreigner may well be proud, to have translated such a book even so creditably as this, we have still a right to demand that a standard work should not fail in precisely the points where this is weak, both for the sake of preserving the purity of the language, and for the sake of conveying clearly the author's thoughts. The faults are of several sorts. We begin by specifying wrongly used or imperfectly rendered words: "precipitous race," for precipitate; "primeval," for primary; "platitude," for level; "co-temporary," "parallelly," "confining" for adjoining; "activate," for accelerate; "acception," for acceptation; "sectators," for sectarians; the "social status of Europe," for the "social condition of Europe; "impersonation," for personification; "scrofula is habitual," instead of frequent. A certain class of grammatical faults is illustrated by the following sentences: "To these free institutions the State substituted"; "Mr. Pobiedonostseff advises to adopt": "make out a difference"; "in proportion with"; "without sacrificing the ones to the others." Another class of grammatical

faults, which obscure the sense, arises from the fact that Russians are never able to master thoroughly the different past tenses of the English verb, no matter with what fluency and accuracy they may use the language in other respects. The present tenses also seem to be difficult: "Goes steadily decreasing," "a landholder was saying [said] to me," "serfdom was established as everywhere else it vanished" (when it was vanishing). "Russia was seen only through Poland, and was mostly known only from the pictures drawn by her adversaries" throws the date of the statement into the distant, completed past. *Has been seen, has been known* restore the sense to the ear and the mind. "Nihilism, which has made [made] so much noise from 1878 to 1883," offers another specimen of this Russian peculiarity. The Russian verb offers no assistance in such cases, but the French corresponds so nearly to the English form that there should have been no difficulty in this instance. The best illustration of the effect is given in the following sentence, p. 407:

"If literature in Russia has got very near to the people, it [has] too often approached it with preconceived views, seeking in it what it was determined to find. Some [have] fancied that they could discover in the hidden depths of the popular mind latent forces which they [have] opposed to the barrenness of the vaunted cultured of the upper classes; others, more scornful or more superficial, could [have been able to] see in the people's soul nothing but darkness and barbarism."

Passing lightly over the improper use of the undignified word "don't," and the interpolation on p. 11 of Alexander III.'s reputed remark, we come to a point which is likely to cause grave difficulty to all readers who are not already very well posted—as very few, comparatively, can be—on the history and nomenclature of Slavic lands and peoples. At times the translator gives the English equivalents, at times she converts the French form into the purely Russian term, or she uses different forms at different times, which is still more confusing. Sometimes the Christian name Feodor appears thus, sometimes as Theodor. Liefland is given for the name of the country, Livs for the people. Uniformity would have required either Livonia, Livs, or the full Russian, Liflyándiya, Liflyándetz. Lithuania and an inhabitant thereof would appear as Litvá, Litóvetz; Esthonia and an inhabitant as Estlyándia, Estónetz, if they are to correspond with even the compromise "Liefland." In any case, whichever form is once chosen should be strictly adhered to throughout. Mme. Ragozin furnishes the Russian forms Arkhangelsk, Kalmyk, but translates the French of Crimea and Caucasus, and changes Nice to Nizza. In the matter of Russian words equal confusion reigns as to the English and Russian plurals, both occurring at times in the same sentence: *Mujiki, mujiks; boyars*, and *drujinniki*, etc.

It is well that M. Leroy-Beaulieu's valuable book is, at last, to be put within the reach of English-speaking people, but it is a great pity that the translation, in many respects not only admirable but elegant, should not have been better. It is to be hoped that, in the two volumes which follow, a competent reviser will be employed.

---

*The History of Music.* By J. F. Rowbotham. Charles Scribner's Sons.

Some years ago Mr. Rowbotham (whose 'Private Life of the Great Composers' was recently reviewed in these columns) issued a book in three volumes which he called 'A History of Music.' We have now a new edition of a shorter work on the same subject, to which he has given the title of 'The History of Music.' This title is utterly misleading; it should be 'An Introduction to Musical History,' or 'A Prehistoric Sketch of Music,' for it leaves off—without a word of apology or explanation—where music, as the word is understood to-day, really begins, namely, with the mediæval Arabians and the troubadours. Of the real art of European music, from Palestrina and Bach to Brahms, not a word is said! To call such a book 'The History of Music' is obviously a case of commercial immorality, for it may lead students to get what they do not want, in place of some complete sketch of musical history, like those of Langhans, Fillmore, Rockstro, Ritter, Riemann, Naumann, or the older German authorities.

Apart from this objection, there is much to be said in favor of the book. Unlike the German historians, Mr. Rowbotham does not begin his story with a few Greek legends about the origin of music, but goes back to savage peoples for the earliest traces of the art. He has carefully searched the volumes of anthropologists and ethnologic travellers, gathering from them many curious and suggestive bits of information as to the first manifestations of the musical instinct. Nor has he stopped at the compilation of facts, but he has endeavored to classify them under a theory which has much in its favor. According to this theory there are three stages in the development of prehistoric instrumental music—the drum stage, the pipe stage, and the lyre stage. The drum is capable of giving expression to the earliest of the musical elements—rhythm; the next element, melody, finds utterance through flute-like instruments, while the possibilities of harmony are provided by the lyre. The drum seems to us the simplest possible instrument, yet it is the result of thousands of years of experimenting, and the man who first thought of covering a hollowed-out log with a skin was in his way as great a genius in instrumentation as was Wagner when he invented new instruments to get clang-tints which he craved in his "Tristan" and "Nibelung" scores. It seems odd that by primitive peoples the simple, noisy drum should be used to express their joy and grief; but there are other and much more perfect instruments towards which our emotional attitude has changed with the progress of music. To us, for instance, a solo flute is the very incarnation of dry monotony and lack of expression, whereas the much less perfect pipes and flutes of antiquity moved their hearers to tears and deeds of extravagance in love and heroism. The Peruvians had a regular love-language for the flute, and among the ancient civilized nations, too, the flute had such effect on the feelings that Plato thought no modest woman should hear the Lydian pipe, and that flutes should be banished from the republic. As far as solo flutes are concerned, this is a consummation to be wished in our republic too, but on different grounds.

Of the music of the ancient Egyptians, Greeks, Hebrews, Romans, and of early Christian music, Mr. Rowbotham gives clear and concise accounts, with numerous details not usually found in manuals. Especially interesting is the chapter on the Chinese, in which is prominently brought out the odd fact that Chinese music is less concerned with sequences of notes, or melodies, than with the different qualities of sound, or what we chiefly have in mind when we speak of instrumentation. According to their system, there are eight musical sounds in nature, the sounds of skin, of stone, metal, baked earth, silk, wood, bamboo, gourd; and of these materials the various musical instruments are constructed. The sensuous element thus predominates in Chinese music. After quoting a famous Chinese piece, which to us seems a mere technical exercise, the author comments:

"To judge of the effect of such a piece as this, it is not sufficient to read the notes as they are written here; we must imagine the rich mellow tones of the musical stones, that are softer and sweeter than any gong or silver bell; we must try and fancy these strange notes dealt out like a shower of feathers—flakes of sound falling on the ear, so beautiful that musical notes disappear in the sensuous swell."

Usually, however, this "sensuous swell" of Chinese music—as exemplified in San Francisco—is more suggestive of a boiler factory than of "flakes of sound."

Mr. Rowbotham's theory as to the origin of the pentatonic scale is not convincing, and another criticism to be made is that he gives too much space to the complex Greek system of music, the learning of which is practically a waste of time, as there is no Greek music worth mentioning extant to-day. The same must be said about the minute details regarding the development of notation, Byzantine, Armenian, and otherwise. No one but a specialist has any use for such things, and a specialist would not be apt to consult a compilation of other men's labors. The trouble with Mr. Rowbotham is that he likes to air his erudition. For instance, one of his tricks is to give, after certain expressions, their equivalent in Greek, Latin, or German, in brackets; not, as Schopenhauer occasionally does, when the language he writes in fails to give his meaning to a shade of accuracy, but merely to impress the reader with his linguistic accomplishments. This same tendency has obviously led him to treat by preference those parts of musical history which are most technical, obscure, and uninteresting. Yet he has succeeded in providing students with a clear and readable summary; his style is usually excellent, and in some places, as when he describes the dismal chants and lugubrious musical antics preceding the expected end of the world in the year 1000, and the carnival of merriment, parody, and excess which followed the exposure of the sham prophecies, he even succeeds in giving a dramatic interest to his pages.

---

*Sur Goethe:* Études critiques de littérature allemande. Par J.-J. Weiss. Avec une préface de Francisque Sarcey. Paris: Armand Colin & Cie.

The title-page of this volume is calculated to excite high anticipations. A collection of essays upon Goethe by so eminent a Frenchman as the late M. Weiss, with a preface, too, by M. Sarcey, suggests large possibilities of delight. It is therefore a little disappointing to learn that M. Sarcey's preface is a very slight affair, interesting chiefly for its author's guileless admission that he is unacquainted with the language of "our neighbors beyond the Rhine," and knows nothing of their literature or philosophy except from translations. He is, however, confident that Mr. Weiss knew all about those things and was just the man to treat of them. The soundness of this opinion we do not presume to dispute, though we could have wished for fresher evidence on the subject than the studies here presented, all of which are ancient history. We have, in the first place, a reprint of the doctoral dissertation submitted by Weiss to the Paris Faculty of Letters, in 1856. It is

upon 'Hermann und Dorothea.' One can read it with some pleasure, for it is cleverly written, but only a partial friend would claim for it any special merit either as scholarship or as criticism. It is a *causerie* about this and that, and abounds in rhetorical flights which have a strange sound in a doctor's dissertation. M. Sarcey praises it for its style, and says that it created a revolution in the Faculty of Letters. The dissertations of that day, we are told, were all of the heavy, erudite type, monuments of patience, industry, and—dulness. But Weiss came along and astonished the doctors with a thesis written in a light and incisive style and "sparkling with new views." M. Sarcey singles out for admiration the following passage, which we must give in the original, since the style is in question. The author is speaking a good word for "the love that leads to marriage":

"Il [l'amour] naît," says he, "par un élan irrésistible; il ne croit qu'à un seul être sur la terre; en lui seul il place le bonheur; hors de lui, il ne voit que des joies décolorées; il a ses alternatives d'espoir infini et d'angoisses, de confiance et de doute; des tourments se mêlent à ses joies; il est tout ensemble inquiet, résolu, timide, exigeant, puisque enfin c'est l'amour. Mais comme il se développe en des âmes actives, nourries jusque-là de sentiments sains et dès longtemps habituées à n'aimer que ce qui est bon, à ne regarder comme désirable que ce qui est légitime et possible, on n'a pas à craindre qu'il s'égare et use la vie en transports inutiles. La raison le tempère sans l'affaiblir; elle le guide sans le dépouiller de son charme de liberté juvénile; elle lui communique je ne sais quoi de fort, par quoi il saura se contenir lui-même et au besoin se vaincre."

"Is not this entire commentary exquisite? And how it explains the love of Hermann for Dorothea," exclaims M. Sarcey. For our part, we should think that the love of Hermann for Dorothea is in no need of such a commentary. We surmise that the author of it was not so much intent upon interpreting Goethe honestly as upon lecturing certain of his own countrymen, who were manifesting a strong literary *penchant* for the kind of love that does not lead to marriage. As a counterblast to 'Mademoiselle de Maupin' the passage may be well enough—we will even let M. Sarcey call it "exquisite"—but not as a comment upon 'Hermann und Dorothea.'

The second essay is a reprint of a review, published in 1855, of a so-called "new translation of 'Dichtung und Wahrheit,' by the Baroness de Carlowitz. It is a good review of a worthless book. Two sentences are worth quoting, as showing the general view of Goethe's character at which Weiss had arrived, at a time when such views were much less common than they are now:

"It is thus that before the formal witness of Goethe's Memoirs and before the still more incontestable witness of his correspondence, all those accusations of egoism and of proud insensibility that have been directed against him, fall to the ground. His works as a whole, the more they are studied, will permit no further doubt of the morality of his genius."

The remaining essays, excepting half-a-dozen pages on the interview between Goethe and the first Napoleon, and a short letter dealing with the history of Werther literature in France, do not concern Goethe, but are miscellaneous reviews of German books published in the fifties. The longest and best—the introduction is a really brilliant piece of writing—is an elaborate critique of Freytag's "Soll und Haben."

BOOKS OF THE WEEK.

Bennett, Prof. C. W. History of the Philosophy of Pedagogics. Syracuse: C. W. Bardeen. 50 cents.

## ROBERT CLARKE & CO.'S

*NEW PUBLICATIONS.*

**Wallace. History of Illinois and Louisiana under the French Rule.** Embracing a General View of the French Dominion in North America, with some account of the *English Occupation of Illinois.* By JOSEPH WALLACE. 8vo. Clo. Net, $2.50.

This is an authentic history of the Mississippi Valley from its earliest exploration and settlement by the French until the final surrender of Illinois to the English in 1765, and of Louisiana to the Spaniards in 1769, together with a concise account of the English sway in Illinois till 1778. It includes many biographical and character sketches of the early explorers and notices of the settlement and progress of many of the towns and villages founded by the French in Canada and the Valley of the Mississippi.

**Life of General George H. Thomas.** By Col. DONN PIATT, with concluding chapters by Genl. H. V. BOYNTON. Portrait. 8vo. Cloth. Net, $3.00.

Written in Colonel Piatt's well-known trenchant style, and is doubtless the most incisive of all his war criticisms. It presents at every step the movement of other armies, and will interest the admirers of other leading generals and lead to much discussion. Gen. Boynton has finished the chapters relating to the Atlanta and Nashville Campaigns. Gen. J. H. Wilson's wonderful cavalry expedition, etc., with an outline of Gen. Thomas's career after the war.

**Donn Piatt. His Work and His Ways.** By CHARLES GRANT MILLER, his Private Secretary. Portraits and Views. 12mo. Cloth. $1.50.

An accurate account of Piatt's varied public services as a journalist, jurist, diplomat, soldier, politician, and author. It is enlivened by numerous incidents, illustrating his sense of humor, brilliant wit, crushing, remorseless sarcasm, cogent method of reasoning, and epigrammatic force of expression.

**Donn Piatt. Sunday Meditations, Selected Prose Sketches,** and Critical Sketches of Celebrated Public Men, including Washington McLean, Robert C. Schenck, Henry Ward Beecher, Roscoe Conkling, Charles Stewart Parnell, James A. Garfield, and Richard Realf. 12mo. Cloth. $1.50.

**Donn Piatt's Poems and Plays.** A selection of his Best Poems and Four Plays. I. Lost and Won; II. A King's Love; III. Emotional Insanity; IV. Blennerhassett's Island. 12mo. Cloth. $1.50.

**Eastward to the Land of the Morning.** By M. M. SHOEMAKER. Illustrated 12mo. Cloth. $1.25.

This is an unusually readable book. Mr. Shoemaker not only knows what to see, but how to describe what he sees better than nine travellers out of ten whose observations get into print. We have not for a long time read a descriptive book which so sets before us and lights up to view the scenes in hand.—*Literary World, Boston.*

**Meline's Mary Queen of Scots** and her Latest English Historian. A narrative of the principal events in the life of Mary Stuart, with some remarks on Mr. Froude's History of England. By JAMES F. MELINE. 12mo. Cloth. $1.50.

An admirable critique on Froude. Mr. Meline's style is strong and trenchant; and his sarcasm frequently admirable. He brings some valuable new material into the discussion.

**Osborne's Principles of Economics.** The Satisfaction of Human Wants, in so far as their satisfaction depends on material resources. By GROVER PEASE OSBORNE. 12mo. Cloth. $2.00.

Mr. Osborne holds that the only working definition of the subject is "the satisfaction of human wants." His book will be read with interest on account of the originality of its thought and outline and the clearness of his statements.

*Any of the above sent by mail, prepaid, on receipt of the price.*

ROBERT CLARKE & CO., Publishers,
**CINCINNATI.**

## HOUGHTON, MIFFLIN & CO.'S
## NEW BOOKS.

### Sam Houston and the War of Independence in Texas.

By ALFRED M. WILLIAMS, author of "The Poets and Poetry of Ireland." With a Portrait and Map. 8vo, $2.00. A valuable and interesting book, both as a history of Texas and a biography of Houston, who had a very remarkable career.

### Essays in Idleness.

By AGNES REPPLIER, author of "Books and Men," "Points of View," etc. 16mo, $1.25. These brilliant essays will challenge, instruct, amuse, and delight the reader. They will charm by their good sense, wit, impatience with nonsense, and admirable literary skill.

### The Petrie Estate.

A clever story of the losing and finding of a will, of the course of true love affected thereby, with many other elements of interest. By HELEN DAWES BROWN, author of "Two College Girls." 16mo, $1.25.

### Two College Girls.

By HELEN DAWES BROWN. New Edition. Price reduced to $1.25.

### A Sketch of the History of the Apostolic Church.

By OLIVER J. THATCHER, Professor in the University of Chicago. 16mo, $1.25. A thoroughly interesting book, giving in admirable form the results of the latest researches in the early history of the Christian Church.

### A Roadside Harp.

A new volume of strong, suggestive, remarkable Poems, by LOUISE IMOGEN GUINEY, author of "The White Sail," etc. Attractively bound. 16mo, gilt top, $1.00.

### The Dayspring from on High

Compiled by EMMA FORBES CARY. 18mo, $1.00. A little book of choice passages, a page for each day of the year. The selections comprise quotations from the Bible, and extracts from religious or general literature, largely from the great writers of the Roman Church.

**HOUGHTON, MIFFLIN & CO., Boston.**
*11 East 17th Street, New York.*

## MEISTERSCHAFT SUPERSEDED

*BY ITS OWN AUTHOR,*

**DR. RICHARD S. ROSENTHAL.**

Dr. Rosenthal's name has become a household word wherever foreign languages are studied. A new work,

### The Rosenthal Method of Practical Linguistry

has just been issued by him, which does not only supersede his former system, published 20 years ago, but will be found superior to any method. It is the mature outcome of 25 years' experience of "the greatest linguist and foremost teacher of the age," enabling any one to learn to

*Speak Fluently and Correctly*

with scarcely an effort and without a teacher.

GERMAN, FRENCH, or SPANISH,

within a marvellously short time.

"Next to living in a foreign country, this is undoubtedly the best of all methods for learning modern languages."—*The Dial.*

Exact pronunciation given. All subscribers become actual pupils of Dr. Rosenthal, who answers all questions and corrects all exercises free of charge. Terms of membership $5.00 for each language. Part I, each language, 50 cents.

**POLYGLOT BOOK COMPANY,**
*45 Lafayette Bldg., Chicago, Ill.*

*30,000 Quotations from the World's Great Thinkers and Writers.*

**Session begins 15th Sept.** Full equipment and corps of instructors in Academical, Engineering, Law, and Medical Departments. Excellent Climate. New Gymnasium, with baths free to all students. For catalogues address

**WM. M. THORNTON, LL.D., Chairman.**

## *Educational.*

# Harvard University.

**LAW SCHOOL.**

*Terms of Admission after 1895-96.*

After the academic year 1895-96 the following persons only will be admitted as candidates for a degree:
1. Graduates of colleges of good standing.
2. Persons qualified to enter the senior class of Harvard College.

The following persons will be admitted as special students:—
1. Holders of academic degrees in Arts, Literature, Philosophy, or Science who are not admissible as candidates for a degree.
2. Graduates of Law Schools which confer the degree only after an examination upon a two-years' course of at least seven months each.
3. Persons who pass the examinations now required of those who are not graduates of colleges as a condition of their being admitted as candidates for a degree.

Special students who reside three years at the School and pass in due course the requisite legal examinations, will receive the degree of LL.B. (1) if they at any time during the course entitle themselves to enrolment as regular students, or (2) if they attain a mark within five per cent. of that required for the honor degree.

For circular containing a list of the colleges whose graduates will be accepted as candidates for a degree, apply to JOHN H. ARNOLD, *Librarian of the Law School,* Cambridge, Mass.

## SCHOOL OF INDUSTRIAL ART

OF THE

## Pennsylvania Museum,

BROAD AND PINE STREETS, PHILADELPHIA.

Seventeenth year begins Oct, 2, 1893.

Instructors: Howard F. Stratton, E. W. France, Charles X. Harris (Pupil of Cabanel), Charles E. Dana (Pupil of Luminais), Henry Plasschaert (Pupil of Academies of Brussels and Ghent), C. B. Finckel, M. D. Goodwin, N. d'Ascenzo, Julian Millard, Paul Lachenmeyer, Florence C. Fetherston, E. M. Hallowell, B. C. Algeo, Mary E. Slater, Wm. Roebuck, W. L. Turner, Helen A. Fox, A. C. Simons.

Technical instruction is intimately and continually associated with training in art. The Textile Department, furnished with 14 Power and 50 Hand Looms, with all appliances for Dyeing and Finishing, is the only School of the kind in America.

The following departments are in operation: School of Drawing, School of Applied Design, School of Textile Design and Manufacture, School of Wood Carving, School of Decorative Painting, School of Decorative Sculpture, School of Chemistry and Dyeing, School of Architectural Design.

Registration for year ending January 1, 1893, 365 students from 17 States, including Canada.

Graduates of the School are eagerly sought as decorators, modellers, designers, and superintendents of mills and other industrial establishments.

For circulars and all information address,
L. W. MILLER, Principal.

## *Teachers, etc.*

*A GENTLEMAN LIVING IN CAMbridge, Mass., wishes to let several rooms in his house to graduate or professional students who would prefer the quiet and comfort of a private house to a lodging-house. A party of two or three friends preferred. Apply to* ELLIS & MILLEDGE, Cambridge.

*GERMAN LADY AS COMPANION,* or to teach German, French, English, Music, and housekeeping. Highest references given and required. Inquire of FREDERICK W. HOLLS, Esq., 120 Broadway, New York City.

*MALE PHYSICIAN, 28, IS OPEN TO* engagement to accompany patient travelling or residing in warm climate. No compensation asked in excess of expenses. References given. Address D., care H. Leffmann, 715 Walnut St., Philada.

*A TEACHER OF EXPERIENCE* wishes to take into her family one or two girls, to whom good home care and instruction will be given. Address P. O. Box 443, Concord, Massachusetts.

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship. Willing to travel. Address Dr. X. B., care *Nation.*

*A TUTOR OF LONG EXPERIENCE* wishes to take charge of two or three boys at home or to travel. Athletic sports and shooting.
"G.," P. O. Box 822, Bellows Falls, Vt.

*A COLLEGE PROFESSOR ABOUT TO* spend the winter in Europe would be willing to take a college-preparatory or other student in charge. Address VOYAGER, care of *Nation.*

*COMPETENT GOVERNESS OF GOOD* disposition desired to assist boy of eleven and girl of eight in their studies. Must speak French well. References required. Address F. J. D., *Nation* office.

*CHARLES W. STONE, Tutor for Har-*vard, 68 Chestnut St., Boston.

## *School Agencies.*

*THE ALBERT TEACHERS' AGENCY* always receives many calls for teachers during the months of August and September by telegraph as well as by correspondence. These vacancies must be filled quickly. Teachers with good preparation or good records are now in demand. Address
C. J. ALBERT, Manager,
211 Wabash Avenue, Chicago.

*THE FISK TEACHERS' AGENCIES,* 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & CO.

*THE NEW AMERICAN TEACHERS'* AGENCY.—Teachers seeking positions and those wishing a change at an increased salary should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

*AMERICAN AND FOREIGN Professors,* tutors, governesses, teachers, etc, supplied to colleges, schools, and families. MIRIAM COYRIERE,
150 5th Ave., cor. 20th St., N. Y.

*NATIONAL BUREAU OF EDUCA-*TION, Miss CROSTHWAIT, Prop., cor. Church and High Sts., Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*An Agency* is valuable in proportion to its influence. If it merely hears of vacancies and tells you about them *that* is something, but if it is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*
C. W. BARDEEN, Syracuse, N. Y.

## T. Y. CROWELL & CO.

*HAVE JUST ISSUED:*

### Lorna Doone.

By R. D. BLACKMORE. Printed from new plates on fine paper, with 18 new illustrations by Frank T. Merrill. Photogravure frontispieces. 2 vols., boxed. 12mo, cloth, neat gold line on cover, gilt top, per vol., $1.50; white back and corners, fancy paper on side, gilt top, per vol., $1.50; silk, full gilt edges, per vol., $2.50; half calf, gilt top, per vol., $3.00.

### Romola.

By GEORGE ELIOT. Printed on fine paper and illustrated with 34 reproductions of Florentine photographs. Photogravure frontispieces. 2 vols., boxed. 12mo, cloth, neat gold line on cover, gilt top, per vol., $1.50; white back and corners, fancy paper on side, gilt top, per vol., $1.50; silk, full gilt edges, per vol., $2.50; half calf gilt top, per vol., $3.00.

The publishers have spared neither pains nor expense in their efforts to make this new series of illustrated standard books the finest that has ever been produced at so low a price. Paper, type, illustrations, and bindings are all of the highest quality and combine to make them most attractive books for holiday gifts.

### Margaret Davis, Tutor.

By ANNA CHAPIN RAY, author of 'Half-a-Dozen Boys,' 'Half-a-Dozen Girls,' etc. 12mo, illustrated, $1.25. In this story Miss Ray takes a wider outlook than she has hitherto done, and while her forte lies in the depicting of healthy boys and girls, the story is bound together by a wholesome thread of romance which greatly deepens its interest and warrants the publishers in saying it is by far the best work that she has yet produced.

### The Musical Journey of Dorothy and Delia.

By the Rev. BRADLEY GILMAN. Illustrated by F. G. Attwood. 8vo, unique binding, $1.25. The author has carried out a quaint conceit in a manner that places it on a level with 'Alice's Adventures.' Intensely amusing, yet it blends with its art and fancy much useful information. Every boy and girl studying music will appreciate it.

### Ingleside.

By BARBARA YECHTON. Illustrated by Jessie McDermott. 12mo, $1.25.

Published as a serial in the *Churchman* last year, this story won the unqualified praise of its readers, and great desire was expressed for its publication in book form.

### Chilhowee Boys.

By SARAH E. MORRISON. 12mo, illustrated, $1 50.

A story of interest to both boys and girls, based on old family records of frontier life in Tennessee in the early part of this century. Graphic and fascinating, and destined to be a classic for the young.

## *Back Numbers of "The Nation."*

In response to frequent inquiries from subscribers:

*An incomplete set* of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

*Complete sets*, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

*Single numbers* not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

## Educational.

# Harvard University.

**LAW SCHOOL.**

*Terms of Admission after 1895-96.*

After the academic year 1895-96 the following persons only will be admitted as candidates for a degree:
1. Graduates of colleges of good standing.
2. Persons qualified to enter the senior class of Harvard College.

The following persons will be admitted as special students:—
1. Holders of academic degrees in Arts, Literature, Philosophy, or Science who are not admissible as candidates for a degree.
2. Graduates of Law Schools which confer the degree only after an examination upon a two-years' course of at least seven months each.
3. Persons who pass the examinations now required of those who are not graduates of colleges as a condition of their being admitted as candidates for a degree.

Special students who reside three years at the School and pass in due course the requisite legal examinations, will receive the degree of LL.B. (1) if they at any time during the course entitle themselves to enrolment as regular students, or (2) if they attain a mark within five per cent. of that required for the honor degree.

For circular containing a list of the colleges whose graduates will be accepted as candidates for a degree, apply to JOHN H. ARNOLD, *Librarian of the Law School*, Cambridge, Mass.

**SCHOOL OF INDUSTRIAL ART**
OF THE
**Pennsylvania Museum,**
BROAD AND PINE STREETS, PHILADELPHIA.
Seventeenth year begins Oct, 2, 1893.

Instructors: Howard F. Stratton, E. W. France, Charles X. Harris (Pupil of Cabanel), Charles E Dana (Pupil of Luminais), Henry Plasschaert (Pupil of Academies of Brussels and Ghent), C. B. Finckel, M. D. Goodwin, N. d'Ascenzo, Julian Millard, Paul Lachenmeyer, Florence C. Fetherston, E. M. Hallowell, B. C. Algeo, Mary E. Slater, Wm. Roebuck, W. L. Turner, Helen A. Fox, A. C. Simons.

Technical instruction is intimately and continually associated with training in art. The Textile Department, furnished with 14 Power and 50 Hand Looms, with all appliances for Dyeing and Finishing, is the only School of the kind in America.

The following departments are in operation: School of Drawing, School of Applied Design, School of Textile Design and Manufacture, School of Wood Carving, School of Decorative Painting, School of Decorative Sculpture, School of Chemistry and Dyeing, School of Architectural Design.

Registration for year ending January 1, 1893, 365 students from 17 States, including Canada.

Graduates of the School are eagerly sought as decorators, modellers, designers, and superintendents of mills and other industrial establishments.

For circulars and all information address,
L. W. MILLER, Principal.

**MUSEUM OF FINE ARTS,**
**Copley Square, Boston, Mass.**
**SCHOOL OF DRAWING AND PAINTING.**
The eighteenth year is now open.

Instruction in drawing from the cast and from life, in painting, modelling, and decorative design, and also in artistic anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell and Philip Hale (Drawing and Painting), C. Howard Walker and Mrs. William Stone (Decorative Design), B. L. Pratt (Modelling). G. H. Monks, M.D. (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the Museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

## Teachers, etc.

*A GENTLEMAN LIVING IN CAMBRIDGE,* Mass., wishes to let several rooms in his house to graduate or professional students who would prefer the quiet and comfort of a private house to a lodging-house. A party of two or three friends preferred. Apply to ELLIS & MELLEDGE, Cambridge.

*A LADY WILL RECEIVE INTO HER* household one or two young ladies who desire a permanent home in New York, or while pursuing some branch of study. Convenient location. Highest references furnished and required. Address
Mrs. M. D. DENNISON, Station G, New York.

*TWO YOUNG LADIES DESIRING* the educational advantages of Boston can find a home in a private family by applying to Miss WALLEY, 78 Huntington Avenue, Boston, Mass. Highest references required.

*GERMAN LADY AS COMPANION,* or to teach German, French, English, Music, and housekeeping. Highest references given and required. Inquire of FREDERICK W. HOLLS, Esq., 120 Broadway, New York City.

*A TEACHER OF EXPERIENCE* wishes to take into her family one or two girls, to whom good home care and instruction will be given. Address P. O. Box 443, Concord, Massachusetts.

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship. Willing to travel. Address Dr. X. B., care *Nation*.

## Teachers, etc.

COMPETENT GOVERNESS OF GOOD disposition desired to assist boy of eleven and girl of eight in their studies. Must speak French well. References required. Address F. J. D., *Nation* office.

CHARLES W. STONE, Tutor for Harvard, 68 Chestnut St., Boston.

## School Agencies.

THE ALBERT TEACHERS' AGENCY always receives many calls for teachers during the months of August and September by telegraph as well as by correspondence. These vacancies must be filled quickly. Teachers with good preparation or good records are now in demand. Address

C. J. ALBERT, Manager,
211 Wabash Avenue, Chicago.

AMERICAN AND FOREIGN TEACHers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to

Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

THE FISK TEACHERS' AGENCIES, 4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N.Y., 106 Wabash Ave, Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

THE NEW AMERICAN TEACHERS' AGENCY.—Teachers seeking positions and those wishing a change at an increased salary should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

AMERICAN AND FOREIGN Professors, tutors, governesses, teachers, etc, supplied to colleges, schools, and families. MIRIAM COYRIERE, 150 5th Ave., cor. 20th St., N. Y.

NATIONAL BUREAU OF EDUCATION, Miss CROSTHWAIT, Prop., cor. Church and High Sts, Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*An Agency* is valuable in proportion to its influence. If it merely hears of vacancies and tells you about them *that* is something, but if it is asked to recommend a teacher and recommends you, that is more. Ours *Recommends*

C. W. BARDEEN, Syracuse, N. Y.

## Died.

GARRISON.—In New York city, September 22, 1893, Annie McKim Dennis, wife of Wendell Phillips Garrison, in the fifty-third year of her age.

**Herbart's Science of Education.**

Translated by HENRY M. and EMMIE FELKIN. With Preface by OSCAR BROWNING.

Herbart began the study of education and of the human mind as a private tutor of boys of gentle birth and nurture, intended to receive the higher education. His experience, therefore—and with him theory and practice always went hand in hand—is of especial value in public schools.

Cloth, 286 pages. $1.00.
Sent by mail, postpaid, on receipt of price.

**D. C. HEATH & CO., Boston.**

**WILLIAM R. JENKINS,**
851 and 853 Sixth Ave., N. W. Cor. 48th St., N. Y.

**FRENCH** *AND OTHER FOREIGN* **BOOKS.** *Send for Catalogue.*

**SCHOOLS** *furnished with all text-books, stationery, printing, and completely* **SUPPLIED** AT SPECIAL RATES.

**UNIVERSITY TOWN OF INNSBRUCK, TYROL, AUSTRIA.**

1,900 feet above the sea, with dry, bracing climate.

**HOTEL TIROL.**

Open all the year. CARL LANDSEE, Proprietor. Large, airy, sunny rooms; modern conveniences; superior cuisine. Reduced rates in winter. Eminent medical care if desired. Unusual educational advantages on moderate terms. Excursions a specialty. Best references. Illustrated pamphlets sent on application.

**T. Y. CROWELL & CO.**

*HAVE JUST ISSUED:*

**Vanity Fair.**

By WM. M. THACKERAY. Printed from new plates on fine paper, with 18 new illustrations by Frank T. Merrill. Photogravure frontispieces. 2 vols., boxed. 12mo, cloth, neat gold line on cover, gilt top, per vol., $1.50; white back and corners, fancy paper on side, gilt top, per vol., $1.50; silk, full gilt edges, per vol., $2.50; half calf, gilt top, per vol., $3.00.

**Ivanhoe.**

By SIR WALTER SCOTT. Printed from new plates on fine paper, with 18 new illustrations by H. M. Eaton. Photogravure frontispieces. 2 vols., boxed. 12mo, cloth, neat gold line on cover, gilt top, per vol., $1.50; white back and corners, fancy paper on side, gilt top, per vol., $1.50; silk, full gilt edges, per vol., $2.50; half calf, gilt top, per vol., $3.00.

**The True Woman,**

Elements of Character drawn from the life of Mary Lyon and others. By the Rev. W. M. THAYER, author of 'Pioneer Boy,' 'Farmer Boy,' 'Nelson, the Country Boy,' etc. 12mo, illustrated, $1.25.

Many thousand copies of this biography have been sold, but the author, feeling that there has been a great change of public opinion regarding the employments of women, has entirely rewritten it from the modern standpoint. It is sure to have a still wider popularity.

**Children's Favorite Classics.**

Few books written for young people possess greater merit or have had a wider popularity than the volumes in this series. This new uniform style is the most attractive form in which they have ever been issued.

Fully illustrated, colored frontispiece, cloth back and corners, fancy paper sides. 8 vols., 16mo, each $1.00. 8vo edition, with colored borders, attractively bound in white and colors, each $1.25.

*Alice's Adventures in Wonderland.*
*Through the Looking Glass.*
*Jackanapes and Daddy Darwin.*
*The Story of a Short Life.*
*Lob Lie by the Fire.*
*The Little Lame Prince.*
*The Adventures of a Brownie.*
*The Peep of Day.*

*Send for our complete Catalogue of new and important publications.*

**THOMAS Y. CROWELL & CO.,**
*46 East 14th St., New York.*

*CHICAGO WORLD'S FAIR, 1893.*

**EM. TERQUEM,**

*Representative of the French Publishers. Book Department*

(East Gallery, Manufactures and Liberal Arts Building)

Extends a cordial invitation to his many friends and patrons in the book trade, as well as to librarians, book-collectors, and publishers and importers interested in French Literature, to call upon him at any time during the Exposition. An opportunity will be afforded to inspect the productions of the leading publishing houses of France, including every branch, from the cheapest popular issues to the most expensive *éditions de luxe*. Also many interesting specimens of fine bindings.

A catalogue, in itself a work of art, and an interesting *vade mecum*, will be mailed on application to the above address, on receipt of 20 cents for postage.

**KINDERGARTEN SUPPLIES**
*at Schermerhorn's, 3 East 14th St., N. Y.*

**Charles Scribner's Sons'**

*NEW PUBLICATIONS.*

**David Balfour.**

Being Memoirs of His Adventures at Home and Abroad. By ROBERT LOUIS STEVENSON. 12mo, cloth, $1.50.

Mr. R. H. STODDARD in *Mail and Express:* "We have not hesitated to compare Mr. Stevenson with Scott when Scott is at his best, nor shall we hesitate to compare him with Thackeray, even in 'Henry Esmond,' though a better book with which to compare this marvellous story would be 'Barry Lyndon.'"

**With Thackeray in America.**

By EYRE CROWE, A.R.A. With 121 Illustrations from sketches by the author. Small 4to, $2.00.

New and charming glimpses of the great novelist are given in this chatty and readable book of Mr. Crowe, the artist who accompanied Thackeray on his journeyings in this country. The rapid and graphic narrative also describes the writer's own very lively impressions of the country and people of forty years ago, while the drawings include portraits of the most eminent notabilities and characteristic scenes of that day.

"A book that no lover of Thackeray will be willing to leave unread. Not only is it interesting from the near view it gives of the author of 'Vanity Fair,' but for the picture it paints of the United States of forty years ago."—*The Critic.*

**The Cameo Edition.**

**Virginibus Puerisque and Other Papers.** By R. L. STEVENSON. With etched portrait.

**Letters to Dead Authors.** By ANDREW LANG. With etched portrait and four additional letters.

These two volumes, the rare individuality and fine literary quality of which have long been relished by the lovers of *belles lettres*, appear in the popular Cameo Edition, each having an etched portrait of unusual interest, and Mr. Lang's book having four additional letters. Each 16mo, half levant, $3.50; half calf, $2.75; cloth, $1.25.

**Noah Porter.**

A Memorial by Friends. Edited by GEORGE S. MERRIAM. With two portraits. 8vo, $2.00.

Many of the closest friends of the late President of Yale University contribute valuable papers to the biographical portion of this important work, while Dr. Porter's philosophical and theological teachings are clearly expounded by high university authorities. The bibliography and portraits add to the interest of a book which will appeal to every admirer of Dr. Porter.

**Windfalls of Observation;**

For the Edification of the Young and the Solace of Others. By EDWARD SANDFORD MARTIN. 12mo, $1.25.

A series of brief essays on topics of perennial interest, intimately personal in tone, literary in touch, and both shrewd and humorous—characterized by a distinct "Roundabout," though at the same time thoroughly American, flavor.

*NEW JUVENILES*

**The Wreck of the Golden Fleece.**

The Story of a North Sea Fisher Boy. By ROBERT LEIGHTON. With eight full-page Illustrations. Crown 8vo, $1.50.

A boys' story of exciting adventures and perils by sea, in the period of the French Revolution.

**Westward with Columbus.**

By GORDON STABLES, R.N. With eight full-page Illustrations. Crown 8vo, $1.50.

A story with Columbus as the hero, possessing all the value of historical truth and all the charm of the most daring romance.

**New Stories by Mr. Henty.**

**Through the Sikh War.** A Tale of the Conquest of the Punjaub.

**St. Bartholomew's Eve.** A Tale of Huguenot Wars.

**A Jacobite Exile.** Being the adventures of a Young Englishman in the Service of Charles XII. of Sweden.

Each crown 8vo, fully illustrated, $1.50.

*** *Sold by all booksellers, or sent, postpaid, by*

*NEW YORK, THURSDAY, SEPTEMBER 28, 1893.*

## The Week.

TRADE and industry in the complicated conditions of modern life exist by and through confidence—confidence in institutions, and confidence in the standard of value. Both are shaken by the spectacle which the Senate exhibits to-day. Republican institutions cannot be carried on except by the rule of the majority. No man is far-seeing enough to foretell the future form of government of the United States. The only safe prediction is, that there can be no Union without the rule of the majority, and that under any suspension or impairment of that rule the country must dissolve into its original constituent parts. We say this not because the Silver Bill is the immediate subject of discussion, but because the same result must come to pass whenever the majority principle is broken down. If we have reached the point in our national existence where the obstruction of a minority cannot be overcome, then patriotic citizens must drop all other concerns and lay aside all other differences until the rule of the majority is reëstablished. This was what they did when Abraham Lincoln was first elected President. It was not to abolish slavery that the people took up arms in 1861—that was only an incident. It was to vindicate and enforce the rule of the majority. It was seen then, as it must be seen now, that the rule of the minority is revolution, anarchy, chaos, and that no price is too great to be paid for putting it down.

---

The truth is, that the Senate is in a state of revolution. It may need a counter-revolution to put the country once more in the path of progress. The framers of the Government supposed that they had established a going concern. We all so supposed. It has turned out differently. The wheels have stopped. If the Senate would simply reject the bill that the House has passed, we should know where we stand. An issue would then be made, parties could take their stand upon it, new parties could be formed if there were need, and we could go to work, American-fashion, to elect new Senators enough to execute the people's will. We are all ready to submit to that will when it is fairly and squarely expressed. But the case before us is quite different. It is a case where the getting of a majority does not accomplish the end. We have the majority now, but it cannot or will not work. It is in this that the revolution consists. The form of government that the fathers established has ceased to be.

---

There is strong probability, from the movement of the foreign exchange market, that we shall send back to Europe a considerable part of the recently imported gold. Stock-market prices are yielding on the prospect of such exports, and a tone of something like discouragement is perceptible in general trade. A large part of the summer's specie imports represented borrowed money. These loans, chiefly made to us in London, were made on short time, and now they are maturing. In sending back the gold, it is true, we are doing only what the Bank of England did in 1890, when the $15,000,000 gold borrowed during the Baring crisis from the Bank of France was returned, a few months later, in the very kegs in which it came. The anxiety with which our present exports are regarded is not due, moreover, to our inability to spare the money. Here in this city, bank reserves exceed the legal minimum by upwards of $17,000,000, and a large proportion of this surplus is available in gold. But the movement is none the less a bitter disappointment and an ominous sign, in that it signifies continued distrust of our finances by the foreign capitalists. The cause of this distrust is perfectly well known. It is a natural sequel to Europe's attitude toward us for two years past. Had both houses of Congress acted promptly in sweeping from our statute-books the cause of this year's monetary troubles, confidence would have been restored in Europe as in this country. Foreign money would have sought investment here, notably in the profitable loan market. The gold that we have imported would have stayed here. But the delays, the threatenings, and the defiant filibustering of a minority of the Senate have filled the foreign mind with the suspicion that the controlling forces in the Government are still unsound on the currency question. Therefore the foreign capitalists refuse to lend or invest their money here, and are already both calling in the loans made and selling the securities bought during the stress of panic. This is what the rise in foreign exchange signifies, and the disquiet with which it is regarded in the financial community is not unreasonable. Moreover, unless the Senate stops the farce very soon, the present unfavorable symptoms are certain to be aggravated and intensified.

---

The speech of Senator Gray of Delaware on the Silver-Repeal Bill is one of the best examples of true debating power that have been given in either branch of Congress during the discussion. He answered in a masterly way the argument, or assertion, that there is not gold enough to do the business of the world, showing that the progress of civilization calls for less gold instead of more, its use as a standard being the main thing, while its use as a circulating medium grows relatively less as banking facilities and other media of exchange increase and multiply. While Mr. Gray was elucidating this point, Senator Hoar interrupted him to quote a manager of one of the largest New York banks as having settled transactions to the amount of $35,000,000 in one week, which balanced each other so nearly that thirty-eight cents paid the difference. The mental attitude of the civilized world towards gold and silver was another thing to which Mr. Gray gave his attention, showing that the preference for gold was beyond the control or influence of legislation. The wages question was also admirably handled by Mr. Gray.

---

While Senator Gray was speaking, Senator Daniel of Virginia interrupted him with the following questions:

"Will the Senator allow me to ask him why it makes such a tremendous convulsion of business when a few million dollars of gold go from this side to England to settle the balance, or a few million come back? If money volume is not needed, why is it that the transfer of a few million dollars of gold from one side of the water to the other throws one continent or the other into a convulsion?"

Because it doesn't! Who has heard of any convulsion in Europe consequent upon the transfer of $45,000,000 of gold to this country in the months of July and August, nearly all having come within a period of four weeks? Cast your glance backward, Mr. Daniel, to the year 1891, and you will find an exportation of gold from this country to the great amount of $70,223,494, all within a period of six months, and no convulsion at all. Go back a little further, to May, 1888, and you will find an exportation of gold continuing till July, 1889, amounting to $61,435,989, without any convulsion. Going back still further, to 1880 and 1881, you will find net gold imports of $77,119,371 in the former year and $97,466,127 in the latter, without any convulsion in Europe in consequence thereof. In fact, the only case in late years where a large gold movement was accompanied by a convulsion was that which began in this country in the early months of the present year. In this case the gold movement was a part of the convulsion. Both were caused by the apprehension that we were nearing the single silver standard, and they will come again if that apprehension returns.

---

It is something more than a question of political consistency which ex-Speaker Reed raises when he appears in the rôle of a filibuster. One must go back of his own famous rules of three years ago against filibustering, to the basis upon which those rules were made to rest by Mr. Reed and his party colleagues. This was, that filibustering was an immoral thing *per se*, and that it was only because the Democrats were wicked men that rules had to be devised for

restraining them from doing what no good man would ever do, rules or no rules. Republicans had before indulged in merely obstructionist tactics, it was true, but they had become convinced of the error of their ways and would never do so again. Who does not recall the pious roll of the eyes with which McKinley, as leader of his party on the floor, said that he and his fellow-Republicans were heartily ashamed of ever having filibustered, and were ready to take a solemn vow that they would never incur such guilt again? The Reed rules were thus entitled to rank with the general rules of morality. They were not at all designed to whip through partisan measures, but only to recognize the sacred right of the majority to do business, and to brand as he deserved to be branded any man who should thereafter be base enough to make a dilatory motion in Congress, such as the ex-Speaker and his followers made by the dozen in the past week, like so many wicked Democrats.

---

Mr. Reed's display of pique and indignation was directly caused by the demonstration that the majority could have its way without lodging autocratic and dangerous power in the hands of the Speaker. That his way was the only way to enable Congress to do business has been his somewhat tiresome parable for three years. The Democrats would have to come to it, he has maintained, or they would find their hands completely tied. But it has now been shown how effective an entirely different method can be made when the Committee on Rules, backed up by a majority of the House, are empowered to fix the order of business and the time for taking a vote. Mr. Reed's plan, it must be admitted, remains the only one known by which laws can be passed without a quorum present, and by which the Speaker can "count" into the House at Washington a member who is physically in Baltimore. That distinction he can still boast to be his uniquely; but he can no longer assert, in the face of a demonstration to the contrary, that the majority can find no other way than his to make their will law.

---

The close, last week, of the "hearings" given to the protected manufacturers by the Committee on Ways and Means at Washington, ends for the present one of the most curious features of the protective system as we have practised it. These "hearings" have been a regular part of the Congressional business for twenty-five years. As a basis of legislation, they were as odd as anything in the history of governments. They virtually consisted of applications for grants from the public Treasury to assist private individuals in carrying on business which, on their own showing, was not profitable. No test of the accuracy of their figures was ever applied. They were not even examined under oath, nor were they required to prove that the unprofitableness of their business was not due to bad management, or incapacity, or extravagance. All they had to say was that, at present prices, they could not make profits. They could not have borrowed money from any bank simply on such stories as they told Congress, and yet these enabled them year after year to get taxes levied on the whole community for their benefit. The worst of it was that the "hearings," long before the Republican party went out of power, became simply explanations to the majority in Congress of the terms on which contributions to the campaign funds could be had. We do not think the Republicans specially to blame for this. Any party which offers a protective tariff to manufacturers is sure to come to it sooner or later, because no tariff can be made simply a help to the energetic and capable. It inevitably becomes also a means of support to the lazy and incompetent, and this class, in order to get it, will always be ready to share the largess with the donors.

---

All the extreme high-tariff organs are asserting that the tariff hearings at Washington have been closed because the Committee could no longer bear up under the weight of unanswerable testimony in support of the McKinley Law, which both Republican and Democratic manufacturers laid before them. A very different view is taken by the American *Wool and Cotton Reporter*, which is both a Republican and a protection authority, for that journal says that the "cause of wool and woollen industry was not benefited by the appearance last week, before the Ways and Means Committee, of prominent advocates of the McKinley Law"; that these "McKinleyites, who represent only a minority of manufacturers, are directly responsible for the defeat of the Republican party last fall," since "they carried the principle of protection too far, and the country protested against it," and that what the woollen industry needs, more than anything else, is a stable and permanent tariff. The responsibility for the lack of such a tariff the *Reporter* puts upon the Republican party as follows:

> "The Republican party had it in its power four years ago to construct a tariff that would have proved acceptable to the country, and have stood unchanged in any essential features through years to come; a law that would have taken the tariff question out of politics, and enabled the manufacturer to shape his policy for the future without fear of being compelled to change it and adapt it to new conditions arising out of a change in the policy of the Government. The party, under the lead of extremists, who were over-greedy in their desire for high protective duties, saw fit to antagonize the better judgment of the country, and in consequence it has been discharged from power, and the duty of constructing a tariff more in keeping with the views of the country has devolved upon the Democratic party."

---

The President's appointment of Mr. William B. Hornblower as an Associate Justice of the Supreme Court commands, as it deserves, the most unqualified praise from all quarters. It is simply a selection which is beyond criticism. Mr. Hornblower stands in the front rank of the younger generation of lawyers at the New York bar, having won his position through sheer force of ability and absorbing devotion to his profession. He will take his seat upon the Supreme Bench at an earlier age than the great majority of men who have preceded him, but, in the estimation of his professional associates, he will enter upon his duties as thoroughly equipped, both by natural judicial temperament, high legal ability, and varied experience, as any of his predecessors. Within recent years it has been the custom to select men further advanced in years for this court, but there have been four members of it who, at the time of appointment, were younger than Mr. Hornblower is. Story, one of the ablest judges that ever sat on this bench, was only thirty-two at the time of his appointment, and Johnson of South Carolina was of the same age. Bushrod Washington was thirty-six, and Iredell was thirty-nine. Mr Hornblower will enter the court in the fulness of his powers, and with the prospect of giving the country many years of honorable and useful service.

---

Secretary Herbert seems to be unwilling to have it appear that he did a gracious and manly thing in restoring Capt. Higginson to active service. He resents the praise which the *Evening Post* has given him for his course in the affair, and says that his letters to Capt. Higginson really constitute a severe "reprimand." This is largely a matter of taste and fancy, we should say. The facts are, as shown by the extracts from the letters which Mr. Herbert gave out for publication on Monday, that he wrote to the officer whom he had removed: "The Department, accepting your assurances, is free to say that you would not have been removed from command of the *Atlanta* had it known at the time that you had not seen, and that you did not know the contents of, the despatch referred to." This may not be an "apology," but it certainly is a confession that the Department rushed ahead to disgrace an officer, and to inflict a heavy pecuniary penalty on him, without first making sure, as it easily could have done, that it had good grounds for its action. The Secretary also informed Commander Higginson that "the transactions herein referred to will not be permitted to prevent your being assigned to such duty as your rank entitles you to perform, when opportunity offers." This fully satisfied Capt. Higginson and all concerned, and seemed to afford good ground for commendation of the Secretary. But if that view of the case is distasteful to him, and if he prefers to have it thought that he had consistently preserved a sour and vinegar aspect throughout the whole affair, nothing is easier than to withdraw

any remarks tending to put him in a more amiable light.

---

A minor abuse in the conduct of the Navy Department, which has long been practised, but which had some peculiarly flagrant illustrations under the last Administration, is the appointment of civilians over the heads of regular officers in line of promotion. Such appointees are, by statute, given a "ranking date" six years prior to their actual appointment, and are also paid from two hundred to five hundred dollars a year more than officers of the line draw in similar positions. But there is no real reason for such appointments, except the desire to pay a political debt or to confer a personal favor; and the sense of outrage which they inevitably provoke in the men passed over is distinctly bad for the service. Particularly is that the case when, as happened more than once during Harrison's Administration, men who have been unable to pass the examinations at the Naval Academy, are picked up by politicians and put into the service with higher rank and better pay than the members of the very class from which they were dropped for incompetence. If civilians are to be appointed at all to paymasterships in the navy, they ought to be civilians pure and simple, and not these fellows who fall back on the politicians to boost them where they cannot climb. Secretary Herbert has shown himself so considerate of the feelings and rights of naval officers in the Higginson matter that we are encouraged to hope he will set his face against this inveterate but demoralizing practice.

---

For a controversy that has been settled by an infallible Pope, with his own Legate on the scene to see that it stays settled, the Catholic controversy over the public-school question has a curious way of breaking out afresh every day or two. On the one hand, "the Faribault plan" has been given up at Faribault, and we were positively assured that this marked the end of the experiment, and that the step had been taken under the direct orders of the Holy See. But now comes Archbishop Ireland to inform us that the giving up of the arrangement at Faribault is simply a new illustration of its beauties, showing how easily either party can withdraw from it. He further affirms that "the principle involved" was not at all affected, and that, in fact, the plan is "now in force in thousands of schools." This last statement looks like a bit of rhetorical exaggeration, or of misreporting, but the Archbishop's emphatic assurance that he is "in full touch with the Holy See in the matter" is of great significance. Like Archbishop Satolli's recent action in connection with the Hoboken parochial school, it shows that, however ambiguous the Pope's reasoning on the subject may be, his acts are with the progressive party, and infallible action is a far more important thing to have on one's side than infallible reasoning.

---

The verdict of the Coroner's jury fixes the immediate responsibility for the Chester disaster upon the foreman in charge of the repairs on the bridge, but holds the Boston and Albany Railroad Company ultimately responsible. This should have a salutary effect in preventing such criminal neglig nce in the future. Railroad companies cannot go upon the supposition that a contractor who is making alterations on their tracks will be sure to be a model of caution; they must themselves provide rigid and constant inspection to make it certain that the lives of their passengers are not needlessly endangered. The past two weeks have brought American railroad management into serious disrepute by the succession of accidents which have occurred within that time, most of them attended by loss of life, and nearly all of them due to criminal carelessness on the part of some employee. Collisions have come along so regularly day after day that the first instinct of a reader of the morning paper has been to ask, "Where was the railroad accident yesterday, and how many were killed in it?" To call the infallible result of lax discipline and blundering management an "accident," is getting to be a ghastly sort of euphemism.

---

The report of one day's votes at the Belfast Trades-Union Congress gives one some idea of the work the British Parliament will have before it in case Labor ever gets control of it. For example, Government contractors must be all made to pay "fair wages"; disused Government stores must not be sold; the Government must provide work for all unemployed persons, so that in case of strikes the employer may have no reserve to draw on to take the places of the strikers. It must make all sea-going vessels carry sails, masts, and yards to work the ship in case of a break-down of the machinery. It must have all goods so marked as to indicate whether they are hand or machine-made. It must not allow employers to make deductions from wages for rent, motive-power, tools, or fines. It must make eight hours a legal day's work, and prohibit night work in bakeries. It must give the Government civil servants direct representation in Parliament. It must pension "aged workers." It must enable fishermen and seamen to vote before going off on their cruises. It must not allow the military to be used in putting down strike riots.

---

This, it must be remembered, was only one day's work. If the legislative programme of the whole session were put together, it would be found that, were the suggestions of the Congress adopted, the care and sustenance of the laborer and the provision for his amusement and relaxation would consume a large portion of the revenue, and all of the time, of the other classes of the community. The position of the non-mining inhabitants of Wales and Yorkshire, for instance, when the miners were out rioting, or "disputing," as the Congress calls it, would be one of great embarrassment if the soldiers were forbidden to interfere. Not only would these persons be unable to do their duty in taking care of the laborer, but they would be placed in great terror for their own lives and property owing to his angry condition when "on strike." We have made no mention of "compulsory arbitration," which some of the representatives of Labor in the House of Commons are pressing on the attention of the Ministry, and which will be very important, because, if ever adopted, it will give the Government arbitrators the right to fix the conditions on which a man shall carry on the business wherein he has invested his capital, whenever Labor chooses to raise a question by finding fault. The bill will therefore need a clause binding the Treasury to pay twenty shillings in the pound to the creditors of every firm which fails after the arbitrators have sat upon it.

---

A standing complaint of French coal-miners has been the competition of English coal with French in the French market, and the consequent periods of idleness or running on half-time frequent in the Pas de Calais coal mines. This being so, one would have thought that the great strike in the English collieries, so prolonged and so seriously cutting short the supply of coal, would have given the French miners just the chance they have been praying for. Not only were the English exports of coal to France broken off, but English manufacturers began to inquire for French coal in order to keep their furnaces going. The natural result was to exhaust the French stocks and to create an unaccustomed demand for mining. But what did the two Socialistic Deputies who represent the miners in Parliament do but seize this opportunity to issue a proclamation calling upon the men not to mine a single lump of coal more than the normal quantity! This course was necessary, said Messrs. Basly and Lamendin, "in the name of international solidarity." Moreover, they argued (somewhat, it must be confessed, in the face of international solidarity) that now was the time to punish those French manufacturers who had been in the habit of buying their coal abroad. The thing to do was to refuse to sell them a solitary pound, thus leading them to a thorough realization of the wickedness of buying anything from foreigners. The miners appear to have bettered these instructions and gone on strike just at the moment that the English collieries are starting up. Such international solidarity looks, from this distance, suspiciously like international stupidity.

### *THE BIMETALLIC TERROR.*

THAT increasing number of psychologists who believe in the existence of a lesion in the bimetallic brain will, we fear, be reinforced by an article from the pen of Mr. Grenfell, one of the bimetallic leaders, in the last *Fortnightly Review*. Mr. Grenfell, it will be remembered, lately abandoned the Liberal party in Parliament, partly because he could not swallow the Irish Home-Rule Bill, but mainly because he could not put up with Mr. Gladstone's sportive treatment of the bimetallic theory. He now frees his mind a little in the article in question, which is entitled, "Mr. Gladstone and the Currency." The very opening page explains the disposition of the alienists to question the sanity of the bimetallic mind, because it shows the existence of that fatal premonitory symptom of mental decline—vague terror, dread of unknown evils.

By way of preparing the reader for the nameless horror to which he is about, as newspaper correspondents say, to "draw attention," Mr. Grenfell cites Alison's—the great Alison, the historian of Europe in ever so many volumes—explanation of the fall of the Roman Empire. Pliny, Gibbon, Niebuhr, Mommsen, Merivale, Hodgkin, and many others attribute this tremendous catastrophe to slavery, to the exhaustion of the free population of Italy and the corruption of the provincial governors, in the presence of increasing pressure from the northeastern barbarians. They say, too, or intimate, that the "fall" began after the death of Augustus, and lasted 500 years. But they make an awful mistake. For what does Alison say (Mr. Grenfell quotes it with a bimetallic chuckle)? "The fall of the Roman Empire, so long ascribed *in ignorance* to slavery, heathenism, and moral corruption, was in reality brought about by a decline in the silver and gold mines of Spain and Greece." There you have it. Poor Pliny, poor Gibbon, poor Niebuhr, poor Mommsen, poor Merivale, and poor Hodgkin! Alison thinks the modern world has been saved from a similar catastrophe—the ruin of its entire civilization—by the discovery of gold and silver in America, and more recently in Australia and California; but Grenfell rebukes him for this view, which he says is too "optimistic." "The mines of California and Australia have not," he says, "fulfilled the hopes which they at first excited. It will appear later that, aided even by the Transvaal, these mines to-day produce too little gold to satisfy the ever-growing needs of industrial society."

Of course the same thing is true of the silver mines of the world. None of them fulfil the hopes they at first excited. A large number of the most productive are already showing signs of exhaustion. The earth does not contain an *inexhaustible* supply of either of the precious metals, and must, as the years roll by, prove more and more incapable of satisfying the ever-growing needs of industrial society. What is this but proof that all that bimetallism can do for us is to postpone for a short period the "fall" of modern civilization? The double standard may enable us to stagger on a little longer, but the day will come when our gold and silver mines will both, like those of ancient Spain and Greece, give out, and then, like ancient Rome, there will be nothing left for us but to "fall," like her, into barbarism, hunger, and despair. There will be people in those days who will say that our civilization perished through idleness, through extravagance, through easy divorce, political corruption, or the triumph of Socialism, or the exhaustion of our fuel, but the bimetallists alone will have the real secret of the catastrophe. "You have come to your present awful situation," they will say to the disgusted and disheartened remnant of the human race, "through your inability to keep up the double standard—or, in other words, through shortness of the two metals, in the proportion of 15½ to 1. You have no circulating medium, and there is nothing left you now but to cut each other's throats and live on plunder. You cannot exchange the products of industry if you have no gold or silver, and therefore there is no longer any use in being industrious."

Further on Mr. Grenfell says, that if "Bimetallism," which he spells with a large B, "be not adopted, consequences of an incalculably disastrous nature *must of necessity* ensue. In an appreciating gold standard," he adds, "Bimetallists see impending a terrible catastrophe which in course of time must overwhelm all classes of the community, and they consider it their duty to do what lies in their power to avert it." There is, of course, much doubt whether the bimetallists themselves could explain, even to the most tactful and experienced alienist, what the nature of this "terrible catastrophe" will be. But by closely listening to their mutterings, one learns, with some approach to certainty, that the thing which inspires them with so much vague terror is the prospect of a further fall in prices. It is only in this way that the appreciation of gold could ruin the modern world as the ancient world was ruined. The hallucination which makes them see in this a "terrible catastrophe" for "all classes of the community" is undoubtedly the belief that all classes of the community and all individual adults are sellers and debtors simply, and never, or hardly ever, buyers and creditors, and they foresee a crisis in which all the civilized nations would be on the market with goods to sell, and yet unable to find anybody to buy. That would certainly be an awful market day—a true *dies iræ*—and would amply justify the bimetallist fears. But, as the world is now arranged, this terrible scene can never be witnessed, for there will always be far more men and women to rejoice over low prices than to lament over them. Prices can never get low enough to break *all* hearts. The protectionist vision of foreigners ruining whole communities by dumping cheap goods on them has never yet been realized, and never will be.

Luckily the bimetallic arguments always contain their own antidote. This is true of Mr. Grenfell's. He shows us what is likely to happen if we do not become bimetallic by pointing to what has happened since we ceased to be bimetallic, say twenty years ago, in 1873. He draws a dreadful picture of the condition of the civilized world since then, but the civilized world refuses to recognize it. It is true, prices have fallen, but the civilized world refuses to treat this as a calamity. It says, on the contrary, that this shows that the great work of civilization is going on with ever increasing rapidity. Every leading nation in the world has within that period been growing in wealth and population; the wages of the working classes and their standard of living have everywhere been rising. It is true, there has been a great deal of agricultural depression in many of the older countries, but the real tillers of the soil have rarely suffered from it. It is the ornamental class—the landed aristocracy—which has been damaged by it. To the laborer it has meant cheaper food and a greater variety of employments. All the great towns and cities have, in fact, profited immensely by the competition of the uttermost ends of the earth with the adjacent farms in the work of feeding urban populations, and are growing yearly in wealth, numbers, and commodity. In fact, any large view of the condition and prospects of Europe and America, considered as the home of a great civilization, makes the bimetallists objects of kindly anxiety.

### *JUDGE LYNCH AS AN EDUCATOR.*

SOME of the Southern papers, notably those of New Orleans, seem to be aroused to the disgrace brought on their portion of the Union by the growing practice of lynching negroes—"nigger-hunting" it ought to be called—for crimes which are easily punishable by the ordinary process of law. In truth, the very condition of public feeling which makes lynching possible, makes the conviction of negroes in the courts for all lynchable offences absolutely certain. Consequently, nothing whatever is gained by the lynching except a little greater rapidity of punishment, and this trifling gain is attended by the exposure of the younger and more ignorant portion of the white population to the most brutalizing and barbarizing of all the processes by which humanity can be or ever has been degraded. We mean, by this, participation in the torture and killing of a human being, either by way of sport or vengeance, by a mob. The theory of such nondescripts as Judge Long of Jefferson Parish, in Louisiana, who is said, judge though he be, and civilized though he seems to be, to ap-

prove of lynching as a means of security for the whites, doubtless is that the lynchers are grave and sober-minded men, who resort to illegal violence solely because they are driven to it by stern necessity. This would have been a ridiculous thing to say in any community in the world for the last three thousand years. We do not need the story of the Roman gladiatorial shows, or of modern autos da fé, or public hangings, or pillories, to tell us that man is the one animal that is capable of getting enjoyment out of the torture and death of members of its own species. We venture to assert that seven-eighths of every lynching party is composed of pure, sporting mob, which goes nigger-hunting, just as it goes to a cock-fight or a prize-fight, for the gratification of the lowest and most degraded instincts of humanity—the very instinct which, as Seneca tells us, made the Roman populace furious with, and hiss, the defeated gladiator who shrank from letting the victor cut his throat. They do not care a straw about seeing justice—even wild justice—done on a malefactor. What they want to see is a hunted man in terror of his life, or a human body torn to pieces without fear of consequences.

We doubt if there is a single intelligent man at the South who believes that lynching is a mode of punishment which is any more effective with negroes than with white men. In fact, the colored, like the white, imagination is much more likely to be impressed by slow, formal justice than by riotous mob justice. This is the reason why all civilized countries substitute trial by constituted law courts for private vengeance as soon as they possibly can. They prefer courts and police to mob, not because they look better, but because they give more security. Consequently it is a disgrace to a civilized community to have to fall back on lynching; and the poorer, meaner, and more contemptible the criminal is, the greater the disgrace. It means failure or inability to perform the most elementary function of an organized society. A State, city, or parish, in any modern country, which makes open confession that it cannot, by means of courts and police, protect its citizens from being murdered or maltreated by individual Africans, makes open abdication of its place among modern civilized communities. The Anglo-Saxon flag, wherever this occurs, goes down before that of the Congo and Ashantee. It means that the "nigger" is "on top." Wherever it takes three or four hundred white men and a suspension of the Constitution to arrest a single negro malefactor, there is "nigger rule" in its worst form. The Caucasian has surrendered to the descendants of Ham.

All this is sorrowful and ridiculous enough, but there is one other consideration arising out of the matter still more serious. The effects of these increasingly frequent abdications on the part of the constituted authorities in favor of mobs, no matter how useful they may be in keeping the blacks in order, cannot be confined to the blacks alone. There is a process of education in them for both blacks and whites. Both races learn from them to despise the law and its officers, to forget that the corner-stone of the civilized State is the general belief in the omnipotence of the law and its final triumph over all its enemies. The bystanders who, at Roanoke, Va., have seen the Mayor and the captain of militia flying for their lives, for having protected a jail against murderous rioters, can never be as good citizens again as they were before the riot. The brain of the ordinary man never lets slip the memory of a scene of that sort; he is never again so ready to believe in the courts and the police as he was before he saw it. This is more particularly true of the boys of the community. There is a superstition abroad among us that our lads learn the art of civil government out of Nordhoff's 'Politics for Young Americans' and similar manuals of political instruction. There could hardly be a greater delusion. They learn both the duties and powers of citizenship from what they see their fathers, uncles, and big brothers being, doing, and suffering, as the grammar says, and from what the newspapers report of the acts and submissions of the fathers, uncles, and big brothers of the other boys. They soon lose their abhorrence for what the public condones, and they soon cease to admire and strive for what the public seems to care nothing about, no matter what the books may say. The kind of citizens they become, in short, depends on the behavior as citizens of the grown-up people about them.

The notion, therefore, that unpunished violence and illegality, any more than unpunished fraud and corruption, can prepare the way for better things, or are likely to be followed by better things, is a chimera. Every lynching operation helps to deprive the community of the power of recovery from the state of things which suggests or prompts lynching, because it lessens the respect of the rising generation for law, and its confidence in the power of the law. This, too, furnishes a complete answer to those unwilling subjects of Gilroy, Croker & Co., who believe that the best or only way to throw off their yoke is to let things get so bad as to be utterly intolerable. Things cannot get as bad as possible in family or in State without fatally debauching the very persons on whom the task of "uprising" has to fall, when worst comes to worst. When the moment of action arrives, it is found that familiarity with the evil has brought about that fatal indifference, even of the good, on which the rascals rely, and on which they batten and grow fat.

## *POLITICS AND SOCIETY IN ENGLAND.*

THE passage of the Irish Home-Rule Bill in the British House of Commons and its defeat in the Lords leave English politics and society in an extremely interesting condition for the foreign observer. None of their phenomena is queerer than the hatred of Gladstone among the upper and upper middle classes. It is difficult to come across a Gladstonian in either of them. This hatred, too, finds expression in a violence of language which is seldom met with in any country except during a period of revolution or civil war, and has long been banished from English social and political life. To match it in recent times, one has to hunt up the epithets showered on Abraham Lincoln by the Southerners in the spring of 1861. But the Southerners were then preparing to fight, and Lincoln was in no sense their man, and Southern society was in a very rough-and-tumble stage of civilization. Englishmen, on the contrary, have had long training in self-control in the use of language, are in profound peace, and Gladstone is their oldest statesman and their Prime Minister, made so by an election the fairness of which is not questioned.

Nevertheless, one hears him in the best circles treated as an old villain, for whom capital punishment would be too good, and frantic desire for his death is openly uttered. That "G. O. M." stands for "God's Only Mistake" is one of the grim jokes of the Conservative clubs, and old ladies will avow their willingness to walk miles with peas in their shoes to see him hanged. The stories about him which are received and passed on, are accepted with a simplicity which used to be confined to Catholic peasantry. One of the most current tells of his reception years ago into the Catholic Church, and ascribes his Irish bill to a simple desire to please the priests and save his own soul. Of late somebody has turned up who was present at the ceremony of his reception. If you doubt this, you are treated to a pitying smile because of the notoriety of the fact. The stories of his abandoned profligacy are, of course, less public, the subject being a delicate one, but they are a very prominent part of the Gladstone legend. The failure of his enemies to detect and denounce him during these sixty years of extraordinary exposure to the public gaze does not help him in the least. Nor does the testimony of those who see him most intimately, and have been impressed by the purity of his life and the simplicity of his character. The ordinary laws of probability are suspended for his condemnation.

No one who passes much time within hearing of this vituperation of Gladstone, and knows how unusual such passionate hatred is among Englishmen of the upper class, can help speculating as to its cause. But no inquiry will do him much good. No bill of particulars of the Gladstonian indictment can, as a rule, be obtained containing anything but the introduction of the Irish Home-Rule Bill, and various changes of opinion on various questions, such as statesmen in

parliamentary countries are constantly making. Nothing can be more novel in England than the frame of mind which makes such things hanging matter for the First Lord of the Treasury.

The explanation of the anomaly is apparently to be found in the association of Gladstone with a prolonged period of extraordinary agricultural depression, and with political changes which have resulted in a transfer of political power. The decline of the landed interest, begun in 1873, was not arrested by Disraeli's brilliant foreign policy, and has resulted in twenty years in converting England into a democracy unchecked by a written constitution. It is difficult to overestimate the dismay and foreboding which this has caused among what had been the ruling class. Except in one or two dairy counties, like Cheshire, and in counties in which the shooting and hunting can be rented in the fall and winter, the landowning class is in great straits. Rents have become nominal, and in many places farmers are allowed to retain their holdings without paying anything at all, in order to prevent the farms from running to weeds. No such combination of calamities has probably ever overtaken a landed aristocracy except through revolution, as in France in 1793, and America in 1865 Gladstone is somehow associated with all this misery and humiliation, and has gradually become responsible for every evil of the day. If Jabez Balfour, the hero of the Liberator Society frauds, is not surrendered by the Argentine Republic, it is because Gladstone wishes him to escape in return for the votes he once gave him in the House of Commons. If silver falls in India, it is because Gladstone is so occupied with home rule that he cannot look after it. If there is a fight on the floor of the House, it is because his legislation has so set the nerves of the members on edge that they cannot refrain from hitting each other.

The social hostility to him has been greatly stimulated by the Primrose League, an organization managed mainly by women of the upper class, of which one hears comparatively little in the newspapers, but which has done excellent propagandist work for the Conservatives. It is in reality a very successful attempt to turn to account for party purposes that passionate social ambition which reigns in all but the most highly placed English breasts. The desire of every class to come into social contact with the class above it may be called "a power" which has hitherto been allowed, as far as politics is concerned, to run to waste. The Tory ladies of rank have done with it what Watts did with steam. By establishing "Habitations," or clubs, all over the country, at which shopkeepers, or tenant farmers, or country lawyers can take afternoon tea, or play lawn tennis with the daughters of earls, and compare notes of work in a common cause with duchesses, for the defence of religion, morality, and the integrity of the empire against Gladstone and "the Rads," they have brought to bear on politics a social lever of extraordinary efficacy. In these gatherings of the Primrose League, too, the neophytes are, as usual, the most vehement in their profession of faith and in their detestation of Gladstone as the prime mover in England's downfall. When "good society" can be had by liberal denunciation of him, he naturally gets short shrift. The hooting of him at the Prince of Wales's reception at the Imperial Institute in May, of which the better class of Englishmen were much ashamed, has been excused by ascribing it to the over-zeal of the Primrose-Leaguers from the Kensington detached and "semi-detached" villas, who felt that in the presence of the monster they must show themselves not unworthy of the exalted society to which they now, in a manner, belonged.

The want of political shrewdness shown in this treatment of Gladstone as the idol of the masses, in a country virtually governed by universal suffrage, is still further exemplified in the treatment of the Irish by the same class. In fact, the two things together afford abundant ground for the inference that "the classes" have lost their cunning as politicians or have not as yet adapted themselves to their new political *milieu*. The abuse of the Irish is fully as persistent and unsparing as that of Gladstone. It is doubtful whether there is any example in history of the steady direction of such a stream of insult on any community which was not held in military subjection by a conqueror, or was not a foreign enemy against whom it was the policy of the hour to excite hostility.

As the Irish have the franchise, and sit on equal terms in the National Legislature, the inconvenience and bad politics of keeping them in a condition of furious hatred of England and Englishmen are obvious. They cannot, if they would, sit down in this age of the world under such torrents of contempt. They are bound, as a matter of self-respect, to resent it by every means in their power, including turbulence, always one of the weapons of the weak and discontented. Nothing, too, is better calculated to arouse the suspicion that the English "classes" have lost their hold on the rod of empire than the theory, which has done immense service in the Irish discussions, that home rule, or self-government, can in our day be treated as a prize for good behavior like an army medal, and that it may be safely and properly withheld from the Irish because upper-class Englishmen think them ill-conditioned and wicked, or, in other words, think of them as they thought of the whole English lower class before the passage of the Reform Bill. The way in which this assumption that self-government is a prize which has to be won, as it never has been won, by good conduct, is applied to the 3,000,000 Irish Catholics, and their unfitness for it proved by telling the world that they are liars, thieves, and murderers, would, even if it were all true, be a political blunder. It is only of a non-voting and unrepresented class, or of slaves, that it is safe or wise for politicians to talk in this way, even if the facts amply justify it. To show how deep seated this delusion is, it is worth mention that even so sober an observer as the London *Economist*, in an anti-home-rule argument the other day, assured Lord Rosebery that an Irish-American State would be composed entirely of "Molly Maguires." If business men talked to each other in this way, how much business would ever be transacted?

The probable effect of this style of talk on the prospects of home rule has also to be considered. Modern democracy is nothing if not optimistic—absurdly optimistic, philosophers say—in its view of the capacity and character of the masses, no matter of what nationality. The new English democracy is no exception to this rule. It cannot bear to hear great bodies of poor people—tenants, laborers, or what not—incessantly reviled by well-dressed gentlemen, as the scum of the earth, and unfit to manage their own affairs, and yet this is in the main the kind of argumentation on the home-rule question to which Conservative orators treat the English working-class voters. Of course, it is not only losing its effect as an anti-home-rule argument, but it is raising sympathy for the Irish in the very class which holds now the balance of power, and will probably ere long rule England.

Some alarm on this point has already begun to show itself in the Conservative ranks. The feeling that abuse of the Irish will not any longer serve in lieu of a positive plan of dealing with the Irish question is spreading among the managers, and there is a strong belief among the Liberals that Mr. Balfour and Lord Salisbury will have some plan of home rule to offer the electors when Parliament is dissolved, as it is pretty certain it will be next fall, after another defeat of the present bill by the Lords. The Liberals will go to the country, as soon as they have some Radical English legislation, such as the Parish Councils Bill and the Employers' Liability Bill, to show as the fruits of this fall and winter session. In forecasting the future of the Gladstone Ministry, it has to be borne in mind that the gains which changed the Tory majority of over 100 in 1886 into a Liberal majority of 40 in 1892, and passed the Home Rule Bill in 1893 by almost the same majority by which it was thrown out in 1886, were made in England. In Ireland and Scotland the Liberals either lost slightly, or barely held their own, at the last election.

## THE COLUMBIAN EXPOSITION—IX.

### ANTHROPOLOGY.

CHICAGO, September, 1893.

Of all the sciences, anthropology is best represented at the Fair, even if we limit the scope

of the term to what concerns the uncivilized races. The Directors of the Exposition decided not to rest satisfied with what private or Governmental effort might accomplish, but to undertake active exploration on their own account. This work, confided to the capable hands of Prof. F. W. Putnam, has been fruitful in archæological and ethnological material of great interest and value, which has been gathered in various parts of America under the supervision of some of our best anthropologists. In addition are the usual public and private collections exhibited by nations and societies or individuals, the display of the National Museum and Bureau of Ethnology, and the various bodies of uncivilized natives grouped under different auspices in the grounds or the Plaisance. The anthropological exhibit was accorded a separate building as an afterthought, the space originally assigned to it being otherwise needed; consequently, this material was much delayed in installation and no catalogue of it is obtainable, the so-called official catalogue being ludicrously inadequate and worthless. New material is constantly coming in even now, and this state of affairs somewhat palliates the imperfections of labelling and presentation which strike the visitor on every side. The display made by the United States Government is shown in the Government Building, and small local collections of archæology or ethnology may be found in most of the State buildings, or mingled with other exhibits in the most unexpected places. Were all the specimens thus disseminated brought together and properly arranged, a very remarkable collection would be formed, but, as it is, much that is worthy of attention must be lost sight of.

Beginning with the native villages on the Plaisance, among those best worth visiting is that which contains the "Dahomeyans." The good-natured negroes here brought together are obviously of several different tribes, but all in about the same state of culture. A Boston lady observed that she regretted having seen them when she thought of "the gulf between them and Emerson." But Emerson himself would have found new material for epigram, if he could have visited these people, noted their singular dances, and observed the peculiar but effective methods of their simple housekeeping. The women grind maize between two flat stones, the native smith will fashion a very presentable ring out of a copper penny with his primitive tools before one's eyes, all in a fashion as old as Tubal Cain. An observant eye will note the fetish images scratched on the rough-cast walls of their huts. Passing eastward, the Cairo Street is worth a visit, and, so far as the "make-up" is concerned, differs chiefly from its original by the absence of the Oriental filth. Here may be seen some very clever Hindu jugglers, the leader of whom, before each trick, goes through a very reverential incantation to his patron gods with a peculiar sort of bagpipe. Every afternoon a bridal procession is led through the street, and what appear to be several genuine dervishes perform their rites before a very unsympathetic American audience. Further along, the village of the Javanese gives an excellent idea of their state of culture, their houses, methods of weaving, etc., with periodic performances in a little theatre. Across the way the Sultan of Johore displays a compact but well-selected series of utensils, samples of manufacture, models of traps and fishing-gear, and a small but well-built house. Near by is a small encampment of Bedouin, under a roof, where their methods of preparing coffee, breadmaking (curiously like that of the Pueblo Indians of New Mexico), and dancing may be observed, in about the normal state of untidiness. Last of all, and decidedly the best, come the Samoans, whose village is not especially interesting, but whose dances and pantomime in their little theatre no one should miss. They are fine specimens of humanity, and their dances are given with an earnestness and vigor really admirable. One seems to catch here the aboriginal note in its purity. These people are said to be delegates from a Catholic mission in Samoa, and expect to devote their earnings to the propagation of the faith—an odd way of making the old pay tribute to the new.

The exhibit of the National Museum and Bureau of Ethnology is designed to illustrate the condition of the North American aborigines at the advent of Columbus, classified in accordance with the linguistic map recently published by the Bureau of Ethnology. This is largely done by means of groups of life-size figures engaged in some occupation characteristic of the tribe or stock to which they belong, surrounded with products of such industry and the utensils or tools employed. The figures, when possible, have been modelled from life and are dressed in native garments. Several of these groups are among the best things of the kind ever prepared, though to be fully appreciated they require a somewhat more thorough knowledge than is possessed by the average visitor. A particularly good one is the group of Moqui women making bread. The Moqui corn, red, blue, yellow, and white, is there, with a woman grinding the parched grains, each color being kept separate; another parches the grain, while the colored meal, thinned from a paste to a gruel, is wiped over a hot flat stone by a third. Here it cooks instantly to a paper-like sheet, which is folded up in flattened rolls like bundles of colored tissue-paper. With a brief explanation, such a group tells its story clearly and in a fashion to be remembered, especially when in the Plaisance one watches the Bedouin woman spreading her papery sheet of dough over a dome-like sheet of hot iron which serves the same purpose as the bread-stone of the Moqui. An extensive collection of objects illustrating the arts of women among savage and semi-barbarous people was prepared by the National Museum, and is shown in the Woman's Building.

Prehistoric anthropology is illustrated by a collection selected by Mr. Holmes of the Bureau of Ethnology, showing the several periods of the Paleolithic age of Europe, with some of the supposed paleoliths of the United States for comparison; and other objects belonging to the Neolithic age. There is also a good series illustrating the quarrying work of the aborigines of the United States, from the quartzites of the District of Columbia to the novaculites of Arkansas and the copper of Lake Superior. Another group contains selections from a collection illustrating the ceremonials of the Oriental religions of the Mediterranean basin, with special reference to them as a starting-point for a comparative study of religions. A large proportion of the synoptic State collections show illustrations of the local archæology, many of which are well arranged and labelled. A good example is that of the State of Illinois, which has in all branches an excellent synoptic exhibit. Most of the Oriental countries having separate buildings and not occupying space in the Anthropological Building exhibit more or less anthropological material. Among many which might be mentioned as worth a visit it will suffice to refer to the Cingalese collection and that in the building devoted to the French colonial dependencies. The implements, etc., are not segregated, but among the things shown are many very interesting specimens.

The Anthropological Building is a cheap structure put up at the last moment in an obscure corner of the Park, yet it contains what one is tempted to pronounce, scientifically, the most interesting collections exhibited under any single roof in the grounds. These comprise, on the one hand, the exhibits of the Anthropological Department of the Exposition, gathered for this occasion under the direction of Prof. Putnam and his assistants, and on the other the usual displays by foreign nations, scientific societies, and individuals. It will be possible here to refer only to a small proportion of the display. Beginning with foreign countries, a very large collection, almost without labels, is shown by Brazil, including remains from the shell-heaps described by Hartt as well as many things from existing tribes. Especially beautiful is the feather work, but the absence of any means of finding out what the things are, and where they come from, is exasperating. British Guiana and Mexico also show much that repays examination by the expert, but with a lamentable deficiency of labels. The collection from the Museo Nacional of Costa Rica contains some extra fine stone carvings from Nicoya and Agua Caliente. Japan has a well-systematized and labelled collection which does not contain much that is novel to students, unless it be the specimens from the shell-heaps which were described some years ago by Prof. Morse. China appears to have no official exhibit, but the deficiency is partly supplied by a well-selected series from the Archæological Department of the University of Pennsylvania. The Peruvian collection of Montes is rich and interesting, but only partly labelled. A large space devoted to the prehistoric cemeteries of Peru attracts much attention, the aim being to exhibit an excavated area with the mummies, etc., as they would appear after the earth is removed. Here again the absence of explanatory placards deprives the display of much of its usefulness to ordinary visitors.

A most attractive display of casts from Grecian sculptures recently excavated is to be found in the central part of the hall. Some of them are familiar, but others, especially slabs derived from tombs showing family groups, deities, etc., are new, at least to the majority of visitors. New South Wales comes to the front with a very fine collection relating not merely to her own section of Australia but also to the rest of that continent, Tasmania, part of New Guinea, and the islands of the Australasian seas. It comprises, besides utensils, weapons, garments, etc., of existing or recently extinct tribes, a fine series of solar enlargements of photographs of the people themselves, the best yet brought together, and also a valuable collection, loaned by Prof. Liversidge, of very rare prehistoric stone weapons and tools. All this material is well classified and labelled; an excellent annotated catalogue is distributed by the Commissioners, and also two other pamphlets, one by the Rev. Dr. W. Wyatt Gill, containing notes on the Hervey Islanders, and the other by Messrs. Hill and Thornton on the aborigines of New South Wales. Near the exhibit of New South Wales is a small but important collection from New Caledonia, illustrated by a remarkable collection of photographs by J. G. Peace of Nouméa. These well repay close examination, and illustrate much

better than most anthropological photographs many details of interest.

France shows a set of the Charnay casts of ancient sculptures of Yucatan and Honduras, close to which are the more recent reproductions obtained by Prof. Putnam's party, except a few of the larger ones, which are erected in the open air not far from the building. The rapid way in which these monuments are deteriorating renders the present collection most opportune and important. The Government of Honduras has a small exhibit of mostly fragmentary original pieces of similar carvings. A very interesting small collection from Bolivia has been received from one of the Putnam parties. Of the other contributions obtained through the official explorations, one of the most interesting is a large-sized model of the Skidegate village, Queen Charlotte Islands, a settlement of Haida Indians renowned for its carved totem posts and richly ornamented dwellings. In this connection attention should be directed to the Alaskan collection of Lieut. Emmons, displayed in the gallery of the Government Building, which, with much that is modern and evidently made for sale, contains also some of the finest specimens of native work, in particular carved masks, ever brought from the northwest coast.

A large collection of archæological material from the Hopewell group of mounds, Ross County, Ohio, is exhibited by W. K. Moorhead. It is particularly important as comprising the spoil from an altar mound where a vast number of objects, probably the most highly treasured of their owners' possessions, were cast into the flames on some critical occasion. These include a great many fine archæological specimens, some doubtless of great age, among which appear a few articles of European origin, perhaps derived from the early Spanish traders. The most numerous of these are the copper ear-studs, some of them plated with silver, of which about a peck are shown; one or two brass or copper buttons; rolled sheet copper, used for cutting into ornaments, and some arabesque designs in the same material, evidently of European manufacture. Some scroll-like ornaments of mica were also evidently cut with scissors, as the natives possessed no aboriginal tools by which such clean-cut curves could be produced. It is to be regretted that so fine and important a collection as this should be almost wholly unlabelled, and that no positive marks by which they could be certainly identified have been attached to the majority of the specimens. Prof. G. F. Wright of Oberlin has his collections of archæological specimens on view, where various implements over which much controversy has been had may be inspected by the curious. Among the thousands of stone implements exhibited from all parts of the country the fine, well-arranged series of the Missouri Natural History Society should be noticed, although there are so many well arranged and carefully labelled specimens on view that it is impossible to refer to the greater number of them. The archæological department of the University of Pennsylvania has a well-selected series of objects, ethnological and archæological, and perhaps one of the largest series devoted to a single topic is that shown by Mr. Stewart Culin in his collection of playing-cards and related games. A very interesting contribution has been made by the Nez Percé Indians, at the suggestion of Miss Alice Fletcher, illustrating customs and utensils now almost or entirely out of use, but which have been restored or reproduced by the aid of the elders to whom they were familiar.

The gallery contains the anthropological laboratories, where a vast amount of statistical information has been restated in graphic form under the direction of Prof. Jastrow, offering to the student of such matters a fund of information over which days might be profitably spent. Anthropological measurements are taken here. Near by are the well-known statues of the Harvard boy and girl. These attract a constant stream of visitors, and are generally acknowledged to form one of the most instructive exhibits in the building. Many visitors will notice several mammoth sheets of heavy paper covered with columns of figures and words in an unknown tongue. These represent the results of one of the most important of recent archæological studies, that of the Mexican calendar by Mrs. Zelia Nuttall. Her investigations on this subject, aided by some recently discovered manuscript records of the period of the Conquest, have resulted, it is believed, in definitely solving a most intricate problem. Mrs. Nuttall's discussion will shortly be printed by the Peabody Museum of Archæology in Cambridge.

In conclusion, it may be said that, owing to the active exploration instituted by the Directors of the Exposition into matters connected with American anthropology, it is probable that this department of science will permanently profit by the anniversary thus celebrated to a greater extent than any other line of research. At all events there can be no question, in spite of all shortcomings, that Prof. Putnam and his associated workers have brought together for our instruction an anthropological collection hitherto unequalled and hereafter not likely to be surpassed. W. H. D.

## THE PROSPECTS OF HOME RULE.

LONDON, September 9, 1893.

A CERTAIN engraving always rivets my attention when I see it in the print-shop windows. It is from Miss Thompson's painting of "The Square at Waterloo." The faces of the men in the shattered but unflinching array are a study—the young and enthusiastic wild with delight and exultation as a wave of their assailants breaks at their feet; the older, the more thoughtful, subdued by the gravity and uncertainty of the situation and all that still awaits them. I thought of this picture last Saturday morning as so many of the Irish and Liberal members leaped on the benches to cheer the passage through the House of Commons of the Home-Rule Bill. I thought of it in Palace Yard as the light went out in the Clock Tower and applauding crowds accompanied Mr. Gladstone's carriage to Downing Street. I acknowledge the enormous advance made since twenty-three years ago, when a small party met round Isaac Butt in a hotel parlor in Dublin to establish the "Home Government Association." I ponder the assurances that a Liberal Government has never failed in the ultimate accomplishment of any great measure upon which it had set its heart. Yet I reflect that in politics, as in all human affairs, no two cases are precisely alike, and I cannot recall that past successes were achieved in the face of impediments and complications such as stand in the way of a Home-Rule Bill becoming an act.

We may know that the contention between Great Britain and Ireland, and the fears and suspicions with which the minority in Ireland regards the majority, must come to an end; but the when and the how are the question. The carrying of a bill such as "The Government of Ireland Bill" would accomplish it; but when and how will such a bill become an act? If within a few years, the world will have an extraordinary instance of the success of a measure in spite of tremendous opposition. I do not so much consider the defeat of the bill in the House of Lords this morning by 419 to 41. Other considerations weigh much more with me. Parliamentary warfare was entirely revolutionized by Mr. Parnell and Mr. Biggar. A minority has now forces at its disposal such as it never had before. No longer does every day bring across from Ireland fresh tales of harrowing evictions, or of barbarous imprisonments for the made offence of free utterances from the press or representative men, such as mayors or members of Parliament. Ireland is quiet, and her population, what remains, enjoys comparative prosperity, such at least as she never before attained. The excitement has subsided to which England is always roused by accesses of Irish crime and disturbance, and indifference is apparently again setting in. The Ministry, men like Mr. Gladstone, Mr. Morley, Earl Spencer, Mr. Bryce, Lord Rosebery, Lord Herschel, Mr. Asquith, Sir Charles Russell, Sir W. Harcourt, with the Liberal party in the main, are thoroughly convinced of the necessity for home rule. By many of them the position is realized as clearly as it ever was by Grattan, O'Connell, or Butt. For this realization, width of mind and experience, a certain philosophic train of thought, not given to all men, have been perhaps requisite. How will the British electorate at the next election regard the assertion of the necessity for home rule as it will be put before them? Great Britain has within the past century made advances in prosperity and prestige rare if not unprecedented in history. It has been guided by a wiser commercial policy than that of any other people. Within the last twenty years education has increased, pauperism and crime have diminished, at an astounding ratio. The British people feel that supreme power now rests with them. No wonder if they attribute all this largely to the institutions of their country, prominent among which is a united Parliament, regulating the smallest as the greatest affairs.

Say what we will, home rule, in so far as it is meant to be practical, is an infringement of the principles upon which the united Parliament has hitherto worked. The British people see what they have gained and the position to which they have attained. It is not equally apparent to them that the present constitution of Parliament will be a bar to their further progress and development. Ireland is not Great Britain. It is "a far cry" there when she is not in disturbance. Men are more easily influenced through their fears than through their reason, and 315 of the 670 members of Parliament—among them some of the ablest and sincerest men in the House—hold that home rule will separate Ireland, destroy the Constitution, break up the Empire, render controversy in Parliament fiercer than ever, annihilate financial control there, and make Irish delegates supreme in British affairs, while reducing the loyal minority in Ireland to virtual slavery in property and religion. (I paraphrase Mr. Gladstone's enumeration of these objections.) Great Britain is an intensely Protestant country. With ample resources now at hand, Irish Protestants will henceforth flood the British constituencies, predicting the direst woes to themselves and all they hold dear and sacred from the passage of such a measure as home rule. How would a Catholic United Kingdom regard the appeals on similar grounds of a Catholic minority in one portion of its dominions?

And if the Unionist position has been comparatively strengthened, that of Ireland, apart from the improvement in the condition of the country, appears to me to have been considerably weakened. If we may judge from the acknowledgments in the newspapers, funds are not as plentiful as they used to be. Irish Nationalists cannot, without laying themselves open to imputations regarding "British gold," receive supplies from British friends as can the Unionists. More serious than all, there is division in our ranks. A "Nationalist" "home-rule" daily organ in Dublin, expounding the principles of a party of nine "true Parnellites" in the House of Commons, lives principally on detraction of those men most prominent in the struggles of the last dozen years. Michael Davitt has been hunted into the bankruptcy court. Ireland thought she had at length evolved a Washington. He proved but a counterpart in clay, and in crumbling to his ruin did his best to involve that of the cause he had hitherto served.

The demand for home rule is eminently just and reasonable, entirely in accord with the experiences of the English-speaking and Teutonic nations throughout the world. The issue now depends on the average calibre of the Irish people. If it proves to be in any degree approaching that of your Revolutionary, your Abolitionist fathers, success is assured. If the progress of the home-rule chariot requires for its continuance the continued hope of some immediate and extensive money gain, such as was lent to it by the Land League movement, a long period of discouragement may await us. With the Irish as with the British people in this case, a philosophic conception of the necessities of the situation is all-important. Nothing has impressed me more in Parliamentary warfare than the superior advantage conferred by university education and training; this advantage leading many of only ordinary abilities to elevated and useful positions, while its absence leads others of preëminent natural capacity to occasional failure. Yet the present struggle will be largely a soldier's battle, and the two men whom I consider most likely to prejudice the cause of home rule before the constituencies have neither of them, I believe, had such training.

The one is Mr. Chamberlain, of whose talent and influence I need say nothing. Mr. Balfour is of a nobler and finer organization, but entirely lacks Mr. Chamberlain's point and implacability. If Mr. Chamberlain had once seen fit to enter upon a repressive policy in Ireland, he would never have relaxed as Mr. Balfour did. If he had once taken up an unpitying and inexorable attitude towards the Irish people, he would never, as Mr. Balfour did after an extended visit to the West, have allowed his policy to be modified by sympathy for their suffering. Mr. Chamberlain has abandoned all Liberal traditions, and, as far as we can perceive, is now the advocate of a purely repressive policy towards Ireland.

The second personage I feel impelled to name, Mr. Thomas W. Russell, is also to be found in the ranks of the Liberal Unionists. A young Scotchman, he came over to Ireland in the sixties, interested himself in Liberal advancement, and became the paid leader of the temperance and Sunday-closing movement there. Upon the passage of the Sunday-Closing Bill and the breaking out of the Land League agitation, he relinquished further temperance work in Ireland as hopeless, though he opened a temperance hotel in Dublin. Mr. Russell never sympathized with Irish national aspiration, and all along he must have had to suppress a certain scorn of the Irish people and their religion. He is a man of unblemished personal character. We have no right to question his statement that he occupies his present position in London society entirely on means drawn from his writings and his business. He displays greater energy in speech, writing, and organization now at fifty-two than he showed thirty years ago. His acrid and fanatical speeches against home rule have been prominent in the debates. His mountains have, it is true, generally been reduced to molehills by the answers of Mr. Morley and the criticisms of Mr. Sexton. But his statements will doubtless pass with but little challenge where through the British constituencies he will now carry the fiery cross of his passionate hatreds and burning convictions. He is a most convincing popular platform orator. "Pirates," "great brigade of liars," "breakers of all the Ten Commandments," "tellers of lies by the million," are his ordinary estimates of the Irish party. He has declared "drink to be the spinal marrow of the Irish cause"; that the "Land League was a conspiracy the most baneful that has ever cursed any country." He has said that "the people south and west [of Dublin] are utterly demoralized," that "large tracts of Ireland are mere nests of mendicancy," that "if the English and Scotch element could be extracted from the commerce of Dublin and Cork, these cities would be left lonely wildernesses." That he is allowed unmolested to travel about Ireland and carry on his ordinary avocations there is a striking proof of the natural mildness of the Irish. No man would dare use such language regarding a free people and live among them. Few would have the courage to speak so of any people. If not loved, he is certainly valued by his own party.

Thus, as my previous communication led up to Mr. Morley, the ideal exponent of the claims of home rule, so this, regarding the force and spirit of the Opposition, has led down to Mr. Russell. Certain as is a settlement on home-rule lines whenever the controversy between the islands is ended, my desire to imitate Mr. Morley's "clear and steady gaze" at the present position may perhaps have conduced to make my estimate of it unduly sober. All depends upon the Irish people themselves. So long as they avoid further differences and maintain in Parliament a party of seventy united Nationalists, as at present, it can scarcely be doubted that they will ultimately command the situation—unless "Labor," with its shadowy aspirations, and claims which are to so many apparently subversive of true liberty, involves every other issue at home and abroad.

D. B.

## KASHMIR.

MARIENBAD, BOHEMIA, August, 1893.

IT suffices to mention the name of any of the better-known divisions of the world to call up in the mind of an intelligent and educated though untravelled person, by some obscure association of ideas, a fairly definite conception of the kind of scenery characteristic of the region in question; and this conception will be much the same for all sorts of men, and is a kind of international possession. The source of it is not so easily indicated, but it will, I believe, in most cases be found to take its rise in some one book wherein the spirit of the locality has been at some time enshrined. Kashmir, except as the land of shawls, is to most men the land of 'Lalla Rookh.' As Moore described it, most people conceive it to be a country of gardens and waterfalls and fair women, a country of glades and lawns and pleasant places, a land of luxury and even wantonness, the home of song and dance, where the unclouded sun is not too scorching, and fresh breezes are ever wafted from glittering hills. Unfortunately, Moore was never in Kashmir, and the country he described was a realm of his own fancy. Kashmir is beautiful, but not with the kind of beauty of 'Lalla Rookh.' It has no waterfalls, no palm trees, and but little aspect of gayety. Its charm is of a subtle and subdued character, and the newcomer is liable to be at first disappointed and disillusioned.

For us in England the name of Kashmir calls up a rather more definite but even falser image. We all have Anglo-Indian cousins, whose modes of thought and manner of life are more foreign to us than those of our transatlantic kinsmen. The Anglo-Indian tells us of Kashmir, but we do not realize the atmosphere in which he is accustomed to live and the scenery by which he is usually surrounded; we are therefore unable to put ourselves into his place or to see with his eyes. Kashmir is to him the very garden of the world, because he goes to it from the burnt and fever-stricken plains of India and not from green and fertile Europe. Its wealth of vegetation is magnified by contrast, and multiplied afterwards by memory playing about it in the hot days before the breaking of the monsoon. Its surrounding hills are the hunting-ground where the young subaltern spends the happiest days of his life. Thus, in the mouth of the Anglo-Indian, Kashmir becomes a paradise of surpassing loveliness, which (he being for the most part a wordless person) he makes no attempt to describe, still less to criticise, but is content to rave about when the mood takes him.

Historically, Kashmir has had two interesting epochs. The first was from about the beginning of the second century B. C. to about the end of the eighth century A. D., or later. It was during this time that the country was dotted over with the charming little Siva temples, showing Hellenistic architectural influence, the ruins of which, some of them almost perfect, add so much to the interest of the country to-day. The second of the periods that have left their mark upon Kashmir was the time when it belonged to the Moghul Emperors. They made it their summer resort, and covered it with the charming gardens which still exist in the neighborhood of the capital, Srinagar (pronounced Srĭnúgger). It is also said that to them was due the introduction into the country of the chinar tree, which adds so much to the picturesqueness of the village neighborhoods. The English took it when they conquered Lahore, but they promptly sold it for £2,500,000—a sum which, I believe, was never paid. It remains merely a protected, and till recently a vilely misgoverned, native State, into which white men are admitted only on sufferance.

Kashmir proper is but a small portion of the kingdom of Kashmir; it is the Vale and no more. The Himalayas, coming from the south-east, divide into two branches, of which the northern continues to form the left bank of the Indus valley; the southern is the Pir Panjal range. The Vale of Kashmir is an ancient lake basin, about seventy miles long by thirty miles wide, included between the two ranges. From the crest of the Pir Panjal you can look down on to Kashmir on one side and on to the plains of the Panjab on the other. Through the now filled up level of the Vale, the waters of the Jhelam lazily meander in series of wide loops, till they come to the gates of the gorge which they have cut through an in-

tricate rock-bound district, westwards and then southwards to the burning plains. The kingdom of Kashmir stretches far to the north and west, and its frontiers are not yet diplomatically defined; but its natural and practically its actual boundary is the line of the Hindu-Kush and Mustagh ranges, beyond which lie Russian Turkestan, the Pamirs, and Chinese Turkestan. Eastwards the Maharaja's dominions include that portion of Thibet known as Ladak, or little Thibet; westwards they terminate vaguely in the no-man's-land on the banks of the Indus, inhabited by a set of chaotic robber tribes, most of whose barren fastnesses have never been penetrated by any civilized traveller in historic times. The whole of this large area, beyond the Vale, is to all intents and purposes desert—mere crumpled Sahara below, on which the ice-bound region rests. This is the hunting ground of Kashmir, interesting to sportsmen and mountaineers, and destined some day to attract the attention of gold-miners, but otherwise dreary and desolate, "sunburnt and sorrowful" below, frozen aloft, sparsely inhabited by a few forlorn tribes who derive a scanty subsistence from patches of sand artificially irrigated.

The royal road by which the Moghul court used to enter the Vale of Kashmir was carried over an easy pass in the Pir Panjal. The route was divided into easy stages, and at the end of each was built a large *serai*. Some of these still exist in tolerable repair; others have fallen into hopeless ruin. Special permission must now be obtained from the Maharaja (through the British Resident) to travel by this route. The other principal ancient way into the valley was from Rawal Pindi up the gorge of the Jhelam. A wretched and often dangerous mule-track, which wandered vaguely up and down hill to turn the various gorges, was till recently the track that the traveller by this route had to follow. Of recent years, however, an admirable high road has been made along the Jhelam, and a swift service of *tongas* organized, so that it is now possible to drive rapidly (in three days or less) from Pindi by way of Mari, Kohala, and Domel to Baramula, where the level Vale opens out. At the end of every stage the Maharaja has built an excellent *dâk bangla* (practically a hotel), where the traveller and his servants can dine, sleep, and breakfast at a nominal price. Some of these *dâk banglas* are surprisingly good, most picturesquely situated, and well furnished, but no one is allowed to make a stay in them. The first comer must always give place to the last arrival and go forward along the road.

At Baramula the charm and life of Kashmir commence. Henceforward the road and the tonga are quitted, and the river and *dunga* take their place. A *dunga* is a long kind of flat-bottomed punt, with a house of matting built upon it. The walls of the house are matting blinds, which can be rolled up. The boat is unequally divided into two chambers, in the hinder of which the boatmen live. It is usual to engage one of these boats for each white member of the party and one for the cook and servants. They are towed or paddled or punted up the river; down stream they are permitted to drift. Comfortable European house-boats can be hired at Srinagar, but the proper life of the river is lived in a *dunga*, and, for men not intending to make a prolonged stay, they suffice.

After the hot and dusty journey through the Panjab to Pindi, and the cantering drive of over 150 miles thence to Baramula, nothing is more delightful than to glide out on to the silent waters in the evening of arrival, and moor for the night a short distance above the village. Not a sound, save the lapping of ripples against the boat, breaks the stillness of the night. Soft breezes pass under the raised curtains and play gently over face and hair. The stars shine not too brightly in the sky, while their doubles dance in the water, and if there be moon enough, a faint suspicion of distant mountains and snowy crests may be felt in the far distance beyond the flat of fertile fields where all things are asleep.

Before you awake next morning the boat is on its way, following the tow-rope so lazily that it only rocks you into deeper slumber. The light presently frets the matting walls, and when you cause them to be uprolled, the sky is bright before you in the water, and, beyond the bank, rise the hills in clear silhouette against the glowing east. Now and again a boat urged by paddlers rowing to a musical refrain passes by, picturesque husbandmen look down on you from the banks, and here and there a village diversifies the simple view. As the sun climbs higher the air becomes filled with a tender mist impregnated with light. All the details of the mountains are blotted out by it so that the snowy crests appear to swim in the gay atmosphere. The light mist always lies upon the plain, and seems to be a part of the sky that has fallen there and been forgotten. Nothing is ever hard and clear. All outlines are soft. There is always a glitter of light as though diamond dust were diffused about.

The day passes lazily by, and you find your boat entering the Wular lake. The hills rise from the water on two sides, the plain stretches away on the third. Perhaps you may catch a glimpse of Bandipur on the north bank and of the new zigzag mule-track, closed to travellers, along which lies the way to Gilgit and the Pamirs—the natural trade-route into Central Asia. The boatmen now bend to their work, for they fear the gusts of wind that sweep unheralded from the hills and make the passage of the lake perilous. It is soon crossed, and you are in the Jhelam again, with the banks and the trees passing lazily by and the hills shifting their position to the bending of the stream.

With a double crew and a moderate backshish, you can, no doubt, mount much more swiftly, but no one in a hurry should visit Kashmir. The spirit of the country is not for him. It can be appreciated only by those who can be idle with delight, and can spend without boredom all the hours of a summer day lying on their backs amid beautiful surroundings, and thanking Heaven that they are alive. The lazy traveller with his lazy crew will tie up for the night somewhere against the bank, and the morrow will be as its predecessor. Towards evening Srinagar will be near, and fortunate is he who enters its waterway towards sunset, when all the air is full of gold, save where drifts of smoke from the wood fires glide athwart it in bands of blue.

In the full flare of midday the irregular wooden houses that crowd the river banks and the foul alleys look sordid enough; but towards evening, when the sunset lies on the water and floats in the sky, a glamour envelops the whole and makes of the city an ethereal paradise, a place of dreams and wonder, and of the people that navigate its streams and canals, not men, but the modelled conceptions of a sculptor's happiest hours, moving about amidst objects from another world. The Mosque of Shah Hamadan is passed about half-way up the town. It is beautiful at all hours of the day, with the beauty, chaste and reserved, which seems to be the prerogative of almost all Moslem architecture in whatever country it is found. The plated tent-shaped roofs of the Hindu temples flash back the light from the sky, and even the tawdry palaces of the governing caste borrow for a moment from the witchery of advancing night a dignity not their own. The passage of the town is always exciting, owing to the press and throng of hurrying boats; the contrasting peace that follows, when the houses are left behind and only parks and fields spread on either hand, is all the more delightful. Lines of noble poplars define the margin of the shore and are reflected black in the water. The hills approach. In another mile the boat reaches its destination—the banglas and camping ground called the Munshi Bagh, reserved for the use of foreign visitors accompanied by ladies.

To bachelors the Chinar Bagh is assigned. It is a damp but beautiful park, lining one side of the narrow river that connects the Jhelam with the Dal Lake, the pearl of Kashmir. The visitor's first expedition should be to the summit of the hill, close behind the baghs, called the Takti-Suliman. It is crowned by the most ancient and approximately perfect temple in Kashmir, and it commands a gorgeous panorama. The whole vale spreads abroad on one side to the encircling mountains; the city, with its grass-carpeted, flower-adorned roofs, is at the foot, and its suburbs and fields straggle round and merge into the floating gardens that are moored on the still surface of the lake itself. To see the Dal Lake is to be irresistibly attracted towards it. An hour's paddling brings you there. You wander about it and visit the beautiful Moghul Gardens that succeed one another round its banks. The best of them is, perhaps, the Shalimar Bagh, where Shah Jehan and his favorite wife, Nur Mahal (for whom was built the Taj Mahal at Agra), were reconciled on the Feast of Roses. It is a garden of the formal Persian kind, whose plan is the pattern of so many Oriental carpets. The terraces are symmetrically divided by paths into shady parterres. A marble-bedded stream comes dancing down in the midst, carried over little marble slopes whose surfaces are so engraved in patterns that the water rippling down them looks like crystal drapery. Pools, baths, and fountains, both in the open air and beneath pavilions, succeed one another on different levels, and there are picturesque houses on the various terraces whose every window commands an entrancing view between trees and over the lake to the hills that swim in the sky. In such surroundings, by choice in the months of April and May, when the fruit trees are in blossom, the flowers are hurrying forth to greet the sun, and the plains of India are becoming intolerably hot, the traveller may spend delightful days, whose passage, if he be in restful mood, will scarcely be perceived.

The bed of the Vale of Kashmir is more than 5,000 feet above the sea. The winter is, therefore, cold enough and the lake is sometimes frozen over. The hot weather is likewise rather emphatic, and the skirts of the monsoon reach into the valley and bring many days of rain and thunder. But heat and rain can be easily escaped by quitting the Vale itself and visiting the high side valleys, each of which has a charm and loveliness of its own. A fully equipped camp can be hired for a small sum from Samad Shah, or any of the other Srinagar merchants, and the necessary coolies can be engaged, body and soul, for four pence a day each. On the way, perhaps, to one of the summer resorts, or merely as an excursion from Srinagar, the visitor will not fail to

mount the Jhelam for two or three days to the upper limit of its navigable portion. He will thus pass the ruined temples of the ancient capital, Avantipur, and the picturesque city and bridge of Bijbehara. At Islamabad he will quit his boat and visit the interesting, though greatly over-praised, ruins of the so-called Temple of the Sun at Martand and the sacred places at the river's source. If he then returns and spends a few weeks in the park-like Lolab and more magnificent Sind valleys, and, perhaps, goes for a short time to the Anglo-Indian summer settlement of Gulmerg (where he can hire a plot of ground and have a wooden house built for a ten-pound note, selling it a month later at half-price to a new-comer), he will have spent the cheapest, probably the most delightful, six months of his life. If he is travelling with ladies who can ride and are moderately adventurous, he might return to India by riding for two months along a good, though sometimes giddy, mule road to Ladak (where he will see Thibet in sample), and then over the Himalayas, by easy but high passes, and through the valleys of Kulu, some of the most beautiful in the world, to Simla.

To conclude with a practical remark. A couple of men willing to rough it, about as much as one roughs it in out-of-the-way parts of the Tyrol (and that is not much), could spend six months along this route from Rawal Pindi, through Kashmir and Ladak, to Simla without consuming more than £150 each, and they might do it for considerably less. They would have, of course, to learn Hindustani, which can be done in ten days. A larger party, including ladies, and travelling with a tent for each European and one or two sitting-room tents, could scarcely succeed in spending more than £1,000 in the same time and over the same ground. The journey is not in the least suited for persons of the tourist habit of mind; but to those who have in them anything of the traveller's spirit it cannot be over-recommended. The country is throughout healthy, and invalids are constantly sent from India to wander through it. W. M. Conway.

# Correspondence.

## THE JUDICIAL POWER.

To the Editor of The Nation:

Sir: In an address delivered in Washington, September 18, 1893, on the occasion of the 100th anniversary of the laying of the corner-stone of the Capitol, Hon. Henry B. Brown, in speaking of Chief-Justice Marshall, said:

"In the case of Marbury vs. Madison, which arose at John Marshall s very first term, he declared the judicial power to extend to an annulment of an act of Congress in conflict with the Constitution, a doctrine peculiar to this country. . . . The lack of this check upon the legislature has wrecked the Constitution of a foreign State, and it is safe to say that our own would not long have survived a contrary decision. Had Marshall rendered no other service to the country, this of itself would have been sufficient to entitle him to its gratitude."

The doctrine of the power of a court to annul an act of the Legislature was not unknown to American jurisprudence previous to the decision of Marbury vs. Madison. In October, 1786, six months before the meeting of the Convention that framed the Constitution, a court of Rhode Island, in the case of Trevett vs. Weeden (not reported), held the "forcing act" to be unconstitutional (McMaster's 'History of the People of the United States,' vol. i., pp. 337-339). The doctrine was recognized by Chancellor Wythe in May, 1793, in the case of Page vs. Pendleton. In that case the power of the Legislature of Virginia to pass a valid law confiscating debts due by Americans to citizens of Great Britain at the outbreak of the Revolutionary War was denied, on the ground that such a law would be repugnant to the law of nations. (Wythe's 'Virginia Reports.') Marshall studied law under Wythe, and it is probable that he was familiar with Wythe's views on the subject. Edgar R. Rombauer.

St. Louis, September 19, 1893.

## "PRACTITIONER."

To the Editor of The Nation:

Sir: A request has been addressed to a friend of mine: he has asked me to comply with it in his stead, and I now do so. The request is, "to trace the origin and adoption into good usage of that most ungainly and misshapen word, *practitioner*."

This word, with every early one of the same class, has French for its base. It was built up on *practicien*.

Similar to it, and apparently somewhat older, is *parishioner*, due to *paroissien*, through its medieval Anglicized corruptions, *paresschen*, *parysshen*, *parisschen*, *pareshon*, *parishion*, etc., etc., of which the ancient doublet was *paroschian*, afterwards *parochian*. Then there is *logitioner*, from *logicien*, authorized by the Rev. Dr. Nicholas Harpsfield (about 1555), by the Rev. Dr. Thomas Stapleton (1565), and by James Sanford (1569); as there is likewise *pragmatitioner*, from *pragmaticien*, in R. C.'s translation from Henri Estienne, *The World of Wonders* (1607). Add *scrivener*, for which Chaucer, Lydgate, and others have *scriven* or *scriveyn*, the old French *escrivain* apheresized, if the original of the word be not the Italian *scrivano*.

An imitation of the vocables instanced is *musicianer*, a serious term with William Lithgow in 1632, used humorously in the *Musical Travels* of Joel Collier, or John Bicknel (1774), and found as now, as a vulgarism, in Gen. John Burgoyne's *Maid of the Oaks* (1779). Representing illiterate blunders are, farther, *physicioner* and *physicianer*, which occur, respectively, in Mrs. M. Pilkington's *Celebrity* (1815) and in Mrs. Eliza Nathan's *Langreath* (1822).

To *practition*, an actual or an assumed depravation of *practitian*, the termination *-er* was irregularly affixed, in order to produce a form thoroughly familiar to the popular eye and ear. Elongations more or less like that exhibited in *practitioner* we have in the chronicler Capgrave's *fischerer*, for *fisher;* in John Lyly's *arbiterer*, for *arbiter;* in the old *alchemister*, and *furtherer*, for *further;* in *Britisher*, *foreigner*, *fruiterer*, *poulterer*, *upholsterer*, *lesser;* and in the dialectal *chemister*, *masoner*, *teamer*, *lesserer*, *worserer*, and so on.

*Practician*, recorded by the lexicographer Minsheu, has been used by Coleridge (1810), Mrs. Sarah Austin (1833), and John Sterling (1839). Richard Brathwait (1640) has *practist;* Bp. John Gauden (1661), *practicant*. To return to *practition*, referable to it is the *practitional* of the Rev. William Watson (1602) and of Robert Southey (1807).

That *practition* has had existence may well be, seeing how common *magition*, *musition*, and *phisition* once were. For *parishion*, mentioned above, we have the authority of Charles Wriothesley (before 1561), after whose manner many, doubtless, spelled before him; the Rev. William Catton having written *parishioner* about 1488, as did the Rev. Nicholas Udall in 1545, and Bp. Bonner in 1554.

*Paryshon*, *parishon*, in *The Revelation of the Monk of Evesham* (1482, or earlier), pp. 88, 104 (Mr. Arber's edition), I here pass by, with many other points touched on where I discuss *parishioner* and *practitioner* in *Recent Exemplifications of False Philology* (1872). Nor need I dilate on the heteroclite *addression*, *fallacion*, *reminiscion*, *conscionable*, *conscionless*, *conscientional*, *equinoctional*, etc., most of which are adduced for remark in my *English Adjectives in -able* (1877).

*Practitioner*, it seems likely, came up not long prior to the middle of the sixteenth century. The Rev. Nicholas Udall has it in 1545, from about which time occurrences of it steadily become more and more frequent.

Now, at all events, as being distinctly differentiated from *practiser*, it has, admittedly, the marked merit of unquestionable utility; and this fact, coupled with that of its thorough establishment, would suffice for its justification, even if, from an etymological point of view, it were a monstrosity altogether unique.

F. H.

Marlesford, England, August 25, 1893.

P. S. Writing recently on the verb *predicate*, I omitted, in naming words kindred to it, overlooked by dictionary-makers, that which is italicized in the following quotation:

"But, in the generall declination and decay of Arts which followed after, this [*i. e.* Rhetorique] likewise was well neare extinguished; that little of it which remained being reserved onely in the *predicancie* of Postillars, or the pathetical sermons of Friers, till Sadoletus, Bembus, Muretus, and others revived and reduced it to its ancient lustre." Rev. Dr. George Hakewell, *An Apologie or Declaration of the Power and Providence of God*, etc. (1627), p. 261 (ed. 1630).

The factitious Latin *praedicantia* means 'sermon,' 'homily,' 'oral address.' *Predicancy*, as cited, may signify 'language of expostulation or fervent remonstrance.'

# Notes.

The Fleming H. Revell Co. will issue shortly 'The Growth and Development of the English Printed Bible,' by Richard Lovett; 'The Early Spread of Religious Ideas, especially in the Far East,' by Dr. Edkins; and 'Social Life among the Assyrians and Babylonians,' by Prof. A. H. Sayce.

T. Y. Crowell & Co. will undertake a complete edition of the works of George Eliot, including the 'Life and Letters' edited by Mr. Cross, with illustrations. There will be a popular set of six volumes, and one for the library in ten volumes, with photogravure frontispieces.

G. P. Putnam's Sons' fall announcements include Rousseau's 'Social Contract,' translated by Rose M. Harrington; Gottfried Kinkel's 'Tanagra,' translated by Frances Hellman, the competent translator of Heine; 'The Evolution of Woman,' by Eliza Burt Gamble; 'The Monism of Man,' by David A. Gorton, M.D.; 'Man an Organic Community,' by John H. King; 'The Progress and the Morals of Secularism,' by John M. Bonham; 'An Historical Interpretation of Philosophy,' by John Bascom; 'Art in Theory: An Introduction to the study of Æsthetics,' by George L. Raymond; 'A Manual of Linguistics,' by John Clark, M.A; 'Industrial Arbitration and Conciliation,' by Josephine Shaw Lowell; 'The New

Primary,' by Daniel S. Remsen; 'Comparative Administrative Law,' by Prof. F. J. Goodenow of Columbia College; and 'The Pottery and Porcelain of the United States: An Historical Review,' by Edwin A. Barber, A.M.

Lovell, Coryell & Co. have in preparation a new collection of stories, principally of Australian life and character, by A. Conan Doyle, with the title, 'My Friend the Murderer, and Other Mysteries and Adventures.'

P. Blakiston, Son & Co., Philadelphia, announce a new illustrated 'Dictionary of Medicine, Biology, and Collateral Sciences,' edited by Dr. George M. Gould.

A fresh mass of reprints awaits brief mention, first in line being the second volume of Pepys's Diary, edited by Mr. Henry B. Wheatley (London: Geo. Bell & Sons; New York: Macmillan), which we have already discussed at length. The present illustrations are a portrait of the Earl of Sandwich, a glazed stoneware bust of the buxom Mrs. Pepys, and a drawing of William Hewer—all very acceptable. It is sufficient, too, just to enumerate the additions to Dent's charming edition of the works of the Brontë sisters (Macmillan), viz., 'Wuthering Heights' and 'Agnes Grey' in two volumes, 'The Professor' in one, and the Poems in one, leaving two of the twelve yet to be accounted for. The "Stories from *Scribner*" gain another tiny volume in 'Stories from Italy,' to which F. Hopkinson Smith, T. R. Sullivan, John J. A'Becket, and Grace Ellery Channing contribute. From Messrs. Scribner we have also a uniform set of the Works of George W. Cable, in five volumes at a popular price, and another of the Works of Thomas Nelson in four volumes, equally reasonable. In both cases the binding is tasteful enough for any library in which books are read at all. The same firm, finally, add to their "Cameo Edition" Andrew Lang's 'Letters to Dead Authors,' and R. L. Stevenson's 'Virginibus Puerisque,' and also issue the same works in a limited edition printed on Holland paper. Mr. Lang, we should note, swells the number of his letters by four new ones—to John Knox, Increase Mather, Homer, and Mr. Samuel Pepys.

The title story in F. Anstey's reprint from *Punch*, 'The Man from Blankley's, and Other Sketches' (Longmans), is the only one which can be called an addition to this humorist's familiar repertory. Any of the rest has had its counterpart in his previous collections. Nevertheless, those who come new to Mr. Anstey may as well begin with this volume as with any other, and cannot fail to be amused by it, since only to the initiated does it lack variety. Mr. Partridge's illustrations are as clever and telling as ever.

Mrs. Mary B. Claflin's 'Personal Recollections of John G. Whittier' (T. Y. Crowell & Co.) adds not much to his well-known traits, though it contains a few new anecdotes, some extracts from his correspondence with the writer, and the first attempt we have seen to indicate his homely New England speech. "Our folks [the Friends] have got to talking t' much" (p. 16); "Liddy [Lydia Maria Child] . . . has worn that bunnit for ten years, but she had some new fixin' on it to-day" (p. 79). Apropos of foolish and gushing women who annoyed Whittier by their remarks, Mrs. Claflin says the poet told her that "at the Radical Club a woman stopped me in the middle of the parlor among all the folks and said: 'I've long wished to see you, Mr. Whittier, to ask what you thought of the subjective and the objective.' Why, I thought the woman was crazy, and I said: 'I don't know anything about either of 'em'" (p. 67). There are two portraits in this little book—the frontispiece excellent. Frederick Douglass's name is misspelled on p. 46, and two words are made one in the first line of poetry on p. 14.

Mr. Eyre Crowe, A.R.A., frankly advises the reader that the letterpress of his 'With Thackeray in America' (Scribners) is only a running commentary on the sketches, and that the latter are of little value except for their connection, more or less remote, with the name and charm of Thackeray, whose private secretary he was on the tour. This is almost as perilous a fabric as the Hindu mythology, with its world resting on an elephant and the elephant on a turtle—especially as, in this case, the turtle, in the person of Thackeray, is only as dimly and doubtfully present as the smile of the vanished Cheshire cat. The book, in fact, distinctly disappoints the expectations which its title arouses. The dead level of the text is broken by little more than several amusing inaccuracies, and the most that one can get out of the illustrations, which as a whole are interesting in neither subject nor execution, is an occasional reminiscence of a building that has ceased to exist, or of a face which the world has come to know in quite other guise than that offered us in Mr. Crowe's pen-and-ink drawing.

As a result of the celebration of the Izaak Walton tercentenary, the venerable Church of St. Dunstan's, Fleet Street, where Walton was once churchwarden, is to become the repository of a stained-glass window to his memory. That the New World does not fall behind the Old either in interest in the famous fisherman or in his no less famous book, is shown by the erection on the Fair grounds, by the Chicago Fly-Casting Club, of a facsimile of his small house on the River Dove, and by the purchase by one of our countrymen from Pickering & Chatto, in London, of a copy of the first edition of the 'Compleat Angler,' at the handsome figure of £235. By way of contrast to this lordly sum, an edition at 1s. 6d. has just been issued by F. Warne & Co. This, together with the illustrated edition of the Bagsters already mentioned, and the numerous articles in periodicals, makes a literary tribute worthy of the importance of the anniversary in the annals of piscatorial science.

The essays read at the School of Applied Ethics at Plymouth, Mass., during the session of 1892, have been republished in book form by T. Y. Crowell & Co., under the title, 'Philanthropy and Social Progress.' These essays are seven in number, and it is significant that three of them deal directly with the colonization idea exemplified in the so-called university settlements.

The twelfth annual report of the Dante Society of Cambridge, Mass., is noticeable for Prof. Norton's tribute to the late Dr. T. W. Parsons as a translator of the 'Divine Comedy,' and for the reprint of an article by Dr. Edward Moore, very helpful in establishing Dante's indebtedness as between Cicero and Aristotle in the division and order of sins in the Inferno, as to which there has been some misconception. The membership of the Society appears to grow slowly. The usual list of accessions to its Dante Collection is appended.

—Our notice of the Japanese School for Nurses in Kyoto brings to a correspondent analogous reminiscences there. He writes:

"Just two years ago, two travellers, in a Kyoto hotel where I was a guest, disputed about the meaning of the word 'adoption' in the Shaksperian line, 'The friends thou hast and their adoption tried,' and asked my opinion in the case. What I said was overheard by Dr. Berry of the Doshisha Hospital, and the next day he called on me with a request that I would spend an hour that evening in a Shaksperian *conversazione* with missionaries—teachers in different departments of the Doshisha—as well as six Japanese young ladies who were about to commence the study of 'As You Like It.' Those present were more than thirty. Their intelligent questions and well-considered remarks were to me an equal surprise and pleasure. The great dramatist did not, like his *Puck*, put a girdle round the earth in forty minutes, but the girdle in which he has now bound the globe will endure for ever. It is a bond lighter than air, yet stronger than iron. During my stay in Kyoto the Doshisha School of Science was opened in a building erected by Jonathan Harris of New London, Conn., at a cost of $100,000. Here, as everywhere in Japan, an increasing majority of teachers were already native. The Professor of Biology, N. H. Kodama, M.D., had come home with the honors of both American and European universities. All real estate in educational establishments is necessarily, according to Japanese laws, registered in the names of natives."

—Americans have so generally come to regard the Roman Inquisition as a dead institution that many of them will probably be surprised to know that it has recently passed sentence of condemnation against one of the most distinguished of English men of science. Prof. St. George Mivart is one of the few Roman Catholics who, until recently, have found proficiency in science compatible with adherence to Roman Catholic doctrine; henceforth, however, he must either abandon the conclusions to which his scientific training has led him or be excommunicated, for the Inquisition and the Congregation of the Index have so decreed. He has been guilty of publishing heretical doctrines of the following nature: To the *Nineteenth Century* magazine last December he contributed an article entitled "Happiness in Hell," in which he argued that there is nothing in the Bible or in Catholic dogma to warrant the supposition that everybody in hell is actively tormented for ever. Virtuous pagans, for instance, though assigned to hell because, having lived before Christ's coming, they had not enjoyed baptism, might pass their eternity, even though they were in hell, in comparative comfort. The real hell for them and for every one consisted in ignorance of God's scheme of salvation through the Catholic Church—that deprivation being of itself sufficient punishment, without the addition of red-hot gridirons and brimstone. Such opinions certainly did honor to Prof. Mivart's humanity, though they displayed ignorance of the fixed policy of his Church. His views were immediately attacked, decrees and precedents were cited against him, and his opponents plainly enough intimated that, if they could not silence him by logic, they had something stronger than logic to beat him with. This was the Congregation of the Inquisition. The dozen cardinals who make up that select committee, with their *consultors* and *qualificators*, proceeded to examine Prof. Mivart's articles, and found them worthy of condemnation. The Congregation of the Index, whose duty it is to publish a list of works which, having been judged heretical, Catholics are prohibited, under penalties amounting even to excommunication, from publishing, reading, or having in their possession, concurred in this decision, which was ratified by the Pope on July 21 and ordered to be promulgated.

—What will Prof. Mivart do? The Catholic Church clings to hell as the sheet anchor whereby she keeps her hold over the vast majority of her members; as a Catholic, Prof,

Mivart must cling to hell too, or run the risk of discovering for himself whether or not happiness is possible there. The article, in the *Nineteenth Century* for September, in which Father Clarke of the Society of Jesus sums up the matter is a model of the studied urbanity with which trained Jesuits apply poultices to the broken backs of their victims.

"This decree," he says, "is decisive respecting the general tendency of the articles in question. It proscribes the doctrine that they teach as in opposition to Catholic dogma. *It does not select any special assertions therein contained for note or censure*, and we therefore have no right to pass sentence on any individual proposition laid down by Prof. Mivart. All that we know for certain is, that in general the articles are condemned alike by the Congregation of the Inquisition and the Congregation of the Index. The decree of the former is a dogmatic decree, and declares them at variance with the teaching of the Church; that of the latter is rather prohibitory than dogmatic, and its primary motive is their dangerous consequences to their readers. No one can fail to recognize the motives that influenced their author. He was actuated by a generous desire to help those who were wavering in their faith, and he thought to do so by departing from the traditional doctrine respecting the eternal punishment of the wicked. The recent decision has shown him to be mistaken in his judgment. The controversy is now happily at an end. *Roma locuta est: causa finita est.*"

The case furnishes a curious comment on the bland utterances of Roman Catholic prelates at the recent Congress of Religions.

—The fourth volume of the *Harvard Studies in Classical Philology* (Ginn & Co.) presents the same combination of scholarship, good sense, workmanlike style, and varied material which has characterized the previous issues. The first article deserves special notice. It is a monograph by Mr. Albert A. Howard on the αὐλός, or *tibia*, *i. e.*, on the flutes, clarinets, and flageolets of the ancients, from which it is possible to learn almost everything that is known of the instruments of this type which were used by the Greeks and Romans. The article is chiefly interesting on account of the diligence with which Mr. Howard has examined the ancient works of art in which these instruments are represented, and because the writer has himself personally conducted very instructive experiments with instruments made for him on the model of those αὐλοί which have come down to us from antiquity. The ability to conduct such experiments in a scientific way implies a familiarity with that branch of physics concerned with musical sounds which is certainly not often met with among classical students. It would be impossible, in the space at our command, to give an idea of the numerous questions discussed in this article. Mr. Howard's views with regard to the identification of certain parts of the αὐλός with corresponding parts of modern instruments deserve particular attention; but the discussion is too technical to be given here. It is high praise to say, in general, that the essay extends and supplements in many important particulars Von Jan's article in Baumeister's 'Denkmäler,' to which it often refers and on which it is partially based. Prof. J. B. Greenough contributes some statistics and an interesting discussion towards the question whether the Saturnian verse was quantitative or accentual. His discussion is largely concerned with the Sapphic metre as treated by Horace in the familiar line (for example)

"Integer vitæ scelerisque purus,"

which is still sung to a German air, with the word-accent represented in Canning's "Needy Knife-grinder, whither art thou going?" whereas, in Sappho and in the classic Latin, the stress falls according to quantity, as shown by our italics. Prof. Greenough, after an exhaustive examination, finds that in Horace all the verses of this stanza, except about one in ten, may be read with the word-accent. Nearly the same ratio applies to the Alcaic verse. He infers, therefore, that this feature is not accidental; that Horace, keeping in mind the ancient folk-song, based upon word-accent, intended to make his odes accessible to the people although following Greek models and quantity. The accentual feeling of rhythm to which the early Latin ear was attuned, discloses itself very clearly in the verses of Ennius and Nævius, in which only one in five of the ictuses fails to conform to the word-accent, as in English poetry. Mr. Greenough's researches confirm, therefore, the opinion of Keller and Klotz, that the Latins began with an accentual rhythm, to which they reverted in the decay of scholarship and of learned writing. To this may be added the curious fact that we are indebted to the Horatian treatment of the Sapphic and Alcaic metres for the earliest forms of Christian hymnology.

—The very able and learned paper of Prof. J. H. Wright, entitled "Herondæa," gives one reason to be proud of American scholarship even when working under the disadvantage of distance from original manuscripts. It presents a skilful analysis, derived from the photographic facsimile of the Herondas papyrus, of the system of punctuation observed by the scribe, the special marks used by him, his processes and sources in copying; and finally offers some critical observations on the text and some felicitous interpretations and emendations. Among these is the crux in i., 55, where Prof. Wright accepts Crusius's reading, ἄθικτος ἐς κυθηρίην σφρηγίς, but inserts a pause before the latter word, and interprets it as referring to secrecy, discretion. Hence the old woman who is recommending to the grass-widow, Metriche, the attentions of the young athlete Gryllus, commends him as "heart-free—and silent as the grave"; a man of honor and discretion. In the third mime, by reading Molon instead of Maron (lines 24–26), Mr. Wright brings the verses into connection with the seventh idyl of Theocritus, where the scholiast mentions Simon and Molon as rivals in a love affair of the famous astronomer-poet Aratus. In this way a piquant and mischievous allusion to local gossip of the island of Cos is supplied in the verses, which fits the Coan affinities of Herondas and would be appreciated by his Coan readers. The erudite defence of these readings and interpretations we cannot summarize; but the confusion of l and r, we may note, is still commonly made in Athens, where the word ἀδελφός is constantly written and spoken ἀδερφός. We cannot resist the temptation to refer to the ingenio s and highly probable explanation given by Prof. Frederick D. Allen of the phrase πεῖραρ ἐλέσθαι in the "Shield of Achilles" (Iliad 18,501). He suggests that the litigants, in presence of the umpire, actually seize a rope and carry on a symbolic contest at which he presides. The "tug of war" is undoubtedly alluded to in other passages of the Iliad; and, in the present passage, it would be the survival of an earlier form of contest in which the strongest actually won his case in the presence of the referee. It is simply a gentler form of the European trial by combat, and is found prevailing in substance among various savage tribes. A similar theory prevailed in Roman law, according to which Sir Henry Maine has shown that the magistrate can interfere only when he actually sees the quarrel going on before him. Accordingly, Prof. Allen explains the law term *manus consertio* as a mimic ceremony, in which the claimants "linked hands," to typify either a wrestling-match, or more probably a pulling-match, in the process of *vindicatio* as applied to land. In the earliest times the magistrate used to go to the land, and the act was performed before him; later, witnesses of the ceremony were substituted for the magistrate's presence, and a clod was brought into court by way of token; finally, the custom survived only as a form of words.

## TWO STUDIES IN PHILOSOPHICAL IDEALISM.

*The Critical Philosophy of Immanuel Kant.* By Edward Caird, LL.D. Macmillan & Co. 1889. 2 vols. Pp. xxiv, 654, xix, 660.

*The Evolution of Religion:* The Gifford Lectures, delivered before the University of St. Andrews in Sessions 1890-'91 and 1891-'92. By Edward Caird, LL.D., D.C.L. Macmillan & Co. 2 vols. Pp. xv, 400, vii, 334.

THE Gifford Lectures on the 'Evolution of Religion,' recently published by Prof. Caird, form a natural complement to the earlier work on Kant, with which we here couple them. The two books together contain by far the most elaborate statement that any member of the British Hegelian school has thus far put into print concerning his attitude towards the fundamental problems of recent philosophy; and it is but obvious justice to observe at once that these publications put Prof. Caird himself at the very head of that well-known and influential, if not very numerous, group of thinkers. He, to be sure, has none of the eccentric genius that once made Dr. Hutchinson Stirling so stimulating and bewildering a leader of studious philosophical youth. Nor is he the equal of Mr. Bradley in brilliancy of dialectical skill. But in quantity and importance of scholarly work he surpasses all his fellows. Even Mr. Bosanquet cannot, at least as yet, be put beside him.

The British Hegelians may best be described as a group of thinkers who have lived long in the world of truth with the most conscientious effort to conform to its ways, but who generally have the gently embarrassed manners of people who are not precisely heirs to its treasures, but only, as it were, younger sons, dependent, a little, upon the courtesy of the original possessors. There has been, among these men, too exclusive a devotion to the business of historical criticism, too much timidity about reading the lesson of history in their own way. Historical criticism is, indeed, also the current method of philosophizing in Germany; but there men like Benno Erdmann or Vaihinger or Dilthey are students of the history of thought largely because their attitude towards constructive metaphysic has all along been sceptical. The men of the British Hegelian group, on the contrary, are no sceptics. They always intend to let us know that they have a constructive philosophical creed, and a significant one, too. Why then—so many a student has said to himself, a little impatiently—why then do they for ever dissect the paragraphs and analyze the perplexities of one Immanuel Kant? Why do they not risk their own statement of doctrine for whatever it is worth, not ignoring history, but summing up its meaning as they can, and portraying its outcome as they see it? Why, thus analyzing their Kant, or even venturing upon a modest biographical sketch of Hegel, or writing a His-

tory of Æsthetic—why must they for ever plead their cause in another's name? "Why don't you speak for yourself, John?" Such, despite the actual constructive efforts of the individual members of the school—despite Green's 'Prolegomena to Ethics,' despite two important treatises on Logic that have issued from the group of thinkers in question—such, after all, remains even now the general impression of the reader of current philosophical literature. One may be pardoned, then, if, notwithstanding the elaborateness of Prof. Caird's *Riesenwerk* on Kant (as a German critic has called that book), notwithstanding its scholarship, and, in one direction at least, its unexampled thoroughness, one finds it very much easier to take interest in the Kant commentary as a whole when one has at last discovered that it leads up to the course of Gifford Lectures before us—a course that is, in general, an admirable piece of constructive work on the Philosophy of Religion. With the latter book, as suggesting more clearly than ever before the goal of Prof. Caird's thought, our brief criticism of these extensive treatises may therefore best begin.

These Lectures on Religion, as we learn from the preface, are addressed, not to *die Gebildeten unter ihren Verächtern*, but to the perplexed among the wandering children of the older faith—to people "who have become, partially at least, alienated from the ordinary dogmatic system of belief, but who, at the same time, are conscious that they have owed a great part of their spiritual life to the teachings of the Bible and the Christian Church." These people "want an eirenicon to reconcile them with themselves." The reconciling principle of Prof. Caird's discourse is in general suggested by him as "the idea of development," which

> "teaches us to distinguish the one spiritual principle which is continuously working in man's life, from the changing forms through which it passes in the course of its history; . . . to do justice to the past without enslaving the present, and to give freedom to the thought of the present without forgetting that it, in its turn, must be criticised and transcended by the widening consciousness of the future."

As these words indicate, however, Prof. Caird is more concerned, in these lectures, to estimate the positive value of the religious ideas whose development he undertakes to portray, than to depict "the evolution of religion" as a mere phenomenon of the natural history of man. As a fact, the study of the "comparative history of religions," as a branch of anthropology, occupies but a small place in these pages. What they furnish is precisely an essay on the philosophy of religion, illustrated by examples drawn from religious history. The treatment of the main subject that is named in the title is, in so far, inadequate. For instance, the psychological problems offered to us by the evolution of primitive religion receive as little attention as empirical psychology generally gets from writers of Prof. Caird's type of philosophical concern. But the disappointment thus at first occasioned to the reader has to give way to an interest in the important philosophical problem which Prof. Caird early presents, and very variously and ingeniously illustrates by his use of religious history. This is, of course, the central problem of reality as it appears to idealistic thinkers.

In brief, Prof. Caird's train of thought is as follows: When one thinks, one thinks about some objective world, and believes in it. But this world, as it comes to one at first, is full of physical and moral problems. These imply, for the thinker, a sense of his own Self, as the perplexed and ignorant but longing Subject, to whom the object-world offers its problems. Thinking, whether practical or theoretical, is a search for some comprehensible "Unity" that will explain the puzzling relations of the Subject and the Object. Religion, from first to last, is a belief that this "unity" somehow exists, above all distinctions and puzzles. Man, from the outset, is "haunted by the idea" that beneath all the contradictions of his life there lies something that will "give a kind of unity to life" by "allying man with nature, and joining him with his fellows in some more or less comprehensive society." Religions have, as their "common characteristic," that in some measure they express this belief, and, in some measure also, and for some men, actually accomplish this end. (Lectures, vol. i., pp. 81, 88.)

But when one seeks for the unity of two opposing terms, one may seek it in either term, or else beneath both. Accordingly, religion has appeared in history in three forms. The "Objective" religions have looked for the unifying principle among the objects of the world. The gods, conceived as powers of nature, as ancestors, or as what not, were to be found, conciliated, worshipped; and thus the object world was to be harmonized and comprehended. The natural reflective outcome of objective religion is Pantheism, which finds God, as the reconciling principle, in the Whole of things, everywhere, and consequently nowhere.

However, it is of the essence of religion to believe, "in some more or less adequate form," in a "divine power as the principle of unity in a world of which *we* are not only spectators but parts" (Lectures, vol. i., p. 235), and consequently, as the Upanishads show us (*id.*, p. 354 *seq.*), Pantheism tends of itself to make the transition to the second, or "Subjective," form of religion, wherein God, the unifying principle, is conceived as a Subject, of greater or less universality. "Subjective" religion takes many shapes. Buddhism and Stoicism represent two of its phases; its highest form, strongly contrasted with these, is the religion of Israel. In this last embodiment, religion gets its most significant moral development, but remains after all inadequate. Monotheism is the culmination of subjective religion; but (*id.*, p. 196) "it is impossible for moderns to recall the attitude of the pure Monotheist. . . . We cannot think of the infinite Being as a will which is external to that which it has made." For us moderns (Lectures, vol. ii., p. 62) "Religion, if it would continue to exist, . . . must combine the monotheistic idea with that which it has often regarded as its greatest enemy, the spirit of pantheism."

It is the office of the "third" type of religion, whereof, in spirit, Christianity is the representative, to undertake this confessedly difficult task. Beneath the opposition of Subject and Object must lie a "principle" which differentiates itself into both, and which, when understood, reconciles their oppositions, enfolding the whole world in its central unity, and explaining both the physical and the moral problems of reality. "As it came from the lips of its founder, Christianity was nothing less than an absolute practical idealism, which . . . regarded moral forces as practically omnipotent" (Lectures, vol. ii., p. 167). Like pantheism, it referred "the finite to the infinite," and regarded "the former as nothing in itself apart from the latter" (*id.*, p. 161). And still, in its universal charity, and in its assertion of God's Fatherhood, it respected the worth of individuals and gave them divine relations. Hence its principle is neither the Subject nor the Object, but a unity superior to both. Hence also, to be sure, the enormous difficulties of the later development of Christian dogma, the endless perplexities in the Church as to the divine nature; hence all those struggles to comprehend a unity which, according to Prof. Caird, only the recent progress of thought, "the whole development of the organic and evolutionary idea of the world as interpreted by idealistic philosophy, and applied by criticism to the history of Christianity" (*id.*, p. 321), has brought to the point where "something like a rational proof of a creed which previously rested almost entirely upon the intuition of faith" is now at last possible. What Christ conceived by a divine intuition, what his followers and the Church partly developed, partly misunderstood—this is now the proper object of a religious philosophy.

The result of Prof. Caird's thought is thus a revised Christianity, from which the traditional sort of supernaturalism has indeed been banished. The highly unconventional character of the theology thus outlined is obvious. The Gospel history is in consequence interpreted without recourse to miracle. The greater part of traditional church dogma appears as non-essential opinion, having only historical interest. Human immortality is apparently, in Prof. Caird's mind, at present a problem whose philosophical answer is decidedly incomplete, if not altogether problematic (vol. ii, pp. 241–43). As to the personality of God, the note (*id.*, pp. 82–84) "On the Unity of Pantheism and Monotheism" rather recognizes the difficulties of the question than insists upon any one solution. "Nature," Prof. Caird there tells us, "comes to self-consciousness in man," and "the process of man's life is the continuation of the self-revelation of the Absolute Being which begins in nature." God is "the principle of unity in all things," and is yet "a living God in whose image man is made." There are "many difficulties in this view," but the "idea of evolution" may be depended upon to suggest the final solution of them all. And herewith the case shall for the present rest. But faith (*id.*, p. 325) is "already on the way to knowledge." This, as some of Prof. Caird's critics have pointed out, appears, on the whole, to be an Hegelianism of the Left, more negative than Prof. Caird's previous publications had prepared us to expect.

The perplexed, if they are students of philosophy, will gain much from the study of the argument thus roughly sketched. Its chief interest lies, of course, in its whole development, and cannot be separated from the text. In any case, these lectures are certainly not for the little ones. Perhaps Prof. Caird's principal defect as an expositor of philosophy lies meanwhile in his peculiarly Hegelian use of what might be called fixed metaphors. The "movement of thought" whereby it "returns upon itself from the object," the "progress which is a regress"—these are, indeed, an old story to readers of this kind of literature; but fixed ideas and fixed phrases do not grow more enlightening by vain repetition. As for Prof. Caird's own favorite formula, "Die to live," which, as all his readers have long since learned, shall sum up the essence of Hegel, of Christianity, of evolution, and of life and thought generally—the devout prayer of at least one reader of Prof. Caird's books is that this formula will ere long, by a process of "return," apply "itself to itself," and kindly "die." Surely thoughts as important as is the one thus expressed can live independently of the agonizing reiteration of set phrases.

In the light of the interesting struggle with fundamental problems represented by the lectures, the whole of the great work on Kant now appears rather as a scaffolding than as an end in itself. The still earlier book on Kant which Prof. Caird published in 1877 was almost altogether cast aside in preparing the treatise of 1889. The latter made liberal use of the modern German "Kant-philology," without itself being, despite its elaborateness, so much a direct contribution to that much-derided science as a tirelessly minute dealing, and, as it were, a hand-to-hand struggle, with the Kantian doctrine of the relation of the Subject and Object-Worlds, and with the metaphysical consequences of that doctrine as worked out in the later critiques. One great difficulty of the Kant book is thus lightened by a reading of the Gifford lectures. For the reader of the 'Kant' found, with all Prof. Caird's minuteness of critical treatment, less direct aid than he had expected in grappling with the philological difficulties of Kant's text, and thus often felt out of sympathy with Prof. Caird's courteously but very stubbornly critical attitude towards an author whom he did not expound quite as objectively as Benno Erdmann, nor yet quite as exhaustively as Vaihinger, but whom he did continually "transcend" and reflect upon with an unwearied ingenuity, whose ultimate and constructive philosophical purpose was held, after all, rather provokingly in reserve.

The brief and often rudely frank notes of Dr. Erich Adickes, in his edition of Kant's 'Critique,' published almost contemporaneously with the appearance of Prof. Caird's book, have proved in all their simplicity far more immediately useful to the student of the text of the 'Critique,' at least in many places, than are Prof. Caird's long chapters. In dealing, for instance, with the famous Deduction of the Categories, Prof. Caird makes little effort to show the actual structure of Kant's sadly intricate exposition in the first edition of the 'Critique,' but, early turning his attention to what seem to him the most significant issues of the argument, introduces (Kant, vol. i., p. 370–78) an interesting parallel with Plato; and then, in connection with this parallel, and after passing on to the Deduction in the second edition (p. 379), proceeds to an important and far-reaching study of the whole problem of the relation of self-consciousness and reality. The student, following Prof. Caird's discussion, feels that he has won some very valuable philosophy, but also feels that he has lost, for the time, his Kant. Prof. Caird himself says, in introducing the chapter on the Deduction (*id*, p. 349): "In the following exposition I shall try to combine the statements of both editions of the 'Critique.'" But where Kant himself is so full of partial repetitions and of other complications, thus to "combine" is, from the point of view of exposition, and in default of a detailed textual analysis, merely to confuse. Dr. Adickes, on the contrary, in dealing as editor with Kant's words, lays all ulterior philosophical purposes aside, and, while setting forth in very crisp fashion his own noteworthy theory as to the composition of the text of the Deduction, actually guides us to an understanding of the difficult Kantian argument before us which previous commentators have wholly failed to give.

Prof. Caird's method in the chapter on the Deduction is typical of a good deal of the work of his stately and scholarly volumes. Philosophically they are very suggestive; as an aid to the actual study of Kant they are often disappointing. One feels too often that Prof. Caird's interests are not Kant's, that he reads Kant's text with his own eyes constantly tending to rise from the book, and to fix their gaze for a while on some far off Unity wholly unknown to the thinker for whom "Nur in der Erfahrung ist Wahrheit." In the elaborate dialectical defence of this unity, this "principle" which self-consciousness makes manifest, Prof. Caird does indeed show us, with great success, how many tendencies in the historical Kant actually pointed towards the definition of some such unity, and were bound to lead to the later idealistic conception of it. But what he does not show us, after all, is the presence in Kant of deep and relatively justifiable tendencies that prevented him from taking the step which is so obvious to his critic. The Kantian who does not understand that Kant's theory, if fully developed to its last consequences, leads to the later idealism, is indeed no complete Kantian, and for him Prof. Caird has much light to bring. But the idealist, on the other hand, who does not see that Kant's essential doctrine of experience, even if undeveloped, retains a very important place as a subordinate and relatively justified point of view, and that even for an idealism of the later type—well, such an idealist has not comprehended the permanent office of empirical science, whose work Kant tried to analyze, and whose real business Prof. Caird seems to recognize very imperfectly in all that he has ever said with reference to it.

Prof. Caird's criticism, then, in our opinion, "Hegelizes" too much the real tendency of Kant, exaggerating herein, to be sure, a real but by no means an exclusive characteristic of Kant's thought. In consequence Prof. Caird too often gives us, with all his elaborateness and his conscientiousness, rather an external criticism than a luminous comprehension of Kant's position. Yet this objection by no means applies to the whole of this treatise, which is, in fact, despite its imperfections, an indispensable work for any Kant library. The opening historical chapters are, in the main, admirable. The chapters on the Rational Psychology and Theology of the Dialectic are both extremely luminous. The exposition of Kant's later critiques is of great value. And the unsatisfactoriness of the treatise, in so far as the book is bound by its limitations as a philosophical exposition of Kant, and is not free to speak its author's own mind as to many matters touched upon but not developed, is now, in some measure, remedied by the appearance of the later work, with which, in our opinion, it should henceforth always be coupled. The history of thought is an invaluable instrument, but it must, as instrument, be used for its purpose, which is the production of enlightened doctrine. Prof Caird's doctrine is unquestionably an enlightened one. An estimate of its philosophical value would carry us far beyond our present limits.

## BOOKS ABOUT THE STAGE.

*À propos de Théâtre.* Par J.-J. Weiss. Paris: Calmann Lévy; New York: F. W. Christern.

*Études de Littérature et d'Art.* Par Gustave Larroumet. Paris: Hachette; New York: F. W. Christern.

*Les Étoiles en Voyage:* La Patti, Sarah Bernhardt, Coquelin. Par Schürmann. Paris: Tresse; New York: F. W. Christern.

*Shadows of the Stage.* Second Series. By William Winter. Macmillan & Co.

*Edwin Booth.* By Laurence Hutton. Harper & Bros.

M. Larroumet is like the late J. J. Weiss in that he also held an important position under the French Government and in that he has also given time and thought to the theatre. But where Weiss was brilliant and paradoxical, M. Larroumet is solid and serious. The qualities of the two critics are abundantly shown in the two books before us. Weiss's volume is one of four to be made up from his *feuilletons* in the *Journal des Débats* during the three years when he was its *lundiste*. It is as lively and as vigorous as its predecessor; it is stimulating. It is obviously the work of a man of fine powers, really fond of literature, really well read, and yet not taking the literary art quite seriously enough to leave behind him that which should justify his contemporary reputation to the generation which succeeds his. But no one who wishes to understand the development of the drama in France can afford to neglect his collected criticisms.

M. Larroumet's essays are stiffer in texture and woven with more care. Weiss relied chiefly on himself; M. Larroumet is capable of research and of weighing evidence. The essay on Adrienne Lecouvreur in the present volume is an instance in point. It is a most acute analysis of the great actress's character and accomplishments, and of her artistic individuality. In the history of the French theatre no women have held as high rank as Adrienne Lecouvreur and Rachel, and there was, therefore, something singularly appropriate in the impersonation of the former by the latter in the adroitly contrived play prepared by Scribe and Legouvé. It is perhaps this pathetic play which has kept alive Adrienne's fame, just as the memory of Mistress Margaret Woffington is kept alive by the artificial but effective comedy of Charles Reade and Tom Taylor, "Masks and Faces." Another admirable paper of M. Larroumet's is that on the centenary of Scribe; in this he does full justice, and no more than justice, to one of the most remarkable figures in the history of the theatre. It is only a clear-sighted critic, understanding the conditions of the acted drama—and of what utility to any one is the unactable drama?—who can discern the strength of the influence exerted by Scribe on the younger Dumas, for example, who simplified the Scribe formula, and even on Ibsen, who first mastered the Scribe method and then gave it up.

No greater contrast to M. Larroumet's dignified essays can well be imagined than the unveracious and vulgar chapters of M. Schürmann's amusing account of his experiences as the manager of the starring trips of Mme. Patti-Nicolini, of Mme. Sarah Bernhardt, and of M. Coquelin. The book is broadly comic and hopelessly common. And the author's temper is as bad as his manners. Of his three stars, M. Schürmann heartily detests two. Only Sarah Bernhardt finds favor in his eyes; Patti and M. Coquelin have to stand an incessant hail of cheap gibes—ill-natured all of them, and ill-founded most of them, at least in so far as M. Coquelin is concerned.

Mr. Winter's opinion of M. Coquelin is not unlike M. Schürmann's. In the second series of his pleasantly written 'Shadows of the Stage,' side by side with an excellent paper on "The Right Standard," side by side with criticisms of the careers and the characters of Mary Duff, Junius Brutus Booth, J. K. Hackett, Edwin Forrest, John Gilbert, John Brougham, Charlotte Cushman, Lawrence Barrett, John T. Raymond, and other dead and gone celebrities of the American theatre, Mr. Winter

has placed certain less useful criticisms of sundry distinguished foreign actors and actresses who have visited America in the past ten or twenty years. One of these is on Signora Ristori, another is on Mme. Sarah Bernhardt, two are on M. Coquelin—one on his controversy with Mr. Henry Irving and the other on his performance of *Tartuffe*. Of his criticism of the *Tartuffe* it is needful only to say that Mr. Winter thinks that *Tartuffe* is a priest. In commenting on the debate between Mr. Irving and M. Coquelin, Mr. Winter takes occasion to declare that French art is inferior to British, since "a mercurial temperament, like the Gallic, naturally expresses itself in effusive movement and gesticulation," and therefore "the French have never produced . . . such actors as Garrick, Mrs. Siddons, Edmund Kean, Ellen Terry, and Henry Irving" (pp. 290-1). The allowance for the personal equation must needs be large for a critic who puts Miss Terry and Mr. Irving in the same sentence with Garrick, Kean, and Mrs. Siddons, and who thinks them superior to Adrienne Lecouvreur, Talma, Rachel, Régnier, and M. Coquelin.

Mr. Winter's beautifully printed little book —most welcome despite its author's vagaries of judgment—is inscribed to Edwin Booth, and it is announced that Mr. Winter has in preparation a detailed biography of the most accomplished tragic actor born on American soil. For the fitting performance of this labor of love no one is better equipped than Mr. Winter. In the meanwhile, Mr. Laurence Hutton, also an intimate friend of Booth and also a most conscientious student of th stage, has republished, in one of the pretty little books of Harper's Black and White Series, a sketch of Booth's career which all lovers of the theatre will be glad to have in so neat a form. Mr. Hutton succeeds in conveying to the reader an adequate impression of a character of very unusual gentleness and generosity and charm. Although he outlines with an abundance of dates the chief events of Booth's career, it is rather the man than the actor that Mr. Hutton presents to us; and great as might be the force and fascination of the actor, the force and the fascination of the man were greater yet. It is the merit of Mr. Hutton's little book that it more than suggests this side of Booth's personality.

---

*Woman's Mission:* A Series of Congress Papers on the Philanthropic Work of Women by Eminent Writers. Arranged and edited, with a preface and notes, by the Baroness Burdett-Coutts. Royal 8vo, pp. 485. London: Sampson Low, Marston & Co.; New York: Charles Scribner's Sons.

*Woman and the Higher Education.* Edited by Anna C. Brackett. With introduction by Mrs. Blanche Wilder Bellamy. Harper & Brothers.

THE handsome volume sponsored by the Royal British Commission to the Chicago Exhibition and dedicated to the Princess Christian, President of the Ladies' Committee, of the external finish of which too much cannot be said in praise, falls naturally into two parts—the thirty-two papers described in the title, and an appendix containing brief summaries of the reports of societies, guilds, and institutions to the number of three hundred and odd. Necessarily, in a volume so composite in structure, there are repetitions, overlapping of outlines, and inequalities of substance, not chargeable to the editorship. There are, on the other hand, some omissions which, in view of the tendencies and importance of the work overlooked, not only cause surprise, but mar the completeness of the survey of the philanthropic activity of Englishwomen. Thus, of the labors of Miss Octavia Hill and her fellow-workers, in rent-collecting in the poor and teeming districts of London, no account is given. Similarly, the work of women in charity organization is, save for incidental reference, left unnoticed—an omission not explicable on the ground that this is a joint work of men and women, since to the work of women colleagues of men in ragged schools, in church organizations, and elsewhere, ample recognition has been given. The women of the Salvation Army are also conspicuous by the absence of a report; while, at the other extreme of charitable enterprise, the Women's University Settlements are dismissed with a meagre space in the appendix—an economy the more to be regretted inasmuch as the one report quoted, that of Miss Sewell of the Southwark Settlement (p. 413), contains more pregnant suggestions of the modern principles of benevolence than a dozen others taken at random.

In the common temper of the philanthropic movements which are represented by shorter or longer papers, noticeably hopeful signs are the almost entire absence of denominational or sectarian prejudice; the strengthening perception that practical insight into human nature is a better philanthropic lever than prayerfulness; the increased understanding that personal sympathy and heartiness are the secret of success in relations between the more and less fortunate members of society; and the growing respect for the individual and the family, coupled with the corresponding belief that the noblest and best work is done by men and women, not by councils, committees, and boards. An eminently practical feature of the combined reports is the emphasis they lay on the need for training for domestic service. In energetic action in this direction the women of England show themselves far in advance of the women of our own country. Orphanages, "homes," or "shelters" are almost invariably provided with means for instruction in simple housework, often in dairy-work and the care of poultry as well; while the Metropolitan Association for Befriending Young Servants (p. 384) can point to results and produce statistics that lend it a national dignity. Of the work described in Miss Calder's concise and admirable paper (p. 317) it is difficult to speak with moderation. Her theme is the introduction, through the initiative of the National Union for the Technical Education of Women in Domestic Sciences, into the elementary schools, of first cookery, then laundry work, and finally household sewing ("home dress-cutting, mending, patching, and darning of garments in daily wear and tear"), all taught "with that scientific accuracy and that knowledge of cause and effect which create intelligent and interested workers," and with the aim of getting rid of "tradition, chance, rule of thumb, and that general inaccuracy which has always been the bane of female work."

This and other such papers exemplify, apart from other results, the reflex benefit of philanthropic work upon the reason and intelligence of the worker, when once it has come to be understood that prevention and not relief is the true quality of mercy. To spread such an understanding in her own field of work is practically the intent and purport of Miss Nightingale's stimulating paper (p. 184) on "Sick Nursing and Health Nursing." Flanked by two others on nursing, her paper points the way to new and timely departures for her rising profession by a syllabus of "Lectures to Health-Missioners" and another of lectures to be given by the "Health-Missioners to Village Mothers." The Baroness Burdett-Coutts herself contributes two papers, "Woman the Missionary of Industry" and "Miss Ormerod's Work in Agricultural Entomology," and lays a train for reflection besides in the implication of the title she has chosen for her volume. "Woman's Mission" is, in fact, no more philanthropy than it is business, art, or medicine. Philanthropy is the mission of all persons who, with inclination for it, have time and intelligence to spare from the right conduct of personal affairs; and, like all other social undertakings, it can be brought to successful issues only by the joint work of men and women, with zeal and knowledge equally distributed among them, not apportioned to sex.

Upon sex in education sentence of final extinction has already been passed, and before long sex in literature will, it is to be hoped, meet the same verdict. In the meantime, however, 'Woman and the Higher Education,' which is a unit in still another of the endlessly multiplying "series"—this time the "Distaff"—reflects credit upon its editor and the six other women writers whose essays she has selected for reprint. Five of these essays form a retrospective view of the education of women from the year 1819 to practically the present time, the last being Mrs. Alice Freeman Palmer's well-remembered paper on the three methods of college education for women—the co-educational college, the woman's college, and the Annex—contributed to the *Forum* in 1889. The irony of events has ordered that a late honored Professor of Astronomy in a woman's college (Miss Maria Mitchell) should be the writer to follow next in order after Mrs. Emma C. Embury, who in 1831 conciliates the prudent by saying, "I do not mean that our daughters should be rendered capable of becoming teachers of classical literature or professors of the sciences; but I would have them intimately acquainted with all *useful* branches of human knowledge."

Of the remaining two essays the last is from the alert pen of Miss Brackett, who, although she has not regarded order as Heaven's first law in the composition of her paper, nevertheless writes with force and enthusiasm of the ideals of her profession of teaching, and with no less force of the shortcomings of parents, chief stumbling-blocks of principals. Finally, Prof. Lucy M. Salmon is represented by a paper, on "The Teaching of History in Academies and Colleges," so well arranged, and with common sense and learning in such happy balance, that the reader, forgetting that controversy over educational opportunities for women is not yet a thing of the past, may have a foretaste of the gratification to come when problems of education, pure and simple, shall occupy the attention of educators.

---

*Louis Agassiz:* His Life and Work. By Charles Frederick Holder, LL.D. [Leaders in Science Series.] G. P. Putnam's Sons. 1893. Illustrated.

DR. HOLDER had the advantage of selecting from the writings of earlier authorities whatever in his judgment would contribute most to the success of his own work. His selections have been judicious, and the result is a fair and entertaining account of the life of the great scientist and teacher. Parentage, boyhood, student life, later life in Europe and America, publications, voyages, relations with

contemporaries, and attitude towards recent developments in science are passed in a rapid review that gives a tolerably good idea of the career in its entirety. Our author is an enthusiastic admirer, and his book is eulogistic rather than critical or analytical. Yet it does not appear that he has been led to overestimate either accomplishments or popularity. In regard to the latter especially, Prof. Agassiz had a hold on popular esteem such as has been accorded no other scientist. With the teachers he was one of themselves, among the clergy he was the defender of the faith against attacks of materialistic or atheistic science; both looked up to him with kindest regard, and never tired of bringing him before pupils or hearers. In this way and through the press they reached the great mass of the people in the country, arousing a personal interest in the man and at the same time waking a desire to know more of his science. Thus, aside from the direct results of his published treatises and his influence on his fellow-workers, we are indebted to the elder Agassiz to an extent not yet fully comprehended for rousing the spirit of inquiry and advancing the cause of scientific education. Many exemplifications besides his grand museum, or even the numerous progeny of the Penikese School, might be cited to show how difficult it would be to rate too highly the importance and vitality of his influence.

Eight or ten memorial addresses and an extensive list of publications are included in this volume. No doubt the book, as it deserves, will meet with a reception gratifying alike to author and to publisher. A new edition will demand modification in a number of particulars. The author's understanding of Darwinism is somewhat indefinite. His assertion that Darwin believed that "all animals have developed from previous forms, the species and genera being produced by environment in vast eras of time," is likely to wrinkle the brows of the advocates of natural selection. A mixed condition of evolution and Darwinism in the author's mind is shown in the remark: "To-day, with perhaps one exception, all of his [Agassiz] pupils are believers in the modern theory of evolution as expounded by Darwin"; and again: "To-day the students of Agassiz are among the most distinguished advocates of the doctrine of Darwin," etc. The author might better have said that all of Prof. Agassiz's pupils are evolutionists, but none of them advocates Darwinism as it was left by Darwin. The Massachusetts Legislature is mistakenly credited with the hundred-thousand-dollar birthday present.

A hasty glance over the pages discloses Rondolet, strata, John, sauba, studis, jaçana, Block, cyprynidæ, and cycnocephalus doing duty instead of Rondelet, stratum, Joel, saüba, sudis, jacana, Bloch, cyprinidæ, and cynocephalus. The phrase "Linnæus's 'Règne Animal'" when corrected will read either Linnæus's 'Systema Naturæ' or Cuvier's 'Règne Animal,' whichever was to have been mentioned. In general, the illustrations are not up to the text; some of them are evidently made by an artist not familiar with the objects represented.

---

*On English Lagoons.* By P. H. Emerson. London: David Nutt. 1893.

In these days of feverish anxiety, when men's minds are full of fears lest the credit of a great nation may be shattered by its legislators, it is most restful and refreshing to be transported in the twinkling of an eye from Wall Street or Washington to the Norfolk "broads," where the silver question is as an unknown tongue. Most interesting it is, under the skilful guidance of Mr. Emerson, to learn the peculiar charms of that little-known corner of the world, and to let his brilliant word-painting blot out the picture of the United States Senate in extra session. To use his own words: "Man must become refined when he is constantly living before such exquisite pictures." The book is a daily record of life in a Norfolk wherry from September, 1890, to August, 1891. A Norfolk wherry is a somewhat flat-bottomed sloop which is used on the shallow lagoons near the coast for all kinds of transportation, and the *Maid of the Mist*, which was Mr. Emerson's particular wherry, was thirty years old and had been employed in carrying marl and other base freights before he came into possession of her. He fitted her up as a kind of sailing house-boat, and engaged as his sole companion a boatman who combine an accurate knowledge of the "broads" with a sense of humor. The winter of 1890–'91 was an exceptionally severe one in England, and for some weeks the *Maid of the Mist* was frozen in. But nothing could daunt so fervid a lover of nature as Mr. Emerson—not even the fear of rheumatism which is said to be the inevitable result of living on the "broads." Occasionally, indeed, his enthusiasm yields a trifle before the rigors of an English spring, and he goes so far as to admit that the aspect of certain marshes covered with patches of melting snow constitutes a "veritable hell"; but even at such times he finds compensation in severe physical exertion, which he rightly regards as the cheapest and most harmless of intoxicants.

The reader who enjoys careful and minute investigation of natural phenomena, records of weather and temperature, and observations of the habits of birds and fishes, will find Mr. Emerson delightful. He has keen senses, and can smell a shoal of fish as easily as a rose—a faculty often claimed by professional fishermen, but not generally admitted. Among many other odd things, he has discovered that when fresh water mixes with the salt tide, the mixture is of a higher temperature than either constituent. Nor is he less observant of the manners and customs of the natives, whose curiosity prompted them to visit the wherry and endeavor to solve the mystery of the apparently aimless existence of the captain and crew. He manages to extract a good deal of amusement out of them, although he holds that Methodism has spoiled the natural gayety of the English rural population—a theory that might repay examination. On the whole, life in a wherry would seem to possess many charms for enthusiastic lovers of nature, and might be profitably essayed by those who go to Florida for the winter months.

---

*The Church in the Roman Empire before 170.* By W. M. Ramsay. G. P. Putnam's Sons. 1893.

This stately volume is the outcome of Prof. Ramsay's travels in Asia Minor, and of lectures which he gave at Mansfield College in Oxford in the year 1892. It consists of two parts—the first a careful analysis of Paul's three journeys in Asia Minor, and the second an enlarged version of the Mansfield lectures. The purpose of the first part is chiefly to test the accuracy of the documents on which our knowledge rests—the Epistles and the Acts of the Apostles. The method followed is to trace the journeys from point to point, as the author has done in person, and, having fixed the connection of the Apostle with each place mentioned, to see what light his report throws upon the condition of the earliest Christians in those parts.

The purpose in the lectures is to examine the attitude of the Roman Government towards the Christians, from Nero to Marcus Aurelius. To do this the author reviews the chief documentary evidence, of which the famous correspondence between Trajan and Pliny the Younger forms rather the central point. In the course of this examination, Prof. Ramsay makes very clear his distrust of almost all German writers who have treated the subject; and in his chapter ix., the introduction to his lectures, he gives a theoretical apology for his own method as superior to theirs. The quality he justly condemns in them is what they themselves neatly call *Systemsucht*—the madness of system; but one could wish him a little larger leavening of this same quality in the arrangement of his work. His style is diffuse and his argument broken by frequent divergences from the main thread of discourse. On individual points, whether of great importance or not, his opinions are decided and clearly contrasted with those of others. It would have been far better if we could have had all the material of the two parts worked over and condensed into one comprehensive treatment, under the topical headings which would best have illustrated the various critical points.

*With Captain Stairs to Katanga.* By Joseph A. Moloney. With illustrations and map. London: S. Low, Marston & Co. 1893. Pp. xii, 280, 8vo.

Dr. Moloney tells the story of the Stairs expedition exceedingly well. His account is plain, straightforward, easily and pleasantly written, and impresses one with its frank truthfulness as well as with the author's kindliness towards the natives. Though he went over a well-known route, and had, with a single exception, only the ordinary incidents which befall the traveller in Central Africa, and has little to describe but the familiar life of the caravan and the appearance and habits of the people whose country he traversed, still he manages to hold the interest of the reader to the end. In fact, the death of the young leader—Capt. Stairs was but twenty-nine—just as he had reached the coast on his return, comes with the effect of the tragic ending of a novel. If, from the circumstances, this book has small value as a record of travel, it is interesting and suggestive as the record of an episode in the "scramble for Africa."

The author frankly states at the outset that the object of the expedition was the conquest of Katangaland. This is the high land in which are the sources of the Congo, and is supposed to be rich in gold, silver, and copper. Its ruling chief was Msiri, a negro tyrant of the very worst stamp. Dr. Moloney says, "We proposed to secure the country, either with or without Msiri's leave, for the Congo Free State" (p. 9). On this native's not unnatural hesitation to give up his country to these European adventurers, he was murdered—it is difficult to use any other word—time being too precious for prolonged negotiations. "The rumored approach of the South Africa Company's expedition, under Mr. Joseph Thomson, caused a prompt solution of our difficulties with Msiri to be a matter of urgent necessity" (p. 179). It is absolutely painful to read the avowal of the determination to resist with force this gentleman if he should attempt "to occupy Katanga"—a determination so strong that Capt. Stairs, in the delirium of fever, "held imaginary conversations with [him],

and demanded his revolver, which I had fortunately secured, to repel that explorer." It is no wonder that they were "hampered" by the presence of English missionaries. Much has been written about the barbarity of the Arabs who harry large tracts for slaves to carry their ivory to the coast, and an exterminating war has been declared against them by the civilized Powers. But is there much to choose, after all, between their conduct and that of these agents of a Christian ruler, who kill a king and some of his subjects, loot his town and take his land, simply and avowedly for the purpose of acquiring gold mines supposed to exist?

The expedition was a costly one, it may be added, so far as loss of life was concerned, for, of the five whites composing it, the leader died of fever, the second in command was killed, and of the negro soldiers and porters only half survived to reach the coast, many having died of pure starvation in Katanga. There are several portraits, an index, and an excellent map.

BOOKS OF THE WEEK.

Anstey, F. The Man from Blankley's, and Other Sketches. Longmans, Green & Co. 75 cents.
Arts and Crafts Essays. Scribners. $2.50.
Baker, Prof. A. L. The Elements of Solid Geometry. Boston: Ginn & Co. 90 cents.
Bandelier, A. F. The Gilded Man, and Other Pictures of the Spanish Occupancy of America. Appletons. $1.50.

**Freytag's Karl der Grosse.** Nebst zwei anderen Bilder aus dem Mittelalter. Edited, with an Introduction and Notes, by A. B. NICHOLS, Instructor in Harvard University. 200 pp. 16mo. Teachers' price, 75 cents; postage 5 cents additional.

These particular essays contain a large element of narrative and anecdote, and therefore are easier, as well as more interesting, than any of Freytag's historical writings heretofore available in separate form with adequate annotation.

**Falckenberg's History of Modern Philosophy.** Translated by A. C. ARMSTRONG, Jr., Professor in Wesleyan University. 655 pp. 8vo. Teachers' price, $3.50; postage 25 cents additional.

A comprehensive view, full and appreciative, in the portions on English and general nineteenth century philosophy, and extraordinarily objective and free from personal bias.

**HENRY HOLT & CO., N. Y.**

**Yale Mixture** A Grand Combination.

**For the Pipe.**

Beware of Substitutes and Imitations.

**For sale by all Druggists.**

**Just Ready, in 1 Volume, 668 Pages, Demy 8vo, Cloth, Price $2.50.**

**Dictionary of Quotations**

**From Ancient and Modern**

**ENGLISH AND FOREIGN SOURCES.**

*Including Phrases, Mottoes, Maxims, Proverbs, Definitions, Aphorisms, and Sayings of wise men in their bearings on Life, Literature, Speculation, Science, Art, Religion, and Morals, especially in the modern aspects of them. With a Subject Index. Selected and compiled by the* Rev. JAMES WOOD, *Editor of "Nuttall's Standard Dictionary." 1893.*

*It admits both Prose and Poetry, and is not confined to one subject or one period It contains proverbs, quotations, and wise saws culled from all sorts of out-of the way sources, old and (particularly) new. The wise sayings of a dozen languages are comprised within its 30,000 references, as well as the crystallized wisdom of the great minds of Amer ca, England, France and Germany. The whole made easily available by the Subject Index, and a novel method of paging and numbering the quotations.*

"The effort has not been to make a collection of 'Familiar Quotations,' but rather to mass so large a quantity of pithy and wise sayings that the apt word for any occasion may readily be found. . . . A really valuable addition to the reference library."—*The Outlook*, New York.

*** *Of all booksellers, or free by mail on receipt of price by the publishers,*

# Extraordinary Relief

*IN EQUITY AND AT LAW.*

By THOMAS CARL SPELLING.

Covering

*INJUNCTION, PROHIBITION, HABEAS CORPUS, QUO WARRANTO, MANDAMUS, CERTIORARI.*

*Containing an exposition of the principles governing these several forms of relief, and of their practical use, with citations of all the authorities up to date.*

**Two vols. 8vo. 1,969 pages. Law Sheep. Price, $11.00 net.**

This is the first adequate treatment of this very important subject. The author is known to the profession as an original and painstaking writer, and only an examination of the volumes is required to prove that he has produced a complete and exhaustive work upon the six great extraordinary remedies—one equitable and five legal.

Every accessible American case has been cited in its proper place, and the English, Irish, and Canadian decisions have been freely referred to.

A large amount of labor has been expended upon the preparation of a very full, accurate, and exhaustive index in which the notes as well as the text have been fully indexed.

# Patent Office Manual,

Including the Law and Practice of Cases in the United States Patent Office and the Courts holding a Revisory Relation thereto. Also, an Appendix of Copyright Decisions. By GEORGE H. KNIGHT, Member of the Patent Office Bar Association, Resident Member of the New York Academy of Sciences, etc.

**One Volume. 8vo. Law sheep, $5.00 net.**

COMPRISING

*I. The Patent Franchise.*
*II. Decisions Relating to Patents for Inventions.*
*III. Decisions Relating to Patents for Designs.*
*IV. Decisions Relating to Trade-Marks and Labels.*
Appendix A. *Copyrights.*
Appendix B. *Foreign Patents.*
*Table of Cases.*

A COMPACT handbook, treating specially of THE APPLICATION FOR A PATENT AND ITS PREPARATION AND PROSECUTION has hitherto been lacking. All patent solicitors and all lawyers engaged in patent practice will therefore be interested in the important work here announced, specially prepared to supply this need by a member of the Patent Office Bar Association.

*The work is the result of a practical experience of more than half a century.*

We buy and sell bills of exchange on and make Cable Transfers of money to Europe Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

*Back Numbers of "The Nation."*

In response to frequent inquiries from subscribers:

*An incomplete set* of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

OFFICE OF THE

# Atlantic Mutual

INSURANCE COMPANY,

NEW YORK, January 24, 1893.

## Charles Scribner's Sons' New Books

*ROBERT LOUIS STEVENSON'S NEW BOOK.*

### DAVID BALFOUR.

Being Memoirs of his Adventures at Home and Abroad. 12mo, cloth, $1.50.

"Lovers of fiction have a great treat before them when they sit down to read 'David Balfour.' We have not hesitated to compare Mr. Stevenson with Scott when Scott is at his best, nor shall we hesitate to compare him with Thackeray, even in 'Henry Esmond,' though a better book with which to compare this marvellous story would be 'Barry Lyndon.'"—*R. H. Stoddard in Mail and Express.*

### The Watchmaker's Wife,

And Other Stories. By FRANK R. STOCKTON. 12mo, cloth, $1.25.

In this new volume there are six of the author's inimitable tales in addition to the title story, 'Asaph,' 'My Terminal Moraine,' 'The Philosophy of Relative Existences,' 'The Knife that Killed Po Hancy.' 'The Christmas Shadrach,' and 'The Rev Ezekiel Crump.' These stories all reveal that fertile fancy, quaint drollery, and quiet though delicious humor which have made the author's name famous.

### Men of Achievement.

**Men of Business.** By WILLIAM O. STODDARD.

**Statesmen.** By NOAH BROOKS.

Each illustrated, half leather. Crown 8vo, $2.00 *net.*

Each of these volumes contains a series of graphic character sketches of Americans who by their own efforts have achieved success The eminence of the writers is an ample guaranty of both the authority and the interest of these biographical studies The volumes are enriched by portraits and other illustrations.

### WITH THACKERAY IN AMERICA.

By EYRE CROWE. With 12 Illustrations, small 4to, $2.00.

New and charming glimpses of the great novelist are given in this chatty and readable book of Mr. Crowe, the artist who accompanied Thackeray on his journeyings in this country. The rapid and graphic narrative also describes the writer's own very lively impressions of the country and people of forty years ago.

"A book that no lover of Thackeray will be willing to leave unread. Not only is it interesting for the near view it gives of the author of 'Vanity Fair,' but for the picture it paints of the United States forty years ago."—*Critic.*

### Windfalls of Observation;

For the Edification of the Young and the Solace of Others. By EDWARD SANDFORD MARTIN. 12mo, $1.25.

A series of brief essays on topics of perennial interest, intimately personal in tone, literary in touch, and both shrewd and humorous—characterized by a distinct "Roundabout," though at the same time thoroughly American, flavor.

### The Opinions of a Philosopher.

By ROBERT GRANT. With many Illustrations by C. S. Reinhart and W. T. Smedley. 12mo, cloth, $1.00.

"It is a wonderfully bright book, full of good and quotable things. Indeed, it is delicious in passages, and is by all odds the best thing Mr. Grant has written."—*Chicago Herald.*

### WOMEN OF THE VALOIS AND VERSAILLES COURTS.

From the French of Imbert de Saint-Amand.

**Women of the Valois Court.** *Now Ready.*
**The Court of Louis XIV.** *Now Ready.*
**The Court of Louis XV.** *In Press.*
**Last Years of Louis XV.** *In Press.*

Each with numerous Portraits, 12mo, $1.25. The set, half calf, $10.00; cloth, $5.00.

"In his previous volumes upon Famous Women of the French Court, M de Saint-Amand apostrophized the virtues of Marie Antoinette, the Empress Josephine, Marie Louise, Duchess of Angouleme and Duchess of Berry. He now reverts to a group of even more distinction and of quite as much historic interest. He presents a group of feminine types discovering almost every shade of human passions and ambitions."—*Philadelphia Ledger.*

### New Library Editions.

**Thomas Nelson Page's Works.** 4 vols in a box, $4.50.

**George W. Cable's Novels.** 5 vols., in a box, $6.00.

Both Mr. Page's and Mr. Cable's books long ago acquired the distinction of classics, and the appearance of the works of each in a handsome uniform binding is in response to a wide demand for library editions befitting their character and their position in the front rank of American literature.

### New Books in the Cameo Editions.

**Virginibus Puerisque, and Other Papers.** By R. L. STEVENSON. With etched portrait. 16mo, $1.25.

**Letters to Dead Authors.** By ANDREW LANG. With four additional letters and etched portrait. 16mo, $1.25.

"The exquisite cameo edition—daintily printed and bound—most attractive and tasteful."—*Boston Post.*

*Large-paper edition of above two volumes, limited to 212 numbered copies, Holland paper, uncut edges, per set, $7.00 net.*

### STORIES FROM SCRIBNER.

**Stories of Italy.** **Stories of New York.** **Stories of the South.**
**Stories of the Army.** **Stories of the Railway.** **Stories of the Sea.**

*Each volume illustrated, 16mo, paper, 50 cents; cloth, 75 cents; half calf, $1.50. The set, 6 volumes, in a box, paper, $3.00; cloth, $4.50; half calf, $9.00.*

"Only those who have regularly read *Scribner's* have any idea of the delightful contents of these volumes, for they contain some of the best short stories written for this periodical They are exquisitely bound, clearly printed on fine paper, and admirably illustrated."—*Boston Times.*

KENTUCKY, Farmdale, near Frankfort.

*KENTUCKY MILITARY INSTITUTE.*—Located in probably the healthiest country in the world. 48th session begins Sept. 11, 1893, and closes June 13, 1894. Address Col. D. F. BOYD, Supt.

MARYLAND, Baltimore.

*THE SARAH RANDOLPH SCHOOL*
FOR GIRLS.
Founded by Miss S. N. Randolph of Virginia.
1214 EUTAW PLACE,
Near Druid Hill Park.
Mrs. A. L. ARMSTRONG, Principal.

MARYLAND, Baltimore, 706 Saint Paul St.

*MOUNT VERNON INSTITUTE,* English, French, and German School for Girls, Mrs. JULIA R. TUTWILER, Principal, will reopen September 27. Boarding pupils limited to twenty. Students prepared for college.

MARYLAND, Baltimore, 122 and 124 W. Franklin St.

*EDGEWORTH BOARDING AND DAY* School for Girls.
Mrs. H. P. LEFEBVRE, Principal.
31st year begins September 21, 1893.

MARYLAND, Baltimore, 915 and 917 N. Charles St.

*SOUTHERN HOME SCHOOL for Girls.*
Mrs. W. M. CARY, Miss CARY.
Fifty-second year. Summer address, Bar Harbor, Me.

MARYLAND, Catonsville.

*ST. TIMOTHY'S English, French, and* German School reopens Sept. 20, 1893.
Principals:
Miss M. C. CARTER. Miss S. R. CARTER.

MASSACHUSETTS, Boston, 593 Boylston Street.

*CHAUNCY HALL SCHOOL (65th Year),* For Boys and Girls.—Preparation for the Mass. Institute of Technology is a specialty. Reference is made to the Institute Faculty. The location of the school building, on Copley Square, is especially attractive, and is very near the Institute.
Preparation also for College (with or without Greek) and for business. Special students received.

MASSACHUSETTS, Boston, 252 Marlboro' St.

*MISS CLAGETT'S HOME AND DAY* School for Girls reopens October 3. Specialists in each department. References: Rev. Dr. Donald, Trinity Church; President Walker, Institute Technology.

MASSACHUSETTS, Boston, 25 Chestnut Street.

*MISS HELOISE E. HERSEY'S* School for Girls opens Oct. 6. Two vacancies for house pupils. No student received without a personal interview. Circulars on application.

MASSACHUSETTS, Boston, 231 Marlborough St.

*MISS WEEKS AND MISS LOUGEE'S* Home and Day School for Girls opens Oct. 3, 1893. Junior, Senior, and College Preparatory courses.
Address Miss S. C. LOUGEE.

## *Educational.*

MASSACHUSETTS, Boston, 9 Appleton Street.

*BOSTON NORMAL SCHOOL OF GYMNASTICS.*—Fifth year opens September 26, 1893.
AMY MORRIS HOMANS, Director.

MASSACHUSETTS, Boston, 112 Newbury Street.

*THE MISSES HUBBARD'S SCHOOL* for Girls will reopen Oct. 3, 1893. A limited number of boarding scholars will be received.

MASSACHUSETTS, Boston.

*BOSTON UNIVERSITY Law School.*
Address the Dean.
EDMUND H. BENNETT, L.L.D.

MASSACHUSETTS, Concord.

*CONCORD HOME SCHOOL.*—*25 BOYS* prepared for college, scientific school, or business. All the advantages of family life combined with best mental and physical training. Buildings new and according to latest models. 75 acres of ground.
JAMES S. GARLAND, Principal.

MASSACHUSETTS, Duxbury.

*POWDER POINT SCHOOL*—PREPARES for Mass. Inst. of Tech., Harvard, or Business. Individual teaching. Laboratories. 50 boys. Elementary classes for young boys. Home and outdoor life. F. B. KNAPP, S.B.

MASSACHUSETTS, Greenfield.

*PROSPECT HILL SCHOOL FOR GIRLS*—Twenty-fourth Year. Prepares for College. Also Science, Art, and Music.
JAMES C. PARSONS, Principal.

MASSACHUSETTS, Plymouth.

*MR. KNAPP'S HOME SCHOOL FOR* Boys—12 boys; 27th year.
H. W. ROYAL (Harv.), Head Master.
Mrs. KNAPP, Principal.

MASSACHUSETTS, Quincy.

*ADAMS ACADEMY.*—*PREPARES* Boys for the leading Colleges. School year begins September 21, 1893. Address
W. R. TYLER, Master.

MASSACHUSETTS, West Newton.

*WEST NEWTON ENGLISH AND* Classical School—Family and Day School. Both sexes. 41st year. College, Scientific, and Business preparation. Send for Catalogue. At home Tuesdays.
ALLEN BROTHERS.

MASSACHUSETTS, Worcester, 66 West St.

*JOHN W. DALZELL'S PRIVATE* School for Boys—Prepares for College or Scientific School. Send for Catalogue.

MICHIGAN, Orchard Lake.

*MICHIGAN MILITARY ACADEMY.*—A College Preparatory School of the highest grade. Location thirty miles from Detroit, and unsurpassed for beauty and healthfulness. For Catalogue, address Col. J. S. ROGERS, Superintendent.

NEW JERSEY, Asbury Park.

*SCHOOL OF THE GOOD SHEPHERD.*
A HOME SCHOOL FOR GIRLS.
Children deprived of a mother's care, and those who from previous ill health have fallen behind others of their age, will receive loving attention and special instruction. $250 per year. Address SISTERS OF THE GOOD SHEPHERD, 419 West 19th St., New York. Right Rev. H. C. Potter, D.D., Head of the Sisterhood.

NEW JERSEY, Lakewood,

*LAKEWOOD HEIGHTS SCHOOL*
Among the Pines.
A thorough and attractive SCHOOL FOR BOYS.
JAMES W. MOREY.

NEW JERSEY, Short Hills.

*LOCKWOOD HOUSE.*—*HOME FOR* eight boys in Principal's family, in connection with Short Hills Academy. New building, fine equipment. Gymnasium; exceptional surroundings.
ALFRED COLBURN ARNOLD, Headmaster.

NEW YORK, Havana.

*COOK ACADEMY FOR BOTH SEXES.*—Classical, Scientific and Literary Courses. Music and Art. A. C. HILL, Ph.D.

NEW YORK CITY, 43 West 47th Street.

*ACADEMIC CLASSES FOR GIRLS.*—Primary and Preparatory Classes.
A Boarding and Day School.
Individual Instruction. College Preparation.
MARY B. WHITON, A. B., and LOIS A. BANGS.

*** *Messrs Macmillan & Co. have removed to their new premises at 66 Fifth Avenue.*

## MACMILLAN & CO., 66 Fifth Avenue, New York.

# The Nation.

NEW YORK, THURSDAY, OCTOBER 5, 1893.

## The Week.

It would be a mistake to suppose that if Mr. Van Alen should be confirmed, the manner of his selection would drop from the public memory as "an old, unhappy, far-off thing." We trust that neither the President nor Mr. Van Alen will deceive himself on this point. If Mr. Van Alen should get the place and keep it, the scandal would be a continuing one, like Wanamaker's presence in the Cabinet. All the President's enemies would ring changes on it in the press every time there came a telegram about Mr. Van Alen's doings in Rome or any question of venality came up, and, as Mr. Cleveland well knows, his enemies are not all in the Republican party. The bitterest are among those whom he has of late been trying to conciliate by his use of patronage, and all the patronage in his gift will not keep them from stabbing him under the fifth rib whenever they get a chance. They are all chuckling to-day over the Van Alen blunder. It disposes, they say, of one more "reformer." The worst of it is, too, that it has not been committed hastily, but after months of discussion and reflection, and after the receipt of numerous protests from some of the President's most faithful friends, and it has been defended by arguments and explanations which Mr. Cleveland in his earlier and better hours would have been the first to tear to shreds and tatters. "No 'bargain,'" he would have cried; "only an expression of 'wishes' and gratification of the same after the event! Do you take me for a Tombs lawyer?"

---

The argument of all arguments which did best service in expelling the Republicans from power last year, and of which Mr. Cleveland himself made most effective use, particularly in his speech at the Lenox Lyceum on November 1, 1892, was the danger and horror of letting them go on giving legislation to manufacturers in return for campaign contributions. That argument was vigorously applied to Wanamaker's case. That very night Mr. Breckinridge thanked a man in the crowd for mentioning Wanamaker as an illustration of power acquired through "boodle." It is applicable to all appointments to office where the candidate's only claim is the pecuniary aid given to the appointing officer's election. There is no rational distinction between a Congressman's voting for an increase of duties for the benefit of a man who has lent or given him money for his election expenses, and a President's giving him an office, high or low, for a similar reason. The trail of the serpent is over all. It is part of the immense wave of venality which to-day is threatening the very existence of the Government, and which no one has denounced more vigorously than Mr. Cleveland himself. Mr. Van Alen, on his part, cannot comfortably go to Italy to consort with foreign diplomatists in what they will consider a purchased place, through a transaction which in England, France, Germany, Austria, or even Italy would ruin everybody concerned in it. That kind of notoriety would necessarily be disagreeable to him. If he consults his own fair fame and Mr. Cleveland's peace, he will ask the President to withdraw his name. The matter will then be forgotten in a month. His confirmation will, on the contrary, make him for four long years what Quay and Wanamaker were to President Harrison, a stock newspaper illustration of the hollowness of Mr. Cleveland's pretensions to political purity. A foreign mission is a nice thing for a rich man, if he knows how to fill it, but it may be too dearly bought, even by a millionaire.

---

Those who, on the President's behalf, take comfort in the fact that Mr. Van Alen is a person who would fill the Italian mission creditably if appointed, in spite of his large contribution to the campaign fund, would be better off if a regard for fitness had marked the selections for the other diplomatic and consular places. But we cannot say that this has been the case. We have no good reason for believing that Mr. Van Alen would have been selected for Rome even if he had not given $50,000. The quality of the diplomatic appointments thus far has not been higher, on the average, than under previous administrations. Care has been taken, as usual, with one or two important posts, like London and Paris, but the others have been flung to the spoilsmen with the old time-honored disregard of the national reputation and the national interests. Mr. Quincy has been allowed a debauch among the consulships which would have sickened a Blaineite, and which has sent him home to Boston with a wet towel round his head. He has sent out to look after our trade in the uttermost ends of the earth the usual quota of broken-down men and ignorant editors, who will, of course, if, partly through the discredit of them, the Democrats should lose the next election, be remorselessly cast adrift at their posts, and many of them will have to "beat" their way home, to our further disgrace. For one of the shocking features of our system is that these poor creatures very often, after being "decapitated," are left penniless at their posts, and have literally to beg their way back to the United States by means of contributions from the American residents and American legations in the capitals on their way. This treatment is good enough for most of them personally, but it is not good enough for the servants of a great, civilized, rich Government like ours. We are sending our new cruisers abroad in order to raise the national reputation in the eyes of foreigners, to show how ingenious, skilful, and powerful we are, and this the sight of such ships in the new navy is well calculated to do. But for the one foreigner who sees an American ship like the *Chicago*, and is impressed by it, ten thousand are taught to despise us by their knowledge of the ignorant and often disreputable officials who represent us on shore. If the result of the present system could be brought home to the American people generally as it is to the few thousands who visit Europe every year, we do not believe any Administration would hereafter dare to maintain the present use of the diplomatic service to reward home "workers."

---

The platforms of two Democratic Conventions, those of Massachusetts and Maryland, which were held last week, make sufficiently explicit declarations on the silver-repeal question. The former heartily supports the President and Secretary Carlisle in "their firm attitude in favor of the immediate and unconditional repeal of the purchase clause of the Sherman Law," congratulates the House upon its "speedy and emphatic response to the President's message," and calls upon the Senate "to follow the action of the House without undue delay or obstruction of the popular will." The Maryland Convention sustains the President "in his earnest purpose to secure the repeal of the objectionable provisions." Every Democratic convention held thus far has taken an equally emphatic position, but that fact will not help the party any in the approaching elections unless the Senate shall pass the Repeal Bill without much more delay. What the country demands is not professions of faith, but action, and if the Democratic majority in the Senate cannot secure that, the party will be held responsible, in the President's words, for "plunging the country into deeper depression." There will be no escaping the consequences of this responsibility.

---

A handful of Philadelphia manufacturers have signed Mr. Wharton Barker's appeal to the Senate to give the silvermen all they want, with a good-sized present thrown in, on the understanding that the said manufacturers, in their turn, be given all they want, with such bonuses as they may designate. This is the surest way imaginable to make both protection and silver purchases odious at one stroke.

It comes very pat on the morrow of the declaration of the Democratic State Convention of Massachusetts, that the Sherman Law was only a roundabout way of extending protection to silver, and that it is but part and parcel of the whole pestilent scheme of legislating for the benefit of private interests. Right here is the real secret of the uneasiness of the thick-and-thin protectionists over the repeal of the Sherman Law. If that piece of protection can be stricken down by Republican votes, why may not others? It is this inquiry, which they have been solemnly putting to themselves, that has led to all their sly intriguing and feeling after a grand political "deal" on the question of repeal. Innocent Mr. Barker comes right out into the daylight with his petition to the Senate, frankly admitting that the silver-producers have as good a right to their protection as he has to his, and proposing to give it to them with a generous hand.

---

Senator Cameron knows his State—at least, he knows his party in his State, and the machine-men who bestride it. There was a Republican State Convention in Pennsylvania a few days ago, and it called upon the Pennsylvania Senators to vote for the repeal of the Sherman Law. On Monday week Senator Cameron made a speech against repeal. For this he was immediately denounced by the leading Republican papers of his State, who asserted that he was misrepresenting his party and betraying the business interests of his constituents. But two days later there was a tremendous convention at Reading of the State League of Republican Clubs, where there was great enthusiasm in denouncing the Democrats and all their works, a fresh pledging of loyalty and devotion to a high tariff and the Force Bill, and congratulation all round that "once again the Republicans in Congress have saved the day for honest money." One innocent-minded delegate thought that this last plank would look better if it had some reference to the share Don Cameron had taken in saving the day, and he accordingly introduced an amendment rebuking the Senator for his course. This was voted down in the Committee on Resolutions by 17 to 8. The Republican clubs know on which side their bread is buttered. Why should they heed the chief Republican papers of Philadelphia and Pittsburgh any more than Senator Cameron does? They know, as he knows, that a good loud cry of "Free Trade" will drive them into line whenever their support is wanted. The contempt which Cameron feels for the opinion of his State is justified by the way its Republican clubs and all other aspiring politicians kneel to him.

---

Senator Gorman's reply to Senator Wolcott on Wednesday week related to one of the branches or offshoots of the Silver-Repeal Bill. It was quite as effective, however, as if it had been on the direct question. The question before the Senate was the resolution of Senator Dubois of Idaho to postpone the silver repeal until January so that the vacancies in the Senate from Montana, Washington, and Wyoming might be filled. Such postponement would be an act of imbecility more glaring, if possible, than that which the Senate is guilty of from day to day. Suppose that Montana, Washington, and Wyoming should never fill those vacancies. If the Senate should stop business in order to accommodate their leisure in electing Senators, they might conceive that the easiest way to defeat the Repeal Bill would be never to fill those vacancies at all. Then, by the same rule, any State that wanted to defeat legislation could do so by the easy expedient of not electing Senators. Evidently, the resolution of postponement offered by Mr. Dubois was not intended seriously, but was one of the numerous contrivances devised by the silverites for the purpose of occupying time and postponing a vote. It was accordingly as good a text for Mr. Gorman to hang a lecture on as any other.

---

He applied the lash to the obstructors with such vigor and effect that they visibly winced under it, and Mr. Aldrich, when his turn came, did the same good service. The latter spoke a true word, and one which will find an echo everywhere, when he said that he "intended to coöperate with the Senator from Maryland, or with any other Senator, in saving the American Senate, if possible, from further humiliation in the eyes of the American people. The question (he continued) whether the Senate should be permitted to legislate to carry out its constitutional functions was a question above party and above party consideration. If, at the dictation of a minority, legislation was to cease, it was high time that patriotic Senators on both sides should confer as to some method by which the Government should be preserved and carried out." Those were words which the country has longed to hear from somebody in the Senate Chamber these many weeks.

---

The metropolitan press is a great bugbear just now to silver Senators whose local press is also against them in the present controversy. Senator Morgan went into a kind of male hysterics on the subject last week. The New York newspapers, according to his view, were trying to browbeat the Senate of the United States and to coerce it to pass a bill which the people did not want, etc., etc. Mr. Morgan's frenzy was all "put on." He knows that the press of his own party in his own State is against him on this question. He thinks he can manage it, however, when the time comes for choosing a successor to himself. So he seeks to conciliate the Alabama Populists. Between the two he will probably fall into the ditch. The metropolitan press represents the country in the present fight, as the vote in the House clearly proves. Why does not Mr. Morgan fall into a fit while contemplating the 130 majority for repeal in the House of Representatives?

---

Senator Morgan must be very stupid not to see that his denunciations of a "hireling press" are really denunciations of public opinion. Granting all that he says about the mercenary character of the men who edit newspapers, the very fact that so overwhelming a majority of them are for repeal proves that an overwhelming majority of the people are also for repeal. The more mercenary the editor is, the more heed will he give to the wishes of his subscribers and advertisers. He would not for a moment advocate a policy distasteful to any man from whom he can get his penny a line. If the fact were, as Senator Morgan would have it understood, that the people were bent on free silver, but that the editors were determined on striking it down, then the unhappy men who write for the press would indeed be speedily reduced to the Senator's rhetorical "crust and a dried herring." But the truth is, that the newspapers give only feeble utterance to the intense disgust of the people with the Senate, and their strong desire for a speedy repeal of the Sherman Law. Far from displeasing their readers by advocating repeal, editors are not half vigorous enough on the subject to suit them, as is shown by the fact that the expressions heard in private, and found in letters to the newspapers, are far more violent than those which find a place in the editorial columns. The Alabama Senator should quit beating about the bush, and frankly say it is the popular wish which he despises and means to defeat if he possibly can. His heroics about the "hireling press" really mean that and nothing else.

---

Senator Hill is as jubilant over his success in packing a State Convention for Maynard as he was in February of last year when he packed the one which sent a solid Hill delegation to the National Democratic Convention. He had a very poor opinion of the anti-Machine Democrats at that time, remarking of them: "They have the mass-meetings and the brass bands, but I've got the delegates." He had a more harmonious convention last year than he is likely to have at Saratoga to-day, but the outcome did not justify his sanguine hopes at the time he assembled his men. He discovered after the Convention that there was a public opinion which was far more powerful than his Machine, and if he were capable of seeing anything in politics except organization, he would perceive that the same public opinion is threatening to upset his plans again. He may succeed, and probably will suc-

ceed, in rejecting all opposing elements from his Convention, and may thus be able to accomplish his purpose of nominating Maynard by acclamation, but the nomination of a criminal even by acclamation does not make the task of electing him any less arduous.

---

Mayor Gilroy has a second article in the *North American Review* on "The Wealth of New York," though he is not in any proper sense an authority on the wealth of New York, as he is neither an economist nor statistician, nor a particularly well-instructed man in any field. Moreover, he has an obvious interest in making the wealth of New York seem as large as possible, in order to keep down public indignation over the number of loafers and scamps who, through the instrumentality of Mr. Gilroy and his friends, are to live off it. We wish sincerely the editor of the *North American Review*, when he gets public officials to write his pages, would limit them to the subjects on which they are real authorities, and on which the public, therefore, would listen to them with real interest. For example, nothing is of more importance to the moral and material future of this city to-day than an exact knowledge of the source and amount of the wealth of the leading members of the Tammany Ring. There is a general belief, founded on their style of living, that they are growing rapidly rich on small salaries. Is this true? If true, what are the sources of their wealth? What does their revenue outside their salaries amount to in the course of the year, and who pays it? We venture to say that a frank and truthful article on this subject from Mr. Gilroy or from Mr. Croker would be one of the most important contributions made to the literature of municipal government within the last fifty years. It would be well worth (say) $500 to the *North American Review*, and would be eagerly read all over the civilized world, whereas Gilroy on the wealth of New York will be read by very few even in this city. Think, for example, of the flood of light which would be thrown on some of the most serious problems of our municipal system by a candid explanation by Mr. Gilroy of the reason why Tom Brennan has to be supported out of the wealth of New York, or of the exact nature of the lien on that wealth held by Scannell, the murderer. If Mr. Gilroy were to write a volume on these topics, he would leap into a fame that would, for a while at least, pale that of Adam Smith or Ricardo.

---

The full text of Judge Ross's decision in what is known as "the Highbinder case" has reached us and is interesting reading. The United States seeks from the court authority to deport under the Geary Act a certain Chinaman, whose name does not appear in the opinion except as "the defendant" and a "Highbinder." The Highbinder, whom, for convenience' sake, we shall call Ah Sing, is a Chinese professional gambler, carrying on business in the city of San Francisco. He also, to use the Judge's language, "belongs to the criminal class commonly called 'Highbinders,' whose avocation is understood to be the commission of any and every species of crime." The question before the Court was whether Ah Sing, as thus described, was a Chinese "laborer," as that term is used in the treaty and in the Geary Act, or belonged to the exempted class of teachers, students, merchants, and travellers from curiosity. Judge Ross decides that he is in law a "laborer," and gets his rule of interpretation from the negotiations with China for a modification of the Treaty in 1880. The refusal of our State Department to agree to any precise definition of the term "laborer," as proposed by the Chinese, indicated, he thinks, a desire to keep it wide open for the accommodation of gamblers and "Highbinders." Consequently, Ah Sing is caught and must go home to the central Flowery Land. We are bound to say we think his case a hard one and the decision an insult to Labor and to New York city. The idea that a gambler is a "laborer" has certainly never before occurred to any lawyer or philologist in this part of the world, nor do we here consider a "Highbinder" a proper subject for expulsion from the country. On the contrary, his claims to high municipal office here receive at least respectful consideration, and sometimes secure his elevation to the criminal bench. For we say, "What is the business of a criminal judge? Is it not to deal with criminals? And who is so fit to deal with criminals as a Highbinder whose avocation has been 'the commission of any and every species of crime,' and can follow all the intricate windings of the highbinding heart and brain?"

---

Mr. Gladstone has undoubtedly furnished "the keynote of the campaign" to the Liberals by his attack on the House of Lords at Edinburgh last week. In fact, a greater piece of luck for the Radicals than the defeat of the bill by a great muster of Peers could hardly have been imagined. It at once enables the Liberal orators, like Mr. Gladstone, to establish a resemblance in fame and in value between the Home Rule Bill and several of the great historic measures, such as the Reform Bill, the removal of the paper duties, and the disestablishment of the Irish Church, to which the Peers have opposed an equally fierce resistance. Moreover, by making the resistance of the Lords a campaign issue, he closes the mouths of a good many Unionists like Mr. Chamberlain, whose denunciation of the House of Lords in their Radical days, as enemies of all progress, was fierce and bitter. In fact, the Liberals are now heading their campaign leaflets with some of "Joseph's" choicest vituperation of the Peers. Mr. Gladstone's suggestion, too, that if the House of Commons should go to the country on the Home-Rule Bill, the Peers should go too, and if defeated do what the House of Commons would have to do—clear out—is in the wicked old man's happiest vein. It is strokes like this which maintain his hold on the masses, and make him the most formidable parliamentary antagonist who has appeared in England since Pitt.

---

There was an interesting debate in the House of Commons on the 21st of September on the subject of silver demonetization in India. Mr. G. Russell, in behalf of the India Office, said that the fixing of a rate (16d.) at which gold would be accepted at the mint in exchange for rupees, and at which gold would be received for taxes, was not intended to work in the inverse way. That is, it was not intended to say that gold would be given for rupees at the rate of 16d. per rupee, or that the rate of exchange on Calcutta would be held at 16d. Therefore it was a mistake to assume that the Government's plan had failed because exchange had fallen to 15¼d. On the contrary, the closing of the Indian mints to silver was an unalterable fact. It had already resulted in great benefits to India. The measure had not been forced upon India, but had been acquiesced in by the Imperial Government after the most careful investigation by a commission composed of bimetallists as well as monometallists. Mr. Goschen took part in the debate. As he represents the Conservative party on its financial side, and is a sort of half-silver man, his remarks are entitled to great weight. He said that in matters of legislation for India the interests of the Indian taxpayer solely were considered. He knew this to be a fact from long familiarity with Indian legislation. The present case was no exception to the rule. He considered that if anybody had a right to object to the general policy of Indian legislation, it was the British taxpayer, who paid the whole or nearly the whole amount of the naval charge for defending the coast of India, which amounted to millions every year. In regard to the demonetization of silver by India he (Mr. Goschen) had been blamed for not expressing an opinion on the subject earlier. He had not done so because he appreciated the difficulties of the situation, because he knew that the persons in charge of it were doing the best they could, and because he had no alternative scheme to put forward. The Government was under no obligation to keep the rate of exchange steady at 16d. or at any other rate. If it was in need of money, it would be obliged to sell council bills at whatever rate they would bring, and no blame could be attached to such action.

*DEMOCRATIC RESPONSIBILITY.*

THE President's letter to Gov. Northen of Georgia was admirably calculated to increase the pressure of public opinion upon the Senate. He puts the case so clearly that the average man, even though he have little knowledge of economic laws and principles, cannot fail to comprehend it. He is in favor of a sound-money standard because it gives every American laborer and farmer a true dollar for a dollar's worth of labor or produce, because it establishes our credit among the nations of the earth, and enables us to borrow their capital, and because it will induce those in our own country who have capital to invest to put it into new enterprises rather than to hoard it. In a few words he thus states the folly of our present financial laws, as it was demonstrated in the recent depression, and places the responsibility for the continued existence of those laws upon the Senate, whose failure to act upon repeal he declares astonishes him. He takes particular pains to say that he is as inflexibly opposed to compromise now as he ever has been, and that nothing whatever can be done in the way of readjusting our currency legislation until "after the repeal of the law which is charged with all our financial woes."

The November elections of this year are to be held four weeks from next Tuesday, and if the Democratic party hopes to escape defeat in any of those which are to be held in the Northern States, it must prod its majority in the Senate into immediate action upon the Silver Repeal Bill. It seems inexplicable that the Democrats in the Senate are unable to perceive the political consequences of their present course. President Cleveland, in his letter to Gov. Northen, gives them warning of the risk they are running by saying: "My daily prayer is, that the delay occasioned by such opposition may not be the cause of plunging the country into deeper depression than it has yet known, and that the Democratic party may not be justly held responsible for such a catastrophe." That there will be, unless the Senate acts, a "deeper depression" in financial and commercial affairs, and that the Democratic party will be "justly held responsible for such a catastrophe," no intelligent person can doubt. The Democrats have a majority of five in the Senate, and they will be held responsible by the country if they are unable to save it from the evil consequences of the Silver Law.

It will not help them with the country to say that the chief obstructionists are Republican Senators from the silver States. The people will look only at the fact that the Democrats are in complete control of all branches of the Government, having the Presidency and a majority in both houses of Congress, and they will say that if this is the best kind of rule the Democratic party can give them, they will see what they can get out of the Republican party. Popular reasoning, in times of panic or depression in business, does not go much below the surface. The party in power is always selected as the first victim, and in this instance it will be rightly selected. The Democrats are responsible for the delay. They are responsible for the weak, vacillating, and half-hearted course which their leaders are pursuing in the Senate. Of course the struggle is a difficult one, and the obstacles in the way of success are great, but the party which shows itself capable of action under difficulties, and able to surmount great obstacles, is the party which shows itself worthy of power.

It is notorious that the weakness of the majority lies in certain Southern Senators who, for the sake of "making themselves solid" with the Populist party in their States, are opposing repeal. These men are indifferent to the welfare of their party, provided they can make their own reëlection sure. They reason that, since there is not to be another Presidential election for three years, they can afford to let the Republicans get the upper hand in a few Northern elections provided that by so doing they can save their local or State party interests. They do not seem to be able to comprehend that, if by their course they convince the country that the Democratic party is incapable of giving it safe and stable government, it will be impossible to elect another Democratic President or another Democratic Congress for many years. They are the blindest kind of Bourbons, as well as the most unpatriotic of men. They know well enough that if the Populist views they are conciliating were to be put into practice in either State or national affairs, the result would be irreparable confusion and disaster; but instead of standing up like honest men and true leaders and showing their constituents the folly and harm of the Populist doctrines, they fall in with them and do their utmost to perpetuate them. They are not merely bad party men; they are enemies of the whole country and of the welfare of all the people.

The supreme folly of their course lies in the fact that repeal must come in the end. No other outcome is possible. Compromise is out of the question. If it were to be agreed upon by the Senate, it would be rejected by the House; and even if the House were to accept it, the President would veto it. In the meantime where would the country be? Unquestionably, in the throes of the worst panic in its history.

*THE VAN ALEN CASE.*

THE charge that Mr. Van Alen of Rhode Island received the nomination for the Italian mission in return for a contribution of $50,000 to the Democratic campaign fund last fall has been current for some months. It was, we believe, first set afloat early in the winter, owing to the positive announcement of Mr. Van Alen and his friends that he was to have the mission. The uncharitable then promptly came forward and said that he was to have it in virtue of a "bargain" with Mr. W. C. Whitney. This bargain Mr. Van Alen vigorously denied from the beginning, while admitting the large contribution. But several friends of the Administration protested privately to the President against the nomination before it was made, on the ground that, whether there was a bargain or not, the bestowal of a great place on a man who had made an extraordinarily large contribution in aid of his election (a sum which would be a fortune to the vast majority of American citizens) would inevitably be considered by the public a *quid pro quo*—that is, an appointment to office for a pecuniary consideration.

It must not be forgotten that while it is important in a republic that justice and offices should not be sold, it is even more important that the people should not have any reason for believing that they are sold. On this principle Mr. Cleveland, we think, acted in his first term. He disappointed the expectations of several gentlemen who had made large donations in money to his campaign chest, and thus incurred their enmity, but, although the appointments would have been fit, his best friends and admirers warmly approved of his course. One of the strongest of his claims on public confidence and respect, in fact, in 1888, when he came up for reëlection, was his freedom from the alliances with and obligations to rich men which have proved the bane of the Republican party, and finally largely contributed to its overthrow.

Mr. Whitney, whose name has been mixed up in the affair a good deal, comes out at last in a long letter, and denies the "bargain," and alleges that when Mr Van Alen gave his money, there was no conversation between them as to his having the mission to Italy or any other office; that Mr. Van Alen never mentioned the subject to him, and that he had made no contracts for office during the canvass, and had never called on Mr. Cleveland to fulfil any campaign contract, and had assured Mr. Cleveland that he was under no obligation to him to appoint Mr. Van Alen or any one else. He also publishes a letter from Mr. Van Alen, dated May 11, which denies that he had "ever stated that he was to have a diplomatic position in exchange for money subscribed by him for political purposes." The most important part of the letter, however, is this:

> "There was absolutely no understanding between myself and any one that I should have any office under the Government. What was said on the subject was said after the election in November last, and was merely an expression of a wish on my part and a promise of assistance in carrying out my wishes."

This is worth all the other documents in the case, and is in fact the only one of any importance. Mr. Van Alen here admits by implication the large money subscription. About the exact amount there

is a curious reticence on all sides. Mr. Whitney "does not feel at liberty to state it," but why not state it if it was an instance of very patriotic, generous, and cordial support of the party in the late campaign? What is there to conceal about it if the making of it was a creditable thing to Mr. Van Alen? Although it is wise and right for a rich man to contribute largely to the party funds, there seems to be some mysterious impropriety in letting the party know how much he gave. Mr. Van Alen also admits that after the election, won in part at least, according to Mr. Whitney, by Mr. Van Alen's timely pecuniary aid, he "expressed a wish on his part," presumably to Mr. Whitney, for something not named, but presumably the Italian mission; and he got, presumably from Mr. Whitney, "a promise of assistance in carrying out his wishes." This promise was probably carried out by Mr. Whitney's letter of June 20 to the President warmly commending him for the place, for various reasons, prominent among them "his patriotic, generous, and cordial support in the canvass, when friends were few and calls were great." There can be no question as to what this means.

The real issue in this matter has been clouded by the charge that there was a formal "bargain" between Mr. Whitney and Mr. Van Alen. There evidently was nothing of the kind. Had there been, it would have been the first of its kind. Such bargains are never made. Mr. Van Alen gave a large sum of money, and, when the election was over, he mentioned something he would like to have, and got a promise of assistance in getting it. Here is the transaction as described by himself and by Mr. Whitney. Some confusion has also been created by personal attacks on Mr. Van Alen of a very gross character. They have been disgraceful. He is a gentleman, and a man of more accomplishments and greater fitness for the place than, we venture to say, any of his predecessors since Mr. Marsh. But he has one fatal disqualification, and that is the contribution of a large sum to aid in the election of the appointing officer. No explanations, or denials, or feats of interpretation will get over this. *The last man in the country to whom the President of the United States should give a great office, is the man who has given most money towards electing him.* The bestowal of offices on persons who support the party with great sums of money may, in some cases, be innocent, but nothing but a total change in human nature would prevent it very soon making every office, including the Presidency, an article of merchandise. The enormous venality into which the Republican party was plunged in order to maintain the tariff, was one of our strongest arguments for its expulsion from power. Let us not begin thus early to copy its errors or its quibbles.

### *DIPLOMATIC SALARIES.*

THE recent law of Congress promoting, in a roundabout way, changes in the titular designations of some of our diplomatic agents, has brought on Congress, as every one foresaw it would, an agitation for an increase of the salaries of those agents. That law has, in effect, placed in the hands of foreign governments the title and rank of our diplomatic agents, because it declares in effect that when a foreign government sends an ambassador to Washington, the President can, and should, reciprocate. It is possible, even probable, that the larger part of the great Powers will change the title of their diplomatic agents to ambassadors. Why should they not, if the name now implies so little in power and functions?

The giving of names by Congress to our diplomatic agents, and the regulating by Congress of their pay, is comparatively modern in our practice. Down to the end of Madison's second term a lump sum was appropriated by Congress "for the expenses of diplomatic intercourse," and the President distributed names and salaries in his discretion. That plan followed the constitutional rule that the President is the fountain of diplomatic agencies, and Congress has nothing to do therewith but to give money enough. It left the President free to nominate and, with consent of the Senate, appoint to any place with any rank, according to his appreciation of the public interest.

The President's power to appoint diplomatic agents is not derived from Congress, and cannot be limited by Congress excepting through its refusal to supply the needed money. Probably the Senate can control the President in that matter, under the second clause of section second of the second article of the Constitution, as a conjoint part of the Executive; but even then, when one has once been made an ambassador, or minister, the President should have power to send the ambassador, or minister, to any government, and change his post of duty as circumstances may require, and without asking the consent of the Senate. The President has, however, often sent diplomatic agents to foreign countries without consent of the Senate. President Fillmore, under the advice of Secretary Daniel Webster, sent Commodore Perry, in that way, as Ambassador to Japan in 1852. Mr. Bayard is not our first ambassador.

Obviously the President could, without the recent absurd law, change, during the recess of the Senate, the titular designation of every mission, although probably no President would thus exercise discretion. When Congress began to put its hands into the business by declaring that the President *shall* appoint, with a defined work and salary, Congress must be understood as declaring that he *may* appoint, and, if he does appoint, the salary shall be as prescribed. Congress cannot compel the President to send a diplomatic mission where he does not think it best that one be sent. The office of diplomatic agent is constitutional. If it be conceded, as it must be, that the President can supplement the statutory diplomatic agent at Hawaii, for example by a special commissioner or ambassador, not authorized by Congress or confirmed by the Senate, then there may be, in one sense, a statutory diplomacy and a President's diplomacy at the same court at the same moment.

As to salaries, the country must now expect a good deal of gabble over what England or some other government pays, and an endeavor to show that only "money makes the diplomatic mare go." Money is, and will be, useful up to a certain point, but it will be very silly for the United States to go beyond that point. Every one should appreciate the special reasons applying to our country and countrymen. To spend with grace and dignity a lot of money in a social way in Europe or in New York, one must be trained thereto or be a laughing-stock. The faculty will not come solely by appointment by any President. Inheritance, experience, observation, tact, feeling, must all combine. And then, too, Congress cannot be certain that the appointee will not pocket the salary, instead of spending it in the ways of the "smart set." Expensive houses may be bought by Congress and fitted up for our embassies, but how about filling them properly with a man and woman every four years under our present system of selection?

By what test shall Congress rearrange diplomatic salaries? It will cost not much more for an ambassador to live in London or Paris than for the Vice President in Washington, if each is on the same average plane of comfort or luxury. Shall the ambassador have more than the Vice-President? And if we are to pay such salaries to diplomatic agents as England pays, what shall our Vice-President, Secretary of State, and Chief Justice have? To a diplomatic agent to the Argentine Republic England pays $17,000; to Vienna, $40,000 and a house; to Brussels, $16,000; to Rio de Janeiro, $22,500; to Pekin, $27,500; to Copenhagen, $15,000; to Cairo, $30,000 and a house; to Paris, $45,000 and a house; to Berlin, $37,500; to Rome, $35,000 and a house; to The Hague, $20,000; to St. Petersburg, $39,000 and a house; to Washington, $30,000 and a house. As Congress has, in an absurd way, sent an ambassador to London only because the Queen sent an ambassador to Washington, why not take the next step and buy a swell house for our Embassy in London and pay our Ambassador $30,000, simply because England does all that for her Ambassador near President Cleveland? It is the first step that costs.

### *HONESTY AT A PRICE.*

A WOMAN who had purchased an excursion ticket from London to some point at a considerable distance was unfortunate

enough to lose it, and a certain member of the London County Council was, as it proved, so unfortunate as to find it. He at once took it to the railway authorities, and, representing that he had bought the ticket but was suddenly compelled to abandon the trip, induced them to refund him the price. But presently the true purchaser of the ticket appeared upon the scene, and as it happened that only one ticket had been sold that day for the station named, and the ticket-seller recollected selling this to the woman, a case was made out against the Councilman which sent him to prison. Mr. John Burns, who occupies a position in England not unlike that formerly occupied by Mr. Powderly in this country, and who is a member of the London Council, felt moved to address his constituents upon this painful subject. After euphemistically and, indeed, somewhat inconsistently referring to the offence of his colleague as committed "in a moment of forgetfulness," he proceeded to deduce from the event a very important political principle. The only safeguard, he maintained, against such lapses from virtue was to be found in the payment of members of governing bodies. The people "did not give the men whom they elected the money which would keep them consistent and patriotic in the discharge of their duties."

It is evident that this principle is of a somewhat far-reaching character. It appears to involve the assumption that men who choose to engage in occupations where the remuneration is insufficient for their support, are not to be blamed for making up the deficiency by stealing. The world not only owes every man a living, but, if he finds it inadequate, he may take it out of the world. The starving man may properly supply his wants, not only if he is unable in any way to procure food, but also if his starving condition is owing to his having deliberately undertaken to perform service without pecuniary compensation. But, however this may be, Mr. Burns certainly failed to consider the experience of other countries with paid legislators. Some very interesting revelations were at the time taking place no further off than across the Channel in connection with the Panama Canal legislation, which were of a nature to prove that a salary is not a talisman against pecuniary corruption. There are other countries which would make no better figure than France, and we regret to say that Mr. Burns's theory is not supported by our own experience. The body in the city of New York corresponding roughly to the London Council has not been preserved from venality by being paid, and several of its members have been sentenced to State prison for taking bribes.

We fear that the experience of our other large cities affords no more support to Mr. Burns's theory, and the Legislatures of several of our States are most outrageously and persistently libelled if they do not contain many dishonest men who are in receipt of salaries sufficient at least to avert starvation. Nor if the theory were modified so as to excuse stealing where the salaries paid to members of governing bodies were sufficient for support, but insufficient for the maintenance of "respectable" establishments, in Carlyle's sense, would it find much firmer basis in our experience. Salaries are very high in the city of New York, there being few instances where the public officer does not receive more than equal labor would bring him in private life, but it would be difficult to prove that these salaries have freed us from jobbery and venality. In fact, a good deal could be said in support of the paradox that there is less corruption and dishonesty when low salaries are paid than when salaries are high, and that there is least when no salaries are paid at all.

The truth is, that Mr. Burns's theory disregards some important elements. One element is that every human being makes efforts for which the compensation is not pecuniary, and another is that honesty is a virtuous habit and not a purchasable commodity or service. The work of the legislator would confer distinction, if no salary were attached to it, more than if paid for in money, and distinction appeals to a great many men more than money. This work, too, is of a nature to occupy but a part of the time of those who do it; in most communities, a very small part. There are hundreds and thousands of men giving without pay to the affairs of churches and hospitals and other beneficent institutions a much greater amount of time than would suffice for the work of legislation if they were to undertake it. But men of this class play a continually smaller figure in our governing bodies. They are crowded out by a class of men to whom the salary attached to the office of legislator is worth a struggle which it is not to the former class. It is undoubtedly true that if legislators were unpaid, a certain number of poor men could not go to the Legislature. Whether this would be a misfortune for the community or not would be determined by a study of the achievements of our paid representatives in the work of legislation. Their recent achievements are not of very distinguished merit; but the subject is too large for discussion within our limits. We certainly shall rejoice if the Government of England retains under a régime of paid legislators that immunity from corruption which has distinguished it under the order that is now passing away; but unless human nature is to be different in the future from what it has been in the past, experience does not encourage this hope.

## THE COLUMBIAN EXPOSITION.—X.

### ENGINEERING.

CHICAGO, September, 1893.

THE charge has been made against the buildings of the World's Columbian Exposition that they have been designed for external effect rather than for the purpose for which they were supposed to be intended—in other words, that the use of the buildings, as safe and appropriate structures for the preservation and display of the articles exhibited, has been made to yield to the demands of external show. This criticism, though severe, is well taken: the exteriors of the buildings, seen grouped together, are magnificent; when considered as tools for their supposed purposes, to house and show off classified exhibits, they are less perfect. The interiors are generally poor, and, furthermore, the installation of the exhibits has often been such as to aggravate rather than relieve the defects. The one interior which could have been made very effective was that of the great Manufactures and Liberal Arts Building, and yet an unsightly clock-tower, placed in the centre, has been allowed to break up all vistas, and the grand effect is lost.

In no building, however, are these defects so apparent as in Machinery Hall. It seems especially unfortunate that a building devoted by its name to engineering subjects should be, from an engineering point of view, the most defective building in the Fair. Externally, Machinery Hall fits fairly well among the principal group of buildings, but is of a style singularly inappropriate to the purpose which its name indicates, while the great east entrance, with its classical pediment, and the north entrance, with its circular porch, both enclosing deep porticos, without interior pillars, and crossed by heavy walls resting on nothing, are constructive absurdities very inappropriate here. The faults of the exterior could readily be forgiven in a structure which will be removed before it has time to go out of fashion, but the defects of the interior are more glaring. The interior of this structure, devoted specially to engineering purposes, consists of three parallel aisles formed of semicircular ribbed arches supported on vertical continuations of the ribs, with no ties or change of section at the spring-line of the arches. The outline bears no relation to the strains which must exist, and, being contrary to correct lines of construction, is necessarily ugly. A cross aisle through the centre gives an opportunity for structures resembling domes, and the three domes are enough to suggest a method of accentuating the interior by an arrangement of prominent exhibits. Unfortunately this has not been done, and the general appearance is a disappointment from the start. Everything seems flat; it is like an oration from which all rhetoric has been eliminated, or like a dull book which can be studied but not read. The exhibits are there, but none has any prominence over another.

Those who remember the Philadelphia Exposition of 1876 know how very effective the interior of Machinery Hall was made, with the great Corliss engine in the centre, the Krupp gun in one corner, and a few very large exhibits standing out as prominent features which gave a rhetorical effect to the whole. At the Paris Exposition of 1889 the great Machinery Hall was second only to the Eiffel Tower, its superb roof and fine interior being the one feature of the Exposition proper which was universally admired. At Chicago, on the other hand, Machinery Hall is the one large building which attracts least attention, and the one building which is especially disappointing to those who should appreciate it most—the engineers. In Spanish-American cities, one is sometimes surprised to find the interior of a building, whose architecture shows that it was originally intended for a very different purpose, filled with tools and used as a machine-

shop. The impression formed on entering Machinery Hall is much the same, and the impression is so strong that the real worth of the things exhibited is overlooked.

The so-called Machinery Hall, however, is really misnamed; it is, in fact, little more than the power-house of the Exposition. The features which should have made the machinery department most effective are to be found elsewhere. The most striking thing to be seen in Machinery Hall is the long row of boilers in the annex on the south side. In a plain lean-to of corrugated iron is placed the series of boilers which provide power for the whole Exposition. They are arranged in a single row, one after another, occupying what seems an interminable length; they are all water-tube boilers, and they are all fired with oil; they develop over 20,000 horse-power. Visitors can see them from a gallery on the level of the main floor of the building, or from the lower level at which they are worked. Their arrangement in a single line tends to increase their apparent magnitude, and one can hardly believe that the effective power of this great battery of boilers is less than has lately been concentrated in the hull of a single ocean steamer. To all who visit Machinery Hall, I would say, visit the boiler-room first; if you have time for but one thing, see the boilers and go.

The distribution of steam from the boilers is made under the floor of the building. The engines are placed along the south side of the main building. The most prominent and the largest engine is the great Allis engine; nevertheless, it has no striking features which appeal to the eye of the layman. It is hard to realize that this unpretending horizontal engine, with its four cylinders and its big fly-wheel, develops nearly twice the power developed by the Corliss engine at Philadelphia; yet it is true, and it is a simple fact that the battery of boilers in the annex furnishes nearly ten times the power that the Philadelphia Corliss engine developed. Outside the electric plants, there is no machine in which greater changes have been made in the last seventeen years than in the steam engine. The Corliss engine at Philadelphia was a single long-stroke condensing beam-engine, working with comparatively high pressure for those days. Among the whole group of engines in Machinery Hall there is scarcely a simple engine to be found. They are generally either compound or triple-expansion, while the Allis engine is quadruple, working the same steam successively in each of its four cylinders. One has but to look carefully over these series of engines to see how completely the compounding principle has been accepted by the modern engineer.

A few of the engines run lines of shafting which supply power to looms and other small machines in Machinery Hall. For the most part, however, the engines, including the great Allis engine, simply run dynamos, and here, in this power-house improperly called Machinery Hall, is ground out the electric power by which the whole Exposition is run. Nothing indicates more than this the advance and limitations of electricity. So long as electric force was looked to as a source of power, its great cost defeated its use; since it has been accepted as a means of conveying power, there seems to be no limitation to its value. All the power begins in the great battery of boilers in the annex; it is converted into useful form by the group of engines along the south side of the building; it is conveyed over electric wires to illuminate the buildings at night, to the stalls south of the lagoon where the electric launches are charged, and to give power wherever power is wanted throughout Jackson Park.

The engines occupy perhaps one-quarter of the whole width of the building; north of this the space is devoted to machines, and to some other things which hardly seem appropriately placed here, varying from Mr. Schneider's exhibit of heavy steel forgings and shapes, from the Creusot Works in France, to the confectionery of the little candy-stands. There is the usual collection of Jacquard looms, weaving all kinds of figured ribbons which people are expected to buy. Here and there a group will be found around some special machine which has the advantage of making a noise. In the British section one notices a specially compact form of engine, known as the Willans central-valve engine, which is made either simple, compound, or triple, always using a single piston-rod, the cylinders being placed above each other, and the steam and exhaust both being taken through the hollow piston-rod. By searching, many matters of interest will be found in this building, which contains a great deal more than a first glance would lead one to expect.

In the Swedish section, buried like a diamond among larger surrounding objects, is found the gem of Machinery Hall. It is Dr. de Laval's steam turbine, which is in fact simply a little turbine wheel run by steam, but whose claims are of the most extraordinary character. Two sizes of turbines are exhibited, five and twenty horse-power. The twenty-horse-power wheel is a steel disc about six inches in diameter, with the buckets cut on the circumference and a tire shrunk around the whole, which is driven at the extraordinary speed of 22,000 revolutions a minute. The periphery of this tiny wheel moves at a speed of over six miles a minute, and this speed is so great that the mere different intensities of the solid steel forging form elements of disturbance, and quiet motion is obtained only by mounting the wheel on a slender shaft which, by springing between bearings, lets the wheel find the centre of gravity, which the builder's art is not delicate enough to determine. The five-horse-power turbine revolves 30,000 times per minute. These extreme velocities are geared down ten times by a gear-wheel and pinion with carefully cut spiral gears, and the turbines run dynamos at one-tenth their own speed. The steam is admitted through several nozzles, and, after passing through the wheel, escapes through an exhaust-box into the air or the vacuum of a condenser. The exhibitor claims an economy almost equal to that of a triple-expansion engine. It is certainly a wonderful machine, but, enclosed as it is in its cover, the casual visitor would never suspect the existence of the wonderful little tool. The suggestions which it makes are immense. In our grandfathers' days the big over-shot water-wheel, with its slow, impressive motion, was considered the highest example of hydraulic economy; to-day it has absolutely disappeared before the superiority of the turbine. The great steam-engine of to-day, with its large cylinders, its reciprocating motion, its disturbances which cannot be counterbalanced, is the most effective form of power we have, but it is as defective as it is effective. It may be that the tiny steam turbine which is seen in Machinery Hall is the precursor of an army of steam turbines before which the reciprocating steam-engine will absolutely disappear.

The redeeming feature, however, of the engineering portion of the World's Columbian Exposition lies in the fact that it is not found in Machinery Hall. The machines which its name would lead one to expect to find here must be looked for in three other departments. The Mining Building, the Electricity Building, and the Transportation Building are the real Machinery Hall. There is one other building which must not be forgotten. Next to the distribution of electricity the most important feature is the distribution of water; at Philadelphia this was accomplished by a pumping-station built by Mr. Henry R. Worthington, who was then living, and which, though located outside the grounds, formed a part of the Exhibition. At Chicago the corporation which has adopted as its name the individual name of this great engineer, has erected a pumping plant of far greater power than the one at Philadelphia, located in a small building near the southeast corner of Machinery Hall. This pumping-station is well worth a visit. The engines are of the well-known Worthington duplex pattern; of the two largest, one is vertical and one horizontal, the latter being fitted with the special high-duty attachment which has been adopted since Mr. Worthington's death. Not only is the general water-supply handled from this pumping-station, but it is these pumps which drive the fountains that are the principal attraction at the west end of the Court of Honor.

Of the three buildings referred to, the Mining Building is perhaps the most effective. It is almost the only building which has a good interior, and this interior has been effectively used. It would more properly be called the Metallurgical Building, as much more of its space is devoted to the products of mines, and to machinery which has an indirect connection with mining, than to actual mining matters. The products, moreover, are not confined to the crude output of the mine, but extend to finished metal work, the product of iron mills being distributed among the several buildings on a system which cannot be understood.

The Electricity Building stands next to the Mining Building, and its interior is rather effective, especially in the evening, advantage being taken of the brilliancy of the electric lights to illuminate in a great variety of ways. This building is really devoted to the use of which it bears the name, but it is hard to see why the comparatively small electric appliances which this building is filled with, should have been separated from the great array of dynamos in the power-house.

When one enters the Transportation Building, one feels that the defects of the so-called Machinery Hall are redeemed. The building itself is a wooden structure, and the interior is poor. The exterior is totally unlike that of any other building on the grounds, in that a departure has been made from classical outlines; color rather than shape has been relied on for decoration. There is an appropriateness in this departure: transportation is preeminently a matter of utility: everything relating to transportation must be regarded as a tool, and the difference between tools and monuments must not be forgotten. In the present condition of the arts, especially in America, metallic tools are the cheapest and best; masonry construction, though the best for monumental use and in positions of great stability, seldom makes an economical tool. The architect of the Transportation Building has recognized that the masonry forms of the classical styles are not adapted to metallic construction. The Transportation Building is of wood covered, as all the buildings are, with humbug, but the lines and general features of decoration are comparatively well adapted to metallic construction and are appropriate here.

The interior is cheap and rather poor, but the most has been made of it, and a collection of exhibits has been brought together here which, from the engineering view, is of more value than all the rest of the Exposition. While the American exhibits fill a considerable portion of the space, European nations are admirably represented, and many of the best and most interesting features are from abroad. There is one feature which may be criticised. The most prominent thing in the south nave of the building is a full-sized model of the great 125-pound steam-hammer at Bethlehem; this model should have been in Machinery Hall, and, if placed under the central dome of that building, would have served admirably to relieve the flatness of the present display. In the narrow nave of the Transportation Building it is less effective, and apparently its only relation to transportation is that it is used to forge guns which, when finished, start the transportation of projectiles.

Transportation may generally be divided into two classes, by land and water; each of these may be divided into transportation by animal and by mechanical power. The north portion of the building is perhaps the least interesting, and is occupied by articles of land transportation by animal power, from the different forms of light buggies in which young people like to drive, to those more gloomy four-wheeled vehicles in which the last journey is begun. The north end of the gallery is largely devoted to the most modern form of transportation by animal power, the bicycle. The old high wheel and the cushioned tire are hardly to be seen; the pneumatic tire and the ball bearing occupy prominent places, while among the bicycle exhibits are shown polished steel balls of sizes varying up to two and one-half inches, which lead the engineer to ask searching questions as to the use to which these larger balls can be put, without getting any answer until much more has been learned than is now known of the actual strength of this class of bearings.

Transportation by water is illustrated in many ways, but, in general, foreign nations, and especially England, are much better represented than America. The White Star Steamship Company shows nothing in the Transportation Building, but has constructed a building of its own in a different part of the grounds. The Cunard Steamship Company has a set of models representing the history of its fleet, all on the same scale, from the little wooden *Britannia* of 1840 to the *Campania*, whose merits and defects are now being discussed. The English builders have also similar exhibits, and models of sister ships, identical except in name, are in several instances found among builders' and owners' exhibits. The two principal German steamship lines also show models of their vessels, while a French company has occupied its space with pictures of harbors and the interior of steamships so lighted as to be interesting to the countryman, but of little value except for show. Besides these there are many models of more ancient craft, and one who has the privilege of the private office of the chief of the Department will find some illuminated Spanish manuscript volumes, in which the modern compiler has shown that the art of decorative writing is not lost, and which give a remarkable history of the development of navigation.

It is, however, in land transportation that the principal interest centres. One striking illustration occupies the whole southern portion of the annex. It is a selection from the Haarmann Museum at Osnabrück, which is intended to illustrate the different forms of railroad construction from the beginning to the latest. Not, however, satisfied with the modern railroad, these Germans, with the profundity which characterizes their race, have dug out from a bog in North Germany the remains of an ancient Roman road, built of timber, near the beginning of the Christian era. This road, which has been traced for something like forty miles, was formed of flat slabs, laid overlapping, held in place by stakes driven through square axe-cut holes, and evidently covered with earth so as to make a smooth-wearing surface. It was a Roman progenitor of George Stephenson's railroad across Chat Moss—the same principle of a broad bearing distributing weight over boggy soil; and the moisture of the bog has preserved this wooden road for two thousand years.

The Baltimore and Ohio Railroad Company has collected a large exhibit which it calls the World's Railway, and which is intended to illustrate the development of railroad construction from the very beginning to the present year. It consists of pictures, full-sized models, and actual locomotives, the latter being from its own lines. The "Grasshopper" is here and the "Camel," but the "Camel" is a ten-wheel engine with a truck, though there is also a full-sized model of the original eight-wheel "Camel," which was built to climb the seventeen-mile grade. The models are of wood and interesting; here are found the early forms when the value of the coefficient of friction was unknown, and among them is the little locomotive which kicked itself along with two legs. This is not the only amusing locomotive, but many fantastic forms of engines and cars may be found distributed among the pictures on the walls. One section, however, of this exhibit, as originally contemplated, is not here. Mr. Theodore Cooper was intrusted with the task of preparing a set of drawings and other illustrations which should show the historical development of American bridge-building. He made the collection, but the railroad has not included it in its exhibit; it is, however, to be found in the west gallery by itself.

Two English railroads, the London and Northwestern and the Great Western, make interesting exhibits. The London and Northwestern is the most striking. As everybody knows, this railroad includes the original Liverpool and Manchester Railway. At one end is shown a model of the famous "Rocket," which took the prize at the Rainhill competition; at the other is shown the very latest form of three-cylinder compound locomotive as constructed by Mr. Webb at Crewe. They are the extremes of English locomotive history. The Great Western Railway exhibits the locomotive "Lord of the Isles," the identical engine which was shown in the Crystal Palace at London in 1851, and which was for many years the typical fast broad-gauge passenger locomotive. It stands here in its original dimensions on Brunel's seven-foot gauge. This railway has devoted much of its space to photographic illustrations of the country through which it passes, and its exhibit appeals as an advertisement to the public as well as a lesson to the student.

A great many locomotives are here, generally on the main floor, and most in the annex on the west side. Here the evidences of compounding again appear. Though the compound locomotive is a rarity in actual operation, a large majority of the locomotives exhibited are compound. Like every tool which is comparatively new, the arrangements of the details are very different, the number of cylinders varying from two to four; except, however, one French locomotive, no engine is to be found in which advantage is taken of the use of four cylinders to place cranks opposite each other, and to compensate reciprocating motions by reciprocating motions. The Pullman Palace Car Company and the Wagner Company each exhibit a full passenger train, showing in its appointments a degree of elegance which one hopes will be exchanged for a corresponding degree of sense before the trains are actually put in service. The Pullman Company also exhibits a model of the town of Pullman; it occupies a well-lighted situation which one wishes might have have been devoted to something less like a toy, especially when the original town can be reached in half an hour from Chicago.

The various air-brake companies make rather unique exhibits, each in the shape of a full equipment for a train of a hundred cars, collected together into a very compact form. The full number of brake cylinders and the full length of piping are put together, the pipes being arranged in very different manners, but generally having a snaky effect which does not suggest the real object. The fact that each of these exhibits represents the equipment of a train of one hundred cars, and that a train of a hundred modern cars means the transportation in one lot of 2,500 tons of freight, is perhaps the most suggestive thing about them.

These larger things are simply, however, some of the more prominent objects in this very interesting department. The Pennsylvania Railroad and the New York Central and Hudson River Railroad have placed their exhibits outside, partly in special buildings for the purpose, and partly, as is eminently appropriate for track and rolling stock, out of doors. It is hard to decide which of the two is the better exhibit as a whole. The Pennsylvania Railroad has an original old train, the New York Central has a reproduction of an old train and its latest form of locomotive. The New York Central Railroad's building is decidedly the handsomer of the two; the exhibits inside the Pennsylvania building are more interesting than those in the other.

While these large objects are the most prominent, they are by no means all, and the superb exhibition of German engineering which occupies the whole south end of the gallery, illustrating great varieties of transportation and construction, is perhaps the finest thing in the whole building. But the French engineers are not much behind it, and even the Japanese show, by comparative illustrations of their ancient and modern work, that we may hope that the accuracy and strength of European and American engineering may yet be combined with the exquisite taste and finish of the Orient. On the whole, little more can be said of the Transportation Building than that it is a continual series of interesting, valuable, and instructive things. Mr. Willard A. Smith, Chief of the Department of Transportation Exhibits, has done a remarkable work. The skill and energy which he has shown both in getting together American exhibits and in persuading foreigners to send things which, in their nature, must be valuable purely for educational purposes, without hope of any direct return to the profit of the exhibitor, have been remarkable. If ever the visitor in the Exposition finds unappropriated time at his disposal, there is no better place to go to than the Transportation Building. G. S. M.

## PIKE'S PEAK AND COLORADO SPRINGS.

COLORADO SPRINGS, July 26, 1893.

FROM the wonders of the Midway Plaisance, where all nations jostle one another in amicable confusion—Turks, Zulus, Fiji Islanders, dignified Egyptians—where, indeed, as Emily Dickinson says,

> "The show is not the show,
> But they that go"

—from the real beauty and magnificence of the great White City, with its impressive Court of Honor and silent lagoons, its stately architecture and collections, we have come to monuments not made with hands—from the World's Columbian Exposition spread out beneath the eyes of the curious in the great Ferris Wheel, to the world and its glory spread out to the eyes of the adventurous from the summit of Pike's Peak.

Colorado Springs, a fair and sunny city reposing on the great plain at the foot of the Rocky Mountains, yet has itself an altitude nearly the same as the summit of Mount Washington, practically 6,000 feet above sea level. Its energetic electric cars fly swiftly along the broad and level streets, arc-lights make brilliant evenings, excellent hotels and handsome dwellings are surrounded by green lawns and shrubbery preserved only by the most painstaking care and watchfulness. Many things ought to be seen here—some must be; among them beautiful Cheyenne Cañon, so loved by "H. H.," and classed by her with the nine places of "divine worship" in Colorado Springs, and where, on the heights above, she lay after her death until tourists and general vandalism necessitated bringing her to the cemetery below. Nor can the "Garden of the Gods" be omitted. Its huge red sandstone monuments, rising perpendicularly more than 250 feet, weather-worn into fantastic shapes, are a sight to be never forgotten, but not easily described. And when, stopping on a ridge near the "balanced rock," not only is all the wild, titanic confusion of the Garden seen, but, behind, the lapping and overlapping heights of the Rocky Mountains, capped by Pike's Peak far up among the sunlit clouds, words fall silent, for the immensity is not assimilable at once. But the Peak itself must surely be ascended. Not all travellers accomplish this, nor is the summit always an entirely happy memory. But it may be reached now with much ease in any one of three ways. The hardy little burros so frequent here are entirely good for the climb, only they must be given their own time, often two or three days. By far the most usual way now to the summit is by the cog railroad, a quick and comfortable route. But we chose the third, by carriage from Cascade Cañon over a mountain road of seventeen miles, with six hours of magnificent views, and a sufficiently gradual ascent into the region of thin air.

Leaving Cascade, at once the road winds upwards very steeply along the side of the Cañon, until after a mile or more one seems all but overhanging the town below, while at the mouth of the ravine the far blue plains fill the distance like an etherealized ocean. The sharp-leaved yucca fringes the road, not lush and luxuriant as in Bermuda, but grayer and stiffer, though hardly less picturesque. Yellow pines root themselves in every possible crevice, and at last, when the banks of a little stream are reached, a myriad of lovely wild-flowers suddenly show their dainty faces, springing up from the hard, dry soil like fairy visitors. The humble, homely, well-beloved yarrow fills every available spot, its familiar odor pungent in the warm air, while close to the wheels large, short-stemmed white evening primroses rest on low, bluish-green foliage. When grown too tired and warm, the white petals turn a delicate pink and droop softly on the leaves below, in endless sleep. The American cowslip, or "shooting-star," is abundant, looking strangely dainty against the coarse dry grass; and blue mertensia grows rankly along the road. As the way becomes steeper, winding more deeply into the heart of the mountains, the beautiful blue penstemon appears, its blossoms so crowding in very rush of life upon the stem that many cannot open at all. Thickets of "quakin' aspen" line the way, soon so shut in that it might well be any country road at sea-level. Yet here the elevation exceeds 9,000 feet above that level.

Turning a sharp curve a sudden surprise is in store. The dryness and dust give place to a veritable valley of peace. No distant view obtrudes to fill the heart with far-off longings, and a tiny brook tinkles down the mountain to make here the sweetest, softest green meadow, where grasses are rank and tall and green, and bushes of spiræa and wild roses grow waist-high in the welcome moisture. Small ranches below also appreciate the dampness, and little homes could be seen far off under the trees. The four strong horses started in again after a moment's refreshing at the spring, but the memory of that sweet picture went with us far up the dry mountain side. The flowers, too, followed; wild roses and blue and scarlet penstemon, in seed below, were at these great heights yet in the prime of their blossoming Up and still up lay our course, the Cañon walls spreading further away, until, from the huge environment of rock and mountain shoulder, could be seen the glory of the whole range piling off to the north in colossal confusion. Near by, red spruce in place of pine, pale-green kinnikinnick hugging the soil, here and there a bit of wild cherry and elder, and an occasional willow shrub.

Many years ago fire swept over these mountain spaces, and miles of spruces now stand tall and gaunt, reaching ineffectual white fingers to the sky, while myriads of others, prostrate at their feet, are still undecayed in the dry solitudes where they lie. But, soon as may be, Nature takes back to her heart her wounded children, and the delicate aspen and acres of crimson "burnt-weed" cover the slopes, while, somewhat above, the spruces again have grown up, many of them almost as large as their ghostly ancestors. Golden-rod of several kinds appeared above 10,000 feet elevation, greatly dwarfed, but lavishly bright and sunny; and a superb mass of scarlet painted-cup.

A half-way house, so called, gave time for luncheon and a change of horses. It is, however, about ten miles from Cascade and seven from the summit. Just beyond came a superb view, with the Mosquito Range to the north, somewhere near which lies Leadville, 11,000 feet above the sea. Ranges seventy miles and more away filled the horizon, with lesser peaks on the other side, while the great plain to the east still lay under the sunshine, calm and reposeful. Onward the road curves to every point of the compass, but always up, until, looking almost straight down, nine of its dizzy loops were apparent at once, and the wonder was how foothold had been found on the steep and rocky slope. But even here was no desolation equal to Fuji's lonely peak in Japan. The spruces still followed, though leaning away from the fierce west winds, with a grotesquely greater growth in their eastern branches; and an occasional crow made haste across some wind-swept height, sharply silhouetted against a sky which seemed to grow an intenser blue with every mile.

After timber-line was passed, not quite 12,000 feet elevation, the vast sky and a primeval chaos of red granite rocks were all. No, not all, for then appeared a fairy garden of Alpine flowers, nestling in crevices and carpeting the stones with radiance. Brilliant yellow, blue, pale pink and white blossoms not an inch high stretched cheerfully in every direction, the whitish green foliage hugging the bleak rocks with insistent affection. The blue flowers, a species of forget-me-not, must indeed have caught their color from the sky so very near, for not a trace of purple marred their likeness to its blue depths. Almost no other flower except "succory to match the sky" is really blue. Shades of purple, faint or deep, obscure the purity of tint. The yellow flowers, looking like dwarf buttercups, though really Colorado saxifrage, hold the sunshine in their cups—a magic selective absorption indeed. Inexpressibly beautiful was this little flat flower garden, nurtured in storm and clouds and sun on these windy heights.

And now came a view into the "bottomless abyss," over a snowbank, where the red perpendicular walls dive indefinitely down, and just overhead the final Peak and the low Signal Service building. Far south glistened the Seven Lakes and the grand Cañon of the Arkansas; east, Colorado Springs, like a faint far checker-board; while the burnt spruces below showed like the confusion of some gigantic game of jackstraws. About 14,000 feet elevation, the flowers became fewer and finally ceased, though gladly they would have followed if a particle of soil had given the slightest pretence of foothold. Instead, brilliant lichens almost seemed to shine from the rocks—and in a moment the very summit was reached.

Here, then, was the mighty vantage-ground from which Prof. Langley had seen the total eclipse of the sun in 1878—when the blue-black shadow of the moon rushed with terrifying swiftness over the plains below—and where he had seen those tremendous streamers of the corona projected more than eleven million miles into space. When again will an eclipse-track deign to cross a station so favorable? Barren water-spaces, African or South American marshes, are too often the exasperating and seemingly lawless choice of these celestial happenings. Since the Boyden Fund for astronomical work on mountain peaks has been managed by Prof. Pickering of Harvard, a wide research upon the summits of high mountains has been conducted with a view to ascertain, first of all, the meteorological conditions there prevailing. The highest station ever permanently occupied for such a purpose being Pike's Peak, with records of a long series of these observations made by officers of the Signal Service, the Harvard Observatory has co-operated by publishing these records in its Annals, where they are now available for study. The station was established in October of 1873, and the splendid series of observations is quite unbroken to the present day. The extensive plains to the east offer particularly good opportunity for noting such cloud and storm phenomena as originate or move east of the Peak, which rises rather abruptly about 8,000 feet above Colorado Springs. Even to the west the mountains are so much lower than the station that fine observation is possible. Heavy wind-storms are, strangely enough, not usual, and the mean hourly velocity rarely exceeds fifty miles. But the Peak is celebrated for its electrical storms, occurring generally

when the air is moist, with perhaps a light snow-storm in progress. The whirling anemometer cups then frequently look like circles of fire.

The great elevation affects many persons, either in heart, lungs, or head; but for actual discomfort on a mountain-top, Fuji doubtless holds the palm. A certain light-headedness, or tendency to headache, characterized the best of us, but the intense pain and the sense of leaden oppression of that sacred height were absent from the Pike's Peak pilgrims. The Signal officers were courteous and attentive, the view almost appallingly grand—distant fires, acres in extent, looking like a hand's-breadth blaze; raging storms covering miles but a tiny incident in our horizon. Yet I fancy when the call to the carriages came, that few were inclined to grumble over the shortness of the hour upon this incomparable height. The curves in the downward road became even more apparent than before as the horses took them at a sharp trot, the leaders airily circling along the outer edge within an inch of the descending slope, as gayly as if with a misstep the wings of Pegasus were available. The lower Cañon was reached in less than half the time of the ascent, and the red walls and standing rocks, the pines and distant slopes, were even more wonderful and effective in the slanting sunshine of late afternoon than in the glow of early morning, and Cascade nestled more enticingly in its meadows. MABEL LOOMIS TODD.

## REMINISCENCES OF A ROMANTICIST.

PARIS, September 14, 1893.

"HABENT sua fata libelli." M. Maxime Du Camp has written many books and many articles. Of his work nothing will probably remain but his 'Convulsions of Paris,' written immediately after the Commune. These 'Convulsions' are what the modern historical school calls a "document"; they give an exact account of what became of Paris during the short triumph of the Commune. Future economists may perhaps consult what Maxime Du Camp has written on 'Paris et ses Organes,' on the municipal and what may be called the material life of Paris. Philanthropists will consult what he has written on 'Private Charity in Paris.' It is somewhat singular that M. Maxime Du Camp should, in his later years, have become a sort of economist and philanthropist. He began life as a pure *romantique;* he is one of the last remnants of the school, which has been replaced by the realistic school. He was well prepared to become a *romantique* by a wild and adventurous spirit. He travelled in the East at a time when Cook did not exist; he was later one of Garibaldi's Mille in Sicily. He is now one of the "Immortals" of the Academy. He enjoys rest; he spends most of his time in a house which he bought at Baden-Baden long before the war of 1870, and which he has not abandoned since the French defeats. He has lately employed his leisure hours in writing essays under the title of 'La Crépuscule: Propos du Soir.' The evening of life has come for him, and, like the traveller on the road, he looks back on the past. It is said, and not without truth, that old age returns naturally, by a sort of irresistible bent, to the feelings of youth and of infancy: the middle of life disappears; we see nothing but its dawn. The *romantique* is found on every page of these crepuscular memories of Maxime Du Camp, and I have read them with a sort of melancholy pleasure.

Maxime Du Camp says little about himself. He informs us, however, that he never knew what the ancients called "res angusta domi"; which means that he was born with a good fortune. He was not obliged to win his daily bread, and he abandoned himself completely to the fancies of his own imagination. Nature saved him from two great dangers: he had no inclination for gambling or for drinking. He jumped, to use his own expression, on the "back of the Romantic Pegasus"; all his admirations were for the great Romantic writers. He sees clearly that the gods of his youth are not the gods of the modern generation, but he is not surprised. "After the evening of the 16th of April, 1849, I nearly broke with a friend, who was thirty years older than myself, because he refused to admit that Meyerbeer's 'Prophet' was a masterpiece. Last winter I was severely scolded by a young man who thought that I was speaking of 'Parsifal' with too much reserve. I made allowance for the difference of ages, remembered my indignation when an opera of Meyerbeer was contested, and did not say a word."

Maxime Du Camp had an adventurous spirit, and in his youth made long journeys. Some of his descriptions of places in the East are the best pages in his volume.

"No city," he says, "ever kept me; I left them all with a sensation of deliverance. What most abides in my memory, what I wreathe with my regrets, it is not Cairo, or Damascus, or Constantinople, or Smyrna, where the girls are the joy of the eye, or Athens, where the Acropolis is the joy of the mind, or Rome, where I lived under Gregory VII., or even Venice, which is the most touching historical remains—no; this is not what I evoke when, lingering in the past, I go back to the happiest days of my existence."

And then come some descriptions of natural scenery which are very charming—the island of Chio, the plain of Cœle-Syria, Lebanon, certain places on the Nile or in Palestine.

"The 18th of August, 1850, I well remember, I remained sitting from morning till night on one of the hills which surround the Dead Sea, over the ravine which leads to the convent of Mar Saba. At my feet, in a bowl which is probably an immense crater now full of water, the Dead Sea, heavy and lustrous, like tin in a state of fusion; in the distance, the land of Hauran, where the doomed cities were, Moab and the Tribe of Reuben. . . ."

For a moment, Maxime Du Camp was tempted to settle in the East; he speaks with tenderness of some places in Egypt, of the island of Elephantine in the Nile, of sundry villages of Syria, of the neighborhood of Smyrna, of Beirut. "I feel now," he says, "that if I had abandoned an active life to bury myself in the Eastern countries, in some favorite retreat, I should have died, devoured by the idleness which is the greatest enemy of man, individually and socially."

The essays which compose this volume touch on the most various subjects. If they have some sort of unity, it must be found in a comparison between the feelings and aspirations of the generation to which M. Du Camp belongs and those of the present generation. Nothing can be, in truth, more different than the state of the soul (to use a very modern expression) of 1830 and of 1893. M. Du Camp tries to be just, and speaks of the youth of 1893 with complaisance:

"No, it is not just," he writes, "to abuse the modern generation. It seems to repudiate none of the tasks of life, it does not sulk before the duty of intellectual culture, and it accepts readily the task of military service, which for several years postpones the moment when paid labor will provide for the needs of existence. It is ready to say 'Here I am' when it is called. Its grandfathers bought themselves a substitute when they were seized by conscription; I know it well."

There is a special essay on "Military Service." Under Louis Philippe, a man was bought for an insurance premium of a thousand francs, and there were special insurance companies which furnished them. The soldiers remained seven years in the regiment and became thoroughly imbued with the spirit of discipline. Now, every young man has to be a soldier, but the term of service is very short, and the officers complain that the military spirit has not time to overcome the civil spirit. The terrible experience of war alone will show what the modern army is really worth. Maxime Du Camp regrets that the institution of one-year volunteers, copied from the German *Einjährige* after the war of 1871, has been abandoned. One year in a regiment would amply suffice for a well-educated and well-trained man. All the supplementary time spent, in obedience to our spirit of equality, under arms is lost, in his opinion.

Universal military service, universal suffrage, such are the two characteristics of modern France. In 1830 the suffrage was not universal, and young men were excluded from the electoral field. All young men, especially all law students, now revel in politics.

"Political preoccupations," says Maxime Du Camp, "did not torment us; a fine picture exhibited at the annual Salon, a fine verse in a poem, a sunset at sea, a new book, interested us more than a political manœuvre. In truth, what was it to us whether M. Guizot should keep his portfolio, or M. Thiers should take it away from him? The Revolution of February woke us suddenly, but only for a short time, and soon after we began anew to obey and to dream. Ah, we were very unpractical, I must confess. We also had eaten of the fruit of the lotus."

It is not certain that what preoccupied the younger generation in 1830 was more ephemeral than what engages the present; but political ambition has become more general, more universal.

"Among those who will try to be first in the electoral battle, who will sacrifice an honest occupation to the inconstant fortune of politics, many will successfully attain the object of their ambition. So many have succeeded, of such singular ignorance and such intellectual platitude, that the hope of ascending the ministerial heights cannot be interdicted to anybody. The future candidates, now on the school-benches, will bring with them their illusion about themselves and their mania for governing. Will it be a good? Will it be an evil? Nobody can answer. France will not know in a hundred years."

Maxime Du Camp dilates much on the change which has taken place in public opinion within sixty years on the subject of Napoleon. He has an essay on the Emperor. His generation, which was more poetical than practical, had a sort of Napoleonic religion. "If he had lived in the dark ages, when writing was not yet invented, he would have been placed in the ranks of the gods, between Apollo, the distributor of light, and Jupiter, the master of the thunderbolt." Whatever may be said of him, it is impossible to deny that "Nature had composed him of rare elements, as an instrument forged for some unaccustomed work." Lamartine was right when, in one of his 'Méditations,' he says to Napoleon:

"Rien d'humain ne battait sous ton épaisse armure."

Napoleon, in the opinion of Maxime Du Camp, saved the Revolution, which had devoured itself and was on the point of perishing when the *coup d'état* of the 18th Brumaire took place. "In my youth," he says, "I knew a man who had been mixed up in the events of

that period, and who belonged to the coterie of the Comte d'Artois. He told me that the 18th Brumaire did more harm to legitimacy than to the Republic." After the Restoration, Napoleon remained in the popular mind as the representative not only of the military grandeur of France, but also of the principles of the Revolution. Mme. de Staël had called him a "Robespierre *à cheval*."

The legend of Napoleon formed itself out of many elements; it was adopted by the Romantic school. Victor Hugo, even Chateaubriand, Béranger, Lamartine, afterwards Balzac, all the poets (and there are poets in prose as well as in verse), presented to the imagination of the people a glorified Napoleon. "Men of my time were brought up on the knees of the soldiers of the First Empire, the survivors of those gigantic wars which terrified and disturbed the world." In the essay "Les Illusions" Du Camp exhibits the transformations of the Napoleonic sentiment—how rapidly the legend was formed; how it became a part of liberalism and the essence of what we call "chauvinism." The idol fell only after the disasters of 1870; the Second Empire was fatal to the first. But was it really fatal? We are struck by a sort of Napoleonic revival. The new generation, however, now sees Napoleon in the light of history, not in the rays of the legend. The modern historical school is founded on documents. There is an essay "Le Document," in which Du Camp shows how many errors are now rectified by a careful study of Government and family archives.

## THE WALRUS AT THE FAIR.

To the Editor of The Nation:

Sir: In the issue of the *Nation* for the week of September 14th, in an interesting letter on "Science at the Fair," signed by "W. H. D.," appears the following: "A fine walrus might have been more life-like if the taxidermist had had a better guide than Elliott's caricatures of this unfortunate animal, which, in addition to extinction, seems to be doomed to posthumous misrepresentation."

Unfortunately, the writer of the above does not indicate wherein the specimen fails to agree with his apparently superior knowledge, but he falls into an error when he infers that Elliott's pictures were used as the model in mounting the specimen. As a matter of fact, the writer saw this specimen and seven others alive ten days before it was killed, though unfortunately he was not able to procure one personally. The impression he received at the time of the form, color, and movement of these ungainly beasts he has endeavored to portray in preparing this specimen, and he believes with some success.

Now, Elliott spent considerable time studying these animals in 1872–'73, and his pictures are the result. My own work is the result of a fairly good observation on one occasion of eight walruses, a rather limited view on another, and talks with people living on the islands. It seems somewhat strange, in view of "W. H. D.'s" description of these pictures as caricatures, that Mr. Elliott and myself should reach practically the same conclusion, though our observations were nearly twenty years apart and intended for different and definite purposes.

The conclusion may easily be reached that possibly the views of Mr. D. on this subject may not be unbiassed. The Taxidermist.

Washington, September 26, 1893.

[We have referred the above letter to "W. H. D.," and now subjoin his reply. —Ed. Nation.]

"In regard to the preparation of the walrus in the National Museum collection, the writer's intention was to criticise the taxidermist's opportunities, and not his ability. The animal in question was obtained at Walrus Island, near St. Paul, Bering Sea, by Capt. Coulson, in August, 1890. The Walrus Island herd is a small one, which in twenty years has not exceeded fifteen or twenty individuals. It has long been known that it contains only old males, who have separated from their kind and are in a state of senile degeneration. The writer has examined these animals, as others have, from a distance with an opera-glass, and his opinion is that neither Mr. Elliott's sketches nor the singularly similar mounted animal in question well represent even these old males. But if the taxidermist had been with the writer in the midst of a herd of several hundred in the full vigor of their prime, had looked into their red eyes and trumpet-shaped nostrils within an oar's length, and noted their movements, agile as those of a seal, he would realize that what he has seen is to the walrus at its best much as a statue of the drunken Silenus is to the Hermes of Olympia. The most prominent feature of a walrus on the alert, *i. e.*, the funicular nostrils, is not represented in any figure, drawing, or mounted specimen in any museum of Europe or America. If the National Museum specimen represents Mr. Palmer's idea of 'movement' in the walrus, one is tempted to ask how he would convey the idea of complete collapse!"

## GRADUATE COURSES.

To the Editor of The Nation:

Sir: We desire to correct through the *Nation* an error in the table on pp. 12, 13 of 'Graduate Courses,' edited by Graduate Students' Clubs of Cornell, Harvard, Johns Hopkins, and Yale, and just published by Ginn & Co. In 1892–93 Columbia had 185 graduate students in its faculties of philosophy, political science, and mines, and three degrees of Ph.D. were given in 1892. The numbers of graduate students given in the first column of our table are in so far not directly comparable as in different universities different disciplines are included in the "Graduate Department." The insufficiency of numbers to convey a true idea of the relative value of the different universities to a particular student led us to insist in the preface that our book was not intended to afford a basis for comparisons.

Respectfully yours,

A. W. Weysse, Secretary,
Harvard Committee on "Graduate Courses."

Cambridge, September 8, 1893.

## ENGLISH HISTORY FOR AMERICAN READERS.

To the Editor of The Nation:

Sir: In your review of Higginson and Channing's History you suggest that in future editions the existence of Darwin, Spencer, Kelvin, should not be ignored. May I venture to add the names of Dalton, Joule, and Maxwell? I think it will be admitted that the influence of their work upon our Anglo-Saxon thought has been profound and far-reaching.

Ought we not to acknowledge, also, that the influences from our "old home" have been powerful in the economic and humanitarian movements of our time—freedom of commerce, sanitation, prevention of cruelty to animals and children, the organization of charity, the emancipation of women, coöperation, friendly societies, etc.? Nor, if the coming generation is to grasp the true state of the case, should our return influence on the people of Britain be lost sight of, notably in matters of political organization and mechanical improvements.—Yours truly, Herbert Mott.

Providence, R. I., September 27, 1893.

## HAMILTON'S KNOWLEDGE OF FRENCH.

To the Editor of The Nation:

Sir: In his communication entitled "Randolph and Talleyrand," in your paper of last week, Mr. M. D. Conway, deeming the negative fact important to his purpose, says: "Unfortunately, Hamilton did not understand French." This statement surprised me, as I had always supposed that Alexander Hamilton's familiarity with the French language was universally known as a not insignificant item in his biography, his mother having been French. Furthermore, I knew that in memoirs of our Revolution, both French and English, Hamilton's usefulness to Washington as an intermedium between him and the French officers is often mentioned. See, for example, the 'Voyages' of the Marquis de Chastellux (Paris, 1788, tome i, pp. 311, 312). In his account of a visit he paid to Gen. Schuyler, the Marquis incidentally gives a brief sketch of the career of the General's son-in-law, Hamilton. From this sketch I transcribe a few words: "Dès lors la correspondance avec les Français, dont il parle et écrit parfaitement bien la langue, les détails de toute espèce, politiques et militaires, dont il fut chargé," etc.

From the use to which Mr. Conway applies Gen. Hamilton's assumed ignorance of French it seems worth while to make this correction. Doubtless there are many persons in New York able to correct the mistake, though they may not be able at once to lay their hand on a testimony so conclusive as this of the Marquis de Chastellux.—I am, respectfully yours,

R. E. W.

176 Federal Street, Allegheny, Pa.,
September 27, 1893.

## SEX AND INHERITANCE.

To the Editor of The Nation:

Sir: In the *Nation* of September 7, W. A. Stille challenges a position which one would not suppose needed challenge but for the fact that it is frequently assumed by good writers. Even such a woman as Harriet Prescott Spofford, than whom no one can be more devoted to the advancement of women, has blemished the pages of that most excellent book of hers called 'Home and Hearth' with this false philosophy. She argues:

"There is every reason that the masculine brain should be the superior up to the present moment, whether it is or not. Greater opportunity, in having at first no one to provide for but himself, and afterwards the necessity for fighting for what he would have, produced in man greater physical strength. Greater physical strength, then, made man master when no one thought of brains; the habit of mastery creates responsibility and fosters intellect. Having mastery, the man has placed himself in every favorable condition. . . . Has there been money to descend, it has descended to the son. Many exercises of the intellect, many studies, the culture of art and of philosophy, need money for their pursuit; it is the son and not the daughter that has had it. . . .

"The habit of receiving education has been for centuries, then, a masculine habit, almost as it were by special grant, in spite of the comparatively few instances of scholarly women. And as some forms of training are so disciplinary that what was education in sire becomes like intuition in son, sex itself might

be said to have exercised influence, and made the masculine brain at this date the superior" (pp. 167–9).

"It does not militate against their right to happiness if women are not the intellectual equals of men; but few will seriously deny that they are capable of developing into equals, and that it is the fault of men that they have not done so. When women have had the intellectual training for generations that men have had, so that if education itself does not become instinct, the habits of education do—when they have had for such time the same freedom, the friction, and the scope, equality will no longer be a matter of question" (p. 136).

In other words, inheritance along the line of sex seems to be assumed by the writer without question. I have always been taught that when inheritance was not from both parents, it very frequently, if not more frequently, was from father to daughter and from mother to son; and if education plays a part in inheritance, we should be inclined to pity the sons rather than the daughters of uneducated women.

Even Mrs. Spofford seems to admit this idea when she gets away from the past and her theories as to it, and regards the present and the future and what the advancement of women may do for coming generations:

"Their upward movement in the last two generations is already seen in its reaction on men, for it is impossible that their continued aspiration and struggle and achievement should not have had effect on their sons. Another century may see yet greater marvels than the present, since men only attain the whole of their own rights and a possibility for the whole of their growth when they inherit from the side of their mothers as well as from that of their fathers a complete and trained intellectual force" (p. 171).

GEORGE HEMPL.

ANN ARBOR, September 22, 1893.

## WAS COPERNICUS A GERMAN?

TO THE EDITOR OF THE NATION:

SIR: In your review of Mr. Oliver Lodge's book on the 'Pioneers of Science,' I was quite surprised to read that the father of Copernicus—and Copernicus himself necessarily too—was believed to have been a German. I had always taken it for a well-established fact that Copernicus was a Pole by birth and nationality. Copernicus is merely a Latinized form of the original name Kopernik, which corresponds with it in sound; and Kopernik is not a German, but a Slavonic name. It is not Polish, but Bohemian, and in the light of documentary evidence the family of the Koperniks can really be traced back to Bohemian ancestry. The *zemani* (knights) of Kopernik were Bohemian noblemen whose name appears in the historical records of the fourteenth century, and has been preserved to this day in the name of the Bohemian village Kopernik, their former seat, situated between the cities of Kosmonosy and Bakov in northeastern Bohemia. In the records of the fifteenth and sixteenth centuries the name can no longer be found, but a clue to its disappearance may be found in the archives of the city of Cracow. From the 'Acta Consularia Cracoviensia' (Proceedings of the Cracow City Council), *ad annum* 1396, we learn that A. D. 1396 citizenship was conferred upon Nicolaus Kopernik. The attesting witness, a citizen of Cracow named Dambrova, testifies that Nicolaus Kopernik had come to Cracow from Bohemia. This testimony is highly important. It is corroborated by the Bohemian origin of the name Kopernik, derived from the word *kopr*.

Historically, the naturalization of Nicolaus can easily be explained. The relations of the two Slavonic kingdoms, Bohemia and Poland, and notedly of the two great cities of Prague and Cracow, were friendly, and, as the two languages do not very materially differ, Mr. Nicolaus Kopernik found little difficulty in establishing himself at Cracow and finally obtaining its citizenship. He probably emigrated to Cracow towards the end of the fourteenth century. His family evidently was Bohemian, but his sons and grandsons spoke Polish. One of his grandsons, the eldest, also named Nicolaus (the frequent occurrence of this name in the Kopernik family is not to be overlooked), left Cracow in 1462 and settled at Thorn, where, on the 19th of February, 1464, his son Nicolaus, the great astronomer, was born.

These facts show pretty clearly, I think, that both Copernicus and his father were Poles of Bohemian ancestry, and, therefore, doubly Slavs. I add some minor facts which may throw more light upon this question: The coat-of-arms of the Bohemian Koperniks bears the figure of a man: so does the escutcheon of Copernicus. Copernicus went to study at a Polish University, Cracow, in preference to that of Leipzig, and when in Italy, at the University of Padua, he registered as a Pole and not as a German.

J. J. KRÁL.

CHICAGO, ILL., September 18, 1893.

[If our correspondent has not heard of Copernicus being called a German, then he has not heard of perhaps the bitterest and most loud-resounding literary dispute of our day. We simply followed the authority of Prowe, whose great biography in three volumes (Berlin, 1883, 1884) occupied many years of its author's life, and was, we fancy, chiefly written in Thorn. Prowe says that until the father Niklas married Barbara Watzelrode, the family was "ein durch und durch deutsches Geschlecht." The greatest living historian of mathematics, Moritz Cantor, in a letter published in the Augsburg *Allgemeine Zeitung* for August 1, 1876, fully sustains this opinion. It has further been defended by Max Curtze, Perlbach, A. Knoetel, and S Günther. The Italians, who almost lead Europe upon questions of the history of science, seem to favor the German side. All the arguments advanced by our correspondent will be found fully considered in the above works.

Although Greek was not taught in Cracow, writings brought to light in 1873 show that Copernicus had more knowledge in that direction than one would suspect from the 'De Revolutionibus.' He gives a Greek form of his name, Νικολαυς ὁ Κοπφερνικος, showing that he understood the first two syllables to mean *copper*. The astronomer's family, in fact, was a family of coppersmiths; by copper they had made a fortune. Now, the Thorn directory for 1422 shows that Margaret Koppernigk had business connections in the town of Frankenstein in Silesia, and in other ways the family has been traced to that point. Near that town is a hamlet named Köppernick, where there is an old coppermine. This neighborhood is distinctly German, and always has been so, although it is on the very border of Bohemia, and was at one time in the kingdom of Bohemia.

As for the assertion that Copernicus was registered as a Pole at Padua, that was investigated, at the instance of Prince Boncompagni, by Favaro, and found utterly baseless. On the other hand, Carlo Malagola, in his admirable work on Urceo Codro, showed that "Niccolò Kopperlingk di Thorn" had registered as a law student at Bologna in the album of the "Nazione Al manna." This may not prove much, but it is, at least, not an invention. As for such coat-of-arms as this family of coppersmiths may have used, it can prove nothing at all. They never were ennobled. It may be granted that Copernicus (ἀνὴρ παντὸς λόγου κρείττων, Scaliger called him) was, as a member of the Polish Parliament, a sturdy adversary of the Teutonic knights. But, on his father's side, the evidence seems to be that his blood was German.

We take this opportunity to correct an inadvertence not pointed out by our correspondent, by which, in the notice under discussion, we spoke of the bishopric of "Regensburg" in place of Ermeland.—ED. NATION.]

## THE DIVISION OF WORDS.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me a few words on one of the subjects mentioned in a communication from me in the *Nation* of August 31? What you then said in answer to my objections to the division of words in the *Harvard Graduates' Magazine* seems to conflict with your practice, which is in accordance with the rule laid down by Lindley Murray and followed by the English press everywhere. This rule is to divide according to etymology, and, when this makes no demands, then *on the vowel*, as it is called, unless in the case of two or more consonants. Apparently, in the United States, the only rule followed is that of pronunciation, and this leads sometimes, even in the works of our best publishers, to such divisions as *noth-ing*. This has a high flavor of illiteracy, but I can't see that it is worse than some of the cases quoted, viz., *physiol-ogy*, *prom-ising*, etc.

You say truly that the *Harvard Graduates' Magazine* is not an official publication, nor is it published at a university press; but a magazine issued under the sanction of a picked body of graduates, with a long list of distinguished officers and council, would never take shelter under such a plea, nor would these consider themselves otherwise than responsible for the reputation of their university.

Possibly your learned correspondent "F. H." might give us some light on this subject.

H. U., '31.

[We should not like to have our own practice scrutinized too closely for consistency. A narrow column like the *Nation's* precludes the uniformity which may be exacted in book-work. Some of our first printing-houses fall under our correspondent's censure, but for ourselves we regard the question rather as one of taste than of literacy. An authoritative treatise to harmonize usage is wanting.—ED. NATION.]

# Notes.

CHARLES SCRIBNER'S SONS have in press Mrs. Burnett's autobiography, 'The One I Knew Best of All'; the 'Memoirs of Chancellor Pasquier,' in three volumes; 'Customs and Fashions in Old New England,' by Mrs. Alice Morse Earle; and 'University Football,' by James R. Church.

Mr. George Haven Putnam will publish, through the firm of which he is head, 'Authors and their Public in Ancient Times'—to the invention of printing. The same firm have in preparation 'Wayside Music,' a collection of lyrics and sonnets by Charles H. Crandall.

Mr. Charles Dexter Allen's work on American bookplates will bear the imprint of Macmillan & Co.

Brentano's autumn list embraces 'Love in Letters,' compiled by Henri Pène du Bois, and illustrated by Frank M. Gregory; 'Modern Scientific Whist,' by C. D. P. Hamilton; and 'How to Keep Young,' by James E. Kelly.

A translation of Bertha Meyer's 'The Child, Physically and Mentally,' by Friederike Salomon, will be issued in November by M. L. Holbrook.

Ginn & Co. announce 'The Ethics of Hegel,' translated and edited by Prof. J. Macbride Sterrett, of Columbian University.

It is not easy to guess the *raison d'être* of Mr. Frederick A. Ober's 'In the Wake of Columbus' (D. Lothrop Co.), though the author qualifies himself as "Special Commissioner sent by the World's Columbian Exposition to the West Indies." The book seems to be a farrago of personal experiences in visiting the various places connected with the career of Columbus, combined with a certain amount of historical misinformation, the whole written in a slipshod style, and illustrated with a large number of woodcuts of very various degrees of intelligibility. It is difficult to comprehend how any one who has visited Spain should, in reviewing the history of the Peninsula, omit the Romans from a list of the invaders commencing with the Phœnicians and ending with the Moors (p. 5), or speak (p. 6) of "Castilian armies" sweeping down "from the Asturias and the Pyrenees" to the work of the reconquest, or tell us that "at last the union of Ferdinand and Isabella joined the forces of Leon and Castile."

Prof Williston Walker's 'Creeds and Platforms of Congregationalism' (Scribners) is a collection of twenty documents illustrating the progressive theology of the Congregational churches, from Robert Browne's 'Booke which Sheweth the life and manners of all true Christians and howe unlike they are unto Turkes and Papistes and Heathen folke,' down to the "Commission Creed" of 1883. In every case the original is followed even in the smallest details of typography, and this, with the running historical comment and exposition, makes the volume one which the theological student, for whom it is mainly intended, should welcome.

Several years ago we expressed a favorable opinion of Dr. Douglas Graham's 'Treatise on Massage.' 'Recent Developments in Massage,' by the same author (Detroit: George S. Davis), is a pamphlet that may be taken as a supplement to that volume. The style is not dignified, but the substance deserves serious consideration for the importance of its communications.

As a rule, books on professional topics for unprofessional readers are worthless in matter or unintelligible to them in construction. A marked exception is 'A Chapter on Cholera for Lay Readers,' by Walter Vought, Ph.B., M.D. (Philadelphia: The F. A. Davis Co.), which may be safely and heartily commended for its real worth and its lucidity. Holding it to be absolutely proved that the specific cause of cholera is the comma bacillus, which is the best working hypothesis and is almost universally accepted as the true theory of this grave and formerly misunderstood disease, Dr. Vought notes simply and assuringly the conditions that foster and those that destroy this germ. He emphasizes what cannot be too widely known, that the disease is contracted only by the entrance of this bacillus, derived from the discharges of the sick, into the mouth, and that complete disinfection of those discharges will effectively prevent an epidemic. The natural history of the disease is clearly described, and a special report is made of the viability of the germ in the ordinary articles of food, with explicit directions as to the best methods of disinfection for individuals and for communities. As its mystery is reduced, both the fear and the danger that belong to cholera are diminished, and this little work should be a valuable help in popularizing such knowledge. It may be depended upon, and it can be understood.

The outbreak, or the fear, of an epidemic of cholera is too frequently the signal for the issue of a new edition of an old writing. It is therefore very gratifying to find that Dr. Roberts Bartholow, a well-known therapeutist, has prepared for his professional brethren a monograph on the nature and treatment of that disease which is a perfectly new work, and which discards everything not bearing upon the disease as now understood, and includes the latest observations of medical science. 'Cholera' (Philadelphia: Lea Brothers) is a good book on an important subject.

'The Soil in Relation to Health,' by H. A. Miers and R. Crosskey, with illustrations (Macmillan), is a brief but admirable treatise on this branch of hygiene. It has long been recognized that the natural soil, and of course the ground charged with artificial products, is an important factor in public health; but we are not familiar with any connected discussion of the subject except as a section of systematic treatises. A handy volume like this, whether for reference or for direct study, is a useful accession to the literature, and this particular book is clear in expression, convenient in arrangement, and accurate in statement. The only omission that we note is that of the influence of continuous high soil-temperature upon the causation of diarrhœal disease.

'A Ready Reckoner of the World's Foreign and Colonial Exchanges' (Putnams) is a handbook of 164 pages, designed to simplify the present cumbrous methods of computing international exchange. The book is a sequel to a work previously compiled by the same author, Mr. J. H. Norman, of the London Chamber of Commerce, which was favorably received by all financial authorities. Mr. Norman's plea is for a reckoning of exchange values on the simple basis of intrinsic gold value of standard coins. The London par of exchange on Paris, for example, is to be computed by dividing the franc's weight in pure gold by that of the pound sterling, and multiplying by the number of pounds to be exchanged into francs. The deviation from par, due to transmission charges, cost of recoinage, money interest, broker's profit, or other causes, is then reckoned in as a premium or discount, as the case may be, on this result. The process for computing exchange on silver-standard countries is identical in principle, the first step in this computation being the division of the pure silver in the standard coin by the existing ratio between gold and silver. The silver coin is thus reduced to its equivalent in pure gold, after which the computation is similar to that of exchange between gold-using countries. Mr. Norman's principle is undoubtedly sound, and furnishes the only absolutely accurate method for reckoning foreign exchange. The second and larger part of the book is given up to tables of monetary signs and mint-issue weights, through which ready reckoning of all exchange values, on the above principles, is facilitated.

Parts 13–24 of 'Famous Composers and their Works' (Boston: J. B. Millet Co.; New York: Henry T. Thomas) begin with the conclusion of the notice of Wagner and end in the midst of the notice of Chopin. After Wagner, there is a summary of Music in Germany, in its turn succeeded by an account of the Netherland masters, and then Palestrina leads the Italian biographies and corresponding résumé. Lully introduces the French composers. Among these, for musical weight, J. J. Rousseau could certainly not claim a place; but he ought not to have been overlooked in the sketch of Rameau, and in reviewing the progress of music in France there should have been something more than incidental mention of the author of "Le Devin du Village," words and music both, of the 'Dictionnaire de la Musique,' and of the famous Letter on French Music, which is in itself a literary classic. It ought never to be forgotten that Rousseau was led to Paris and to literary fame by his musical p ssion, and that besides inventing a new method of musical notation he maintained his independence by copying music. A page of his musical autograph would have found an appropriate place among similar facsimiles in this handsome publication. The parts before us abound in portraits, views, and specimen pieces of music.

Mr. H. H. Bancroft's 'Book of the Fair' has reached its third part (Chicago: The Bancroft Co.; New York: Rhule, Thomas & Co.). The text comprehends even the naval review and parade in New York, and begins a detailed account of the Exposition with the Government and Administration Departments. The illustrations continue to be numerous and very helpful.

The third of the forty parts of Mr. William C. Harris's 'Fishes of North America that are Caught on Hook and Line' has just appeared (New York: Harris Publishing Co.). Nominally issued monthly, these instalments have met with provoking delays on account of the difficulties in the chromolithographic illustrations from original oil paintings, and it is nearly two years since Part 2 was issued. The genuine fisherman is doubtless more possessed of the patience necessary to bear such waiting than those who are bored by angling all day without a bite. The two plates in the present number represent the pike and the hybrid trout.

Another *recueil* from the inexhaustible Librairie de *l'Art*, viz., 'Peintres de Genre Contemporains' in two parts (Macmillan). It must be said of the hundred examples displayed that they possess rather more interest than the collection of landscapes which preceded them. They illustrate several schools and some great names, and several American artists are represented in the sketches, which vary greatly in carefulness as well as in the mode of production.

Japan, besides spending more than half a million dollars in order to be well represented at the World's Fair, has issued a little stack of publications. The 'General View of Commerce and Industry in the Empire of Japan' is a volume of nearly five hundred pages, in English, bound in silk and well printed, though the proof-reading has been badly done. It has a map of the empire and diagrams of the chief ports and cities, an outline of geography and resources, and a readable history of the foreign trade of the country, with abundant statistics, rules relating to custom-houses, ministers, and consuls. Especially valuable is the conspectus of Japanese and American trade, with all necessary details, from 1887 to 1891, together with the text of the treaties and regulations. The catalogues published include those treating of agricultural objects, education, weights and measures, manufactured articles, record of the national educational society, with an historical volume entitled 'Outlines of the Modern Education in Japan.' Two folio pamphlets tell of the 'Organization of the Meteorological System,' and give a 'Report on Earthquake Observations in Japan.' The former is the magnificent development on a national scale of an office opened in 1872 for tridaily observations; the latter, besides rich textual description and illustrations of apparatus, gives thirty-one maps on which, by means of colored and shaded lines, the great earthquakes since 1885 are figured. All these are Government publications.

M. Émile Terquem, the representative at Jackson Park of the well-known Paris Publishers' Club, has just presented in its name to the Cornell University library, apropos of the quarter-centennial celebration at Ithaca, a goodly parcel of books. Among the publishers participating in the gift are Ollendorff, Jouvet, Colin, Hachette, Delalain, Alcan, Hetzel, Delagrave, Masson, and Plon, and among the volumes may be mentioned Marshal MacDonald's 'Souvenirs,' Janet and Séailles's 'Histoire de la Philosophie,' Flammarion's 'Mars,' Mme. de Witt's 'Les Femmes dans l'Histoire,' Henri Martin's 'Les Capétiens et la France Féodale,' and the useful work on copyright by MM. Lyon Caen and Delalain reviewed by us at the time of its publication.

The campaigns of the year 1864 chiefly are exemplified in the sheets of Parts 17, 18 of the Atlas now issuing from the War Department, and among these Virginia has a large share, thanks to that excellent Confederate topographer, Capt. Jed. Hotchkiss. Sherman's campaign from Atlanta to Goldsborough, N. C., is also illustrated. We may further enumerate maps of the defences of Washington and of the approaches to New Orleans, and a large-scale plan of Richmond.

The Münster and Dresden sheets of Vogel's Map of the German Empire (Westermann) bring the end of this important work in sight, as only the Hanover, Stuttgart, and Munich sheets remain to fill Parts 13 and 14.

The recent bringing to light (or to remembrance, for it is in the British Museum) of the stoneware bust of Pepys's wife, lends interest to the paper on white salt-glazed ware in the illustrated series on "Old English Pottery" now running in the *Portfolio*. The August number has a fine specimen in the bust of Prince Rupert by John Dwight of Fulham.

Mr. F. Gutekunst's imperial panel photograph of Edward Eggleston is a shade less satisfactory than the notable series to which it belongs. It fails to suggest the large stature of the novelist; but we cannot say that the focussing of the plate is responsible for that.

—In the composition of *Harper's* for October the zest and charm of foreign travel and exploration play a leading part. Col. Dodge continues his now somewhat bewildering enumeration of the various characteristics of Eastern breeds of horses and their riders. Mrs. Pennell describes still another French town, Toulouse, in its typical summer brilliancy. Mr. Davis, in his usual fluent fashion, sketches the Oxford undergraduate in his hours of ease and mischief. Of far greater interest is the leading article, in which Mr. Weeks begins the story of the ill-fated caravan journey from the Black Sea to the Persian Gulf in which Mr. Child met his death. The present instalment, covering the ride from Trebizond to Tabreez, is only the prologue, but the tragic note is distinctly heard or felt throughout, and the strong relief into which Oriental picturesqueness throws personal peril recalls parts of Huc's famous and brilliant narrative of adventurous travel in the Farther East. Of domestic interest are Mr. Janvier's description of Lispenard's Meadows, another almost forgotten part of that strange New York which only old men remember, and Carl Schurz's clear definition, called forth by the recent attempt to "boom" a wild scheme of annexation, of what our "manifest destiny" seems to him to be. In brief, we may let the tropics alone, look only northwards for territorial extension, and preserve freedom, prosperity, and power; or we may yield to the allurements of the tropics and embark on a career of rapid deterioration, leading to a "future of turbulence, demoralization, and final decay." Miss Woolson's novel comes in this number to an ambiguous conclusion, and William Black's "The Handsome Humes" draws nigh to a characteristic ending.

—The October *Century*, with which the magazine completes its twenty-third year, is faithful to tradition in that its greatest interest lies in biographical and historical articles. Of these the chief in real importance may perhaps be the first half of the manuscript diary of Admiral Cockburn's secretary, kept on the voyage which consigned Napoleon to St. Helena. Nothing new or strange, however, appears so far in the very prim and very British account of the secretary's observations in regard to the "actions and conversation of Bonaparte, once the scourge of mankind." The officers on board evidently regarded and treated Napoleon as upper servants might treat their young master in disgrace—with mingled severity and servility. The Emperor himself meanwhile preserved his customary demeanor and habits of life, greatly shocking the secretary and his superiors by his first instinctive surprise at being given only the honors due a retired British general, by his playing at cards of a Sunday evening, and by his frank avowal of his proposal to end by opium the sufferings of the dying French at Jaffa who had to fall into the hands of the savage troops of Djezza Pasha. Not less strongly than Napoleon's unique personality in the martinet pages of the Admiral's secretary shine out in two other articles the familiar traits of Whitman and Salvini—those of Whitman in characteristic letters to his family from Washington in the early years of the war; those of Salvini in the concluding leaves from his autobiography. The latter has been throughout exceedingly pleasant reading, for Salvini's buoyant self-confidence and simple acceptance of his own power and rank give his narrative extraordinary vigor, while preserving it from the reproach of mere egotism or garrulousness. The leading article is Mr. Flynt's vivid account of his wanderings with German tramps. It is with patriotic pride that we learn of their inferiority to the American species.

—The fiction in the current *Atlantic* is dialectic to a degree that suggests the Tower of Babel, and, what with Yankee, Calabrian, and the jargon of the Tennessee mountains, makes the reader almost yearn for the good old-fashioned plan which innocently made all races and peoples use—so long as they figured in literature—the same conventional and intelligible means of communication. The bulk of the number consists of what Mr. Howells calls "contemporanics"—articles on subjects more or less alive in popular interest. One discusses the Central American Isthmus and its bearing on sea power, and others the humiliating failure of Tilden's will to insure the carrying into effect of his vague charitable plans, and the famous Electoral Commission of 1877. The most pertinent is an account of the Scandinavian, but almost hopelessly un-American, system for dispensing liquor to the community by corporations designated and organized by the community, for the investigation of which a commission has already been appointed in Massachusetts. Mr. Apthorp writes exhaustively of classicity in music and of Robert Franz and the late Otto Dresel. The only article that deals with literature is Prof. Jebbs's statement of the permanent influence exerted by Greek poetry.

—Conspicuous in the table of contents of *Scribner's* are the names of Mr. Stevenson and Mr. Howells. The former contributes an introductory note to his grandfather's reminiscences of Scott, whose guide and companion he had been in a northern voyage made in 1814 in the yacht of the Lighthouse Commissioners. The latter devotes a long article to expounding the mysteries of the business side of an author's life. Mr. Howells's successful career as a professional man of letters, and the well-known piquancy of some of his views in regard to the practice of his art, make all he says interesting and well worth the attention of all who are entering the trade of which he is past master. Only three of the points he makes, however, are so unexpected or so characteristic as to demand comment here. First, Mr. Howells insists throughout that the man of letters inevitably degrades himself and his art by bartering for money, as modern life forces him to do, that which by its very nature refuses to be weighed and priced in the terms of commerce. Second, the man of letters belongs economically to the great class of laborers and artisans, rather than to that of the middlemen, and should feel a genuine sympathy and kinship for them. Third, it is urged that the highest class of readers are to-day the readers of the magazines; that it is an "antiquated and ignorant prejudice which stamps the magazines as ephemeral"; and that literary reputations made through contributions to the magazines are far less likely to be fallacious than those made through books. This may in a way be true, so far as novel-writing goes, but literature is more than a good story here and there, and we should be loath to believe that the ministers of our amusements have so soon become the absolute masters of all our literary interests.

—In 'The Ancient Ways: Winchester Fifty Years Ago' (Macmillan), the Rev. W. Tuckwell has taken advantage of the recent celebration of the five-hundredth anniversary of his old school to print some pleasantly written reminiscences of his own time there. The

pretty little volume with its illustrations appeals, of course, chiefly to Wykehamists; but it contains what perhaps entitles it to a niche in the literature of the history of education, and that is a more complete account of the practice of "fagging" in its palmy days than is anywhere else easily accessible. Mr. Tuckwell—as we need hardly say of so good a Radical and so true a lover of flowers and gentle things—condemns the system unsparingly, chiefly by means of a simple recital of his own experiences: "Slavery is the only word which summed the three years' experience of a college junior. The details, whether cruel or grotesque, were all so contrived as to stamp upon the young boy's mind his grade of servile inferiority, and his dedication to the single virtue of abject, unquestioning obedience." Yet, as he remarks, it was "the best corrective," when once "the initial blunder" was fallen into of "leaving a mob of boys to self-government during great part of the day." A book like this helps us to understand how it was that such evils could arise as marked the beginnings of the factory system: the men of two generations ago were brutal in the treatment of the children not only of the poor but of their own class. It may be noticed that even the "ancient customs" of Harvard contained rules which might easily have developed into a fagging system like that of the great English schools; such as the rule that "all freshmen shall be obliged to go on any errand for any of their seniors." The ages at which boys entered Harvard and Winchester a century ago were probably not very different.

—'La Vita Italiana nel Rinascimento' is the publication of certain lectures delivered at Florence in 1892. They are third in a still continuing series of popular talks on Italian life, literature, and art. Preceding the present volume there has appeared one entitled 'Gli Albori della Vita Italiana,' and another, 'Vita Italiana nel Trecento'; the conferences of the present year were on the 'Cinquecento.' The publishers are Fratelli Treves, Milan. The titles of the several volumes suggest the scope and purpose of the whole series: too summary to aid much the scholar, it is, nevertheless, a useful compendium for the general public. The volume in hand deals in three parts, roughly equal, with history, literature, and art during the fourteenth century. The methods are naturally more suggestive than exact. According to Signor Masi, the Italians of the Quattrocento were the typical Renaissance people, and, among the Italians, *par excellence* the Florentines, and among the Florentines the Medici, and among the Medici Lorenzo the Magnificent. By this somewhat facile method of elimination, accordingly, study of the Italian Renaissance is reduced for the most part to a study of the immediate time and surroundings of Lorenzo de' Medici. His own poetry is the characteristic Renaissance lyric; his tutor, Politian, the characteristic humanist; his somewhat neglected protégé, Leonardo da Vinci, the characteristic artist. Certainly this concentration of interests, if from a scholarly point of view dubious, is conducive to sharpness of outline and to unity. Of Lorenzo as the protagonist of the Renaissance, there is much florid eulogy in the volume. Signor Masi, in his opening essay, does not hesitate to revive in its fullest intention the contemporary epithet of *pater patriæ*. Signor Nencioni compares the poetry of Lorenzo with that of Robert Burns. Lorenzo's shortcomings are ascribed to the spirit of the times; his excellences to his own credit. In fact, the whole volume, with one exception, has overmuch of the air of the rostrum: the lecturers hardly aim higher than their readers' ears. The exception is Vernon Lee's interesting account of the sculpture of the Renaissance. As usual, this gifted writer handles her subject in the large, running easily up and down the ages and bringing side by side their respective ideals, manners, methods, in such wise that we are enabled to compare them in a single *coup d'œil*, like specimens in a museum. For this essay alone the volume is worth examining.

## MACH'S SCIENCE OF MECHANICS.

*The Science of Mechanics:* A Critical and Historical Exposition of its Principles. By Dr. Ernst Mach, Professor of Physics in the University of Prague. Translated by Thomas J. McCormack. With 250 illustrations. Chicago: *Open Court* Publishing Company. 1893.

Dr. Ernst Mach's 'Die Mechanik in ihrer Entwickelung historisch-kritisch dargestellt' has for its ostensible purpose elementary instruction in the principles of mechanics. A secondary purpose is to narrate the history of that science. The ulterior design is to illustrate the author's views of the philosophy of science. This is the vital spark of the book; and doubtless this it is which recommends it to those who by "homilies" and "catechism" are engaged in propagating a "religion of science."

Considered as a history of mechanics, the work is admirable. It mentions all the great steps in the development of the science, down, at least, to 1847; it sets forth their nature, and explains them so lucidly that every reader will easily get a general understanding of them. We do not mean to defend all the criticisms upon the reasonings of Archimedes, of Galileo, of Newton, of Lagrange, of Gauss, and of many others, which cannot always meet the assent either of physicists or of logicians. Thus, when Mach objects to the assumption of Archimedes, that two equal weights at the ends of two equal arms of a lever will balance, that it is not evident, because the different colors of the lever-arms might affect the phenomenon, the obvious reply is that Archimedes did not mean that the two weights would balance in spite of everything. He did not mean, for instance, that nobody could push or blow one side down; nor, when we repeat the statement to-day, do we mean to deny that the magnetism of the lever might interfere with the experiment. When a physicist says that a certain phenomenon will happen under certain general conditions, he never means that no circumstances can possibly prevent it. What Archimedes meant was to lay down a proposition in regard to the geometrical relations of lever-arms to which nobody could object. Nor was he writing about the theory of cognition. He said nothing about the origin of the belief. He simply put forth the proposition as one to which, it was safe to assume, every sane man would assent.

Again, Galileo, being not much over twenty years old, investigated the law of falling bodies. It was not until he was past the age of eighty, and with failing powers, that he wrote out his reasonings. One point he made was that if the velocity of a falling body were proportional to the distance it had fallen from a state of rest, then, after it had fallen a unit of distance in a finite time, it would in precisely the same time have fallen double that distance. But the aged Galileo had evidently forgotten how the young Galileo had reached that conclusion, and his attempt to reproduce his former reasoning is impotent. Nevertheless, that conclusion does truly follow from that assumption. Mach flatly denies this, but he is wrong. Galileo's original reasoning was probably somewhat like this: Imagine two bodies, which we may designate as Achilles and the tortoise, to have fallen from the same height, but at such instants that at another and given instant the tortoise has fallen one yard and Achilles two. Then, on the assumption that the velocities are proportional to the spaces fallen from rest, Achilles will be falling twice as fast as the tortoise. Now, Galileo could easily show that this implies that Achilles had at *every* instant been twice as far from the starting point and had been falling twice as fast as the tortoise. Consequently, Achilles must have performed his total fall of two yards in the same time that the tortoise performed his total fall of one yard. But both bodies are supposed to fall by the same law. Hence, this is a law which would make them fall one foot in the same time as two feet. These instances illustrate how important it is that the reader should be upon his guard against Mach's very inaccurate reasoning.

The author declares that it is quite impossible to get a full comprehension of the different mechanical principles without being acquainted with the discussions which originally led to their acceptance. Probably he would extend the same remark to many other sciences. We might name this the embryological principle in pedagogy, since the embryologists inform us that each individual animal has in his growth to pass through a series of transformations which roughly copy those through which his race has passed in the pal ontological development. No doubt, this principle is important in teaching all those subjects in which the conceptions are really difficult, such as metaphysics, logic, ethics, political economy, and several branches of mathematics. Yet it might very easily be carried too far, and it probably has been carried too far in this very treatise. If a student's sole object is to learn mechanics as thoroughly and quickly as possible, there are certainly text-books enough in our own language which would better serve his turn.

For a good many years Germany has in philosophical matters been quite as anglomaniac as England and Anglo-Saxon America have been tudescomaniac. Dr. Mach's metaphysics belongs to the good old Lockian sect of sensationalism. The proposition that all our knowledge rests upon and represents experience is nowadays accepted by sensualists and their opponents alike, the latter taking "experience," in its ultimate sense, for whatever has been forced upon our minds, willy-nilly, in the course of our intellectual history. To major force we can only submit, and it is idle to dispute the reality of such things as food, money, beds, shoes, friends, enemies, sunshine, etc. But the anti-sensationalists, or perhaps the most advanced of them, say that, having once surrendered to the power of nature, and having allowed the futile ego in some measure to dissolve, man at once finds himself in synectic union with the circumambient non-ego, and partakes in its triumph. On the simple condition of obedience to the laws of nature, he can satisfy many of his selfish desires; a further surrender will bring him the higher delight of realizing to some extent his ideas; a still further surrender confers upon him the function of coöperating with nature and the course of things to grow new ideas and institutions. Al-

most everybody will admit there is truth in this: the question is how fundamental that truth may be. There are those who hold that while the brute compulsiveness of things may be said to constitute their reality, yet the whole fact of reality, with the relation of the ego to the non-ego, is not described until the individual Will is recognized as merging into the environing non-ego, as the individual instant of time merges into its past and future. For these thinkers, the line between fact and figment (which may or may not resemble and represent fact), so far as it can be drawn at all, is to be drawn between the involuntary and the voluntary parts of cognition; so that products of sense-perception—this chair, this table, this inkstand—belong to the realm of unquestionable reality. But they do not fail to remark that the process of compulsion exercised by the non-ego upon the ego is not altogether instantaneous. A part of it is continued through centuries. Nor is this compulsion always definitive. Resolute endeavor, aided by ingenuity and by favorable experiences, will often succeed in throwing off a part of the yoke. As for *immediate* experience, the individual sensation, it is the affair of an instant; it is transformed before it can be recognized; it is known to us as immediate only inferentially.

The sensationalists, and Dr. Mach with them, draw the line between fact and figment otherwise. Individual sensation is for them the only reality; all that results from the elaborative action of the mind is unreal. "Nature," says Mach, "is composed of sensations." A chair or a table is not real. "The *thing*," he tells us, "is only an abstraction." And again: "The world is not composed of things as its elements, but of colors, tones, pressures, . . . in short, what we ordinarily call individual sensations." Thus, all knowledge is based on and is merely representative of individual sensations, and all thought, all intellect, is of value only as subservient to peripheral or visceral sensation.

It was a favorite opinion of the pre-scientific sensationalists—Hobbes, Locke, and others—that abstraction and generalization were mere matters of convenience. Mach pushes this idea so far as to see no value in science except as an economy. "The end of science," he says, "is to *save* experiences, by the reproduction and anticipation of facts in thought." He does not make it quite clear why he should wish to save experiences, unless they are disagreeable, nor how he can save experiences except by slumbering. However, it is not our purpose to make objections, but only to outline Dr. Mach's opinion. It would seem that, all thought, memory, and higher feeling being held by the sensationalists as merely subservient to "individual sensations," if they could only be assured of a series of highly agreeable individual sensations for the rest of their lives, they should be content to forego all thought and all memory, and pass the time in an "Epicurus stye" of individual sensations.

In science, metaphysics may be useful in furnishing a system of pigeon-holes in which all possible facts may be conveniently arranged, but what the scientific inquirer chiefly asks of it is that it should efface itself, as the French say, and not block the road of experimental inquiry. But Dr. Mach's sensationalism appears upon most important points quite at odds with the conclusions of science, the nature of the difference being this, that the scientific men wish to leave questions to be settled by experiment, while Mach wishes to forestall this by deciding them by metaphysics.

For instance, the crowning doctrine of physics is that all the events in the physical universe are motions of matter. Heating and cooling, changes of color, sounds, electrification, all may have their physical qualities; but so far as they are extra-mental they are nothing but motions of particles in space. Many a metaphysician will offer to show you in advance that it must be so. The physicists at first propounded it as a question, and then went on to put that question to Nature in experiments. By this time they are pretty well satisfied that the answer is affirmative. But still they keep up their eternal teasing of the great mother, to see if the same answer will always be given. Mach, however, decides it is not so; his metaphysics has revealed that to him. He seems to deny the kinetic theory of gases, and regards the whole atomic theory as destined to be overthrown.

Again, Sir Isaac Newton formulated the three laws of motion which stand to-day in all the text-books. The first, due to Galileo, is that a body left to itself continues for ever to describe equal spaces in equal times on one straight line. The third, Newton s own achievement in great measure, the law of action and reaction, is that one body cannot be drawn back without other bodies on the same line being drawn forward to balance it. Now Newton, with his incomparable clearness of apprehension, saw that the third law implies that spatial displacement is not merely relative, and further that, this being granted, the first law implies that temporal duration is not merely relative. Hence, Newton drew the conclusion that there were such realities as Time and Space, and that they were something more than words expressive of relations between bodies and events. This was a scientific conclusion, based upon sound probable reasoning from established facts. It was fortified by Foucault's pendulum experiment, which showed that the earth has an absolute motion of rotation equal to its motion relative to the fixed stars. Moreover, Gauss and others were led to ask whether it be precisely true that he three angles of a triangle sum up to two right angles, and to say that observation alone can decide this question. Now, the mathematicians demonstrate that if that sum is not precisely two right angles, there is such a thing as an absolute velocity of translation. Whether there be or not is to the minds of scientific men a question for experiment and observation to decide. But Mach will not let it go so. His metaphysics tells him that there is no such thing as absolute space and time, and consequently no such thing as absolute motion. The laws of motion must be revised in such a way that they shall *not* predict that result of Foucault's experiment which they did successfully predict, and the non-Euclidean geometry must be put aside on metaphysical grounds. Is not this making fact bend to theory?

The English of this translation has received the emphatic approval of Prof. Mach himself.

## VILLARI'S FLORENTINE HISTORY.

*I primi due Secoli della Storia di Firenze:* Ricerche di Pasquale Villari. Vol. I. Florence: G. C. Sansoni. 1893.

THE history of Italy has still to be written, even if we regard the peninsula, with Metternich, as simply a geographical expression. No history, moreover, is more difficult to write, for, in place of the development of a single nation under institutions fairly well known and intelligible, we have a congeries of States, each working out its own ideals under social organizations and impulses of the most diverse and often of the most transitory character, and all of them dominated on the one side by the Holy Roman Empire and on the other by the Holy See. To accomplish this clearly and creditably is a task to daunt the courage of the most enterprising scholar, for he must not only assemble his material from an enormous mass of printed documents and an equally voluminous series of papers as yet accessible only in the archives, but he must coördinate an infinite variety of petty details, he must trace effects to remote and obscure causes, and he must weigh the interaction of opposing influences more complicated than those which have operated on the moral, social, and political evolution of any other nation.

So far has any adventurous historian been from accomplishing this task as a whole, that Prof. Villari informs us in his introduction that it yet remains to be done for the individual communities which formed the aggregate of mediæval Italy. His own undertaking is more modest, and yet it is by no means an easy one, viz., to ascertain and set forth the origin and the vicissitudes for two centuries of the community which shared with Venice the glory of being the most remarkable of the Italian republics—the little State which, under the name of Florence, at no time numbering within its walls a population of over a hundred thousand souls, made its influence felt from farthest Thule to central Asia, which organized a commerce embracing the then known habitable globe, and used the resultant wealth in stimulating literature and the arts till it became the acknowledged leader and teacher of European culture. The external facts of Florentine history are fairly well known and accessible, though the critical student has often to dissociate them from the legends which have encrusted them; but to seek the causes and occasions of those facts and to trace the influences which raised the little Florentine commune to a position so commanding, to investigate the social and moral condition of its people, and to find the key to the changes in its political organization which succeeded each other with such phantasmagoric rapidity, is a labor worthy of the well-known learning and acumen of the author.

The questions involved are of more than mere local interest, for though we may not wholly agree with Prof. Villari, that to the commune is due the idea of free institutions and the structure of modern political organizations, there can be no doubt that the free cities of the early Middle Ages exercised no little influence in determining the form and direction in which society has developed itself; and no study, by so able a writer, of the process in so active and intelligent a population as that of Florence can be without instruction for the student of human institutions in other lands. Florence, in fact, affords a peculiarly interesting field for such an investigation, for during the formative period its municipal constitution was remarkably plastic. One experiment succeeded another with a rapidity almost bewildering, as the people advanced towards the conception of a democratic republic. Yet this republic was in reality only an aristocracy. Even as late as the year 1494, not long before its final downfall under the power of the Medici, full citizenship was accorded to only about three thousand men.

This aristocracy consisted of merchants and manufacturers. The gradually growing independence of the Tuscan cities had become virtually complete in the disorders following the

death of the Countess Matilda in 1115, when the Empire was unable to vindicate its claims to feudal suzerainty and the Holy See was powerless to make good the testamentary provisions of the Countess, who had instituted the Church as her general legatee. One by one Florence dominated the feudal nobles in its neighborhood, and step by step it stripped them of influence within its walls. In the continual revisions of the Constitution which took place during the thirteenth century the seven *Arti Maggiori*, or principal mercantile guilds, gradually became the governing power. Long participation in the management of their own associations, as well as of public affairs, trained their members to be politicians and statesmen and diplomatists as well as merchants. The policy of the republic was wholly commercial —its wars and its negotiations, like those of England, were carried on almost exclusively with the object of opening new avenues of trade; and it is well worthy of consideration how great an influence Florence and Venice have exercised in the gradual subordination of the military to the industrial spirit, which is perhaps the most marked peculiarity of modern civilization.

In nothing was the shrewdness of the Florentine traders more strikingly manifested than in their regulations to maintain their commercial reputation. Under the statutes of the guilds every piece of merchandise was closely scrutinized by officials appointed for the purpose, and every defect in quality, weight, or measure was punished with heavy fines. The ticket of the guild placed on a bale of goods was a guarantee recognized and valued in every market. In the same spirit the weight and fineness of the florin were religiously maintained through every crisis, and while other States were suffering all the ills entailed by a debased coinage, the florin was everywhere recognized as a standard, giving to Florentine commerce an advantage which might be studied with profit by our own financial quacks.

Brilliant as were the achievements of this commercial aristocracy, the system carried within it the seeds of its own destruction. The *popolani grassi*, or plutocrats, were involved in an endless struggle, on the one hand to keep the nobles and the people in subjection, and on the other to deprive of all liberty the cities subdued by force of arms so that the republic actually became weaker the more its territory became extended and its apparent power increased. A further source of decadence was developed in the decay of the manlier virtues, when war was no longer the rising of a people in arms led by their fellow-citizens, but was carried on by mercenaries hired for the occasion from military adventurers who had succeeded in assembling Free Companies. The discontent of the mass of the population, deprived of all share in the government, and oppressed with taxes to defray the cost of the continual wars necessitated by the commercial expansion of the ruling class, paved the way for the usurpation of the Medici, which was not so much the destruction of the liberties of a republic as a revolution which reduced all classes to equality under a prince.

All this is set forth by Prof. Villari with his wonted clearness and ability, and we shall look forward with interest to the promised completion of his work.

---

*The Ghost World.* By T. F. Thiselton Dyer. London: Ward & Downey; Philadelphia: J. B. Lippincott Company. 1893. 16mo, pp. vi, 447.

*The Secret Commonwealth of Elves, Fauns, and Fairies:* A Study in Folk-Lore and Psychical Research. The Text by Robert Kirk, M.A., Minister of Aberfoyle, A. D. 1691. The Comment by Andrew Lang, M.A., A. D. 1893. London: Published by David Nutt. 1893. Crown 8vo, pp. lxiv, 92. (Bibliothèque de Carabas, Vol. VIII.)

HORACE, in the most charming of his Epistles, makes true wisdom consist in shunning not only avarice, but also all other distracting fears and passions, and asks the reader—

> "Somnia, terrores magicos, miracula, sagas,
> Nocturnos lemures portentaque Thessala rides?"

He would be greatly amazed, could he return to our modern life, to see how large a part these things still play. Our present interest in them, it is true, is largely antiquarian and scientific; still, that would not account for the widespread concern in manifestations of the spiritual world which makes a market for books like Mr. Dyer's. It is not necessary to seek for a survival of superstitious beliefs and observances among savage tribes. Enough yet remains in the most cultivated and enlightened circles of civilized society to prove the enormous tenacity of beliefs which our ancestors entertained for untold ages. Mr. Leland's 'Etruscan Roman Remains in Popular Tradition,' recently reviewed in this journal, shows how a great mass of classical Roman, and even ante-Roman, superstitions are found among the peasants of Italy, and Mr. Crawford, in his last delightful novel, 'Pietro Ghisleri,' gives a striking example of the survival of the belief in the *jettatura*, or "evil eye," among the cultivated Romans of the present day.

It is this universal, unscientific interest which leads us to draw our chairs closer about the fire on a winter's night and unconsciously fall to telling ghost stories, some of them taken from our own experience, or that of our intimate friends. For such occasions Mr. Dyer has furnished a convenient compend of the subject, arranged under suitable headings, and dealing with every phase of the "Ghost World," from the soul's exit at death to checks and spells against its further wanderings. The author is a practised hand at such collections, and the present volume is but one of a long series on 'English Folk-Lore,' 'British Popular Customs,' 'Domestic Folk-Lore,' 'Church Lore Gleanings,' 'Folk-Lore of Plants,' and 'Folk-Lore of Shakespeare.' These works are all made with care and taste and will be found agreeable reading. The present volume is no exception, and as it makes no claim to be an original contribution to the subject, it does not need any lengthy criticism. The author has adopted the modern method of comparative study, and draws upon the ghost stories of savages, using freely our own aboriginal lore as given in Dorman's 'The Origin of Primitive Superstitions,' etc., and the two remarkable articles in the *Nineteenth Century*, vol. xvii., by A. Lang, "Comparative Study of Ghost Stories," and in the *Contemporary Review*, vol. xlviii., by J. G. Frazer, "The Primitive Ghost." A remarkable proof of the universality of Shakspere is to be found in his frequent references to almost every phase of the present subject, and Mr. Dyer has aptly quoted him on many occasions.

A more curious work is that of the Rev. Robert Kirk, reprinted by Mr. Lang in the "Bibliothèque de Carabas." The author was a minister at Aberfoyle in Scotland, the youngest and *seventh* son of a minister of the same place. Little is known of his life; he was of scholarly tastes, publishing a Psalter in Gaelic and being engaged on an Irish translation of the Bible. He was twice married and had two sons. His end was a singular one, in view of the book we shall presently mention. Sir Walter Scott says ('Letters on Demonology and Witchcraft,' second edition, London, 1831, p. 160):

"Although the learned divine's monument, with his name duly inscribed, is to be seen at the east end of the churchyard at Aberfoyle, yet those acquainted with his real history do not believe that he enjoys the natural repose of the tomb. His successor, the Rev Dr. Grahame, has informed us of the general belief, that as Mr. Kirke was walking one evening in his night-gown upon a *Dun-shi*, or fairy mount, in the vicinity of the manse or parsonage, behold! he sunk down in what seemed to be a fit of apoplexy, which the unenlightened took for death, while the more understanding knew it to be a swoon produced by the supernatural influence of the people whose precincts he had violated. After the ceremony of a seeming funeral, the form of the Rev. Robert Kirke appeared to a relation, and commanded him to go to Grahame of Duchray, ancestor of the present Gen. Graham Stirling. 'Say to Duchray, who is my cousin, as well as your own, that I am not dead, but a captive in Fairy Land; and only one chance remains for my liberation. When the posthumous child, of which my wife has been delivered since my disappearance, shall be brought to baptism, I will appear in the room, when, if Duchray shall throw over my head the knife or dirk which he holds in his hand, I may be restored to society; but if this opportunity is neglected, I am lost for ever.' Duchray was apprised of what was to be done. The ceremony took place, and the apparition of Mr. Kirke was visibly seen while they were seated at table; but Grahame of Duchray, in his astonishment, failed to perform the ceremony enjoined, and it is to be feared that Mr. Kirke still 'drees his weird in Fairy Land.'"

Mr. Kirk's little book was written in 1691 and was probably not printed until 1815, when an edition of only one hundred copies appeared at Edinburgh from the press of James Ballantyne & Company for Longman & Company of London. The title-page to the presumed reprint (the printers say, "One hundred copies only reprinted") bears the date of 1691, but the title-page with that date was probably only the title-page of a manuscript; at least no copy of an edition of 1691 has yet been found in any of the great libraries of England or at Abbotsford, although Sir Walter Scott mentions it, and would probably have had it if it existed. The edition of 1815 is rare, but at least one copy is in this country, in the Andrew D. White collection on witchcraft in the Cornell University Library. It is a quarto of pp. vi, 97, of which pp. 47-97 are occupied, under the title of "Appendix," with "Extracts from a Treatise on the Second Sight, Dreams, Apparitions, etc. By Theophilus Insulanus. Edin., 1763, 8vo." This appendix is omitted in Mr. Lang's reprint.

Mr. Kirk's book is the most curious imaginable. Written in 1691 by a Scotch divine, it is nothing less than a calm assumption of the existence at that time of a commonwealth of elves, fauns, and fairies, whose government, habits, etc., are minutely described upon the authority of "Men of Second Sight" (it is not clear whether the author himself was one of these by virtue of his being a seventh son), the method of obtaining which gift is also carefully explained. These fairies are of a middle nature betwixt man and angel; they inhabit subterranean abodes, which they change at each quarter of the year. "They are distributed in tribes and orders, and have children, nurses, marriages, deaths, and burials; their apparel and speech is like that of the people and country under which they live: they are said to have aristocratical rulers and laws, but no discernible religion, love, or devotion to-

wards God," "their weapons are most what solid earthly bodies, nothing of iron, but much of stone, like to yellow soft flint spa, shaped liked a barbed arrow-head, but flung like a dart, with great force." The moral character of these "subterraneans" is minutely described on p. 25, and the conclusion is, "But for swearing and intemperance, they are not observed so subject to those irregularities, as to envy, spite, hypocrisy, lying, and dissimulation."

The author adds to the evidence given by his friends, etc., a letter from Lord Tarbott to the Hon. Robert Boyle, in which many additional instances of second sight are narrated. The remainder of the little work is taken up with a discussion of various questions relating to second sight and the objects upon which it is exercised, as, for instance, that it is not unsuitable to reason nor the Holy Scriptures; the difference between second sight and compact and witchcraft; the effect of acquiring second sight upon the acquirer's body, mind, or actions; whether the "subterraneans" are subject to vice, lust, passion, and injustice as we who live on the surface of the earth; how they are generated; and finally, as to the interposition of Satan.

Such is the curious little work which Mr. Lang has undertaken to edit, and to which he has prefixed an introduction of great interest and value. A few years ago Mr. David MacRitchie ('The Testimony of Tradition,' London, 1890) advanced the theory that the British Isles were once occupied by a race of dwarfs dwelling in artificial caves which still survive. The race yet lives in popular memory as fairies, and their former abodes are known as "fairy hills." Mr. Lang (as had already been done) shows the untenability of this theory, partly by historical proofs, and partly by arguments drawn from comparative folk-lore. Mr. Lang's own conclusion is given on p. lxv: "As to the fairy belief, we conceive it to be a complex matter, from which tradition, with its memory of earth-dwellers, is not wholly absent, while more is due to a survival of the pre-Christian Hades, and to the belief in local spirits." A still more interesting topic involved in Mr. Kirk's work is the origin of the belief in second sight and the phenomena (house-haunting, etc.) attributed to fairies. A large number of cases, old and new (the list is far from exhaustive), are examined without any satisfactory conclusion. As to second sight and telepathy, Mr. Lang thinks that they may owe their origin to events of an ordinary kind, illusions, cases of mistaken identity, or hallucination; but there are many instances of veridical second sight which cannot be explained in this way, and we must await further researches on the part of psychologists.

The volume, like all of the series, is beautifully printed, and is adorned with a frontispiece by Lockhart Bogle, representing a fairy appearing to a Highlander by moonlight. Mr. Lang also contributes a poetical dedication to Robert L. Stevenson, and a charming poem to the memory of Mr. Kirk (the inscription on whose tombstone, we learn from another source, has been renewed by the piety of his latest editor).

---

*L'Art du Rire et de la Caricature.* Par Arsène Alexandre. Paris: Quantin (Librairies-Imprimeries Réunies.)

BECAUSE of the great difficulty of the task, Champfleury (we have his word for it) undertook the history of caricature in antiquity. To record the development of the art throughout the ages would mean labor far more arduous and prolonged; for this reason, probably, M. Arsène Alexandre was wise to evade it. Than such a record nothing would be more interesting. "Tell me what a man laughs at and I will tell you what that man is," has passed into a truism no less applicable to men taken collectively. In the jests and gibes of a nation is reflected the national character. The real history of caricature must prove as well the history of civilization. So extended a scheme, however, comes not within the scope of M. Alexandre's work, as he himself is the first to admit. There is no question with him, he says at the very outset, of compiling a learned chronicle: that would be scarce amusing enough (and here he may be right), nor could much be learned from it if he did (and here we find him wholly wrong). But if he gayly disclaims all pretensions to method, if he declares that, so far as he is concerned, dates may take care of themselves, it is not for us to criticise him when he leaves undone those things which he never proposed to do. We may believe it foolish not to relate facts essentially appropriate, if not indispensable, simply because they have been related before and elsewhere. We may hold it impossible to avoid politics when writing on caricature. In a word, we may not accept his attitude on the subject—indeed, we may think it one sadly to be deplored. But we must recognize it honestly if we would form a fair estimate of his book.

As a series of light articles, his chapters make very pleasant reading. They might have served as delightful *feuilletons* in any one of the Paris papers, and, for all we know, many of them may have appeared first in that form. M. Alexandre has an easy style—"chatty," the "new journalist" would call it. Moreover, despite his modest ambitions, he has evidently studied the caricature of many lands and many phases, and he succeeds in impressing the reader with his sympathetic knowledge and keen appreciations. The fact is, it is because he knows so much that one wishes he had been willing to learn—or think—a little more. While, nominally, he disdains method, practically he is not altogether superior to it. He begins at the beginning—with the broad, serene, primitive laughter of the builders of the Pyramids, the creators of the Sphinx. He traces the progress of caricature and its countless changes in the art of Greeks and Romans—ever graceful, for all its grotesqueness, with the former; too often verging to vulgarity with the latter. He follows it still further, until it develops into the grim humor and awful gayety of mediævalism, when men could laugh loudest at death and the devil and the very horrors they dreaded most. And so he continues to mark its progress through century after century, in country after country, down to the Forains and Schlittgens and Du Mauriers who are now the joy of readers of *Le Courrier Français*, *Fliegende Blätter*, and *Punch*. He even interrupts the smooth flow of his gossip to point out the influence of time and race on its manifestations—to explain that the caricature which was fantastic in the Middle Ages became theological with the Reformation, bloody with the Revolution; that the laughter which was brutal with the English Hogarth was terrible with the Spanish Goya, tragic with the French Daumier. He records also the appearance of the first type of genuine vitality in the illustrated press—Mounier's Prudhomme, the great figure of Philipon's *Caricature*, the first paper devoted to the art which gave it its name. But he touches upon these matters all too lightly; he may recognize their "profound philosophy," but he is content to note his recognition and pass on. Take the last-mentioned alone, for example. What could be more important and significant in the history of caricature than the transference of popular types from the stage to the newspapers—the conversion of Maccus and Pappus, of the characters of the "Commedia dell' Arte," into the *Robert Macaire* of Daumier, the *Beisele* and *Eisele* of German fame, the *Ally Sloper* and *British Workman* of British origin? But upon this he dwells not; no hint does he offer of the strange modern transformation scene, as it were. The fact is, throughout, prominence is given according to, not the importance of subject, or type, or development, but the strength of the author's own preferences.

This is most conspicuous when he comes to contemporary caricature. He is complete and exhaustive enough in dealing with French caricaturists, though friendship and personal prejudice no doubt influenced him not a little in his unstinted praise of Willette and Forain. But the caricature of foreign lands he has understood not so well, and therefore has cared for less: as a consequence, it is presented with a superficial treatment that is appalling, or with mistakes that amuse. To class Walter Crane's illustrations for fairy tales with the work of English caricaturists is a blunder not unworthy of a Frenchman. But his nationality is scarce an excuse when M. Alexandre records the death of Mr. Du Maurier in 1892! Grant that in the effort to adapt *Punch* to the British Matron, the vigor of English caricature has suffered, this is no reason why Charles Keene should be dismissed with a word and without a single example of his work, while pages are devoted to Randolph Caldecott. Caricature in Germany fares little better; in America it is disposed of in a couple of short paragraphs. M. Alexandre's arguments to hide what we fear is his own ignorance are not convincing; in *Judge* and *Puck* he has discovered too little art and too much politics. But these, if we mistake not, have been the chief characteristics of caricature in all time.

To realize that inartistic rendering is neither a new thing nor the special product of America, we have but to look at the illustrations. To publish them, the text most probably was a mere excuse. And yet, like the text, they show that M. Alexandre, if interested in his subject, has brought to its presentment no individuality of observation, no freshness of selection. He has collected together but the old stock examples, as inevitable in a book about caricature as are the early playing-cards and the St. Christopher in a treatise on engraving. In the last chapters, dealing with contemporary work, of course he has been able to reproduce drawings less hackneyed, and here his apparently intimate relations with Willette and Forain have stood him in good stead. But, for the rest, he has kept to the beaten track. In the whole collection, perhaps nothing is so striking as the lack of artistic distinction. Invention, humor, fantasy, originality, gayety, audacity, vigor, fearlessness—these are qualities found in almost every illustration. But artistic ability is seldom to the fore. It seems as if, in the effort to make his meaning clear, the artist had been compelled to sacrifice its artistic expression. There could be no better instance of the disastrous effect of the literary element when it prevails in art.

It is well worth noting, however, that in this respect the modern are somewhat in advance of the earlier caricaturists. There are exceptions, necessarily: the old men who recorded their jests on the stones of the parish church or the

stalls of the monastic choir, were not often entirely preoccupied with the story they had to tell. We are not sure that Holbein's Dance of Death should be included in such a series; but if it should, then it also we must except from the general rule. But few will dispute that in the work of Breughel and Callot, or again of Hogarth, Gillray, and Rowlandson, to whom M. Alexandre lends preëminence, the literary far outbalances the artistic interest. Goya was too great as an artist to be supreme as a caricaturist. Daumier's concessions to caricature interfered sorely with his art. We cannot re-echo the verdict of Baudelaire that he was one of the most important men, not only in caricature but in modern art. Only now and then (as in the drawing published by M. Alexandre, where Liberty, most dramatically conceived and executed, appears in the doorway at the last council of the ex-ministers) are we reminded of the really fine artist who was lost in the clever caricaturist. And so one might go on through the list. To-day, however, we see men like Charles Keene in England (for the present purpose he must still be counted among contemporary illustrators), Schlittgen and Reinecke in Germany, Willette, and Caran D'Ache, and Forain (at their best, be it understood: success threatens to make them careless), who are no less concerned with the manner in which they render their tale or jest than with its meaning; who, in order to raise a laugh, never find it imperative to forego all beauty of line and composition. Something of healthy vitality may have departed from modern work, but it has gained in artistic force and expression.

---

*Thomas Jefferson.* By James Schouler, LL.D., author of 'History of the United States under the Constitution.' New York: Dodd, Mead & Co. 1893. ["Makers of America" Series.]

In treating of Jefferson as a "maker of America" it is not easy to draw the line between biography and history, and it certainly is not easy to write anything new which shall be true. But the history of great events with the biography of great characters is said to call for periodical reconstruction, according as the angle of human vision changes from age to age, and in this sense it was entirely proper that Dr. Schouler should essay rightly to divide the word of truth under both of these heads for the present generation. And he is well equipped for his task, alike by his historic studies and by sympathy for his subject, when Jefferson is regarded in the deeper relations which he bore to the politics of his time. Viewing American history in its more immediate connection with the personage whose life and labors are here passed under review, he finds in Jefferson, "stem-winding, as it were, in his mechanism," one of those spontaneous and creative natures which required "no extraneous key to set and keep him going." Dr. Schouler sees clearly that all the intuitions of Jefferson, whether they are to be characterized for his justification or for his condemnation, were presageful of the nineteenth century, with its liberalism in politics and its liberality in religion.

It may be said that the political *Aufklärung* of this century came to its first distinct expression in the American Revolution, of which Jefferson was the literary interpreter in the Declaration of Independence. It came to its second portentous expression in the French Revolution, of which Jefferson was a close observer, and in the beneficence of which he continued to believe despite all the excesses with which it was accompanied. He felt by the instincts of a natural sympathy what the student of history now perceives by cold analysis, that these two great epoch-making events were part and parcel of a great common movement for the emancipation of man from the thraldom of tyranny and superstition. As early as 1753 we find the Earl of Chesterfield writing that "all the symptoms which he had ever met with in history, previous to great changes and revolutions in government, were then existing and daily increasing in France," but he had no sympathy with the deep motive of this political unrest, and no comprehension of its significant place in the world-wide evolution of political thought and aspiration.

It must be admitted to the praise of Jefferson's sagacity as a political philosopher, that he seems to have attained "to something of prophetic strain" in the presence of this century's democratizing tendency long before that tendency had come to a fixed effect and had registered itself in our social institutes and political enactments. Indeed, one of Jefferson's biographers is bold to say that "if Jefferson was wrong, America is wrong"—so completely was the spirit of America foreshadowed in his perceptions. In the evolution of politics, the Past, to use the well-worn figure made so familiar by Goethe, is perpetually weaving itself with the Future in the loom of the Present, or, as Freeman has phrased it, in plain pedestrian prose, "History is past politics and politics present history"—that is, history getting itself made. The ordinary reader of history towards the close of the last century (who as an "ordinary" reader cannot be presumed to have been gifted with that prescience which is skilled to descry coming events in the shadows they cast before them) may well be pardoned if, before the American and the French Revolutions and for long years afterward, it should have seemed to him that what we call to-day the "historic forces," or the philosophy which teaches by example, were to be sought in alliance with the party of Alexander Hamilton rather than with the party of Jefferson. Prof. William G. Sumner, we remember, in his sketch of Hamilton considered as a "maker of America," attempted to find a providential mission for that constructive and at the same time reactionary statesman in the necessity that was at first laid on the country to retrieve itself from the popular license and military incivism incident to a revolutionary period. This necessity, however, was one which soon spent its force under the settled government of the Federal Constitution, and it was mainly because the Federalist party sought to pass off this necessity for more than it was worth in the domain of politics that the party itself was soon discharged of its reason for being. The Federalists could not understand their epoch because they never understood the new political era in which they were living. Jefferson understood his epoch because he not only understood the new political era, but helped to make it and was made by it.

Perhaps we cannot better measure the break which the Virginian statesman made with the conservative thought and the received political traditions of his time than by dropping our plummets here and there for deep-sea soundings in the well-nigh fathomless denunciation with which grave divines like Dr. Timothy Dwight, and flippant pamphleteers like Stephen Cullen Carpenter with his two-volume diatribe, once thought proper to pursue the "Apostle of Democracy." Perhaps, too, we cannot better measure the historic repute in which Jefferson is popularly held to-day than by gauging the depth at which we must dredge for this vituperation now that it has been sedimented at the bottom of what was once the Gulf Stream of American politics, after having been held for long years in such active solution by the cross-currents of a conflicting public opinion.

But if so much should be said in simple justice to the historic place which Jefferson holds as a creative force in American life, it becomes only the clearer from the perspective in which we can now survey his influence, that he had, as indeed must be the case with all agitators and reformers, the defects of his qualities. Dr. Schouler is not blind to Jefferson's faults of character, and, after designating some of them, he expresses the opinion that the Virginian philosopher, in consequence of his residence and experiences in France, grew at length more French than English in his political methods and temperament as well as in his viands and cookery. As during the whole of Jefferson's career the main distinctions in our domestic politics turned on questions of "Anglican" or "Gallican" predilections, and as Jefferson adhered unswervingly to the latter, it would indeed be strange if his fine political hand had not taken the color of the dye he worked in.

Dr. Schouler writes, as we have said, with an avowed sympathy for his subject. A careful consideration of certain facts cited by Prof. J. M. Merriam in a paper read before the American Historical Association, an abstract of which may be found in its reported Transactions (vol. ii., p. 47), would have perhaps moderated somewhat the praise bestowed on Jefferson for the reserve with which he is supposed to have exercised the power of removal on his accession to the Presidency. We could wish that Dr. Schouler, in vindicating the "originality" of the Declaration of Independence against certain loose asseverations of John Adams, had specified the probable sources from which Jefferson drew the counts of his indictment against the King. Those counts were doubtless floating in the air at that time, as indeed we know from other papers, preserved in 'Almon's Remembrancer' or 'Force's Archives,' in which similar specifications are to be found anterior to the Declaration.

---

*Joan of Arc.* By Lord Ronald Gower. Charles Scribner's Sons. 1893.

The leading motive of the noble author in making this latest contribution to the literature of the Maid appears to have been piety to the memory of his mother, who had, he says, a *culte* for the heroine. Judged by such a standard of intention, the book may fairly be called a success. The splendor of its outward appearance, the warmth of admiration expressed for the subject, and the evidence of careful reading of the material used, are enough to satisfy the most exacting worshipper. Other excuse for being the book has none. It is a very slight affair—nothing more, indeed, than a rambling summary of the materials published by Quicherat, whom Lord Ronald calls "Director of the Institute of the Charters," and filtered through the biographies of Wallon and Fabre. It is written in the apologetic-cynical tone, with abundant praise of all who believed in the heroine and plentiful abuse of all who opposed her. The whole psychological side of the question—after all, the most interesting—is untouched, and the proper relation of the dealings with Joan on the part of friends and foes alike to the contemporary view of the supernatural is not made clear. Very pretty illus-

trations of the various places connected with the Maid's brief career do not add to the usefulness of the work. A fair bibliography of French and English works is not without value.

---

*Gun and Camera in Southern Africa.* By H. A. Bryden. Illustrations and map. London: E. Stanford. 1893. Pp. xiv, 544. 8vo.

THIS title hardly does justice to an unusually attractive book. It is far more than a mere hunter's record of game killed, though some of the adventures told recall those of Gordon-Cumming. The first part, in addition to the main incidents of life on a station in Bechuanaland, contains a clear and sober account of the present condition and prospects of this part of British South Africa. These are distinctly encouraging. Not only is the available land being rapidly taken up for ranches, mostly by syndicates, but the natives, also, are increasing in numbers and wealth, the wagon-transport service being now largely in their hands. "The main arbiter of life and death" to the Bechuana, however, is the drink-traffic, which has ruined the Hottentot and Cape Kaffir, but is up to this time prohibited in the Protectorate. If, as there is some reason to fear will be the case, "Bechuanaland is handed over to the uncontrolled mercies of the Cape Colony, and the old Dutch wine-farming, brandy-selling party (and it is a strong—almost a supreme—party in the Cape Parliament) is suffered to work its will, the country will be flooded with vile cheap liquor and the natives ruined irredeemably."

In a hunting trip to the northward the author passed through the territory of Khama, the most enlightened native whom South Africa has produced. He more than confirms what other travellers have reported of this remarkable chief. Here is the account of Khama's ordinary day's occupations: "From earliest dawn he is up and riding about, here directing native labor in the cornfields outside the town, there selling grain and oxen to the passing expedition, helping the hunter, traveller, and explorer in every possible way, administering justice in his 'kotla,' holding prayers for a short space in the afternoon for such as like to attend, buying and inspecting ploughs and other implements for his people, or seeing that they are fairly dealt by in their negotiations with the up-country traders." That his people are not unworthy their ruler the following incident shows:

"I saw in the compound of the Bechuana Trading Association 300 American ploughs ready for sale. After Khama had chosen the two or three required for his own use, his tribesmen were allowed to buy, and in one day the whole stock was bought, paid for, and taken away. Not bad business this when it is remembered that each plough sold for the price of £5 cash, or the up-country equivalent of a good ox."

The chief gave Mr. Bryden permission to shoot in his country, for, in addition to his other claims to respect, he preserves the large game which still roams, though in greatly diminished numbers, in the plains to the south of the Zambesi; and the second part of the book is devoted to an account of this trip, which was taken in wagons through the Kalahari desert nearly to the shores of Lake Ngami. While part of this region is absolutely waterless, a considerable part of the so-called desert is "one of the finest natural ranching countries in the world." Here our author had an opportunity of shooting giraffe, which still are to be found in the "thirstland" in troops numbering several score. There is apparently no immediate danger of the extinction of this interesting animal, especially if the British officials see that the existing game laws are observed. The natives hunt the giraffe for his hide, which sometimes attains the extraordinary thickness of an inch and a half, and is used by them for sandals and whips.

Interspersed with Mr. Bryden's very entertaining account of his sport are many valuable notes on the fauna of the country, the birds being described with unusual care and fulness of detail. There are also chapters on the giraffe, the game birds of the hunting-grounds, and the present distribution of large game in South Africa. The closing chapter contains some useful directions and suggestions for wagon travelling. The numerous illustrations, from photographs mostly taken by the author, are especially interesting and well-chosen. An admirable index and useful map add still further to the value of Mr. Bryden's very entertaining and instructive book.

---

*A Short History of Ireland, from the Earliest Times to* 1608. By P. W. Joyce, LL.D. Longmans, Green & Co. 1893. vii, 565 pp.

STRANGE to say, one of the periods of Ireland's deepest suffering and degradation (that of the famine and exodus of 1846 to 1852) was a golden season in her literary history. The Ordnance Survey, instituted twenty years previously under Colby and Drummond, had brought forward Irish scholars like O'Curry and O'Donovan. The translation of the 'Annals of the Four Masters' was undertaken. The publications of the Archæological and Celtic Societies began to appear. Petrie cleared up the mystery in which the ignorance of previous antiquarians had involved the history of the round towers. The writings of Davis and the young Irelanders threw a patriotic glow over graver studies. Zeuss's 'Grammatica Celtica' lent a deeper and wider interest to the study of the Irish language and everything relating to the history and traditions of the country. It was for the first time fully realized what a unique place was held by Ireland in the European family of nations, as one where an old civilization had existed untouched by contact with Roman rule; one where the Celtic language and Celtic laws and a pastoral arrangement of society had been conserved down to the end of the sixteenth century. No man has done more than Dr. Joyce to render available for the ordinary reader the cream of the labors of such scholars. His 'Names of Irish Places,' his 'Celtic Romances,' have added enduring charm and interest to every hill and valley in Ireland. He has proved himself somewhat of an Admirable Crichton in the domain of Irish literature. Besides the books above named he has given us a scholarly introduction to Irish grammar, he has taken down and published ancient music that might otherwise have been lost, he has written on 'School Management' and on the 'Care and Use of Handicraft Tools,' and he has now ventured upon the troubled waters of Irish history.

The volume before us consists of two portions. We have a popular account of the language, manners, customs, and institutions of the ancient Irish. We have also a history of the island down to 1608. The first appears to us most to justify the care bestowed upon the work. It fills a long acknowledged want. We are not aware of any other source to which the ordinary reader could turn for reliable collected information within a reasonable compass concerning the subjects treated. The author's succinct exposition of the principal features of the Breton Institutes is peculiarly happy. The laws and customs comprised within the Breton Code came down from the remotest antiquity. They held sway over the minds and feelings of the greater portion of the inhabitants of Ireland until three hundred years ago. The change from them to English law was a complete wrench. The two systems did not fade one into the other. Whether for good or ill, the influence of the native system is still traceable in the character and thoughts of the people. Much which in late ages has been considered lawless in the inhabitants of Ireland was in truth, perhaps unconsciously in many instances, an adherence to the old principles ground into the race by immemorial usage. The most important portions of this code annotated by ancient jurists have, within late years, under the supervision of competent scholars, been published by the Government.

In the historical portion of Mr. Joyce's book are ably and clearly brought out the initial mistakes made in the "settlement" and government of the country, which have since led to such deplorable consequences. The Anglo-Norman policy of the thirteenth, fourteenth, fifteenth, and sixteenth centuries—that of regarding the mass of the Irish people as necessarily the "King's enemies"—is still, in the estimate of a powerful British party, the only true policy to be applied in the government of the country. Yet, upon the whole, the historical portions of this book disappoint us. They are honestly, conscientiously, and reliably done; but there is a certain stiffness, a certain want of breadth of view, especially in the chapters relating to the original inhabitants of the island and the introduction of Christianity. We miss the broad scholarship, the grasp and fervor of a Green. We are promised a further volume, carrying down the history of the country to the present day. The historical portion will then run to considerably more than twice the length of Mr. Walpole's 'Short History.'

Dr. Joyce has brought to his task a lore and an acquaintance with details of the history of his country which Mr. Walpole could not lay claim to. But, after the closest examination we have been able to give to the book before us, we are obliged to confess that the work of the latter writer still holds its place as the most satisfactory popular history of Ireland, whereas Dr. Joyce's early chapters, respecting the manners and customs, cannot, as we have already stated, be elsewhere matched.

*Rumford Chemical Works, Providence, R. I.*

Beware of Substitutes and Imitations.
**For sale by all Druggists.**

**JUST PUBLISHED:**

THE BIBLE OF AMERICAN HISTORY.

**Madison's Journal of the Constitutional Convention.**

The only full account of the proceedings of the Constitutional Convention throughout the entire session from May to September, 1787.

HERE WILL BE FOUND the account of the organization of the Convention, the statement of its purpose, the work of each member and each State, the development of the various departments of the Government as they now exist, with their functions and the original idea in each case, from which, with many changes, the present form came, together with the debates on all these points. It is invaluable to anything like a true conception and appreciation of the Constitution. The Madison Papers alone have been out of print for many years, and have therefore been practically inaccessible to the general reader and student.

DR. W. F. POOLE, the great Librarian, says: "Madison's Report of the Proceedings of the National Constitutional Convention is a work of inestimable value, and the great text-book for the study of American Constitutional History."

DR. E. C. TOWNE, in the Chicago *Post*, says: "A volume monumental of our beginnings as a nation, which easily stands one of ten thousand among books of interest and of value for the choicest shelf of every library, and for the hands of the scholar in many studies of matters American."

THE BOSTON TRAVELLER says: "The student of political history nowhere gets a clearer insight into the inner life and spirit of the men who organized the republic than in these pages. It is among the valuable books for the reference library and for study."

The book is printed from large, clear type, on excellent paper.
*Library Edition*, with wide margin, two volumes, $5.00. *Student's Edition*, thinner paper, plain cloth, *net* $2.50.
For sale by booksellers, or sent, postpaid, on receipt of price by the Publishers,

**ALBERT, SCOTT & CO., 106 Wabash Ave., Chicago.**

## Educational.

## People Who Weigh and Compare

Know and get the best. Cottolene, the new vegetable shortening, has won a wide and wonderful popularity. At its introduction it was submitted to expert chemists, prominent physicians and famous cooks. All of these pronounced

# Cottolene

a natural, healthful and acceptable food-product, better than lard for every cooking purpose.

The success of Cottolene is now a matter of history. Will you share in the better food and better health for which it stands, by using it in your home?

Avoid imitations—countless—worthless. Stick to **COTTOLENE.**

Sold in 3 and 5 pound pails.

## MEISTERSCHAFT SUPERSEDED

*BY ITS OWN AUTHOR,*

**DR. RICHARD S. ROSENTHAL.**

Dr. Rosenthal's name has become a household word wherever foreign languages are studied. A new work,

### The Rosenthal Method of Practical Linguistry

has just been issued by him, which does not only supersede his former system, published 20 years ago, but will be found superior to any method. It is the mature outcome of 25 years' experience of "the greatest linguist and foremost teacher of the age," enabling any one to learn to

*Speak Fluently and Correctly*

with scarcely an effort and without a teacher.

GERMAN, FRENCH, or SPANISH,

within a marvellously short time.

"Next to living in a foreign country, this is undoubtedly the best of all methods for learning modern languages."—*The Dial.*

Exact pronunciation given. All subscribers become actual pupils of Dr. Rosenthal, who answers all questions and corrects all exercises free of charge. Terms of membership $5.00 for each language. Part I, each language, 50 cents.

## FRENCH AND GERMAN TEXT-BOOKS.

*FRENCH.*

***An Introduction to the French Language.** A Complete Course for Beginners. By Alphonse N. van Daell, Professor of Modern Languages in the Massachusetts Institute of Technology. 12mo. Cloth. xxvii+229 pages. Price, $1.10.
A complete first-year book, compact and concise, and yet full enough to be accurate and thorough. Adopted by Harvard University (beginners' class), Sheffield Scientific School (Yale), University of Michigan, Mass. Institute of Technology, Tufts College, Ogontz School, Norwich Free Academy, New Bedford (Mass.) High School, etc.

***La Prise de la Bastille.** Par Michelet. Edited and annotated by Jules Luquiens, Professor of Modern Languages in Yale University. 12mo. Paper. 55 pages, Price, 25 cents.

***Popular Science.** Selections from Lévy, Flammarion, Milne-Edwards, Toussenel, Du Camp, Muller. Edited and annotated by Professor Luquiens. 12mo. Cloth. vi+252 pages. Price, 70 cents.

***La Famille de Germandre.** Par George Sand. Adapted and annotated by Augusta C. Kimball, Teacher in Girls' High School, Boston. 12mo. Cloth. x+108 pages. Price, 56 cents.

***Madame Therese.** Par Erckmann-Chatrian. Edited and annotated by George W. Rollins, Master in Boston Latin School. 12mo. Cloth. vi+211 pages. Price, 70 cents.

***Quatrevingt-Treize.** Par Victor Hugo. Adapted and annotated by James Boïelle, B.A., Senior French Master in Dulwich College, England. Revised for use in American schools. 12mo. Cloth. viii+216 pages. Price, 70 cents.

***La Cigale chez les Fourmis.** Par Legouvé et Labiche. *Comédie en un acte.* Edited by Professor van Daell. Paper. 12mo. 37 pages. Price, 25 cents.

***Extraits de la Chanson de Roland.** Avec une Introduction Littéraire, des Observations Grammaticales, des Notes, et un Glossaire Complet. Par Gaston Paris, Membre de l'Institut Revue et Corrigée par l'Auteur. 12mo. Cloth. xxiv+160 pages. Price, 70 cents.

***Andromaque.** Par Racine. (Texte de 1697.) Edited by Ferdinand Bôcher, Professor of Modern Languages in Harvard University. 12mo. Paper. ii+75 pages. Price, 25 cents.

***De l'Institution des Enfans.** Par Montaigne. (Texte Original de 1580.) Edited by Professor Bôcher. 12mo. Paper. iv+26 pages. Price, 25 cents.

***Le Misantrope.** Par Molière. (Texte de 1667.) Edited by Professor Bôcher. 12mo. Paper. 93 pages. Price, 25 cents.

**Modern French Readings.** Edited by William R. Knapp, Professor of Romance Languages and Literatures, University of Chicago. 12mo. Cloth. 467 pages. Price, 90 cents.
The selections are such as to enable the reader to acquire experience in the popular, social, every-day terms and idioms that characterize the writings of the French to-day.

**Les Trois Mousquetaires.** Par Alexandre Dumas. Edited and annotated by F. C. de Sumichrast, Professor of French in Harvard University. 12mo. Cloth. vi+289 pages. Price, 80 cents.

**Pages Choisis des Memoires du Duc de Saint-Simon.** Edited and annotated by Professor van Daell. 12mo. Cloth. vi+238 pages. Price, 75 cents.

*GERMAN.*

**Eysenbach's German Lessons.** By W. C. Collar, Head-Master of Roxbury Latin School, Boston. 12mo. Cloth, xxiv+330 pages. Price, $1 30.
There is nothing better than this book to give students a real grasp of German in the briefest possible time.

**Collar's Shorter Eysenbach.** By W. C. Collar. Edited by Clara S. Curtis. 12mo. Cloth, xvii+242 pages. Price, $1.10.
This book embodies the same plan and aim as Eysenbach's German Lessons, but is shorter and easier. Adopted by Massachusetts Institute of Technology, and many other institutions.

**German Exercises.** By J. Frederick Stein, Instructor in German in the Boston High Schools. 12mo. Cloth, 118 pages. Price 45 cents.
Designed as supplementary to any good grammar and excellent as a first reader in German.

***Soll und Haben.** Von Gustav Freytag. Edited and annotated by Ida W. Bultmann, Teacher of German, Elmira Woman's College. 12mo. Cloth, vi+220 pages. Price, 70 cents.

***Dietegen.** Von Gottfried Keller. With introduction and notes by Gustav Gruener, Assistant Professor of German in Yale University. 12mo. Cloth, vi+75 pages. Price, 40 cents.

***Brigitta.** Von Berthold Auerbach. Edited, with Introduction and Notes, by J. Howard Gore, Professor of German, Columbian University. 12mo. Cloth. viii+115 pages. Price, 55 cents.

***Die Erhebung Europas gegen Napoleon I.** Von H. von Sybel. Edited, with Introduction and Notes by A. B. Nichols, Instructor in German in Harvard University. 12mo. Cloth. x+126 pages. Price, 66 cents.

# The Nation.

NEW YORK, THURSDAY, OCTOBER 12, 1893.

## The Week.

THE Cincinnati *Enquirer* publishes an interview with Senator Sherman in which he expresses the opinion that, although the Silver Repeal bill has a decided majority in the Senate, it cannot be passed, and that it will be necessary to agree upon a compromise. The kind of compromise that he thinks could pass would be a reduction of silver purchases to 2,500,000 ounces per month, and the continuance of the same for three years. This would mean the payment of a bonus of about $65,200,000 to the silver mine-owners in order to get rid of the silver nightmare at the end of three years. The objections to this plan are exceedingly weighty, and are not wholly financial. It is doubtful, in the first place, whether such a compromise would relieve the tension in the business of the country. It would not do so without some visible means of strengthening the gold reserve in the Treasury, which is running down simply because its expenditures are greater than its receipts. Such a compromise would smash the Democratic party in the North; but naturally this would not be an objection in Senator Sherman's view. Such a compromise would not put an end to the contest over silver, but would merely intensify it and obscure other political issues. It would start a war against the Senate as a branch of government representing the rule of the minority, and would intensify and harden the contempt which the public now entertains for that body. It would put a stop to any legislation hereafter which should be very distasteful to as many as one-third of the members of the Senate, since their partisans throughout the country would insist that they should exhaust their powers before allowing an obnoxious measure to pass. This feeling would probably lead to a change in our form of government. The best thing to be done is to fight for unconditional repeal until the public sentiment of the country scares the anti-repealers into common decency.

---

If anything were needed to prove the absurdity of compromise on a basis of further silver purchases for three years, the situation of the Federal Treasury would be enough. It was early in June, during the first stress of panic, that the Treasury's gold reserve reached its lowest figure. It sank then to $89,578,363. The country was then treated to the humiliating spectacle of the Secretary of the Treasury advertising, arguing, and pleading with bank presidents to lend the Government gold; for that was precisely the meaning of an exchange of bank gold for United States notes. The banks responded more liberally than might have been expected, and the gold reserve, thus replenished, rose slowly again to a point above the $100,000,000 mark. The gold imports, which, while paper money was hoarded, were speedily used in ordinary payments, helped along the movement, and by August 10 the reserve had reached $103,873,290. Like most of the sudden gains of that month, this expansion was artificial and temporary. With the slackening of the gold-import movement, the Treasury gold reserve began again to decrease. Last Saturday it practically touched the minimum figure of June. On Monday it fell $1,000,000 below that figure, nor is there any reason to believe that the decrease, in existing circumstances, will be stopped. If gold exports were to be resumed—which in all probability would happen if unconditional repeal should fail—the shrinkage would be rapid.

---

In any case, unless confidence is very speedily restored through the Senate's vote, the loss can hardly fail to be continuous. Last year the heavy drain of gold for export purposes was partially made good by an active merchandise import trade. It was this which supplied the Treasury with currency on which to borrow bank gold in its time of need. To-day the whole Government revenue is under a paralysis. Customs and internal-tax receipts are smaller by two millions a week than in the corresponding weeks of 1892. Expenses are not diminished. Low as the Treasury stock of gold has run, the Government is forced to use that metal in its ordinary payments, and it has no longer other currency with which to purchase gold. Within two months the net available balance of all kinds of money has decreased $15,000,000. Within a week it has fallen $5,000,000. In the face of such conditions, the proposition to continue the disastrous drain of silver-bullion purchases is little short of madness. That some energetic measures will be necessary, in any case, to fill the Government's coffers, exhausted by the last administration's vicious legislation, is probably true. But it is hard to see what measures will suffice, if the nation's resources and credit are at once assailed by further persistence in the silver-purchase policy. With their good name once restored to the Treasury and the currency, means of relief will easily suggest themselves. Without such restoration, all that the Government can do will resemble only the frantic efforts of an embarrassed business concern to stave off bankruptcy.

One of the curious and memorable features of the obstruction in the Senate from which the country is now suffering is the obscurity and poor character of the leaders in it. Even if they were men of any political eminence or personal respectability in their respective communities, the public would be little disposed to put up, for any purpose whatever, with persistent attempts to prevent the will of the majority in a legislative body from being carried into effect. But one of the oddities of the present crisis is that they are not men of political or other eminence, and many of them are wanting even in personal respectability. Take the case of Senator Stewart, the head and front of the band. It is now seventeen years since he was shown by congressional investigation to be a dishonest lawyer and a conspirator in the Emma Mine case, which became famous in consequence of the connection with it of Gen. Schenck, then the American minister in London. The exposure then made of Stewart should, and would, in communities whose morality was better set, have driven him into obscurity. Among his constituents it probably had the effect of endearing him to them. He is now in the United States Senate, heaping gross personal abuse on the President, whose pardon, had he then got his due, he would be at this moment soliciting from the recesses of some state-prison, and not blocking legislation on the simple ground that it would be injurious to some of his own industrial enterprises.

---

The Denver and Rio Grande Railroad is an enterprise in which a large amount of foreign money is understood to be invested, and it will need to obtain much more than can be furnished by the communities through which it runs before its development is completed. But the general counsel of this road (we believe) is Senator Wolcott of Colorado, who is also one of the directors, and he is perhaps the most audaciously defiant, of the desperate minority in the Senate. Is it probable that capitalists, either of the Eastern States or of Europe, will add to their investments in enterprises and communities thus represented? More than one-fifth of the revenue of this road last year came from the carriage of precious ores, but would it not be better to lose all this revenue than to lose credit? A poor man known to be inflexibly honest can borrow at a low rate of interest when a rich man of different reputation cannot borrow at all. Much the same is true of communities; but when a poor community not only needs to borrow but has got the name of dishonesty, its prospects are not good. Capital will avoid it, settlers will keep away from it, and pros-

perity will come to it only when the people who take pride in honorably fulfilling their obligations refuse to be dominated by the people who spend their time in ranting against the greed of capitalists.

---

The evidence is overwhelming that there is almost no popular support in the South of the policy of obstruction to the repeal of the Silver Purchase act. Mississippi is a State which one would expect to show as much favor to such tactics as any, but the editor of the Greenville *Times*, after having "carefully and closely examined the State press," reports that, out of a total of 81 papers, 45 favor unconditional repeal, while only 18 oppose it; the remainder expressing no positive convictions. Moreover, the *Times* says that of the eighty-one "there are not six which do not favor a vote upon this question—which do not view with serious concern the effect of the revolutionary tactics adopted by the silver-State Senators backed by the cotton-State Senators." The Mobile *Register* recently made a similar canvass of the Alabama press, and found that, besides a few papers which are committed to the Populists, there are none that support the obstructive policy to which Senator Pugh has given his adhesion.

---

The action of the Nebraska Democratic State convention on the financial question is full of significance and encouragement. Nebraska is a State where the Populists have been very strong, and Weaver came within about 5,000 votes of Harrison's poll last fall, drawing strength from both of the old parties, but especially the Democratic. Many of the Democratic managers have yielded to the craze, and favored making terms with the third party this year. Congressman Bryan, who has won a reputation as a brilliant speaker at Washington, cast in his lot with the free-coinage element when that question first came up, and he has been against repeal of the Sherman act at this session. He went home to attend last week's convention, confident that he could easily carry a majority with him in opposition to the President's position, but he found that in the atmosphere of Washington he had utterly misinterpreted the public sentiment of his State. The convention not only refused to follow his lead, but adopted resolutions fully endorsing the President's policy and declaring for the immediate repeal of the Sherman act. Mr. Bryan thereupon announced that he should join the Populists, and the Democrats are to be congratulated upon their loss.

---

It will be a great surprise to the disciples of the Peffer-Stewart-Jones-Wolcott school of finance to learn from the Treasury statement for September that the per-capita circulation of the country has been increasing during the past month. Their theory is that the recent stringency was caused by the absorption of money by the gold-bugs, and that relief could come only by enlarging the circulation. Mr. Frank B. Tracy, in an article on the Populist party in the current number of the *Forum*, gives the following as their view of money as it was stated to him by "one of the ablest Populists in the West":

> "The money market is like the pork market in which John Cudahy lost his millions. Eastern financiers and gold-bugs are attempting to corner the money market, just as Mr. Cudahy attempted to corner the pork market. Mr. Cudahy failed because the supply of pork was beyond his estimation. Wall Street is succeeding because the supply of money is limited. We insist that the Government should increase the circulating medium to fifty dollars per capita and keep it there. As fast as the plutocrats gather in the money, the Government should issue more money until the money-corner is broken."

We have never been able to get from a Populist or cheap-money advocate a statement of the way in which a new issue of money could be got into the pockets of the people unless the people had something to sell for it. We should like to have them explain now how it is that the "plutocrats" are able to "gather in" all the money that the Government issues—how does it get into their pockets? And if it all flows there, what is the use of the Government trying to put the per capita at $50 and "keep it there"? The only result would be to burst the pockets of the plutocrats.

---

The platform of the Saratoga convention very appropriately hitches the theft of the Senate to Maynard's candidacy, and puts both before the people of the State for approval. Its opening declaration congratulates the people on the fact that the Democrats had a majority in both branches of the Legislature last year, and following this comes a long and very cheap stump speech upon the alleged public benefits which that majority conferred upon the people. As everybody knows that the majority in the Senate was secured by theft, this arrangement of the platform puts that issue first in the canvass, side by side with the candidacy of the chief agent in the thievery. It was a characteristic bit of machine insolence to reverse the usual order and put all reference to national politics in the second place. The ticket is made up in the same way. The opposition in the party was directed mainly against Maynard, and the only basis for "harmony" that ought to have been accepted was the withdrawal of Maynard. Instead of this, he was put at the head of the ticket, and two anti-machine men of very complacent political disposition were put on below him. The arrangement may please the persons who acquiesced in it, but it will not please many others, least of all the thousands of Democratic voters who have made up their minds not to vote for Maynard.

---

What the Saratoga platform says upon the silver-repeal question is direct and forcible, and was the only thing that any political party in this State with ordinary sagacity could say at the present time. There is only one opinion held in the State, and that is represented by the demand of the platform for the "speedy and unconditional repeal of the law's obnoxious and injurious provisions." Before the election comes around the repeal ought to be an accomplished fact, but, whether it is or not, the main questions before the people of this State will be the election of a criminal to the bench of their highest court, and the approval by the people of the theft by Maynard and his associates of a seat in the State Senate by which the Democrats secured a majority. No amount of "sops" to anti-snappers, and no amount of carefully worded support of the Cleveland administration in the platform, will avail to blind the voters to this fact.

---

The Senate committee on foreign relations has made a favorable report on the nomination of Van Alen as ambassador to Italy, on the ground that no reasons were known for rejecting him, his fitness for the place being conceded, and there being no evidence of any bargain when he paid his money into the campaign fund. Every rich man not in public life who has a desire for office will, of course, take notice of the senatorial opinion that for a cash contribution, if there is no bargain, or none that the parties to it will acknowledge, there is no objection to the delivery of the office *for and in consideration of the money.* We say for and in consideration of the money because Mr. Van Alen never was in public life at all; never held so much as a seat in a State Legislature; was never voted for and never took part in any kind of political campaign; never wrote a political article for any magazine or newspaper; never made a political speech; was never heard of in any political capacity whatever until he was nominated as ambassador to Italy. Therefore the office must have been given for and in consideration of money. The Senate may share in the ignominy of this transaction, but it cannot lessen it by confirming him.

---

Several newspapers, and among them the Louisville *Courier-Journal*, have improved the occasion of the appointment of Van Alen as ambassador to Italy to recommend the raising of the salaries of our ambassadors, so that there will be no excuse for appointing rich men to those positions merely be-

cause they are rich. There is one defect in this argument. There is no clause in the Constitution which requires an ambassador to spend all of his salary during the year for which it is appropriated. Some of them might be like the wife of John Gilpin, of whom it was said that,

> "——though on pleasure she was bent,
> She had a frugal mind"

It would not help us very much in the esteem of foreigners to enact that the ambassador to England, for example, should have $40,000 per year provided he would spend the whole of it. Moreover, such a proviso would not be self-executing. It would be necessary to charge some officer of the Treasury with the duty of seeing that he did spend it. If we should couple with the appropriation a requirement that the ambassador should spend the full amount of his salary, questions would arise eventually as to his method of spending it. If the pay were given on such conditions, the public would have rights in the matter, and among others the right to know what the money was spent for, and we may be sure that the newspaper reporters would not lose sight of these rights. Whichever way we turn, our embassies take on a ridiculous air. In Europe, from time immemorial, the "balance of power" has been the great question of nations, and is as great today as ever. Embassies exist in order to gain or keep influence at court. The governing classes are to be conciliated and kept in good humor, by all possible means, among which good cheer and a liberal expenditure of money always count largely. We have no such motive for spending money. The "balance of power" is nothing to us. A salary corresponding to those paid by European powers to their ambassadors, with a requirement that it be spent, would have no aim except imitation. We should ape their manners without their *raison d'être*.

---

Mr. Quincy, who for some years had figured as a prominent civil-service reformer in Boston, but has lately been distributing consulships on the old spoils system in Washington, was called sharply to account by Mr. Moorfield Storey at the dinner of the Massachusetts Reform Club on Saturday, and made his explanation. The reason why he has distributed the consulships as spoils is, that there is no law to prohibit his doing so, and as long as this is the case, he must let Congressmen have their way with them. This "is an unfortunate fact," he says, but it is a fact. It is also a remarkable fact, but a fact, that the men whom the Congressmen wanted appointed were always fit for the places, so that the appointments have been good, owing, of course, to the wisdom and self-denial of the Congressmen. He has given a great many consulships to editors of country newspapers. Why was this? Because the editors had supported the Democratic candidate? Perish the thought. It was because "they had lived and travelled abroad and were generally men of wide information, who took a great interest in the development of the commercial interests of the United States in foreign countries, and were in every way fitted for the consular service." There was hardly an original word in Mr. Quincy's speech, as we have seen it reported in the Boston *Herald*. His defence of his proceedings is the old one by which every attack on the abuses of the civil service has been met during the past thirty years by the spoilsmen. No point in it is so familiar as the impossibility of appointments for merit, under "our system of government." "Our system of government" has, somehow, according to Mr. Quincy's school of politicians, a chemical affinity for abuses of all kinds, including, according to the silver men, a debased currency. We cannot have good money, or good consuls, or anything first-rate, because, somehow, "the system" forbids it. His reasons for corrupting the newspaper press hardly call for comment. They do not seem to have caused merriment at the dinner, but that they have certainly been received with peals of laughter in all the newspaper offices of the country we are quite sure.

---

There is food for reflection in the failure of a fashionable church on a fashionable avenue in this city to make itself, after trying the experiment for two years, a "people's church." There was no lack of talent or enthusiasm or money on the part of those undertaking the movement; but the attempt to restore on Madison Avenue the idea of a church which St. James had, where the rich and poor would sit together, is now confessed to have been thoroughly unsuccessful. Mixing oil and water is as easy as mixing the classes in New York churches. The poor themselves do not want to go to the same church with the rich, and the rich do not really want them to come. This is simply the weak side of what is, on the whole, the greatest advantage of the church in this city—its social prestige. With that a true people's church is incompatible, inasmuch as it would mean a mixing of rich and poor on weekdays as well as Sundays, and in each other's homes as well as in the sanctuary.

---

M. Zola was received with effusive enthusiasm in London, whither he went to read a paper on "Anonymity in the Press" before the Institute of Journalists. This was the more surprising inasmuch as, while she was embracing the writer, England was at the same time sending a publisher to jail for bringing out a translation of his works. The novelist's address itself was decidedly eclectic, practically urging unsigned political articles and criticism for those who liked that sort of thing, and the signed article or critique for those who preferred the thing that way. We observe, by the by, that he has been picked up pretty sharply by some French writers for having blundered in describing French practice, one critic remarking, in view of certain specified mistakes, that it was somewhat startling to find the father of "the human document" so poorly documented. But this is a charge which has been brought with no little justice against his most boasted realism in his novels, a writer in the *Athenæum* going so far as to assert lately that Zola would be known to future criticism as the most romantic of the romanticists, his world being as purely one of the imagination as theirs, the only difference being that his was filthily imagined.

---

A diversity of view, not without its amusing features, has sprung up among Paris artists over the question whether they ought to send paintings to the Vienna Exposition next March. The question is not so simple as it might seem. One cannot be too careful in such matters. Suppose your sending a canvas to Vienna should be taken as an endorsement of the Triple Alliance? Are you prepared to strengthen the enemies of your country in that way? Should you not rather seize with avidity upon this opportunity to make a grand demonstration and protest against the Triple Alliance? Those are the queries which are going the rounds of the Parisian ateliers, and not a few of the men who mix their paints with patriotism have declared that they are not going to play into the hands of Humbert and Joseph and William in any such treasonable fashion. The affair has become a question of the day, and reporters have been sent out to interview the better-known artists. Benjamin Constant was disposed to take a flippant view of the case, and asked the reporter: "When an Englishman desires me to paint his portrait, am I to gnash my teeth and growl out, 'Remember Egypt! Think of Madagascar!' and drive him out of my studio?" And even M. Detaille was so lost to true love of country as to suggest: "Those among us who have the patriotic fever would do much better to send to Vienna some *chef-d'œuvre* which would win a tremendous victory for French art." But such opinions as these do not move the resolute painters who are determined to cultivate art for politics' sake, and who will not send a single canvas to Vienna so long as they can get more *réclame* and orders in Paris by abstaining.

*THE SENATORIAL "TUG OF WAR."*

THE minority in the Senate, as we go to press, is entering on the process of obstruction pure and simple. Mr. Voorhees's demand for a continuous session until a vote on the repeal bill is taken means that the Senate, "the most august body in the world," as one of its members recently called it, will endeavor, at the close of two months' deliberation, to reach a decision on a most important public question by a trial of physical strength. That is to say, a most important problem in the national finances will be solved by ascertaining which of two small bodies of elderly men can go longest without sleep and without taking off their clothes. Another mode of reaching the same result, and one fully as likely to prove satisfactory, would be what athletes call the "tug of war"—that is, hauling on a rope in opposite directions by the contending parties. Under this process, if Mr. Voorhees and the majority succeeded in pulling Mr. Stewart and the minority over a chalked line on the floor, the repeal bill would pass. On the other hand, if Mr. Stewart and his men succeeded in pulling Mr. Voorhees and his men over the line, the purchase of 4,500,000 ounces of silver per month would continue.

The superiority of this to "the continuous-session" plan must be plain to the meanest capacity. It would, in the first place, be a very speedy process. The result could be reached in half an hour, whereas the continuous-session struggle may last for ten days. In the second place, it would be very much less injurious to the health of the Senators. The wear and tear of sleepless nights and irregular meals on elderly men will of course be very great. It may carry some of them to their graves. The "tug of war," on the other hand, could hurt none but those with weak hearts, and they could be excluded by a careful examination by the Senate's physician. But, no matter which process is resorted to, we venture to say the spectacle of a decision in financial policy reached in this way by the most famous second chamber in the world will be a heavy blow to constitution-makers all over the earth. When they see Voorhees and Stewart trying to starve each other out on a currency question, their brains will reel.

The United States Senate is the prototype of all the artificial upper houses in the modern world, and indeed may be said to be the lineal descendant of the Roman Senate. It was intended by the founders of the Constitution to be what the Roman Senate was in its best days; that is, an assembly of distinguished "exes," if we may use the expression—ex-governors, ex-judges, ex-generals, and so forth; of men who had served with distinction in inferior positions, and would bring to its debates tested, as distinguished from probable or expected, character and judgment. All the other second chambers, at the close of the last century and beginning of this, were based on birth and wealth. The first one set up after the French Revolution—the Chamber of Peers under the Restoration—was an almost exact copy of the English House of Lords. Since its failure the American Senate has furnished the model for the new constitutions. Every parliamentary country except Germany and Austria has copied it within the present century, and, more than this, the arguments by which second chambers are defended are generally drawn from the 'Federalist.' In most of the essays and speeches which either advocate the creation of a senate or defend a chamber of peers against popular reproach, the lower house usually appears as a passionate, tumultuous, headstrong body, which may at any moment rush into the wildest excesses. The Senate, on the other hand, always appears sicklied o'er with the pale cast of thought. The members are middle-aged men surrounded by honor, love, and obedience in their respective communities, and bringing to the consideration of public affairs the ripened judgment and experience of more or less illustrious careers in the arts, in arms, in commerce, and in jurisprudence. Such is the Senate of the poets, the literary men, the jurists, and the professors of political science.

The effect on these gentlemen of the approaching "tug of war" may be more readily imagined than described. When Stewart and his men go down, as they doubtless will, before the superior physical vigor of Voorhees and his men, the effect on modern second chambers will be hardly inferior to that on the Roman Senate of Cæsar's arrival in Rome after Pompey's flight. The senatorial dignity, not to say majesty, cannot survive "the tug of war." People will say that if such a body has to reach a vote on the gravest of measures through a trial of physical endurance—that is, through a process for which Italian or Irish laborers at $1.25 a day are fully as competent as the hardiest silver-man now in the Senate—they will not care to go to the expense and trouble of a Senate very much longer. A deliberative body in which, under its own rules, the minority cannot be made to vote without reducing them to a state of physical exhaustion, as with chloroform or cocaine, is an absurdity which the modern world will not tolerate or imitate very long. It can get that sort of legislation done for much less than $5,000 a year.

*THE ETHICS OF CAMPAIGN FUNDS.*

WE have received several communications apropos of the Van Alen affair, asking whether we mean to take the ground that the contribution of money to a campaign fund ought to disqualify a man for office in case his party is victorious at the election. If so, say the writers, it would in England shut out a man like Lord Rosebery or Arnold Morley, both heavy contributors to the electioneering expenses, and in this country men like the late Samuel J. Tilden, or Abram S. Hewitt, or the late Hamilton Fish. These men, having plenty of money, gave freely and properly to the legitimate expenses of a party canvass, and no party canvass can be conducted without great outlay. The work of organization in modern democratic states—of "bringing out the vote," as we call it—is necessarily expensive, and the cost must be, and always largely will be, borne by the rich men of the party. Are such men to be deprived of the right to hold office, therefore, simply because they are rich, and are greatly interested in politics, and have aided in a perfectly legitimate manner in winning the party victory?

It seems at first sight as if this raised a difficult question, but the practice both of England and America shows the question to be a very simple one and easily answered. In truth, the English mode of producing candidates for high office leaves no room for it in that country whatever. In the first place, there are in the diplomatic and consular service no places to be bestowed in return for electioneering services of any kind. Both are regularly organized, like the army or navy, in which men hold their offices during good behavior, are promoted through seniority or for special service, and are expected to possess a proper equipment for their particular posts in the matter of language and experience.

Every now and then, however, a man who is not in the regular diplomatic service gets a great embassy, like that of Paris, or Rome, or Constantinople, because of special fitness for some extraordinary crisis. Lord Dufferin is a conspicuous example of this, but we can recall no case when such a distinction was conferred on a very rich man, or on any man for activity in home politics. There thus remain only places in the cabinet to be given in return for "heavy checks." But in the first place, if any English minister were fool enough to load himself with incompetent rich men in the cabinet, as they would have to maintain themselves in the House of Commons, their obscurity and want of debating capacity would cover him with ridicule and drive him out of office in a few weeks.

In the second place, English practice ever since 1688 requires candidates for high office to have served an apprenticeship either in Parliament or in subordinate offices, and to have become known to the country in one or other of these places. So that when a minister comes to make up his cabinet, the possible men are designated for him by a process of selection which has been going on for years, and out of this cir-

cle he cannot travel. Mr. Gladstone, for instance, could no more go to a dry-goods store in Regent Street and take Marshall or Snellgrove for the Postmaster-Generalship, because either of them had made a handsome contribution to the Liberal chest, than he could sell the furniture in his official residence in Downing Street and pocket the proceeds. In other words, the Wanamaker transaction, or any transaction like it, would be impossible in England. A man in English politics may be rich, very rich, and give freely to the party treasury, but in order to get high office he must be something else than rich, and must have made himself known to the public, as well as to the ministers, by the display of some kind of talent or acquirement. To take three or four of the most recent entries into official life: Balfour had been fifteen years in the House of Commons before he became Irish Secretary; Chamberlain had been the leader of the Radical wing of the Liberals in the Midland counties for twelve years, and had won great distinction as a municipal reformer in Birmingham and served in one Parliament; Bryce had sat twelve years in Parliament, and become famous as an author and professor of law; and Asquith had achieved high distinction at the bar and served in one Parliament—before obtaining seats in the cabinet.

The process of selection with us is by no means either so elaborate or so sure, but it is sure enough to make it quite easy to avoid mistakes. In each party there are enough men marked out for high places by other signs than wealth to prevent any misapprehension as to the reason for appointing them, no matter what their contributions to the campaign fund may have been. If the late James Russell Lowell had given $100,000 to aid in electing President Hayes in 1876, his appointment to the Spanish mission would nevertheless have been universally recognized as fit and pure. The same thing might have been said in 1884 if the London mission had been given to George William Curtis. No gift could have disqualified Charles Francis Adams for the London mission in 1861. Neither Samuel J. Tilden nor Abram S. Hewitt could have unfitted himself for the Treasury Department by any donation, however large. It is true, we freely allow the selection of obscure men for high places every now and then, because of local party service, or some special personal relation to the President, but it may be said to be an unwritten popular requirement that such appointees shall be poor or in moderate circumstances. Much tolerance as there is for venality of one sort or another, the American people are not prepared to allow obscure wealthy men to be popped suddenly into high offices of state, because they will never believe that a rich man of whom they have never heard before, got his place without paying for it. This natural and valuable popular distrust must be taken into account by all Presidents. It is the salt of public life. It may be the salvation of the republic. It is not enough that there are other reasons than his wealth for making a man a cabinet officer or an ambassador. They must be patent reasons, reasons that the humblest voter can see and understand.

## *THE FEDERAL ELECTION LAW.*

THE discussion of the Federal Election law and its proposed repeal, which has been in progress for some three weeks, has attracted little attention, either in the House of Representatives or in the country at large. Few people in Washington have cared enough about the speeches to hear them, and the newspapers have but reflected popular indifference in the scant space given to the reports. It is safe to say that no supposably important measure has come before Congress for a long time about which the people seemed to care so little.

One reason for this popular indifference is the fact that the question of repealing the law was practically settled last year. The long controversy over the Force bill during the Harrison administration was virtually a contest as to whether the attempt to regulate elections through the exercise of the federal power should be abandoned, or pushed further than had before been attempted. It was universally felt last year that, if the Democrats should win, they would repeal the law. They did win by a great majority, and since then everybody has taken its repeal for granted.

Such support as the existing statutes on the subject receive is largely perfunctory. Every candid Republican admits that the law has utterly failed to accomplish what was expected of it. It was advocated originally on the ground that it would secure "a free election and a fair count" at the South, which would mean Republican majorities, largely composed of negroes, in more than half of the congressional districts in that part of the country. The system has been tried for more than twenty years, and there is not a Republican from a single district having a large negro population, with the single exception of one from South Carolina. In other words, it has been just as practicable to keep the blacks from voting or to miscount their votes with a federal election law as without one. To advocate its retention on the ground that it does any good in that section is therefore absurd.

The system has been equally worthless in the North. The perfection of its application has been seen in New York city under "Johnny" Davenport, who used it simply as a means of paying a lot of political "strikers" out of the Treasury at Washington for alleged help to the Republican party. As a matter of fact, these strikers only hurt the party by disgusting fair-minded men with an organization which resorted to such methods. The utter uselessness of the law as a partisan device was demonstrated last November, when in the face of it there was rolled up in this city an enormous Democratic majority. Of course it would be absurd to discuss it in any other than its partisan aspect here, where Davenport is so well known, because the idea of getting any assistance towards honest elections from him is preposterous.

The theory of the system is radically wrong. This theory was that the way to secure fair elections in any State was, not through the governmental methods of that State, but through the interference of federal authority. Elections will be honest or dishonest according as the people of a community will to have them. It is with elections as with other things—public order, for example. Indiana has for years suffered from "whitecaps," and Mississippi is now terribly ravaged by such bands of outlaws. Such lawlessness will go on until the people of those States make up their minds to suppress it. If there were any way by which an excuse could be found for the interposition of the Federal Government through its courts, the cure could not be wrought through them, because courts, whether federal or State, depend for their efficiency upon popular sentiment, and when that sentiment is lacking in a State, such criminals will go unpunished. That has been the trouble with the Federal Election law in every Southern State—there has been so little support of it on the part of the people that juries could not be got to convict offenders against it.

Progress has been making towards fairer elections of late years, both North and South, but it has not been through the federal authorities. In every case it has been because the people of a State became convinced of its necessity, and ordained it through State laws. Anybody familiar with the spirit of our institutions might have predicted in advance that the experiment would have worked precisely as it has done. So, too, might any one who has studied our political history have informed the Republican managers that "Johnny" Davenports would do the party far more harm than good. It seems to be regarded as necessary, for consistency's sake, by most Republicans in Congress and in the press to "make a howl" over the proposed repeal of the Federal Election law, but there is little sincerity in the outcry, and a great many members of the party will be glad to get rid of a system which has been tried in the balance and found wanting.

## *INTERNATIONAL CONGRESSES.*

THE example set at Paris in 1889 has been duly followed at Chicago, and a series of "congresses" on all sorts of sub-

jects has been one of the features of the World's Fair. But the number and prominence of such assemblages at international expositions only accentuate the tendency towards holding them, which has been distinctly on the increase during the past few years. Scarcely a topic of large scientific or philanthropic interest can be mentioned which has not had, or is not planning to have, its international congress. Whether due or not to a growing sentiment of cosmopolitanism, or to the desire of investigators and reformers to adopt something of the comparative method, the fact must have fallen under the observation of everybody.

It must be admitted that too often these international congresses have had their ludicrous aspects. In allusion to them, a French writer recently defined an international congress as a gathering where the speakers or essayists rarely understood each other, and never succeeded in making themselves understood, though the members would nevertheless separate in a state of mutual complacency and good-will, conscious of having worthily played a great rôle, proud of having touched elbows with official personages, and joyful at the sight of their names in the newspapers. Such results are, indeed, inevitable to a greater or less extent when diversity of language is added to difficulty of subject. How the thing worked in one case is wittily described by the Frenchman mentioned, M. Édouard Rod, when he tells of his own experiences at a Peace Congress held at Berne a few years ago. First they had some general and eloquent remarks on the horrors of war and the blessings of peace, and then they took up the practical question of "neutralizing" various countries so as to withdraw them from the possible range of a "general war in Europe." Egypt was satisfactorily neutralized by acclamation, and Tunis by resolution. So was Rumania by a good majority, and Norway and Sweden by a close vote. After that, affairs grew critical, and the Peace Congress was in danger of becoming a general scrimmage, being saved from such a painful ending only by a strategic motion to adjourn for one year, until public sentiment should have had time to "ripen."

It is evident that the subject under discussion has a great deal to do with the success or failure, the dignity or absurdity, of international congresses. Where the gathering is simply one of workers in a broad field of scientific inquiry, who come together to compare notes and to block out work for the future, there is no difficulty, and the published proceedings are often of great value. The Congress of Americanists, or international medical congresses, are instances in point. In these a certain amount of special knowledge is necessary to secure membership and a hearing, and the very need of sticking to a body of ascertained fact cuts down the theorizers and discourages faddists. But as soon as we approach questions of social reform, the case at once alters. Benevolence is then made the equivalent of competence as a basis for an invitation to "read a paper," and performers on wind instruments are apt to abound.

When an international congress takes up what may fairly be called "an open question," it is as good as settled that its proceedings will be futile. If the management is fair, and gives both sides a hearing, the result will be very much like a drawn battle. If it is partial and prejudiced, and arranges for speakers on only one side of the case, as was done at the World's Temperance Congress at Chicago, all the opinions are discounted and discredited from the start. Moreover, in either case, it is almost impossible to get a man to read a paper on an open question who will be willing to treat it as open. The reason he is ready to read is, that he thinks he has closed the question, and that he can close it for his hearers, and finally for the whole world, if only he is given a chance. Hence, we almost surely get intemperate and positive assertion, instead of cautious discussion, and the only question that will appear to the dispassionate observer to be closed is the question of the futility of such exhibitions. This is particularly true when men who, for years, have been compelled to discuss their favorite projects for reforming the race within the circle of their luckless friends and neighbors, at last get a foothold on an international platform, and let loose on all mankind their plans for forming a World's Society for Badgering the Poor, or an International Congress of Parents to emphasize the importance of training children.

Another common failing of international congresses arises from their tacit assumption of legislative powers. They forget that their legitimate function is to appeal to and to educate public opinion, and they go ahead with their solemn resolves and acts as if a new Amphictyonic Council making laws for the whole world. But reform by resolution is really no more impressive on an international than on a local scale. The abuse of alcohol is just as apt to be ended by a series of thirteen whereases and a score of resolveds in a county temperance convention in Rhode Island, as it is in a World's Temperance Congress at Chicago. In short, it is clear that the true function of international congresses, called to debate unsolved and perhaps insoluble problems, is that of intelligent and all-sided discussion, with the aim of stimulating inquiry and experiment and influencing public opinion, and not at all that of acting as lawgivers for the whole human race.

## THE SOUTHERN FARM SINCE THE CIVIL WAR.

CLARK'S HILL, S. C., September, 1893.

THE changes wrought in the South by Mr. Lincoln's proclamation of emancipation were enormous and far-reaching. To a native returning here after some years' absence they appear more clearly than to one who has remained on the spot all the time. The locality from which I write is in that broad band of hill country, gradually sloping towards the Atlantic, neither mountainous nor level, lying between the Appalachian chain and the sandy belt along the coast. It is a strip about five miles wide in the western part of South Carolina, with the Savannah River on one side and a creek on the other. The plantations here in the days of slavery averaged about a thousand acres and fifty to sixty negroes. All the conditions make this place and the surrounding district fairly typical of the large undulating region in which it lies.

In this broken country, water has been man's chief enemy, for outside of the "low grounds" along both streams there is hardly a level acre to be found. The most shiftless system of agriculture the world has ever seen has been practised here since the first "new grounds" were cleared. In no instance was any attempt made to prevent washing, and in many cases gullies were deliberately courted by laying off cotton and corn-rows up and down the hill-side. To replace the seamed and gashed fields, the axe would ring nearly all the winter, and a new "patch" would be prepared for the plough. This reckless squandering of mother earth's gifts destroyed perhaps half of the arable surface by 1865.

For the first year or so after that era the negro remained with his former slave-master and worked the old land on shares, furnishing the labor only and receiving one-third to one-half of the gross product. Afterwards the black seemed frenzied to break away from all his previous humiliating associations. A wholesale spirit of swapping bosses came over him, and wagonloads of household stuff passed from "quarter" to "quarter." He next wanted to become a renter, though with few exceptions he had nothing besides his "naked human strength." The landowner had to credit him, without security, for stock, seed, food, implements. The universal custom was to charge two bales of cotton—about 800 pounds lint—for a one-mule farm. More fresh land was wanted, and the black agreed to fell the forests on condition of using the ground rent free for two crops. Under this stimulus, the dark woods soon gave way before their keen-edged enemy. With the folly of their fathers, the planters put forth no effort to save their land. Rotation, even if thought of, was practically impossible with the negro so determined to make cotton; manuring has never been tried to the present day. With a clean-culture crop like cotton on the hills, season after season, the fierce showers of summer soon justified the colloquial expression, "No man here has a title to his land."

The conclusion of such careless methods was plain and the end not far. The soil being gone, the negro had to go too. Generally he went in the same direction that the cause of his departure had gone—down stream towards the ocean, and farther southward and westward to Georgia, Florida, Alabama, Mississippi, and Louisiana. Large numbers went to the towns and villages lately sprung up in this belt. It is astonishing to see how mobile these people have become in a third of a century of free-

dom. Negroes who were never more than a few miles from home, and then only on Sundays with a pass, are now ready to go anywhere, and have as keen an eye for the main chance as the dominant race. From this agricultural community, which until a few years ago was twenty miles from the nearest railway, rough field hands and the descendants of field hands have drifted to New Orleans, Louisville, Washington, Baltimore, New York, and Boston. They have gone mostly as waiters, one or two going as ministers. In one respect they suffer from the same limitations that the whites do. Neither can make the change from the hill country to the sands without serious impairment of health, and many die in the acclimatizing process.

As a result of the destruction of the soil, the same land maintains fewer people than it did in slavery. It is impossible to get exact figures, but the best judges believe that only about three-fifths as many people live on this strip as lived here in former days. A few reliable data are fairly typical of the whole. On one plantation at the upper end about a hundred slaves dwelt; now it has about twenty-five or thirty negroes. Another, about the middle, had forty-one slaves; it now supports one family of about five. A third, alongside of this, which had forty, now has twenty-one. As might be expected, almost all the more intelligent of the blacks went from the farms. The picturesque plantation, that formed a little world-unit in itself, with its carpenter, wheelwright, blacksmith, mason, spinners, weavers, tailors, and shoemakers, has disappeared. Scarcely a negro artisan is to be found in this locality. On the other hand, the whites have increased slightly.

While this movement has gone on in the population, significant changes have taken place in the conduct and condition of those remaining. Emancipation was a revolution in the life of both white and black, but, if one may base a conclusion on narrow limits, the negro has stood the test better than his former owner. The circumstances of old slave-owners (at least those who counted many slaves), as a class, have decidedly not improved. They have seen their lands torn by rains and eaten up by claims. They often go on foot where they used to ride in carriages. Their table is supplied with less quantity, but probably greater variety, than of old, though "hog and hominy" is still the chief diet. "Store-clothes" have replaced home-spun. Not so many of the boys go to college. Sermons are still heard once a month, shorter and more moderate and not so theological. Unable to accommodate himself to the new order, and with debts hanging over him, the course of the old slavocrat is painful and halting. To add to his perplexities, some of his sons have caught the urban fever, and others have ceased to look to the farm for a living. Of some twenty young men grown up in this neighborhood in the past ten years, only six have become farmers.

While his master has been struggling to hold his own, the black has bounded forward. Cast forth a child, with scarcely more than clothes on his back, he had to combat the bitter prejudice of the whites against his elevation. I can remember when a sneer greeted the report that a negro was trying to learn to read, when there was a feeling of hot resentment at his purchase of a horse or cow, while a mob might have been gathered to prevent him from buying land among white neighbors. Now nearly every family has a cow, and many of them a horse, while there are three farms owned by negroes, and land is as readily sold to them as to any one.

With this gathering of property have come more wants, greater variety in dress, more dishes for the palate, better churches, education, travelling. The black pinches to get a ready-made suit once a year or so. Flour has largely replaced corn-meal on his table. For a few years after 1865 he did as the Druids of old did—built up a leafy bower in the forest and lifted up his voice in worship. This was replaced by a rude board shelter with log seats. Now the blacks have just completed a large, commodious frame house, well supplied with benches, glazed windows, and a gallery.

Their passion for learning is well known, but the earnest, noble efforts of this poverty-stricken people for education can never be too highly appreciated. The religious feeling has worked in this direction among them as it has among the whites. The negroes of this locality are Baptists, and an organization of this church, the Union, composed of some ten churches, has undertaken to provide a good "macademy," as so many of them call an academy. A farm of 140 acres, with a fine school site centrally located, has been bargained for, and the school will open next year under competent teachers. The farm will be divided into smaller lots, to be sold or rented, in order to raise revenue for the school.

With the construction of the railway about a decade since, the blacks here could more easily indulge their fancy for seeing something of the world. They pack excursion trains to Augusta, the nearest large city, twenty-five miles away; more adventurous spirits go much further and spend a large part of their earnings in this way. One of the simplest-minded negroes I ever knew has bloomed into a local Marco Polo, and can tell great tales about the high mountains, the broad ocean, about tobacco farms in North Carolina, rice plantations near Charleston, and orange groves in Florida. In spite of the great sacrifice necessary to keep his two sons, Robert Henry George Washington and Solomon Grundy, at school, he says, "I'se got to set out every other year and trabble somewhar."

With this development and multiplication of the negro's wants there could be no decline in efficiency, and it is gratifying to know that no one believes that he has lost in value as a laborer, while many hold he has improved—and this in spite of the almost universal fear, after Lee's surrender, that the blacks would be worthless as soon as all the "old black whip niggers" had died off. It is still more pleasant and still more surprising to learn that many experienced observers say that the black is more prompt in paying his debts than the white, and all say he is equally good. But all this material advance has more sharply defined social grades. In a very small and select circle aristocracy is distinguished by ownership of land, but it is generally marked by possession of an animal, either horse, mule, cow, or jackass. There is as much talk among blacks as among whites about marrying for money. It is more amusing, because louder and less concealed, and because the amount of wealth involved is smaller. A young girl has made an extra-fine catch if her husband has a horse, cow, and pig. Just as with their blue-blooded brethren everywhere, those who ride to church are far above those who walk. This pride especially aroused my attention the first Sunday morning after I returned home. I sat on the front piazza to watch the streams of colored worshippers go walking by to their devotions as in years long past. They went in considerable numbers, but on horseback and in buggies, with a small percentage on foot. Along with this growth of family pride has come the desire to preserve the memory of the dead. Only a few are able to afford such a luxury, and the churchyard here, containing a hundred or more graves, has only two or three small marble headstones, and these have been set up in the last ten years.

The plant of civilization must needs be disfigured with excrescences. Up to fifteen years ago, tramps of any sort were unknown. Now, whites go by, at some seasons, daily, and gangs of colored wandering beggars have also begun. Usually such negroes are willing to work on odd jobs *only*. It is probable that these vagrant bands furnish the wretched victims for the horrible lynchings described with so much detail in the local papers. The problem of house-servants has also arisen down here. The domestics trained in slavery have all either died or scornfully left the boss's house. The fat old colored mammy that presided with such severity in the kitchen is now only a reminiscence. It is difficult to get a negro for such personal service at all, and none but the rawest, gawkiest girls can be obtained. The price paid may have something to do with this: an average girl gets only $20 a year. The women work in the field if the crop belongs to the family; otherwise they hardly work at all, as they will not hire.

While the negro has been slowly improving in his habits and ways of life, there has been also a gradual advance in the financial system among the farmers. Those of this neighborhood have been one year behind, and the returns from each year's crop have always been spent before harvest time. At first the merchant furnished the food and implements, charging a time price which was from 25 to 100 per cent. above the cash price. With the borrower at his mercy, the dealer paid no attention to either time element or interest rate in fixing his terms. The farmer in turn used his credit as capital and made it the basis for a still more advanced price, and the negro in most cases paid double for all he got. As supplies were procured at different times, it required a skilled accountant to tell what rate of interest either white or black paid. There was no hope of getting out of this mire until more money was available in this section. This came when the cotton factor could furnish money at a stated charge, he himself looking to the banks. Of late years, however, with the establishment of a few local banks, some farmers in the surrounding district have been enabled to apply directly to them, with a consequent lowering of their interest rate to about 10 or 12 per cent. Relief has also come in a corresponding way, though not so fully, to the negro renter. Until within a few years, each one had to look to the owner of his land for all credit. In this locality, as in many others, a few farmers have accumulated a sufficiency to become capitalists to some trustworthy negroes. The interest is high, from 20 to 75 per cent., but the ignorant fellow knows exactly what he has to pay, and there is no chance for nimble white fingers to "figure up" a big account. At one time hopes were high when the Land Loan Companies began to do business in the State, but the interest—20 per cent. and upwards, running over the entire year—was too heavy a burden, especially with the steady drop in cotton. Advantage was taken of the usury laws, and the companies have withdrawn from this section.

In another way capital has come to lighten the load on the farm. Steam has supplanted horse power in ginning the cotton. One engine releases the capital locked up in a dozen

houses and cumbrous outfits. But, of late, centralization has gone a step further. A large plant, in combination with an oil mill at a town twenty miles off, is driving to the wall a dozen or more rivals in a radius of ten miles. The farmer sells both lint and seed, and saves the haul home, or carries back commercial fertilizer. He has still, in all the hill country of the South, to face the problem of constant destruction of the soil by rain, and the crushing competition of the Mississippi bottoms and Texas prairies in the production of cotton—practically the only market crop in all this belt. The wearing force of water is a most serious menace to future prosperity. There are plantations here with 500 acres of gullies out of a total of 1,000 acres. Nature does her best at recuperation with the "old-field" pine (short-leaf variety), but even this sombre tree must labor for a millennium before covering up man's hideous butchery. It is almost sickening to see a broad, sloping hill which, fifteen years ago, made a bale of cotton to the acre, now a mesh of leaping torrents at every rain. Forestry is as little talked of here as an expedition to the moon, and yet no spot more needs something of the sort. The declivities have been denuded of vegetation, and the rich valleys are becoming useless for agriculture. When I was a boy, it was entirely safe to plant along the creek; now for the past three seasons the angry waters have deluged the growing corn. Terracing is being timidly tried, and on gradual slopes with success, but there must be more thrift and energy before the farmer here can carry this handicap in the race against the level lands.

The waste of soil, coupled with the decline in the price of cotton, is slowly forcing a change in farming, in the direction of greater diversity in production. In this immediate locality several have begun to raise fruit. A few miles away, some active men have started dairying, and drive weekly some fifteen or twenty miles across the country to sell butter in Augusta. Others raise stock horses, mules, beeves, and small flocks of sheep. Here and there a hennery has been set up on a limited scale. Nearly all produce more corn and meat than in former days. It is an open expression among a few, and silent conviction among the many, that King Cotton has passed his day of undisputed supremacy on hill farms. Under such conditions intelligence in studying the markets and energy of management will be on the side of the white; but whether these qualities will offset the black's toughness of fibre and power of abstinence can be decided only by time. One special class, the old slavocrats and their descendants, are additionally weighted by the slipshod habits and careless methods that have descended as a legacy to them from slavery. Brought up with broad, generous notions of life, it was only natural that they should try to keep up something of their former style. It was only incapacity of poor human foresight that led them into mortgages in hopes that a future rise in cotton would enable them to meet the demands. Reared in idleness, with untrained muscles and unpunctual ways, they neither wanted to work nor could endure steady manual effort, even if they had so desired. Their children have imbibed some of this spirit of leisurely dignity and have inherited some of this weakness of physical constitution. But the majority of the whites were not large slave-owners. By actual daily contact with the sun's rays, they have got hardened to the summer heat. Men of this class (and it is an extensive one) can stand the scorch and blister of the hottest spells side by side with the black. But neither in the days of slavery nor since have they been the influential class in thought, in industry, or in politics. It seems an open question whether a man can do hard manual labor, day after day, in this hot climate while still preserving that firm yet elastic spirit and fertility of resource so necessary for supremacy.

Still, no matter how low prices may fall, the thrifty farmer here can insure himself against want because he can raise nearly all he needs on his own land and with his own hands. Fruits, beef, mutton, poultry, dairy products, meal, vegetables—all these he can get in profusion by his own efforts. In fact, nearly everything for his table, except sugar, this soil will yield, though wheat is a rather uncertain crop, and its cheapness in the West has about killed its cultivation with us. Even a substitute for sugar can be found in the sorghum molasses rather abundantly produced for one or two years during the civil war. For implements and appliances of metal and for cloth (though the farmer can go back to primitive methods and make that) he must have a small money crop—four or five bales per family—which he can grow on half-a-dozen acres. Such a life would not be a full one or a liberal one, but it would be a comfortable one. Only laziness can bring a healthy land-owning family here anywhere near want. C. MERIWETHER.

## THE MASTER OF BALLIOL.

CAMBRIDGE, MASS., October 6, 1893.

To old Oxford men the news of Jowett's death brings a peculiar sense of desolation. One by one the unique personalities are passing away from university life. Pusey has gone, and Green and Liddon and Freeman and Matthew Arnold; Ruskin is in distant seclusion. There remain in Oxford some great scholars and more able administrators; but where shall we look for men of that indefinable charm, that unceasing attractiveness repelling familiarity, which we felt in the Master of Balliol? Perhaps this is the old mistake of the *laudator temporis acti:* every fresh generation of undergraduates finds, let us hope, its own gods to worship; but to those who are no longer undergraduates, Oxford, in spite of all its material beauty, becomes more and more commonplace. And to a Balliol man the feeling of loss is incomparably more vivid. To us "the Jowler" *was* the college. Other colleges, Magdalen or New, might have noble buildings and lovely parks; in our austerity we thought them enervating. Other colleges might be "at the head of the river," and most of us did not greatly care; hat we considered appropriate enough for a college like Brasenose. What we prided ourselves upon was a real or imaginary intellectual preëminence, a mental alertness, a combination of old-fashioned scholarship with new-fashioned hospitality to ideas; and of these qualities the Master was to us the incarnation. Of course we were proud of our dons; we thought there were none like them. We enjoyed Nettleship's supposed inability to make up his indubitably keen mind; we caught fire from Toynbee's rapt enthusiasm; but these were but parts of the college, while Jowett summed up the whole. The men of other colleges doubtless often called us prigs, and our stories of "the Master" sometimes bored them; but that was what we felt.

Jowett's person was, like his mind, dainty. An irreverent writer once spoke of his face as of the tombstone-cherub order; and the phrase was descriptive. But cherubs too frequently have something gross in their chubbiness; and everything about the Master was delicate and fine. Perhaps it was his appearance which helped to create the affection which mingled with our awe and respect; he was the *Doctor Seraphicus* of the college. Yet we trembled when we had to go and see him, even at a breakfast party, to say nothing of less agreeable occasions. In his clear little staccato voice he could say such biting things. Many were the stories of breakfast parties with long silences, broken by the more adventurous, who suffered accordingly; of undergraduates taken for walks and left to make the conversation, with painful results to themselves. What was the explanation? we asked ourselves. Did the Master enjoy discomfiting the shallow with his rapier thrusts? or could it possibly be that, after all these years, he was still shy himself, and said what he did because he could not help it? Probably the last theory, if not complete, was the truer. And certainly the undergraduate or young graduate who had anything really to say, however contrary it might be to the Master's opinion, and was so interested in the subject that he forgot the mastership and spoke out freely, was sure to win Jowett's esteem. Such a conversation, which the young man when he came to his ordinary self thought of with wonder and a flushed face, was not seldom followed by an invitation to dinner.

On the first and fifth Sundays of each term the Master preached to us in the College chapel. Strange sermons they seemed to those accustomed to hear from the pulpit of the problems of faith and immortality and the soul. As a rule he gave us nothing but the truisms of wholesome living and kindly good fellowship: how that the older men should call upon the newcomers, and how mistaken were diffidence and introspection—like the old college sermon which he is said, when staying with his friend, Principal Shairp, to have preached to a congregation of Scotch fishwives, on the duty of small-talk. The connection between sermon and text was sometimes slight. Thus, on the text, "Man does not live by bread alone, but by every word that proceedeth out of the mouth" ("of God" being, he remarked, an unnecessary addition of some of the manuscripts), he preached every five or six years a discourse "on what our ancestors might have called 'The Governance of the Tongue,' but what I prefer to call 'The Art of Conversation.'" We admired the style; we were on the lookout for quaint turns of expression; we chuckled over glimpses of heterodoxy; but the wisdom of it was in large measure beyond our years. So far as we did understand it, some of us occasionally thought the wisdom was of the world—not meanly worldly, but worldly still. Let your object, he seemed to say, be distinction of some sort. Be a martyr, if you like, but a distinguished martyr. To us then he hardly seemed to have a gospel for the average man; and perhaps this impression was not altogether an unfair one.

It was this æsthetic appreciation of distinction which made Jowett welcome young earls to the college. We made jest of this, but none of us thought the Master a tuft-hunter. The penniless Scotchman with a reputation from Glasgow was just as welcome. The Master liked to think of the college as sending forth men who in various ways were to influence the world. Yet he could be very kind to the obscure. Meeting a young graduate making a living by "coaching" or private tuition, he asked him how he was getting on. He was told that there had been few pupils that term, and that the coach had been obliged to give up his hope of going to Germany in the vacation. A

few days later the coach was sent for, and given an envelope with the words: "I hope you will go to Germany; good-bye." Four years later the Master had quite forgotten he had ever drawn that check.

In all old members of the college who made the smallest mark for themselves in after life, the Master had an unfailing interest. Critics said that all his geese were swans. Whether swans or geese, they all received from him the same antique courtesy. When recovering from his last severe illness, he was able to spend part of his time in dictating letters to his secretary, and in one of these, to a former undergraduate who had sent him a book, it is touching to see the note appended to his signature in microscopic characters: "Excuse my writing to you by the hand of Miss K." In these type-writing days the painfully scribbled line is eloquent.

Hitherto I have been trying to give some impression of the place the Master occupied in the minds of the young men around him. This is hardly the time to attempt that broader view which would show what he has been to Oxford, to literature, and to speculation during the last half century. To the outside world he became known first as a heretic, as one of the authors of 'Essays and Reviews.' But he never became the active "leader" of a movement; he was content with his own belief, which was, apparently, an old-fashioned Deism, without striving to persuade the world that it was compatible with the Anglican formularies, though his own position implied it. In his latter years, at any rate, he took but little interest in technical theology. When he appealed to the public again, it was with his translation of Plato. It is a commonplace to say that Jowett made Plato an English classic, but it is true. There are many who could reëcho the remark made by a studious woman living away in the country and far from the babble about contemporary reputations: "I never enjoyed a book more than Jowett's translation of the *Republic;* it marks an epoch in my life." For no one ever succeeded in making the readers of Plato realize, as he did, the essential modernness of Greek thought.

But it was as a tutor, and afterwards as Master, of Balliol that Jowett made the deepest impression upon his time. I suppose it is true to say that to him is largely due the tutorial system in its present Oxford shape. That system is one, there can be no question, of enormous benefit to the ordinary student. Its defect is that it imposes all-devouring obligations on the tutor, and sacrifices to education the advancement of learning. It will break down ultimately of its own sheer weight: but it must be remembered that the worst excesses of the system are the growth of the last few years; and perhaps the Master hardly realized what a momentum the movement had acquired to which he had helped to give the initial impulse. To Balliol and Jowett, again, is largely due the excessive importance to-day of the honor examinations of the University. There is unquestionably a good deal that is unhealthy in the present stress of preparation for tests of various kinds which marks the life of a large number of the abler students at Oxford, especially among the poorer men. But the system may well have seemed the only practicable method, under English conditions, of securing for moneyless brains a fair chance in the University, and, through the University, in English society. The defects which we deplore alike in the tutorial system and in the examination system are, after all, the well-nigh unavoidable excesses associated with a reforming movement in the main salutary. W. J. A.

## IN THE BALEARIC ISLANDS.—V.

VALLDEMOSA, August, 1893.

THERE seem to be at times inadjustable differences between facts and feelings, for while we were convinced, on consulting the statistics of summer temperature for Mallorca, that the maximum given would be quite bearable, yet when our thermometer registered but 75 degrees, we found ourselves unaccountably uncomfortable in Palma. It was, perhaps, a foregone conclusion that, having fallen under the spell of Valldemosa, we should return, and, a "celda" being vacant in the Cartuja, retire within its walls. Its cool retreats, where mortification of the flesh must have been a none too easy task, consist of suites of large and lofty rooms opening on charming little gardens which overlook the valley. A vaulted corridor, over four hundred feet long, divides the chapel and cloisters on the right from the cells on the left, its grated windows framing lovely bits of this earthly paradise. Coming out from the chapel, where an elaborately inlaid reading-desk and the ingenious indicator, by means of which the silent brotherhood announced themselves, are mute reminders of the former occupants of the Cartuja, the merry voices of children riding their *borricos* down the long corridor, the easy chairs placed sociably together before the cell doors, through which we get glimpses of cosey tea-tables, give one a bewildered feeling of incongruity; and if by chance we see the gray-bearded, emaciated figure, clad in long brown cassock, that sometimes steals, ghost-like, along the corridor, it only serves to intensify this feeling.

One of the kings of Mallorca, finding that the pure air of Valldemosa gave him immunity from asthma, built a royal residence here. A later king, Don Martin, presented this palace, in 1399, to the Carthusian brothers, for whom he had a great affection. The growth of the community made enlargement necessary from time to time, and a great part of the picturesque irregular pile known as La Cartuja was built within this century. But, although much of the ancient monastery has been destroyed, and the encroachments of modern life have somewhat concealed its original character, there still remain sculptured walls, doorways, and windows, and half-obliterated frescoing to tell of former glories; while from the quaint old clock-tower, roofless and without dial, bells, grown rusty from long exposure, still note with hoarse tone the passing hours. The chemist's shop is tucked away in the same dark corner, in search of which George Sand used to stumble at night through the gloomy cloisters; and while the letters of the old inscription on the ceiling, *Non in verbis, sed in herbis, fac medicamentum*, have disappeared, its spirit remains in bunches of herbs drying in one of the old guest rooms, now used as a storeroom. Considering the ferment of feeling excited at the time of George Sand's residence here, it seems strange that the location of her cell should now be a matter of doubt. Then her presence in the Cartuja was considered a "desecration." Now the rivalry between the owners of the various cells reminds us of Homer dead. Diligent inquiry has resulted in no positive evidence as to its location, and when we question the old villagers, they slowly shake their heads and reply, "No sabe."

Fear of invasion in times past, and, later, the need of cultivating every inch of soil, have huddled the village houses close together, giving dark interiors, which make a fitting background for the old women with ugly, wrinkled, pleasant faces, sitting in their doorways with their distaffs. At this season the doorstone is the centre of family life, and serves as an open book from which to read the daily annals of these simple folk. Dark-eyed, youthful St. Johns look up at us with serious glance as we pass by, and sometimes we see a benignant-looking goat step over the threshold and stand, with almost human patience, suckling a brown-limbed baby rejoicing in the freedom of a single short garment. Early and late, as we go up and down the steep, narrow streets, we hear the intermittent droning of paternosters mingled with the various sounds of industry, for this is eminently a religious village, proud of having been the birthplace of the Beata Catalina, of miracle-working fame, to whose chapel, on a pine-crowned crag above the Cartuja, the pious resort for their evening devotions.

Descendants of the old Aragonese, these peasants maintain the sturdy self-respect that characterized their ancestors. We sometimes meet on the highways a day-laborer with as haughty a mien as any hidalgo, while the maidens have the noble bearing of the Frisian woman. On the day of our arrival three peasant women came to bid us welcome. They bore themselves with a rude dignity quite refreshing, and although their unfamiliar dialect, vociferated in harvest-field tones, threatened to prove an insurmountable barrier, mutual good-will and descriptive gestures soon established an understanding. A grave, ceremonious handshaking accompanied the leave-taking, and has since been repeated with the daily delivery of milk and bread. Even in the dance this gravity of deportment is not relaxed. On the occasion of a recent festival, we secured front seats, on a plank supported by candle-boxes, in the plaza, where pine knots, placed in iron frames fastened to tall poles, smoked and blazed and threw a lurid light over the scene. The maidens, in bright petticoats, low-cut black bodices, the sleeves fastened at the elbow with rows of gold buttons, tulle head-dresses, and heavy chains of gold around neck and waist, were invited to dance by the alcalde, or mayor. The partners, with eyes fixed upon the ground, advanced, retreated, circled round each other, but never came in contact. As sugared almonds were thrown over the heads of the most graceful, it required the alcalde's most official aspect to keep the children from rushing in pell-mell, but the moment the dancing ceased there was a mad scramble. This was the only note of hilarity in the whole performance. But the dance itself! The slow, measured movement of lifted arms and hands keeping time with the graceful swaying of the supple figures that seemed to float above the ground, the quickened step as a wild song rose above the rhythmic clicking of the castanets, skilfully used by the dancers, the lithe spring into the air, and, as the song abruptly ceased, the suddenly stiffened muscles of outstretched arm and pointed foot, as if touched by magic charm—all this needs a winged pen to describe.

The *predios*, or farm estates, tilted down the mountain slopes, or perched on bluffs commanding the sea, conceal unsuspected material for the artist. The cluster of buildings forms a small, isolated hamlet, picturesque in detail, each dwelling having an individuality of its own, several rising in massive towers which give a mediæval character to the whole. Here are giant olive-presses, dating back nearly three centuries, still in use; but he who would

be tranquil, let him not investigate too closely under what conditions the fruit of the olive is made to yield its rich golden oil. Wherever we go among the country or village people, we hear the kindly "Bon di' tenga," and the *casa* with all it contains is placed at our disposal with true Spanish grandiloquence of word and gesture. This we know is the usual exaggeration of courtesy, yet, accompanied as it is by a frank, engaging smile and a genuine offer of fruit, we are not disposed to quarrel with formulas.

Centuries of patient toil have developed wonderful skill in agriculture, notwithstanding the use of primitive, awkward implements. A straight, clean-cut furrow follows the one-handled Arab plough, and the rich soil grows light under the heavy *caveg*, the island implement which unites in itself the functions of shovel, hoe, and pickaxe. The grain is all cut by hand, and threshed only on open-air threshing-floors, prepared in accordance with Virgil's instructions, where, above the regular hoof-beat, as the fluted stone rollers are dragged over the floor, rises the monotonous chant of the driver, with a melancholy cadence calling to mind old plantation melodies. A breezy day is chosen for the winnowing, which is as primitive a process as the threshing; and when the harvesting is over, and the trees have felt the pruning-hook, the rubbish is carefully piled into heaps with limestones in the midst, and slowly burned for the fertilizing ashes. These summer days are long days of unwearied toil, but as the sun dips into the sea the angelus sounds from the hermitage on the heights above; and when the evening star appears and the glow-worms light their diamond lamps in the hollow olive trees, a wonderful stillness broods over the earth, broken only by the shepherd's pipe blending in pleasant symphony with the tinkling sheep bells.

The shriek of the locomotive that was to carry us to Manacor, the starting-point for the caves of Drach and Artá, sounded strangely dissonant to ears grown accustomed to Arcadian sounds, yet we were conscious of a pleasant thrill of excitement as we "embarked," as Spaniards say, for our first ride on the only railroad in the islands. It passes through extensive vineyards, where low, sturdy vines support heavy clusters of the rich grapes that go to make the golden-brown wine of Binisalem. Ripe figs were drying in the sun, and the almonds, having burst their purple husks, were being dislodged from the trees by means of long, slender canes. Inca, a little above the railroad, makes a striking picture with its background of bleak, sterile mountains, its ancient-looking buildings and lofty palms; and, faintly discerned on an almost inaccessible crag, the ruins of a castle, the last stronghold of the Moors, seem to mock at nature's apparently impregnable defences.

The numerous windmills of Manacor give it a picturesque aspect from a distance, but the enchantment is dispelled on near approach, for the town, which is the second in importance in Mallorca, is pervaded by a dreary air of commonplaceness relieved by nothing to detain the traveller. At the end of an hour's drive through a rather desolate country overgrown with heather and lentisk, we came to a pretty little basin of the Mediterranean, where a few staringly new houses suggested the nucleus of a watering-place. Crossing the bed of a winter torrent, a short walk led to the entrance of the cave of El Drach (the dragon), low and dark, and unpleasantly suggestive of the fabulous monster. But, after the first plunge into darkness, our attention was absorbed by the beautiful, lace-like formations, some of delicate opal tints, and the still, deep pools of water in which, like a magic mirror, were reflected our lights and even the fire and flame of the guide's cigarette. Of the names given to different portions, that of "Lago de las Delicias" (Lake of Delights) seemed most fitting. There are still unexplored chambers, and deeps from which, on casting in a stone, come back faint and fainter reverberations until an ominous splash denotes that it has found a resting-place in water that would seem to be below the level of the adjacent sea. The whole interior, which it took nearly two hours to explore, left an impression of fairy beauty which even the dread "Purgatorio" failed to obscure.

Of quite a different character are the caves of Artá. We made an early start from Manacor, for the road is long and rough and the caves extensive. Passing through the village of Artá, which is not uninteresting, at some distance beyond we left the carriage and walked along by the sea, where white lilies with golden hearts were blossoming in the sand, climbed a steep, wooded hill, and, creeping round a sharp angle hung over the waves, found ourselves before a magnificent rocky portal in the sea face of a perpendicular cliff, and fifty metres above the water. The promise of the entrance is well fulfilled as we penetrate the interior. Everything is on a massive scale, and so different as in no way to suggest a comparison with the neighboring cave of Drach. Here there is no soft coloring; all is white and black, and water is absent. Stalactites and stalagmites meet to form gigantic columns, and glistening white banners of a fantastic reality are flung out high above our heads in the obscurity of lofty halls whose gloomy recesses the flare of the Roman candles only serves to make more strange and fathomless. In one instance a lofty roof is supported by a single slender column rising up in the centre of the great chamber to a height of twenty-two metres, and bearing a striking resemblance to the stem of a giant palm. After a stay of three hours in these underground workshops of nature, the sudden vision of the smiling blue sea before us as we emerged from the cave deepened an impression that will remain long in the memory.

## THE WEST IN THE SENATE.

To the Editor of The Nation:

Sir: In several issues of the *Nation* during the past summer, and particularly in the one of August 31, you have complained most bitterly of the votes cast by the new States of the West in the Senate. Knowing that you aim to be just and fair with your readers, however much you may differ with the people of the West upon the silver question, I desire to call attention to a few facts disclosed by the Census of 1890.

Two of "the six youngest States of the Union in the Northwest," South Dakota and Washington, have a total population of 678,198. Two of the original thirteen States, Delaware and Rhode Island, have a population of 513,999. Have not the people of Colorado, who number more than any one of the four, and almost as many as the two Eastern States combined, as much right to complain of Delaware and Rhode Island as you to complain of South Dakota and Washington?

Three of "the six youngest States of the Union in the Northwest," the two Dakotas, and Washington, have a total population of 860,917. Three of the original thirteen States, Delaware, Rhode Island, and New Hampshire, have a population of 890,529. Were all these six States fully represented in the Senate, the population for each Senator would be practically the same; with Washington deprived of one Senator, the Eastern States have a decided advantage. The Senators from the two New England States and Delaware are solid, of course, for unconditional repeal; it remains to be seen whether the five Senators for the Northwest will vote together in favor of silver coinage.

"The six youngest States of the Union in the Northwest, the two Dakotas, Montana, Idaho, Wyoming, and Washington," have a total population of 1,138,166. Six of the oldest States of the Union, Delaware, New Hampshire, Rhode Island, Vermont, Florida, and Oregon, have a total population of 1,928,140. Six of the largest States of the Union, New York, Pennsylvania, Ohio, Illinois, Missouri, and Texas, have a population of 23,669,241. The disparity between the first two groups is insignificant when either is compared with the last. Missouri and Texas, with a population of nearly five millions, practically united in favor of the free coinage of silver, have as much right to complain of the Eastern group voting against silver as Ohio and Illinois, with seven millions of people, have to complain of the Western group voting for it. As a matter of fact, each of the nine Senators now representing the Western group has practically as large a constituency behind him as each of the twelve Senators coming from the other group.

Senators Teller and Wolcott represent a larger constituency than is to be found in Delaware, New Hampshire, Rhode Island (three of the original thirteen States), Vermont, Florida, or Oregon. For the whole Union, Colorado ranks 31 in population, leading thirteen of her sisters; while Delaware stands only 42, one better than the Territory of New Mexico, and two below the Territory of Utah; Florida ranks 32, New Hampshire 33, Rhode Island 35, Vermont 36, and Oregon 38.

The four silver States, Colorado, Montana, Idaho, and Nevada, have a total population of 674,503. Four of the Atlantic-coast States, Delaware, New Hampshire, Rhode Island, and Vermont, have a total population of 1,222,951. The four largest States of the Union have a total population of 18,754,534. The disparity between the silver group and our old New England sisters is scarcely noticeable when either total is compared with the four leaders.

When the contest on tariff reform comes, and the great States of Texas and Missouri, Kentucky, and Georgia, backed by the teeming millions of the South and West, are clamoring for relief, aided by your powerful voice, and we find these pocket boroughs of the East—Rhode Island, Vermont, New Hampshire, and Delaware—are all solid for the protected barons, the shoe will be pinching the other foot. No section will more gladly change from the present method of representation in the Senate to one based on population than the West. Fifty years from to-day, if a change is not sooner made, it will be the West and South complaining of the strength in the Senate wielded by rotten boroughs of the East, rather than the East finding fault with the thinly settled States of the West. In the meantime neither section can justly complain of the other.

W. H. Bryant.

Denver, Col., October 3, 1893.

[The inequality of the original thir-

teen States was, of course, deplored from the beginning, since the territorial limitations rendered it permanent for the very smallest. Still, their integrity had to be guaranteed in the Constitution, and it must be said that every one of them has more than maintained its population, while Rhode Island stands at the very front in point of density. Had either Rhode Island or Delaware, like Nevada, steadily fallen off in the number of its inhabitants after its admission to the Union, there can be no doubt that the country would long ago have been moved to abolish these States by annexation, using all possible pressure to that end. The constitutional situation would also have been felt to be scandalous if Delaware and Rhode Island, which have generally been in opposition, had in combination held the balance of power in the Senate, or had availed themselves of the license of the Senate rules to defeat a vote upon a measure overwhelmingly passed by the lower house, and notoriously commanding a majority of the suffrages of the Senate itself.

We cannot allow that the population of Missouri and Texas are "practically united in favor of the free coinage of silver." Finally, we admonish our correspondent that "the contest on tariff reform" has come now, and that the overthrow of the existing protection to silver-mining is the necessary first step in coming to close quarters with McKinley and his abominations.—Ed. Nation.]

## JUDICIAL POWER.

To the Editor of The Nation:

Sir: The court of North Carolina has the distinction of sharing with Rhode Island the honor (given by a correspondent in your issue of September 28 to Rhode Island and Virginia) of having, some years before the federal court, held that a court has the power to declare null and void an act of the Legislature.

In 1785 the Assembly of North Carolina passed an act entitled "An act to secure and quiet in their possession all such persons who have purchased, or may hereafter purchase, lands, etc., which have been sold, or may hereafter be sold, by commissioners of forfeited estates, legally appointed for that purpose." The act also required the court, in all cases where the defendant made affidavit that he held the disputed property under a sale from such a commissioner of forfeited estate, *to dismiss the suit on motion.*

Such a case (Bayard vs. Singleton, Martin's Rep., vol. i., pp. 42–48) came before the court at the May term, 1786. The judges had the nerve to deny the motion to dismiss. Justice Ashe observed, among other things, that "the people of this country, with a general union of sentiment, by their delegates, met in congress and formed that system or those fundamental principles comprised in the Constitution, dividing the powers of government into separate and distinct branches, to wit: the legislative, the judicial, and executive, and assigning to each several and distinct powers, and prescribing their several limits and boundaries." We find added to his remarks, "Curia advisare vult." At the November term of the following year the court took up the case, and decided that the act above alluded to was unconstitutional and void. And so we may say the North Carolina court intimated an intention to hold to the doctrine mentioned several months before the decision of the Rhode Island court, though the decision was not rendered till the year following.

The justices sitting at the hearing of this case were Ashe, Spencer, and Williams. The last-named occupied the place resigned by James Iredell. Iredell was counsel for the plaintiff in this case. He wrote a strong pamphlet vindicating the power of the judiciary. The judges were eventually sustained by public opinion. Iredell was afterwards Associate Justice of the Supreme Court. It is not impossible that this decision and the weight of Judge Iredell's opinion may have had some influence on the court in arriving at the decision of Marbury vs. Madison, as well as the fact, mentioned by your correspondent, that the doctrine was recognized by Chancellor Wythe, under whom Chief Justice Marshall studied law.

Wm. Myers Little.

Charlotte, N. C., September 30, 1893.

To the Editor of The Nation:

Sir: Mr. Rombauer's communication in your issue of September 28 relative to Wythe's influence on Marshall called to my mind some rather copious notes that I made a few years ago in the same connection, and I concluded that a résumé of the results then obtained might be not uninteresting to your readers. I write without access to many of the authorities cited, but I made my notes with considerable care.

It is curious that while many writers upon our constitutional law and history have recognized the importance of the famous case of Trevett vs. Weeden, few of them have seemed to be aware of the fact that that case was by no means the first in which a judicial body held an act of a State Legislature to be unconstitutional. Prof. Henry Wade Rogers, in his preface to that admirable work, 'Constitutional History of the United States as Seen in the Development of American Law,' for which our thanks are due to the University of Michigan, has not fallen into this mistake. He refers to the well-known New Jersey case of Holmes and Ketchum vs. Walton, tried in 1780, which, I believe, was first unearthed by President Austin Scott of Rutgers in a paper read by him before the American Historical Association (see their Papers, vol. ii). Prof. Rogers next refers to Trevett vs. Weeden (1786), and concludes by citing the South Carolina case of Bowman vs. Middleton decided in 1792. It is strange that he says nothing of certain Virginia cases which must have been familiar to Marshall and have influenced his decisions far more than the three cases named above. These cases have been ably discussed by President Lyon G. Tyler in his 'Letters and Times of the Tylers,' but they are well worth study in the original reports.

In 1782, four years before the decision in Trevett vs. Weeden, the case of the Commonwealth vs. Caton (4 Call, pp. 5-21) was tried in the General Court. The constitutionality of a pardon to traitors authorized by the lower house of the Assembly alone was involved and was denied by the court. Edmund Pendleton was the only judge who seemed chary of expressing an opinion; George Wythe was as thoroughgoing in the expression of his as Marshall could have been. He said:

"Nay, more, if the whole Legislature, an event to be deprecated, should attempt to overleap the bounds prescribed to them by the people, I, in administering the public justice of the country, will meet the united powers at my seat in this tribunal; and, pointing to the Constitution, will say to them, Here is the limit of your authority; hither shall you go, but no further."

Whatever may be thought of the Canute-like eloquence of the justly distinguished chancellor, it can hardly be denied that Marshall, who studied law under him, must have been influenced by his views on this important matter. It may be noted that John Blair, who was one of the first justices appointed by Washington to the Supreme Court, was equally outspoken in his opinion.

The next case in Virginia occurred in 1788, two years after Trevett vs. Weeden. The Legislature had passed an act (Hening xii., 532, 644, 764) by which duties in the new district courts were devolved upon the judges of the Court of Appeals, who already had duties in the General Court and in the courts of admiralty and chancery. This increase of duties without a corresponding increase of salaries was deemed unconstitutional by the judges, and they determined to protest, although conscious that the case was a delicate one since their own pockets were involved. They, therefore, drew up what Mr. Tyler rightly terms "a most elevated and dignified remonstrance" (printed in 4 Call and 1 Virginia Cases), which was transmitted to the Legislature at a special session (June 23 to June 30, 1788) called by Gov. Edmund Randolph for the purpose of reconsidering the act. The Legislature promptly repealed the obnoxious act, but at their regular meeting, in the fall of the same year, they thoughtlessly passed a new law reconstituting the Court of Appeals and practically removing all the old judges. This was plainly unconstitutional; but the judges were now as graceful as the Assembly had been, for they resigned their positions while protesting against the principles of the act (Tyler's 'Tylers' i., pp. 175-6). It is obvious that we have here no judicial decision, properly speaking, but we certainly have a very emphatic statement of the principle of constitutional law under discussion.

In 1793 the General Court was confronted with a very similar question in Kamper vs. Hawkins (1 Virginia Cases, p. 20). This case involved the constitutionality of an act of the previous year, which gave judges of the General Court, when sitting in district courts, powers belonging to chancery. The court pronounced the act to be unconstitutional, all of the judges delivering long and weighty opinions. Not one is at all in doubt as to the propriety of declaring acts of legislature unconstitutional. One, Judge Henry, shows that he knew as clearly as any modern publicist the difference between an omnipotent parliament and a legislature serving under a constitution. Judge Roane stated that he had been doubtful on the point, but that his opinion had changed. Judge Tyler, too, delivered an excellent opinion, which his grandson has done well to reproduce at length. He saw as clearly as Marshall did afterwards that a judge can decide on the constitutionality of a law only when it is brought to his notice in a definite case; in his own words, he would not "in an extra-judicial manner assume the right to negative a law." Finally, Judge Tucker delivered an opinion which seemed to me, when I read it some years ago, to be but little less lucid than Marshall's far more celebrated opinion in Marbury vs. Madison. I write, of course, as an amateur in legal matters and subject to correction.

We are now brought down to the case of Page vs. Pendleton, cited by Mr. Rombauer, for which I wish to thank him, as it had escaped my notice. We see that from 1782 there is a chain of cases in Virginia in which the great doctrine of the right of the judiciary to pronounce on the constitutionality of laws is laid down with ever-increasing force and clearness. We need not forget the colonial precedents (Wilson's 'The State,' p. 474; Bryce's 'American Commonwealth,' chap. xxiii.) that helped these early judges, but we must remember that it took some boldness to apply those precedents after the changes brought about by the Revolution, just as it took some boldness in Marshall to apply State precedents to such a body as the Congress of the United States. That he did extend and apply these precedents is evident, for the effect upon him of the cases cited above must have been great. They took place while his mind was in the formative period, and he had been Wythe's pupil only two years before the latter delivered his opinion in Commonwealth vs. Caton. It is, I believe, generally conceded that Marshall was not a great lawyer in the sense of being widely read; he was, therefore, thrown all the more upon precedents familiar to him from his early training and practice in Virginia. His essential greatness is not diminished by the acknowledgment of his indebtedness to such men as Wythe, Blair, Henry, Tyler, and Tucker.

W. P. TRENT.

SEWANEE, TENN., October 1st, 1893.

P. S.—I have assumed above that Commonwealth vs. Caton (1782) is the first Virginia case of the kind under discussion, and Holmes vs. Walton (1780) the first case in the United States. This is not incontestably true. Judge Tucker, in his edition of Blackstone (Part I., Appendix, p. 293), published in 1803, expressly stated that in the case of the attainder passed by the Virginia Legislature in 1778 upon a notorious freebooter, Josiah Philips, the General Court refused to pass sentence without trial, and put the prisoner "upon his trial, according to the ordinary course of law." He then drew the conclusion—"This is a decisive proof of the importance of the separation of the powers of government, and of the independence of the judiciary; a dependent judiciary might have executed the law, whilst they execrated the principles on which it was founded."

This case of Josiah Philips is one of the most remarkable that have ever occurred in the United States. It has been treated, but without the necessary fulness, in the lives of Patrick Henry by Wirt and William Wirt Henry, and was the subject of more than one of Jefferson's letters. It played an important and curious part in the Virginia Convention of 1788, and is probably the most typical case of attainder known to our judicial annals. If Judge Tucker is right, it is also a case of great constitutional importance, as it antedates Holmes vs. Walton by two years. I have in manuscript a laborious analysis of the whole case, an abstract of which I had the honor of reading before the American Historical Association three years ago. In this analysis I have given my reasons for believing that Judge Tucker was mistaken in his assertion that the General Court actually pronounced upon the constitutionality of the act of attainder against Philips—reasons of an historical nature, and wholly independent of those laid down subsequently by the Supreme Court in the famous case of Cooper vs. Telfair (4 Dallas, 14), in which it was held that, unless bills of attainder were specially prohibited by the State Constitution, the right to make use of them inhered in the State legislatures prior to the adoption of the Federal Constitution. I cannot trespass upon the patience of your readers by detailing these reasons here; but it seems proper to refer to the case of Philips as a possible instance of judicial overruling of a legislative act, on account of the weight that must always attach to the statements of so able a jurist as Judge Tucker. I may at some future time make bold to submit to you a brief account of this curious and important case.

W. P. T.

## THE DIVISION OF WORDS.

TO THE EDITOR OF THE NATION:

SIR: Allow me to state that the *Harvard Graduates' Magazine* is printed at the Riverside Press, Cambridge, and that the system of syllabic division adopted in its pages is the system which has been in operation there for many years. To imply, as your esteemed correspondent "H. U., '31," implies, that the *Magazine*, by printing *prom-ise* instead of *pro-mise*, or *reg-ister* instead of *re-gister*, lays itself open to the charge of illiteracy, seems to me to be as unjustifiable as to impute illiteracy to Emerson, Longfellow, and Lowell—not to mention living authors—who had their books put in type at this same Riverside Press.

The fact is, that in this method of dividing words one method prevails in England and another in America; being Americans, we follow the usage which Webster and Worcester and other dictionaries have warranted. "H. U., '31," regards Lindley Murray's rule as infallible: Americans do not. Lindley Murray's method is as arbitrary as ours, and it would require but little pains to show incongruities in both methods. The main purpose of any method is to secure uniformity. "H. U., '31," suffers from a misapprehension in imagining that literacy or illiteracy in these matters depends on the adoption or rejection of English custom. Would he accuse Mr. Lowell or Prof. Norton of illiteracy because they use the American form *honor* instead of the English form *honour?* Would he imply that such scholars as Prof. Lane and Prof. Goodwin are illiterate because they do not pronounce Latin and Greek according to Oxford usage? And even in English printing-houses there is not the uniformity which "H. U., '31," supposes. In the course of a few pages of the first edition of Ruskin's 'Modern Painters,' one of the most carefully printed books which England has produced, I find such contradictions as *difference* and *refe-rence;* but not on this account would I charge Ruskin or the English with illiteracy. In short, the hyphen as a test of culture seems to be uncertain, and happily the reputation of Harvard University does not depend on so slight a thing.

I should refrain from trespassing on your space to present these self-evident facts, did I not fear that, by silence, I might appear to desire to shift your correspondent's charge of illiteracy from myself, to whom it belongs, to either Harvard University or the gentlemen who compose the council of the *Graduates' Magazine* Association.

WILLIAM R. THAYER.

CAMBRIDGE, MASS., October 7, 1893.

# Notes.

ROBERTS BROS. will shortly publish 'Public Libraries in America,' an historical and descriptive account by William I. Fletcher, Librarian of Amherst College; 'Such As They Are,' poems by Thomas W. and Mary Thacher Higginson; and 'Allegretto,' poems by Miss Gertrude Hall.

T. Y. Crowell & Co. announce 'The Englishman at Home: His Privileges and Responsibilities,' by Edward Porritt; a Life of the wife of Rembrandt, by Charles Knowles Bolton; and a volume of verse by E. F. Fenollosa.

'Twenty Years at Sea; or, Leaves from My Old Log-Books,' by Frederick S. Hill; 'Glimpses of Unfamiliar Japan,' by Lafcadio Hearn, in two volumes; 'An Old Town by the Sea,' namely, Portsmouth, N. H., by T. B. Aldrich; and 'In Exile, and Other Stories,' by Mary Hallock Foote, are in the press of Houghton, Mifflin & Co., together with illustrated holiday editions of the 'Autocrat of the Breakfast-Table' (illustrations by Howard Pyle); Mrs. Deland's 'Old Garden' (with more than a hundred color designs by Walter Crane); and Miss Jewett's 'Deephaven' (illustrated by Charles A. and Marcia O. Woodbury).

'From Sunrise to Sunset,' poems by Curtis Guild, is promised by Lee & Shepard.

D. Appleton & Co. will publish a diary of travel, 'In the Track of the Sun,' by Frederick D. Thompson, illustrated by Harry Fenn; Bryant's 'Poems of Nature,' a selection, with illustrations by Paul de Longpré; 'Picciola,' with copious drawings by J. T. Gueldry; and 'The Country School,' a study of New England schoolboy life, by Clifton Johnson.

The fall list of Charles Scribner's Sons includes the 'Life and Correspondence of Dean Stanley,' by R. E. Prothero and Dean Bradley; a book on New Mexican customs and types, 'The Land of Poco Tiempo,' by Charles F. Lummis; nineteen African legends picked up by Henry M. Stanley and told in 'My Dark Companions and their Strange Stories'; 'Stelligeri, and Other Essays concerning America,' by Prof. Barrett Wendell; 'An Old Master, and Other Political Essays,' by Prof. Woodrow Wilson; a popular edition of the 'Cyclopædia of Music and Musicians'; a limited portfolio edition of 'French Illustrators,' by Louis Morin, with many reproductions after more than sixty artists; and 'Rembrandt: His Life, His Work, and His Time,' by Émile Michel, edited by Frederick Wedmore, and illustrated most abundantly with photogravures, cuts, and color reproductions.

J. B. Lippincott Co. will supply the American market with a new edition of Goldsmith's works, illustrated by Herbert Railton.

Ginn & Co. have in press 'The Beginnings of the English Romantic Movement,' by Wm. Lyon Phelps, instructor in English literature at Yale. The book gives the results of an examination of the minor literature from 1725 to 1765, with a view to tracing the early growth of English Romanticism.

We commended last spring Miss Jane Barlow's 'Irish Idylls,' with its equivocal title, which might rather suggest verse, whereas her metrical 'Bogland Studies' would by the same token have been taken for prose. We are glad to see an American edition of so pathetic, humorous, and truthful a work (Dodd, Mead & Co.). Miss Barlow launches it with a little preface by way of propitiation. The same firm renew the 'Journal of Eugénie de Guérin' in two pretty blue volumes with gilt tops, and Austin Dobson's 'Memoir of Horace Walpole,' one of the less valuable of this author's numerous productions. The third edition of Mr. Winter's 'Shakespeare's England' to bear the imprint of Macmillan & Co. is the second issue

for the present year, but the work has been revised and wholly reset, furnished with a variety of cuts and a portrait of the author, and bound in holiday or gift-book fashion. No doubt the illustrations and the general attire will increase the popularity of this sentimental tour among literary haunts. In conjunction with the Messrs. Black, Macmillan & Co. add volumes xi. and xii. to the Dryburgh Edition of the Waverley Novels, being 'The Abbot' and 'Kenilworth,' still excelling rather in typography than in illustrations; and in conjunction with J. M. Dent & Co. extend the captivating edition of Fielding's Works by 'Tom Jones' in four volumes, with vignettes of scrupulously decent selection and design. From the Harpers we receive three more volumes in the uniform edition of William Black's novels, viz., 'White Heather,' 'Sabina Zembra,' and 'The Wise Women of Inverness.' 'Stories of the Army' is the latest in the pocket series of "Stories from *Scribner*." 'Alice's Adventures in Wonderland' has been copyrighted to T. Y. Crowell & Co., perhaps as to its decorative borders and such of its illustrations as are not Tenniel's and therefore, we feel like saying, have no excuse for existence, so intimately associated in the minds of the rising generation are the original cuts and the classic text. Tenniel-and-water is, literally, what the new designs amount to, and the mixture of real and counterfeit, of process line and process wash, greatly detracts from the comeliness of the volume.

It would be hard to account for the revival of buccaneer literature except on the familiar principle that it never rains but it pours. Year before last we had Mr. Howard Pyle's 'Buccaneers and Marooners of America' and the reprint of Capt. Burney's 'History of the Buccaneers of America.' Both these writers drew largely upon Esquemeling's 'Buccaneers of America' (1678), which in turn is now reprinted together with the narrative of another authority, Basil Ringrose. The volume, which is published in this country by Charles Scribner's Sons, is a handsome octavo of 500 pages, indexed and illustrated in facsimile with buccaneer portraits, scenes, charts, and coast contours. The introduction, by Henry Powell, adds little value to the work, and should not be trusted implicitly: St. Kitts was not simultaneously settled by English and French (pp. xvi, xvii.); the Mosquito Coast has not "for some time past been absorbed into the adjacent republic of Honduras" (p. xi.). Descriptions of primitive peoples, manners, and customs occasionally relieve the tale of rapine and adventure.

Superficial learning is, after all, better than ignorance, and many are the books which are written in its interest. Of this class is 'Chapters in Modern Botany,' by Prof. Geddes of University College, Dundee (Scribners). The book avowedly begins "with something rare or strange—at any rate unfamiliar," in order to avoid the "prejudice that botany deals mainly in hard names," and to awaken at once interest in the subject, so that the reader may be tempted to learn something of the forms and processes of plant-life, and at least acquaint himself with the methods of study. Accordingly, the writer begins with an account of pitcher-plants, and presently finds himself obliged to assume that somehow or other a Sarracenia has been improved into a Darlingtonia, and then he wants some experimentalist to catch a young and ambitious plant of the one genus trying to assume the form of the other. From pitcher-plants the book passes naturally to fly-traps, and from these to the wonderful man-eating (or at least dog-eating) plant of Central America, which perhaps was nothing more than some kind of a cat-brier. Later chapters deal with many phases and functions of vegetation, and are interesting reading for one who knows something of the subject already. One or two pages near the end of the book commend systematic botany as at least a subject from which accuracy in the use of language may be learned—a kind of accuracy which must have been asleep when *Monotropa Hypopitys* was called an orchid.

A less ambitious book is 'Recreations in Botany,' by Caroline A. Creevey (Harpers). At the outset the reader is warned against poison-ivy and poison-sumac, which is well; and in the second chapter the use of a botany-box, a lead-pencil, a sharp knife, and a pocket microscope is recommended, while 'Gray's Manual' must be within reach. The student is also told to look up the meaning of "obcordate" and other hard words in the glossary, and to refer occasionally to the 'Lessons.' This is surely a fair beginning, and disposes the reviewer to look leniently upon an occasional misspelled name of a plant, such as "Epiphagus" for Epiphegus, "asparinoides" for aparinoides, and "cœrula" for cœrulea. The authoress confesses to having waded, shoes and stockings off, into a swamp in search of *Arethusa bulbosa*, "though clumps of poison-sumach were growing near by," and, as an older swamp-wader knows very well, mosquitoes, snakes, and snapping-turtles may have been watching her. She may, therefore, be forgiven for saying that numbers of the Arethusa "would spring up and bloom in a single night," and for calling *Calopogon pulchellum* a barbarous name, which it really is—for does not Calopogon signify a beautiful *beard*, and is it not barbarous to force a neuter adjective to qualify a masculine noun?

The author of 'The Trees of Northeastern America' has now followed that work with 'The Shrubs of Northeastern America' (Putnams). Here the species are arranged in natural orders, and in this respect the book is better than its predecessor. The same effort is made to avoid the usual language of botany, and with the same result. One sentence is enough to quote: "In some regions, an old opinion is said still to linger, that the presence of the barberry causes blight in the grainfield." Surely some of the botanists to whom the author acknowledges his obligations could have directed him to the literature concerning the connection of *Æcidium berberidis* and *Puccinia graminis*.

In 'How to Judge a Horse,' by Capt. F. W. Bach (William R. Jenkins), we have a treatise of really practical convenience. The anatomy of the animal is so clearly explained as to make the structural and dynamic importance of the bones intelligible to the ordinary man. There is much else, upon training and driving and upon bits, saddles, stables, etc.

A vast amount of useful information is compressed into a small book entitled 'Domestic Economy,' by F. T. Paul (Longmans, Green & Co.). The author has for some time delivered an annual course of lectures at the Edge Hill Training College at Liverpool, and upon that foundation he has constructed a text-book. A great variety of subjects is treated, such as physiology, digestion, foods, dress, and hygiene, and it would not be easy to find a more convenient compendium of things which every one needs to know, but which most of us do not know exactly where to look for.

In the *Geographical Magazine* for September Mr. George N. Curzon continues his account of his journeys in Indo-China with some interesting details of the life of the Annamese. In reference to the native government, he says: "Annam exhibits the spectacle, unique in the East, of a complete decentralization of administrative and executive authority, due to the institution of a communal system which is enshrined in the customs of the people, and has long familiarized them with the liberties of self-government to which Europe is now returning." The famous Khmer ruins at Angkor he believes, contrary to the common view, to have been dedicated to "Brahmanism, pure and simple, upon which at a later date were grafted Buddhistic additions." The accompanying map, including Siam, is a reduction of the French official map published this year. The Zoutpansberg gold-fields in the northern part of the Transvaal are described by F. Jeppe, who says that, notwithstanding the great natural drawbacks, such as scarcity of water, high cost of transport and provisions, and a dangerous climate, the mines are steadily gaining. The paper is illustrated by a map showing the geological formations.

The *Scottish Geographical Magazine* for September opens with a short account of the Siamese frontier, by Mr. Coutts Trotter, accompanied by a useful map. Among the other articles are an extended notice of Mr. F. H. Newell's 'Hydrography of the Arid Regions of the United States,' and a criticism of the map contained in Mr. Curzon's recent work on Persia. We may note, however, an inconsistency in this number of the magazine itself. The port of Hué, the capital of Annam, is given by Mr. Trotter as Tourane, but in the map it is Touron; in the French official map, as given in the *Geographical Journal*, it is Turan.

The *Psychological Review*, to be published by Macmillan & Co. early next year, will be edited by Profs. J. Mark Baldwin of Princeton and J. McKeen Cattell of Columbia, with a notable collaboration.

We have before us the first number of the *Proportional Representation Review*, a quarterly magazine of modest dimensions published at Chicago by the American Proportional League; also the first number of *Popular Astronomy*, whose objects we have already heralded, issued from the Goodsell Observatory of Carleton College, Northfield, Minn.; and finally the initial number of *Aeronautics*, significantly published by the *American Engineer and Railroad Journal* as a medium for one branch of the science of transportation. It opens with the proceedings of the Conference on Aerial Navigation held at Chicago on August 1-4, and closes with "Notes" of thrilling balloon trips and other pertinent items of news.

The *Publishers' Weekly* has reprinted in a neat pamphlet its Review of 'The Publishers' and other Book Exhibits at the World's Columbian Exposition,' than which we have seen none better.

At the eleventh hour the official publishers of the World's Fair, W. H. Conkey & Co., have got out a 'Revised Catalogue, Department of Fine Arts,' in which the pictures are numbered consecutively as they appear on the walls. There are no memoranda of the pictures themselves, but instead we have portraits of the several commissioners. There is further an index of exhibitors, and lists of judges, awards, etc.

The International Copyright Conference which was to have been held this year in Paris, has been postponed till next year at the request of France. Last month, however, the

Association Littéraire et Artistique Internationale met at Barcelona, having copyright for its entire programme, and we hope to be able to give some report of its doings at no distant date.

The regular courses leading to an M.D. degree at the Medical School of Johns Hopkins University opened on October 5 with a class of sixteen, of whom three are women. The high standard set by Johns Hopkins for admission to this school has, for the first time in the United States, secured a band of medical students each with a bachelor's degree from some reputable college. Of the thirteen men, Johns Hopkins supplies four, Yale three, Harvard two, and Amherst, Swarthmore, Virginia Agricultural College, and the University of Wisconsin each one. The women are graduates respectively from Smith, Vassar, and Wellesley. A most encouraging feature in connection with this important step in medical education is the number and grade of the institutions from which these students have been drafted. The fact, moreover, that eleven of the men in this pioneer class come from colleges not coeducational, disposes at once of a current prophecy that the admission or presence of women "would keep away male graduates of leading conservative institutions."

The far-seeing Bürgermeister of Oberammergau, whose sound municipal management and forethought for the comfort of the numberless visitors to his modest community brought him well-earned fame in 1890, is not allowing his people to grow rusty in the exercise of their unusual talent. Under his direction, a drama treating of the life and death of St. Vitus is being performed by the villagers during the autumn relaxation of their hardy and laborious lives. The play is by Herr Molitor, and its pleasantly rhythmical title is "Die Rose von Sicilien." With Bürgermeister Lang as director, aided by his innately artistic fellow-actors of the Passion Play, it is safe to assume that the gifted peasants of this Bavarian highland will have lost none of their prestige when their village next becomes the centre of universal curiosity and excitement, which the modern temper seems to demand that each summer shall now supply in one part of the world or another.

Mr. George C. Foulk, whose death by acute cerebral congestion, near Miyanoshita, Japan, has been reported, is one of the few Americans who have helped to make Corea known to the world. As one of the junior officers of the United States Navy, he became, while on the Japan station, fluent in the language of Nippon, and gained some knowledge of Corean. Accompanying the Corean embassy to this country in 1883, he acted as interpreter, and on returning was naval attaché to the United States Legation at Séoul. For several months he was in sole charge. He made excursions in places remote and difficult of access, studying especially the military and political systems of the recently hermit kingdom. The results of these studies are to be found in a masterly series of papers in the United States Foreign Relations for 1885. In the outbreak of 1884, while in the interior, he barely escaped with his life. Resigning from the navy, and marrying a Japanese wife, he settled in Kioto as professor of mathematics in the Doshisha University. The loss of this promising scholar is to be greatly lamented.

The friends of Mrs. Rebecca Lloyd Brünnow will hear with regret of her death, which occurred on July 6, at her summer residence, Châlet Beauval, near Vevey, Switzerland. She was the daughter of Henry P. Tappan, first Chancellor of the University of Michigan, and will be remembered by her translations of Victor von Scheffel's "Der Trompeter von Säkkingen" and "Bergpsalmen." The last production from her pen was a poem entitled "F. B. In Memoriam," and privately printed; a loving tribute to her deceased husband, the well-known astronomer.

—In a recent number of the London *Times* there is a strikingly clear and somewhat startling statement of the causes and extent of the recent religious riots in India. They were not confined to the streets of Bombay, but the fanatical movement of which they were the expression has spread widely throughout northern India. Early in the summer in certain districts in the northwestern provinces circular letters were addressed secretly to each village, "apparently in some cases to almost every Hindu household," calling on the able-bodied men to assemble at a fixed place on the day of the Muhammadan festival to prevent the sacrifice of cows. In obedience to this summons, in one district alone armed mobs of Hindus "assembled at thirty-four preconcerted centres in numbers varying from 100 to 4,000 men," and not only rescued the sacrificial cows, but beat the sacrificers and plundered their homesteads. This movement has been greatly stimulated by the Cow Protection Society, which in the nine years of its existence has grown into a new power in India. By pamphlets, public meetings, and through the native press, it urges the protection of the cow not only on account of its sanctity, but also on the economic grounds of the diminishing and deteriorating of the cattle through their use for food and sacrifices. The society has headquarters associations in different parts of India, with branches in the great cities and "a vast irregular army of sympathizing local bodies." Added to these is the multitude of Hindu devotees and religious mendicants who wander over India preaching the sanctity of the animal which still forms the symbol of orthodox Hinduism. The effect of this propaganda is that the feeling between the Hindus and Muhammadans has become electric, and any accidental conflict may bring about an explosion.

—In an interesting paper entitled "King John and the Abbot of Bury," which Mr. Thomas Arnold contributed to the June number of the *Contemporary Review*, occurs this passage: "The body of [Abbot] Samson was laid, *doubtless with due funeral rites*, in a small burial close, 'in pratello,' near the monastery, whence, as we are afterwards informed, it was translated at the end of two years and a half into the chapter-house." Now Abbot Samson died December 30, 1211, at a time when England, as Mr. Arnold himself tells us, "lay under the great interdict imposed upon her by Pope Innocent III.," etc. The words we have italicized seem to have been written in forgetfulness of the fact that funeral rites were among the things of which interdicted countries were deprived. It is true that, in some cases, clerical persons, as also beggars, strangers, and infants, were excepted from this part of the Interdict; but we have the express testimony of the annals that such was not the case in this particular Interdict. We will cite for it only Matthew Paris ('Hist. Angliæ,' anno 1208): "Quod [sc. interdictum], sicut in authentico Domini Papæ expressum habetur, *non obstantibus privilegiis* ab omnibus est inviolabiliter observatum. Cessaverunt itaque in Anglia omnia ecclesiastica sacramenta, præter solummodo confessionem et viaticum in ultima necessitate et baptisma parvulorum. *Corpora quoque defunctorum de civitatibus et villis efferebantur et more canum in biviis et fossatis sine orationibus et sacerdotum ministerio sepeliebantur.*" This leads us to understand why Abbot Samson was buried "in pratello"—a piece of probably unconsecrated meadowland. The explanation is made exceedingly probable by the time of the translation of the remains to the chapter-house. The Interdict was laid upon England in 1208, and was removed in 1214, after six years and one month—just about two years and a half after the Abbot's burial in unconsecrated ground.

—Dr. Karl Bücher, who gained so deserved a reputation by his work of some six years ago upon the population of Frankfort-on-Main in the fourteenth and fifteenth centuries, has just put together in book form half-a-dozen recent lectures under the title 'Die Entstehung der Volkswirtschaft' (Tübingen: Laupp, 1893). Of these one is a popular summary of the results of his investigations into the mediæval life of Frankfort, in which, it will be observed, he abides firmly by his much-attacked opinions on the small population of the cities. Of the others the most striking are the two which attempt to sketch, one the whole current of economic development down to the present, the other the sequence of industrial systems. Both are vigorous pieces of writing, putting a good many things in a new light, and furnish a welcome relief from the somewhat narrow formulæ of most writers on the subject. But even Bücher's ambitious formulation of economic progress fails to cover anything like the whole field; it cannot aid clearness of thought, for instance, to lump together all the methods of production and distribution which existed before the rise of the mediæval town under the title of "The Isolated Household." Moreover, one cannot help thinking that his attention has been too exclusively directed to urban life, and that he pays too little regard to agrarian conditions. He certainly thinks himself more original than he is; for most of what he tells us had already been said in another shape by Schmoller. Why he should go out of his way to have a fling at the economists of the historical school, and to express his sense of the value of the deductive method, is a little hard to say—possibly it would be explained by the inner university history of the last few years; for Bücher's own admirable work is after the best manner and in the best spirit of the historical school, and where the generalizations of the economists he criticises are faulty, they are to be mended—as his own procedure shows—not by more analysis, but by deeper and wider historical knowledge.

—M. Émile Deschanel, professor and Senator, literary man and politician, has written a two-volume book on Lamartine, who was also in his day a literary man and a politician. Having proved to his satisfaction, in his well-known volumes on the romanticism of the classic French writers, that romanticism antedates Rousseau, De Staël, and Chateaubriand, M. Deschanel, in these two very interesting volumes, proposes to raise Lamartine to the highest pinnacle of glory, and to prove that idealism, and not realism or naturalism, "is the master of the world." This is a large task, and one which, to most students of literature, will seem impossible of accomplishment. The days are gone by when idealism such as Lamartine embodies can rule minds. That the sentiment in his works, the beauty of much of his verse, the pathos of more than one of his poems—the famous "Lac," the nearly equally famous "Crucifix," the "Vallon," and

some others—will always compel admirers, must be conceded. But that Lamartine will ever again sway minds and influence literature as he unquestionably did when at the apogee of his fame, is a forlorn hope indeed. Much of his work has already perished, more will disappear in days to come, and the "Swan," as he called himself, will be read in part only, and in very small part. Nevertheless, M. Deschanel's work is not only acceptable, it is useful. His enthusiasm for the poet may not be shared by the reader, but his study of Lamartine's career and his analysis of his prose and verse writings will prove convenient for reference and for correction of some legendary blunders, justified, so far as public acceptance of and belief in them go, by the fact that Lamartine himself is responsible for many of them. It is by means of the poet's correspondence that M. Deschanel has corrected these errors, and were this the sum of his service he would be entitled to gratitude. He has done much more: laying aside a large measure of his enthusiasm, he has frankly noted faults and defects as well as beauties and qualities. After reading the "Harmonies," "Jocelyn," or "La Chute d'un Ange," M. Deschanel's comments on these poems strike one as just and moderate. Further, he has not forgotten the political side of Lamartine's career, and the fulness with which he describes it enables the reader to understand Lamartine better than he could if he looked at the poet alone.

## TWO BOOKS ON ANCIENT CONSTITUTIONS.

*The City-State of the Greeks and Romans*: A Survey Introductory to the Study of Ancient History. By Warde Fowler, M.A., Fellow and Sub-Rector of Lincoln College, Oxford. Macmillan & Co. 1893.

*History of Federal Government in Greece and Italy.* By Edward A. Freeman, edited by J. B. Bury, M.A., Fellow of Trinity College, Dublin. [First edition, published 1863, entitled 'History of Federal Government from the Foundation of the Achaian League to the Disruption of the United States of America.'] Vol. I. General Introduction. History of the Greek Federations. Macmillan & Co. 1893.

Both of these books serve to remind us of the unique position occupied by the history of the State among studies pursued at Oxford, the *alma mater* of so many living statesmen. Mr. Warde Fowler's 'The City-State' is an expansion of lectures recently given at Oxford to pupils reading in the school of Literæ Humaniores, while Mr. Bury's edition of the 'History of Federal Government' makes once more accessible an early work of the late Prof. Freeman, whose name is associated with the remarkable development of historical study which has characterized the Oxford of the last thirty years. If Mr. Fowler in his "biography" of the ancient City-State gives us the last word, Prof. Freeman's History contained in its introductory chapter the first word, of the Oxford school on the working of ancient democratic and oligarchical institutions. This being the case, it is interesting to note how fully both writers agree in all essentials, not only with each other, but with Grote and Thirlwall. Thirlwall, indeed, serves as Freeman's constant guide when he deals with the Achæan League, his main theme; and in the picture of the City-State given by both our authors, Grote's favorable view of Athenian democracy is confirmed and justified, though it receives certain rectifications and qualifications at the hands of each.

Prof. Freeman has gone out of his way to justify the rejection by Acanthus and other towns of the terms of alliance offered by Olynthus. They need not, he affirms, have been actuated, as Grote supposes, merely by a blind attachment to their own existence as independent City-States, for it is by no means clear that a really free and equal Federal relation was proposed, and, whatever the proposal, it was made at the sword's point. Freeman contends, therefore, that Grote made far too much of the Olynthian League. But his real grievance is that, having made much of the Arcadian League, Grote closes his history and excludes all account of the Achæan League from its pages. In this matter he maintains that Grote looks at everything from a purely Athenian point of view. "In Mr. Grote's view, Athens has become contemptible; the autonomous city is no longer the single type of Grecian Government. Therefore Grecian history has come to an end; or, at all events, Mr. Grote has no heart to continue it." Mr. Fowler would probably not quarrel seriously with this criticism passed upon Grote, for a summary sketch of the Achæan League forms a portion of his account of the influences which brought about the dissolution of the City-State; and his introductory chapter contains a timely plea in favor of regarding—at least for the study of constitutional history—the career of Greece and Rome as a unit. This involves some attention to the history of a period which brought Greece and Rome into contact. But Mr. Fowler nowhere countenances the mood of indignation and impatience with which the historian of federalism chronicles Roman interference in the later days of the Achæan League. This interference was one of the steps towards a reconstitution of politics out of which the modern State and federalism as constituted to-day have arisen. To Freeman writing thirty years ago, the Romans in Achæa seemed like the Austrians still lingering at Venice. He was too much influenced by the prevailing movement in favor of nationalities to have a clear vision in the affairs of "the Greece of Polybius." Had it been otherwise he might have found that period as uninteresting for the historian of Greece as it seemed to Grote.

A far more fundamental rectification of Grote (it can hardly be termed dissent from him) is contained in Mr. Fowler's protest against accepting as decisive the condemnation of Athenian democracy by Plato, Aristotle, and Isocrates, "who knew Athens only after the gifted and animated population of the golden age had been thinned down sadly by war and pestilence." He trenchantly urges that it is "not scientific to judge of the workings of Athenian institutions in the fifth century B. C. by the opinions of men who knew them only as worked by a degenerate population in the fourth." Grote felt this, and based his account of democracy more or less upon it. Indeed, the clear apprehension of this truth which we now have is chiefly due to Grote, but nevertheless he does not embody a clear and consistent acceptance of it in his account of the Sophists and of the trial of Socrates.

The clearer apprehension in all their bearings of certain leading characteristics of the Greek and Roman City-State has been slowly worked out during the last thirty years until every scholar can see, with Mr. Fowler, that the differences between it and the modern State are such as to make them specifically different. A recognition of this alteration in the modern point of view is brought home to us by the strange effect of Freeman's contrasting the two species under the respective designations of the "small State" and the "large State." Nothing in his excellent definitions can be quarrelled with, but no one who attached as much importance as he did to the niceties of terminology, would ever, in the present state of knowledge, be content with the qualifications "small" and "large" to cover the difference as now established. In this respect, as well as in the political atmosphere gathered around the 'History of Federal Government' by Freeman's characteristically passionate allusions to passing events, his book is linked to an order of European politics which has passed away, whereas the reflections by the way contained in Mr. Fowler's book belong to the political world of the present day. In such allusions his 'City-State' does not greatly abound, but a certain number are necessary, not only for the presentation of his theme, but also for accomplishing his educational purpose—to stimulate his pupils' interest and widen their historical horizon. A comparison of such allusions in these two books affords striking illustrations of the way in which the march of contemporary events necessarily controls our reading of past history, and, by constantly shifting our point of view, presents antiquity in one perspective after another.

When Freeman wrote, Louis Napoleon Buonaparte (as he always spelt the alien usurper's name) had just perpetrated his Coup d'État, Hungary and Venice were still oppressed by the Austrian Archduke, who had assumed "the portentous title of Emperor of Austria." Accordingly, he is concerned to maintain that the right equivalent of τύραννος is *emperor* in its modern acceptation. The history of France for him is a succession of usurpations on the part of the kings, tyrants, and emperors of Paris, who have encroached upon "the old realms of Germany and Burgundy." England was evidently Freeman's beau ideal of a well-built modern State, as is shown by words which sound strangely in the present constitutional crisis. They are indeed all the more remarkable considering the pronounced home-rule attitude subsequently taken up by the writer: "No one could wish to cut up our United Kingdom into a Federation, to invest English counties with the rights of American States, or even to restore Scotland and Ireland to the quasi-Federal position which they held before their respective Unions." Elsewhere the writer laughs at Wales, saying: "It has been gravely declared at a Welsh Eisteddfod that her Majesty is properly the Queen of Wales, with the province of England annexed. However this be, the province and the kingdom have shown no tendencies towards separation for several centuries." Napoleon's Coup d'État inspired our author with the feeling that "a great capital, even in a consolidated State, has a strong tendency to be a great evil." In a Federal State this danger is so much enhanced that Freeman would apparently dispense with capitals in such States. Thebes and the Bœotian League are his warning example, and in describing the reconstitution of the enlarged but moribund Achæan League by Philopœmen, he approves heartily of the abolition of the old capital, Aigion, adding that Philopœmen "understood Federal principles too well to give the League the curse of a capital anywhere else."

The modern point of view inevitably occupied by Mr. Fowler is strikingly different from Freeman's. The angle of his vision has been determined by the recent agitation for

home rule, and by the wonderful recuperative power which France has exhibited, not to speak of the disappearance of the "man on horseback" from French politics. Mr. Fowler accordingly instances France as the typically well-knit modern State, and perhaps he goes too far in forgetting how often we have seen, as Mr. Freeman put it, "a Parisian riot accepted as a French revolution." His own definition of a modern State is wide enough to include the United States or the Swiss Republic, and the gist of it is that in this form of polity the capital city is a convenient place for carrying on the central Government. While the State is growing, the question is an open one as to where the acts of government may best be performed. In England the seat of government was long just where the King happened to be. Oxford was the English capital during the civil war. Bordeaux supplanted Paris in 1870–1871. Let any one, bearing this in mind, read Henri Martin's ingenious argument at the outset of his 'History of France,' and he will find that, by a concatenation of facts social, geographical, and historical, Paris only and Paris always is the fated and predoomed capital of France. Doubtless there are signs of a reaction, but Paris is still so much more than the first among equal French cities that France is a dangerous and rather misleading type of the modern State. The extraordinary importance attached by Frenchmen to their Paris still links the political constitution of France and Paris closely to the ancient type of the City-State, and makes France to that extent an exception among modern States. Perhaps, though, this is what Mr. Fowler means by speaking of France as the best-knit of modern States. At all events, it is certain that the altered times in which we live, when a bold and tyrannical usurpation like the third Napoleon's has become, for the moment and thanks to the late Gen. Boulanger, a ludicrous absurdity, give Mr. Fowler a point of vantage in discussing the uses and abuses of Greek tyrannies which was denied alike to Freeman and to Grote. The fact of usurpation, the circumstance that every Greek tyrant was driven beyond the ideals in which he and all members of the normal body politic were born and bred, was unwelcome in many ways and did great harm, but it brought good as well as evil. "The tyrant," says Mr. Fowler, "in the very fact that he was out of harmony with the true Greek social life, was of some use in widening its boundaries, always apt to be somewhat confining."

Mr. Fowler roundly declares that there is absolutely nothing new in his book, and certainly does confine himself most scrupulously to a presentation of views arrived at in common by the leading authorities of to day, but, nevertheless, his sketch of the part played in the realization of Athenian democracy by the tyranny of Pisistratus will be a revelation to many. It is also a privilege reserved for historians of to-day to be just and appreciative in dealing with aristocracies. Now that democracy has won its way so far that even the German Empire can get itself called a democracy, we are in a position to be fair in appreciating aristocracy in Greece and at Rome. To the aristocrats Mr. Fowler attributes the first framing of the ideal of duty to be performed manfully and gracefully for the public good. His appreciation of the differences between the Greek and the Roman genius appears best in his account of kingship. To the Greeks the personality and the breeding of a king were all in all, just as their gods were conceived of as "bodily presences rather than spiritual essences." The Romans, on the other hand, revered the power of their gods without necessarily embodying it or them in human form. Hence, the Romans "could abolish the King and yet retain his *imperium;* while at Sparta the powers were suffered to decay, the King himself remaining." After quoting the well-known passage where Herodotus describes the Spartan kings and their strangely curtailed powers, our author adds: "In this picture we see, as it were, an ancient and hallowed building, with all the graceful details of its architecture still preserved; a building which was once the central point of the common life of the State, but is now comparatively little used except for religious purposes."

Throughout his whole book Mr. Fowler enforces with constant aid from Aristotle the invaluable truth—so easy to realize in dealing with the simpler and more obvious organization of the ancient City-State, so hard to disentangle from the complex workings of a modern constitution—that a sound State is built upon sound character in its citizens, and in turn offers them the only means as yet discovered for bringing all their capacities into play. He has now and again a word to say of the modern Socialists and their ideal, which leaves him so far undisturbed that he can declare the growth of the modern State to be as yet unfinished, and assert that "there is fortunately no sure sign, even in our most highly developed States, that decay is as yet setting in."

The fundamental questions raised by Socialism were taken rather less seriously thirty years ago, when Freeman wrote his account of Federal Government, and the two additions, now published for the first time, were written in the early sixties. It is perhaps useless to speculate about changes which he might have made in the book, had he ever returned in his later years to the problems of Federal Government. He may well have been deterred from the attempt by remembering what odds were against his earlier work. He had planned an extensive publication which was to portray the Federal Republic as a system "intermediate between the city-commonwealth, which sacrifices everything else to the full development of the individual citizen, and the great modern kingdom, which sacrifices everything else to the peace, order, and general well-being of an extensive territory." But when his first volume was finished, the civil war in America had just reached its most uncertain point, and "the affair of the *Trent*," which was still unsettled, confirmed Englishmen in any prejudices they might have against Federal Government. Accordingly, by way of being fair in argument, he assumes everywhere that the disruption of the American Union is certain of accomplishment, and his general title contained the words, "from the formation of the Achaian League to the disruption of the United States of America."

Had our author lived long enough to return to the favorite theme of his youth, he would doubtless have qualified his statement that "the reason of the case would lead us to expect that the members of a league from which one or more members have seceded, would be less anxious to retain them, at all events less ready to make great sacrifices to retain them by force, than either a monarch or his subjects will be to recover a revolted province." To-day it no longer "remains to be seen whether the people of the Northern States will be ready to endure so prolonged a struggle for the forcible reduction of their revolted brethren as Spain, or even England, endured for the forcible reduction of their revolted dependencies." The modern federal tie has proved a stronger one than its apologist of thirty years ago dared hope; the quasi-federal status of Ireland, Scotland, and Wales is in a fair way towards restoration. All this seems to show that the "consolidated" modern State is transforming itself into something akin to Federalism. We may well ask, therefore, if Prof. Freeman can have been right in saying: "Probably no two constitutions produced at such a distance of time and place from one another ever presented so close a resemblance to each other as that which exists between the Constitution of the United States and the Constitution of the Achaian League." The clear conception of a specific difference between the City-State of antiquity and the modern consolidated State of which every one of the United States is a modified but real example, coupled with the reflection that the members of the Achæan League were City-States, vitiates the analogy which Freeman has insisted upon between ancient Leagues and modern Republics. Whatever parallels our historian may draw between Assemblies, Senates, and Congresses, however freely he may use of ancient Leagues terms to which modern federal republics alone have given their present meaning, the result of the American war remains, and we now know that the modern federal tie has strength which defeats calculations and defies argument. The American citizen has given unmistakable proofs of something hardly to be distinguished from "that burning patriotism which the Athenian or the Florentine felt for the city in which his whole political and personal being found its home."

Under these altered circumstances our chief concern with Achæan institutions is confined to the question whether or not they were copied by the framers of our Constitution. No one has ever maintained that they were, and we may accordingly proceed to the reflection that the Arcadian and the Ætolian Leagues—prototypes in Greece—sprang up in the backwoods as it were, among primitive villages where the organization of the City-State was achieved very late and most imperfectly. The process was a long one which brought such leagues to the forefront in Greece. Athens, Sparta, and Thebes had first to live out all the life of real initiative that there was among Greeks. We may yet learn from the march of modern and contemporary events to qualify the one statement about the Achæan League in which all authorities, including both of the authors under consideration, now agree—namely, that it was what the Germans call a *Bundesstaat* rather than a *Staatenbund.* It is quite possible to maintain that political organization moved a step backwards when the Ætolian and Achæan Leagues came to the front. Worn out by centuries of petty wars among neighbors, and generations of hateful strife among factions, the City-State required in Greece a period of backwardness and political nothingness before it could gather strength for the final reconstitution which brought it safely beyond its own limitations, and fashioned in Greece such an approach to the more extensive and complex modern State as a Roman province now appears to have been.

---

*The Memories of Dean Hole.* Second edition. London: Edward Arnold; New York: Macmillan & Co. 1893. Pp. xii, 377. Illustrated.

'The Memories of Dean Hole' has come to a cheap edition, which shows that the book is popular. It owes its popularity largely, we should think, to a pervading geniality of man-

ner, which, to the credit of human nature, always takes, even if it be a little overstrained. The Dean is evidently an excellent specimen of a class of ecclesiastics which only the Established Church of England could produce. Slight affinities may be traced in the French abbé or curé of the old school, and possibly in the "live man" of our American churches. But fox hunting and cricket-playing England alone possesses the genuine breed.

The Dean's ideal of clerical character and his theory of his own position are given in these words:

"A good man, wherever he goes with a good purpose, will communicate goodness; for virtue, thank Heaven, is a thousand times more impressive for good than vice is infectious for evil. Clergymen must not be hermits, but rather in the world though not of it; all things to all men, that they may save some. Great harm is done by their absence from those places and pastimes in which laymen see nothing immoral or irreligious, and the latter resent it, as suggesting the evil which they do not find. Moreover, it confirms the hurtful notion that the clergy are wanting in manliness, and is used as an argument by those who rejoice to disparage and to denounce us as 'a lot of old women.'"

The Dean has been an enthusiastic fox-hunter and cricketer, keeping up both sports after he had taken orders. He avows that if he were a Bishop, and the question were put to him by a "priest" whether it was right for a clergyman to hunt, his answer would be that it was, provided the priest had the time and the money and would ride *straight to hounds;* if he heard of the priest's "craning and shirking," he would withdraw the permission. Archery is comparatively ecclesiastical, and rose-growing, for which the Dean is famous, still more so. He would be sorry to hear, he says, that the ecclesiastical element was banished from the chase, because its participation contradicts the impression that parsons lose their virility on taking holy orders. He even flatters himself that he "drew" more as a clergyman from having been seen on the hunting-field.

Not only fox-hunting but the turf receives the Dean's approbation, qualified by a pious proviso against betting and black-legging, which is about as effectual as a proviso as that the devil shall not be black. His principal associations—those, at least, about which he tells us most—were with the *Punch* set and literary men of the cognate circle, whose conversation probably did not often turn on theology and whose habits are not likely to have been ascetic. He does not mind letting us know that in his youth he gambled, and once at Paris lost a large sum, from the payment of which, however, he escaped, owing to the notorious character of the men with whom he lost it. He has certainly been "in the world," and must sometimes, as when enjoying an evening with Douglas Jerrold and Mark Lemon, or riding straight to hounds, have found it difficult not to be "of the world."

On the other hand, he appears to have been an excellent parish clergyman, exemplary in the performance of all his duties. He has been a Select Preacher before the University of Oxford, and has risen at last to the highest grade but one in the profession. With his geniality, his good sense, his popularity, and his prestige as a rider and batsman he has no doubt been an extremely useful element in English country life, done something to keep society, even society of a rather boisterous kind, decent, and, by "being all things to all men," succeeded in "saving some." He has the satisfaction of stating that a huntsman once apologized for having in his presence damned the horn of the master of the hunt. He has been, in short, a not inconsiderable grain of the salt of the earth. To assign his exact position in the spiritual world is not easy. It is needless to say he is a High Churchman. He sympathizes moderately with the Oxford Movement, reveres our "solemn and beautiful Liturgy," cherishes the Rubric of Edward VI. permitting the use of pontificals, though he doubts the expediency of taking advantage of it, and steers a judicious middle course on the subject of what the high-flying Anglicans now frankly call the Mass. He styles himself a Catholic Priest, without the slightest suspicion of incongruity in the picture of a Catholic priest "riding straight to hounds." All the other churches of Christendom, we repeat, may be challenged to produce his counterpart.

Of the remarkable characters whom the Dean has known, he has most to tell us about Leech, of whom he relates several anecdotes, none of which seems to us so good as Leech's rough sketches, facsimiles of three or four of which are given. There are, however, some amusing stories in the book. Here is one which the Dean heard from an eye-witness:

"In a London home it was the custom to place a foot-warmer, before the repast began, in front of the chair of the hostess, who was chilly and infirm from old age. On this occasion the guests were early, or the footman was late, and the latter was still under the table when the former took their seats. The lady of the house became conscious of some motive power below, and, thinking that it came from a favorite retriever, who was allowed to roam where it pleased, fondly addressed it as 'Rollo, good Rollo!' and, failing to hear the protest, 'It's not Rollo, grandmamma—it's Alfred,' affectionately patted the head as it emerged from the table, with a halo of powder and an expression of perplexity which Leech himself could not have copied."

Readers will laugh, too, at the boy in the Church school who, on being asked what sign Peter gave of repentance, replied, "He crowed thrice"; and at the farmer who, at the rent-dinner at Belvoir, being served with some rich liqueur, smacked his lips and, turning to the footman behind him, said, "Young man, if you've no objection, I'll tak' some o' that in a moog."

---

*The Recrudescence of Leprosy, and its Causation.* By William Tebb. London: Swan Sonnenschein & Co.

THIS good-sized volume may be likened to a cry out of the wilderness—one is tempted to say out of the wilderness of ignorance, but that would not be a fair saying in all respects. It is freely admitted by those who know anything of the subject that leprosy, which at one time was a widespread scourge in Europe, and which isolation rendered practically extinct there, is now advancing up the line of diseases, and in some parts of the world is a very serious plague. In Minnesota and Louisiana at home, and in New Brunswick on our borders, there are formidable groups of such cases. It was taken to the Sandwich Islands along with other fatal gifts of the life-destroying whites, and there it is a deadly cloud from which distress and suffering constantly flow. It is in the West Indies, not indigenous but imported; it has overshadowed the East Indies from an immemorial time, and, with the contraction of the earth's surface under the pressure of increasing intercommunication, it is advancing into regions hitherto exempt. All this may be admitted, and it is very well that there is a public warning.

Nearly twenty years ago the discovery by Hansen of the *bacillus leprœ* brought leprosy within the category of specific diseases, and gave a logical basis for the popular opinion of its communicability. It is not contagious in the sense that smallpox and scarlet fever are; it is as typically inoculable as another more widely spread disease. Its inheritance has been doubted, but as the bacilli are sometimes found in the blood as well as at the exterior seats of the disease, there is no reason why there may not be hereditary lepers. Its ordinary spread is the step-by-step one of inoculation. Whether that inoculation is accidental, as in the reported cases of pricking by a fish-hook polluted by lepers; or incidental, as in the daily contact of domestic life; or unintentional but extrinsic, as in the use of infected instruments, inoculation is the usual determining cause. If all the lepers could be kept in seclusion, non-intercourse would free the world of the disease. For reasons too numerous and too complicated to detail here, that is impracticable. Then, deliberate and presumptive although undesigned inoculation must be guarded against. And here is the key to this book. While he does not use exactly those words, the author evidently believes vaccination to be a device of the adversary, and full of evil, and especially efficient as a maker of lepers. It is not at all impossible that the inoculation of humanized vaccine directly from the arm may also be the occasion of the inoculation of leprosy. In fact, it may be admitted that that has occurred, that it may continue to occur, and that there is a widespread fear of such vaccination in leprous countries on that account; and the logical deduction is that the utmost precaution should be used in determining the character of the virus.

The account of the spread of leprosy in various parts of the world corresponds sufficiently with known scientific data to be accepted in a general way, and in that respect this popular treatise is an addition to popular knowledge. But the true object of this book is not to proclaim the rise or fall of leprosy, but to denounce vaccination. The alleged subject is a side issue. The real kernel and essence of the whole is condemnation of "the Jennerian cultus," as the doctrine of vaccination is designated. In so far as this book shows, as we think it does, that leprosy is increasing and that one of its modes of distribution is through improperly selected vaccine virus, it is commendable. But it would be more commendable were it addressed to the profession charged with the function of antagonizing smallpox, and not to the general public, whom it may fill with unreasoning fear. But when, going beyond the subject of leprosy, it holds that vaccination does not prevent smallpox, and that it is itself a disease more to be dreaded than that against which it is directed, and therefore that it should be abolished, it exhibits ignorance and prejudice combined in such proportions as quite to disqualify the author from expressing a competent opinion. Whatever may be the actual origin of the true vaccine lymph, concerning which there is dispute, there is no real doubt of the immense value of the practice introduced by Edward Jenner, or that it practically accomplishes what is claimed for it. A serious advocate of the abolition of vaccination is a physical anarchist.

---

*Les Fabliaux.* Par Joseph Bédier. Paris: Bouillon.

THIS important and erudite work forms part of the publications of the École des Hautes Études, issued under the auspices of the Ministry of Public Instruction. Such a testimonial

to its worth is deserved. M. Bédier is one of the younger scholars trained by M. Gaston Paris. The latter looks with particular favor upon the writer and his work, although M. Bédier controverts some of the positions held by his teacher. The book is a mass of information, well-ordered, clearly set out, and covering very thoroughly the ground the author has selected. It is likely to attract much attention from students of folk-lore in general, M. Bédier taking a stand in opposition to the most universally adopted systems which seek to explain the genesis of popular tales. He holds neither with the Orientalists, who bring back all tales to Eastern originals, nor with the anthropologists. In his opinion—and he backs it with much solid fact—the influence of the East has been very greatly overrated; impartial investigation fails to find sufficient grounds for declaring that India is "the reservoir, the source, the matrix, the motherland of folk-lore." No more, he affirms, is true than this: "India has produced great collections of tales and has propagated a large number of these both orally and in writing."

He does not admit that certain tales, found in many different countries, must necessarily have had a common origin, much less that that origin must have been Eastern. It is impossible, he contends, to know anything of the origin or of the method of propagation of such stories, among which he includes "the vast majority of popular tales, almost all the fabliaux and fables, and nearly all fairy tales." As far as France is concerned, he finds only a small number of folk-tales traceable, not always clearly, to an Oriental origin. For one class of tales only does he admit the possibility of tracing the origin by internal evidence: it is that which comprises what he terms ethnic tales—that is, those which bear plain marks of a particular race or nationality. These ethnic tales are the peculiar property of the race which has invented them; they cannot belong to any other, and it is comparatively easy to trace them back to their sources. But as no race has a monopoly of the invention of tales, M. Bédier contends that many similar tales may have arisen and did arise in different countries, and are the common patrimony of many nations.

At first sight it may appear that M. Bédier has merely set out to overthrow two or three systems in which he does not believe, and that he has nothing to offer in the place of that which he says must be taken away. This is not a just view either of what he has proposed to himself or of what he has accomplished. He does present a new theory, simple, it is true, but which bears examination and application well; if it proves a better method in the examination of folklore, his object is attained; if, on the other hand, the Orientalist system prevails over his attacks, he will have done it a real service, for it is certain that the system has many weak points, not the least of which is its arbitrariness. In any case, all interested in folklore will find it necessary to read M. Bédier's work, to weigh carefully his arguments, and to note the numerous facts he adduces in support of his views.

BOOKS OF THE WEEK.

Arnold, T. K. First and Second Latin Books. Revised. American Book Co. $1.
Ballantyne, R. M. The Walrus Hunters. T. Nelson & Sons. $1.50.
Cox, Palmer. The Brownies at Home. Century Co. $1.50.
D'Araujo, Oscar. L'Idée Républicaine au Brésil. Paris: Perrin & Cie.
Edwards, G. W. Thumb-nail Sketches. Century Co.
Foster, A. J., and Cuthell, E. E. The Robber Baron of Bedford Castle. T. Nelson & Sons. 80 cents.
Greenough, Prof. J. B., and Peck, Prof. Tracy. Livy, Books XXI. and XXII. Boston: Ginn & Co. $1.35.
Harland, Marion. My Little Love. G. W. Dillingham. 25 cents.
Japp, A. H. Hours in my Garden. Macmillan. $1.75.
King's Handbook of New York City. 2d ed. Boston: Moses King. $2.

*READY:*

**De Quincey's Joan of Arc and the English Mail Coach.** Edited, with Biographical Introduction and Notes, by JAMES MORGAN HART of Cornell University. xxvi+138 pp. 16mo, boards. Teachers' price, 30 cents; postage 4 cents additional.

These essays are at once attractive to the novice in literary study, and fairly representative of the author's work in two notable phases. The editor has directed his efforts mainly to indicating the lessons De Quincey's style is so admirably adapted to impress upon the young writer.

**Verne's Michel Strogoff.** Abridged, with Summaries of Omitted Passages and Notes for Beginners, by EDWIN S. LEWIS, Ph.D., of Princeton University. vii+122 pp. 16mo, cloth. Teachers' price, 70 cents; postage 6 cents additional.

This story combines, for the purpose of a first reader, simple diction, high ethical tone, and intense and sustained interest. The required brevity has been secured mainly by excising descriptive passages, any gaps thus created being bridged by short summaries. The book can be begun as soon as the regular verb is reached, irregular forms being referred to the tables of principal parts at the end of the volume. Subjunctives are carefully treated in a separate classified list. The notes abound in references to the grammars most generally used.

**Joynes's Minimum French Grammar and Reader.** By EDWARD S. JOYNES of South Carolina College. vi+269 pp. Cloth. Teachers' price, 75 cents; postage 6 cents additional.

Combines in a single brief volume the essentials of grammar with ample exercises and graded selections for easy reading, with Notes and Vocabularies. The object is to reduce preliminary grammatical study to the minimum consistent with due method and completeness.

**HENRY HOLT & CO., N. Y.**

Letters of Credit. We buy and sell bills of exchange on and make Cable Transfers of money to Europe, Australia, and the West Indies; also make collections and issue Commercial and Travellers' Credits, available in all parts of the world.

Brown Brothers & Co., Bankers,
NO. 59 WALL STREET, NEW YORK.

**AUTOGRAPH LETTERS.**
*PRICE LISTS SENT FREE.*
**WALTER ROMEYN BENJAMIN,**
**287 Fourth Ave., NEW YORK CITY.**

*NOW READY.*

**THE PILGRIM IN OLD ENGLAND.**

By AMORY H. BRADFORD, D.D. A Review of the History, Present Condition, and Outlook of the Independent (Congregational) Churches in England. Southworth Lectures for 1892 at Andover Theological Seminary. Crown 8vo, 362 pp., extra cloth, gilt top, $2.00.

*SEVENTH THOUSAND.*

**THE INTERWOVEN GOSPELS AND GOSPEL HARMONY.**

By Rev. WILLIAM PITTENGER. The four Histories of Jesus Christ blended into a complete and continuous narrative in the words of the Gospels; interleaved with pages showing the method of the Harmony. According to the *American Revised Version*. Full indexes, references, etc. *New Edition*. 12mo, cloth, red edges, with five maps, $1.00.

**FORDS, HOWARD & HULBERT**

# Charles Scribner's Sons'

*NEW PUBLICATIONS.*

## Ivar the Viking.

A Romantic History based upon authentic facts of the third and fourth centuries. By PAUL DU CHAILLU. 12mo, $1.50.

This new book by the celebrated explorer, traveller, and archæologist is a popular account, in the attractive form of a continuous narrative, full of incident and adventurous interest, of the manners and customs, the daily life and surroundings of the Vikings of the third and fourth centuries. The pictures of Old Norse life are very vivid and entertaining.

## Meh Lady.

A Story of the War. By THOMAS NELSON PAGE. *New Edition.* Illustrated by C. S. REINHART. Small folio, $1.50.

A new and beautifully illustrated edition of this charming Southern classic, in uniform style with the illustrated edition of "Marse Chan," issued last year.

"Nothing more beautiful has ever been penned by a Southern writer."—*New Orleans Picayune.*

## The Sunny Days of Youth.

A Book for Boys and Young Men. By the author of "How to Be Happy Though Married," etc. 12mo, $1 25.

The author is no less entertaining in this book than in its predecessors, making use of anecdote and story to bring home to his readers his reflections touching the early development, intellectual, moral, and social, of character.

## Memoirs of Madame Junot.

Napoleon, his Court and Family. With Portraits. 4 vols., crown 8vo, $10.00.

The publication of this well-known and standard work in an attractive Library Ed tion will secure for it a wide welcome.

## University Football.

The Play of Each Position Treated by a College Expert. Edited by JAMES R. CHURCH. With Portraits and Illustrations of Plays. 12mo, $1.25.

A timely book, in which all the aspects of this wonderfully popular sport are described by college experts —Cowan, Irvine, Poe, and George of Princeton; Lee and Hallowell of Harvard, and Bull and Winter of Yale, each of whom explains in detail the play of the position in which he has won renown.

## An Old Master,

And Other Political Essays. By Prof. WOODROW WILSON of Princeton University. 12mo, $1 00.

A collection of thoughtful and scholarly essays by a thorough student of political questions in the large sense, who possesses the art of imparting a popular, unprofessional, and human interest to each topic.

## The White Conquerors:

A Tale of Toltec and Aztec. By KIRK MUNROE. Illustrated. 12mo, $1.25.

Mr. Munroe has made himself a great favorite with young readers, and this new story, a tale of daring adventure against a background of historical interest (the Spanish Conquest of Mexico), will win for him many new admirers.

## The Watchmaker's Wife,

And Other Stories. By FRANK R. STOCKTON. 12mo, cloth, $1.25.

In this new volume there are six of the author's inimitable tales, in addition to the title-story: "Asaph," "My Terminal Moraine," "The Philosophy of Relative Existences," "The Knife that Killed Po Hancy," "The Christmas Shadrach," and "The Rev. Ezekiel Crump." These stories all reveal that fertile fancy, quaint drollery, and quiet though delicious humor which have made the author's name famous.

## Men of Achievement.

**Men of Business.** By WILLIAM O. STODDARD.

**Statesmen.** By NOAH BROOKS.

Each illustrated, half leather. Crown 8vo, $2.00 *net.*

Each of these volumes contains a series of graphic character sketches of Americans who by their own efforts have achieved success. The eminence of the writers is an ample guaranty of both the authority and the interest of these biographical studies. The volumes are enriched by portraits and other illustrations.

## Stories of the Army.

Fully illustrated. Paper, 50 cents; cloth, 75 cents; half calf, $1.50.

This is the concluding volume of the delightful series of "Stories from Scribner." The six dainty volumes forming the set contain stories by many of the best American authors; in a box, paper, $3.00; cloth, $4.50; half calf, $9.00.

## CHARLES SCRIBNER'S SONS,

*743-745 Broadway, New York.*

THE CENTURY CO.'S

# NEW BOOKS

ISSUED OCTOBER 10.

## Poems Here at Home.

By JAMES WHITCOMB RILEY. This latest collection of verses by the Hoosier poet contains some of his best pieces. No one who has read any of Mr. Riley's previous works will need to be told more than this. Such old favorites as "Nothin' to Say," "The Old Man and Jim," "The Raggedy Man," "The Absence of Little Wesley," "Old John Henry," etc., are included among the more than half a hundred poems gathered in this volume, which is illustrated by Kemble. Price, in green cloth binding, $1.50; vellum, $2.50.

### Sweet Bells Out of Tune.

A novel of New York society, by Mrs. BURTON HARRISON, author of "The Anglomaniacs," etc. Illustrated by C. D. Gibson. Price, $1.25.

### Balcony Stories.

By GRACE KING, author of "Monsieur Motte," etc. Dreamy tales of Louisiana. Illustrated by Sterner, Blum, and others. Price, $1.25.

### The White Islander.

A romance of the Indian massacre at Mackinac. By MARY HARTWELL CATHERWOOD, author of "The Romance of Dollard," etc. Illustrated by Francis Day and Henry Sandham. Price, $1.25.

### Walter Camp's Book of College Sports.

Containing chapters on Baseball, Football, Track Athletics and Rowing, with the latest rules and many suggestions from the author, who is recognized as the highest authority among college athletes, and who has been for many years the adviser of the most successful Yale teams.

### The Century Gallery.

A collection of sixty-four of the best engravings that have appeared in *The Century* and *St. Nicholas* magazines during the past ten years, printed on heavy plate paper and suitable for framing. Price, in portfolio, 13⅜ x 17⅝ inches, $10.00.

### An Embassy to Provence.

By THOMAS A. JANVIER. An account of a trip in a one-horse chaise through the old Provençal towns of Southern France. Price, $1.25.

### To Gipsyland.

Describing the author's adventures among the gipsies of Hungary. By ELIZABETH ROBINS PENNELL, with illustrations by Joseph Pennell. Price, $1.50.

### The Public-School System of the United States.

A book of great interest to teachers and to all interested in the cause of education. By Dr. J. M. RICE, who visited the public schools of thirty-six of the principal cities of the United States, and in this volume has set forth the systems of teaching in vogue. 300 pages. Cloth, $1.50.

### The Autobiography of Tommaso Salvini.

Leaves from the life of the great Italian tragedian. In cloth binding, with frontispiece portrait, $1.50.

### Thumb-nail Sketches.

A charming little volume in stamped sheep binding, containing a number of stories of adventure by the artist GEORGE WHARTON EDWARDS, with the author's own illustrations. Price, $1.00.

### The Cosmopolis City Club.

By Rev. WASHINGTON GLADDEN. A book describing the organization and work of an ideal (and practical) club, whose object was the purification of city politics. Price, in cloth binding, $1.00.

### Handbook of English Cathedrals.

By Mrs. SCHUYLER VAN RENSSELAER. A handy volume, in flexible covers, describing the great cathedral churches of England. Profusely illustrated by Joseph Pennell. 400 pages. Cloth, $2.50; full leather, $3.00.

### The Great Remembrance, and Other Poems.

A new volume of poems by RICHARD WATSON GILDER. Price, 75 cents.

## New Books for Children.

### The Brownies at Home.

A new Brownie Book by PALMER COX. As funny as the other two. Price, $1.50.

### The White Cave.

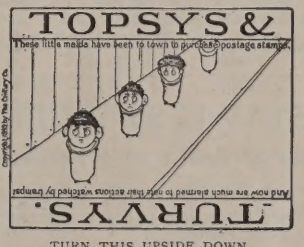
A story of adventure in Australia, by WILLIAM O. STODDARD. Price, $1.50.

### Bound Volumes of St. Nicholas.

The numbers for the past year in two parts, containing nearly 1000 pages and as many illustrations. Price, $4.00.

### Topsys and Turvys.

The greatest novelty of the year. A book of colored pictures, by P. S. NEWELL, that viewed right side up show one picture and upside down another. Price, $1.00.



TOPSYS &
These little maids have been to town to purchase postage stamps
TURVYS.
And now are much alarmed to find their actions watched by bumpers

TURN THIS UPSIDE DOWN.

***The books named above will be issued October 10th. On and after that date they may be had at all book-stores, or will be sent post-paid to any address on receipt of price by the publishers,*

THE CENTURY CO.
33 East 17th St., New York.

*** A new catalogue of The Century Co's publications will be sent free on request.

### CHEAP MONEY EXPERIMENTS.

IN PAST AND PRESENT TIMES

A clear exposition of the various cheap-money schemes that have been tried at various times in this country and elsewhere.

*Price, in cloth, 75 cents.*

THE CENTURY CO., 33 E. 17th St.
NEW YORK.

# Royal Baking Powder

**Absolutely Pure**

A cream of tartar baking powder. Highest of all in leavening strength.—*Latest United States Government Food Report.*

ROYAL BAKING POWDER Co , 106 Wall St., N. Y

*CHICAGO WORLD'S FAIR, 1893.*

## EM. TERQUEM,

*Representative of the French Publishers.*
*Book Department*

(East Gallery, Manufactures and Liberal Arts Building),

Extends a cordial invitation to his many friends and patrons in the book trade, as well as to librarians, book-collectors, and publishers and importers interested in French Literature, to call upon him at any time during the Exposition. An opportunity will be afforded to inspect the productions of the leading publishing houses of France, including every branch, from the cheapest popular issues to the most expensive *éditions de luxe*. Also many interesting specimens of fine bindings.

A catalogue, in itself a work of art, and an interesting *vade mecum*, will be mailed on application to the above address, on receipt of 20 cents for postage.

## JAMES G. BLAINE.

We have just secured a small quantity of James G. Blaine's 'Twenty Years in Congress.' The work is complete in two royal octavo volumes of about 700 pages each, printed from new electrotype plates on superfine book paper, bound in fine English muslin, marbled edges. Published by Henry Bill Publishing Co., Norwich, Conn. Original price, $7.50. Our price for the two volumes, $3.50.

## Leary's Old Book Store,

*No. 9 South Ninth St.,*

(First Store below Market St.) PHILADELPHIA.

## T. Y. CROWELL & CO.

*HAVE JUST ISSUED:*

**Eliot's (George) Complete Works.**

Including Novels, Poems, Essays, and her "Life and Letters," by her husband. Printed from new electrotype plates made from large type and illustrated by Frank T. Merrill and H. W. Peirce.

*Popular Edition, with half-tone illustrations. The only low-priced edition containing the "Life and Letters" complete.*

6 vols., 12mo, cloth, $6.00; 6 vols., half Russia, marbled edges, $7.50; 6 vols., half pebble calf, gilt top, $8.40; 6 vols., half calf, gilt top, $12.00. *Fine Edition*, printed on *fine English* finish paper, illustrated with photogravure frontispieces, 10 vols., 12mo, cloth, gilt top, $15.00; half calf, gilt top, $30.00.

While there is always discussion as to the continuance of the popularity of Scott, Dickens, and Thackeray, the position of George Eliot as a novelist seems to remain unshaken, even unassailed.

**Handy Volume Classics in Prose and Poetry.**

38 volumes in dainty bindings, charmingly illustrated, and the choicest books for holiday gifts. 15 new volumes added this season, viz.:

Byron, Bryant, Shelley, "Ethics of the Dust." "Queen of the Air," Mrs. Browning, "Tales from Shakespeare," Keats, "Seven Lamps of Architecture," Longfellow's Early Poems, "Evangeline," Abbé Constantin, Whittier's Early Poems, Lowell's Early Poems, "Poems by Two Brothers."

Cloth, vellum finish, gilt top, 75c.; particloth, $1.00; half leather, $1.25 ; full silk, $1.50; half calf, $2.00; half levant, $2.50; full leather, $2.00 per volume.

☞ Descriptive Catalogue sent on application.

**Wordsworth's Poetical Works.**

Complete edition, with an Introduction by JOHN MORLEY. Printed on fine paper, and illustrated with Portrait and original photogravures by E. H. Garrett. 2 vols., boxed. 12mo, cloth, neat gold line on cover, gilt top, per vol., $1.50; white back and corners, fancy paper on side, gilt top, per vol., $1.50; silk, full gilt edges, per vol., $2.50; half calf, gilt top, per vol., $3.00.

*SEM.—Sp'l offer, free tuit'n, no profit. $50,-* 000 b'l'd'g, good board, send st'mp, name *Nat.* 88th yr.

NEW YORK, Utica.

*MRS. PIATT'S SCHOOL FOR GIRLS.* —The next school year begins Thursday, Sept. 21, 1893. Applications should be made early.

NORTH CAROLINA, Asheville.

*RAVENSCROFT SCHOOL.—PREPAR-* atory Boarding and Day School for Boys. Head Master, RONALD MCDONALD, B.A., Oxford.

OHIO, Cincinnati.

*MISS ARMSTRONG'S SCHOOL FOR* Girls, Liddesdale Place, Avondale. Family limited. Circulars sent on application.

PENNSYLVANIA, Bryn Mawr.

*MISS BALDWIN'S DAY, BOARD-* ing, and College Preparatory School for Girls reopens September 28. For circular, address
MISS FLORENCE BALDWIN.

PENNSYLVANIA, Germantown, 202, 204, 335 West Chelten Avenue.

*MISS MARY E. STEVENS' BOARD-* ing and Day School.—24th year. "Approved" by Bryn Mawr College. The Bryn Mawr entrance examinations are held in the school by an examiner from the College. School certificate admits to Vassar.

[*Educational continued on page vi.*]

# OUR AUTUMN ANNOUNCEMENTS.

By TWO OF THE "LITTLE WOMEN."

**COMIC TRAGEDIES.** Written by "Jo" and "Meg," and acted by the "Little Women." With a Foreword by "Meg," Portraits of "Jo" and "Meg," and a view of the house in which they lived. Uniform with "Little Women." 16mo, cloth, $1.50.

"In the good old times when 'Little Women' worked and played together the big garret was the scene of many dramatic revels. From the little stage library, still extant, the following plays have been selected as fair examples of the work of these children of sixteen and seventeen. With some slight changes and omissions they remain as written more than forty years ago by Meg and Jo, so dear to the hearts of many other 'Little Women.'" —*Foreword.*

By HELEN JACKSON.

**COMPLETE POEMS.** New edition. With portrait. 12mo, cloth, $1.50; white and gold, $1.75.

By THOMAS W. HIGGINSON and MARY T. HIGGINSON.

**SUCH AS THEY ARE.** Poems. Illustrated by E. M. Garrett. Small 4to, cloth, $1.00.

By HONORÉ DE BALZAC.

**THE VILLAGE RECTOR.** Translated by Katherine P. Wormeley. 12mo, half Russia, $1.50.

The twenty-sixth of our series of translations.

By EMILY DICKINSON.

**COMPLETE POEMS.** Edited by T. W. HIGGINSON and MABEL LOOMIS TODD. First and second series in one volume. 12mo, cloth, gilt, $2.00.

By EDWARD E. HALE.

**FOR FIFTY YEARS.** Verses written on occasion in the course of the nineteenth century. 16mo, cloth, $1.00.

A collection of Mr. Hale's verses written on various occasions during the last half-century.

**HELPFUL WORDS.** From the writings of EDWARD E. HALE. Selected by Mary B. Merrill. Illustrated by Frank T. Merrill. Square 16mo, cloth, $1.00.

By AGNES BLAKE POOR.

**BROTHERS AND STRANGERS.** A Novel. 16mo, cloth, $1.00.

A story of life in Boston and Western New York.

By GERTRUDE HALL.

**ALLEGRETTO.** A volume of Poems. By the author of "Far from To-day." Illustrated by Oliver Herford. Small 4to, cloth, $1.50.

*Our complete Catalogue mailed free. Any book on list sent on receipt of price.*

**ROBERTS BROTHERS, PUBLISHERS, BOSTON.**

# MACMILLAN & CO.'S NEW PUBLICATIONS.

*EDITION DE LUXE OF*

## "THE CAMBRIDGE SHAKESPEARE."

EDITED BY WILLIAM ALDIS WRIGHT.

*NOW READY:*

### THE TEMPEST.
### TWO GENTLEMEN OF VERONA.

The *Edition de Luxe* of the Cambridge Shakespeare will be comprised in 40 volumes Super Royal 8vo, each volume containing a single play, an arrangement which the publishers believe will commend itself to students and amateurs. It will be printed on fine cream-white hand-made paper, and bound in Irish linen. The impression will be limited to 500 copies, a considerable number of which have been ordered for America. It will be issued at the rate of two volumes per month from October. The price is $2.00 per volume, but orders will be received only for complete sets.

*Just Ready. Second Edition. Professor Goldwin Smith's Brilliant Work.*

**The United States:**

AN OUTLINE OF POLITICAL HISTORY, 1492-1871. By GOLDWIN SMITH, D.C.L., author of "Canada and the Canadian Question," etc. With Map. 12mo, cloth, $2.00.

The first edition having been exhausted soon after publication, a second edition has been printed, and is now ready at all booksellers'.

*A Few Extracts from the Press.*

"To say that nothing comparable with this most instructive and enchaining volume has hitherto come from Prof. Smith's pen, would perhaps be only anticipatlng the judgment of its readers."—*Toronto Mail.*

"As a whole has a comprehensiveness of view and a ready grasp of leading tendencies that should make it particularly useful to the busy man who desires a rapid survey of American political history. By deliberately neglecting details Prof. Smith has been able to fasten the attention upon salient points, and to concentrate interest around the career of the great leaders in our political development."—*Boston Beacon.*

"It is a marvel of condensation and lucidity. In no other book is the same field covered so succinctly and so well. Of the five chapters, the first deals with the Colonial epoch, the second with the Revolutionary period, the third and fourth review the history of the Federal Government to the outbreak of the Civil War, and the fifth depicts the era of rupture and reconstruction. We have marked certain passages for extract, but the truth is that almost every page is enriched with striking comments that cause the reader to carefully reconsider, if not to change, his views of historical persons and events."—*New York Sun.*

*Just Published. The Translation of Windelband's Great Work.*

**A History of Philosophy.**

With especial reference to the Formation and Development of its Problems and Conceptions. By Dr. W. WINDELBAND, Professor of Philosophy in the University of Strassburg. Authorized Translation by JAMES H. TUFTS, Assistant Professor of Philosophy in the University of Chicago. In one volume of 650 pages. 8vo, cloth, $5 00.

**Genetic Philosophy.**

By DAVID JAYNE HILL, President of the University of Rochester, author of "Elements of Psychology," "Social Influence of Christianity," etc. In one volume, 12mo, price $1.75.

**Aspects of Theism.**

By WILLIAM KNIGHT, LL.D., Professor of Moral Philosophy at St. Andrews, author of "Essays in Philosophy." 8vo, cloth, $2.25.

*Just Ready, Vol. I. 8vo, $3.00.*

**Principles of Political Economy.**

By JOHN SHIELD NICHOLSON, M.A., D.Sc., Professor of Political Economy in the University of Edinburgh. In two volumes, 8vo. Vol. I., 450 pp, cloth, $3.00.

*Vol. II., in the Press.*

**Lord Tennyson and His Friends.**

A Series of 25 Portraits and Frontispiece in Photogravure from the Negatives of Mrs. JULIA MARGARET CAMERON and H. H. CAMERON; Reminiscences by ANNE THACKERAY RITCHIE. With Introduction by H. H. HAY CAMERON.

Four hundred only printed, of which three hundred and fifty are for sale (one hundred and fifty of this number in America). All copies numbered.

This volume contains four portraits of Tennyson—representing the famous painting by G. F. Watts, two of the favorite photographs, and the "Dirty Monk" portrait.

The group includes, moreover, photogravure portraits of the Prime Minister, Arthur Hallam, Henry Irving, Longfellow, Browning, Carlyle, and many others, most of whom afforded special sittings to Mr. Cameron.

The introductory, by the daughter of the author of "Vanity Fair," is luminous and entertaining.

Columbier folio. Bound in buckram, with gilt ornamentation. Price, $35.00.

THE ONLY COMPLETE EDITIONS PUBLISHED.

*Just ready—Vols. VIII., IX., and X. of*

**The Works of Alfred, Lord Tennyson, Poet Laureate.**

Completing the Cabinet Edition. 12mo, cloth. Price, $1.50 each.

*** Also a limited edition printed on hand-made paper. Price, $3.50 per volume.

CABINET EDITION. Now complete in ten volumes. The set, in box, $12.50. Sold separately. each $1.50.

THE WORKS, complete in one volume, with Portrait. 8vo, cloth extra, gilt top, $1.75; half morocco, $3.50; ornamental half morocco, $3.75.

*To be Published Next Week. Mr. Winter's Biography of Edwin Booth.*

**The Life and Art of Edwin Booth.**

By WILLIAM WINTER, author of "Shakespeare's England," "Shadows of the Stage," etc. With 12 full-page portraits in character, reproduced by E. Bierstadt, and other Illustrations. Crown 8vo, cloth, gilt top. Price, $2 25.

Also an edition printed throughout on English hand-made plate paper, limited to 250 copies, each in a box, at $6.00 net.

25 copies of this edition have been printed, with proofs of the illustrations on Whatman paper. Price, $10 00 each.

**A Companion to Dante.**

From the German of G. A. SCARTAZZINI. By ARTHUR JOHN BUTLER, Editor and Translator of "The Hell," "The Purgatory," and "The Paradise" of Dante. Crown 8vo, cloth, $3.00.

*To be Published Next Week, Mr. Crawford's New Novel.*

**Marion Darche.**

A STORY WITHOUT COMMENT. By F. MARION CRAWFORD. In the uniform series of Mr. Crawford's novels. 12mo, Cloth. Price $1.00.

*Mrs. Steel's New Novel.*

**Miss Stuart's Legacy.**

By Mrs. F. A. STEEL, author of "From the Five Rivers." 12mo, cloth, $1.00.

*** *Messrs Macmillan & Co. have removed to their new premises at 66 Fifth Avenue.*

## MACMILLAN & CO., 66 Fifth Avenue, New York.

# The Nation.

NEW YORK, THURSDAY, OCTOBER 19, 1893.

## The Week.

THAT learned jurist, ex-Judge Thomas M. Cooley, gives very clearly and concisely to the *Evening Post* his opinion as to what the Senate ought to do to put an end to the disgraceful deadlock which a minority of its members are maintaining. "Members of the majority," he says, "should make the proper motions looking to definite and final action on the pending measure, and the presiding officer should recognize them, since only in that way can the inalienable right of the Senate to express its will be exercised." This places the whole matter in a nutshell. The talk about the Vice-President having no power to act in this matter because he is not elected as a member of the Senate is the sheerest nonsense. The Constitution not only provides that he shall be President of the Senate, but it gives him a casting vote whenever the Senate is equally divided. This is as specific a grant of all the powers of a presiding officer as could be asked. If some Senator will make the necessary motion for a vote on the repeal bill, and the Vice-President will sustain him, the latter will be the most popular man in the United States.

---

Senator Vest tried to turn a very sharp corner on Monday when asked how he expected to pass a tariff bill or the repeal of the election laws if it were true, as he contended, that "one-fifth of the Senators present can prevent the passage of any legislation." His reply was: "When we reach the election bill and the tariff bill, . . . the responsibility of defeating the will of the majority will rest properly where it belongs." What this means, if it means anything, is that when a majority is all of one party and the minority all of another, then obstruction is outrageous and the responsibility of defeating the will of the majority something fearful, which no Senator or group of Senators could endure for a moment. But it is utterly impossible to make any such distinctions either in theory or in practice. A partisan majority is no more sacred than any other. Indeed, a majority made up of members of both parties has a far greater presumption in its favor of standing for the popular will. A question that cuts, like the repeal bill, right across party lines, gives the best of all opportunities for Senators to align themselves in accordance with the real interests of the people. No majority whipped into line by a party caucus could ever have such moral weight. More than that, if the majority rule is to be defied, it will make an end of all parties. Submission to the majority is their vital breath. If a minority can defeat a law which the majority want, it can defeat the will of a caucus, can repudiate party pledges, can bolt a platform or a candidate with just as good right. Senator Vest cannot cut up all government by the roots and hope to leave government by party uninjured. His statement of his own position is his sufficient humiliation and condemnation.

---

There is evidence that the silver craze is waning in Kansas as well as in Nebraska. It will be remembered that the recent Democratic State convention in the latter State rejected free coinage by a vote of three to one, and heartily endorsed President Cleveland's position. No State convention is to be held in Kansas this year, but the Democratic conventions in three of the most populous counties have just nominated straight party tickets, in one county for the first time in four years, while in one convention a free-coinage resolution was offered and defeated, one being adopted in its stead which endorsed the President's course. As only last year free coinage was almost universally endorsed by the Kansas Democrats, and they "fused" with the Populists in support of Weaver for President, the change in sentiment revealed by these conventions is most significant.

---

The bankruptcy of the Union Pacific Railroad brings up anew the question how the maturing claim of the Government upon that corporation shall be adjusted. This question has been before Congress nearly ten years, and has received fitful attention. But Congress never gives more than fitful attention to any subject that is not immediately pressing. Now the subject becomes a pressing one. The debt matures at various periods from 1895 to 1899, and amounts to upwards of $52,000,000 net. Congress can no longer dodge the problem of Union Pacific finances, if it can once get its own finances straightened out. What the bankruptcy of the company illustrates most strikingly is the absolute collapse of business west of the Missouri. New competition and over-extension had no doubt prepared the way for trouble; financiering based upon Government subsidies, which made a memorable scandal in our history, piled up obligations which the company is now not able to meet. Yet it is probable that the great system would have maintained its solvency had its ordinary earnings been assured. But the net returns over operating expenses, which in April nearly equalled the returns of 1892, decreased from last year's net by $578,497 in June, and by $724,402 in July. The decrease for July represented a falling off of nearly 50 per cent.; the August earnings, not yet reported, will probably show heavier losses still. For the seven reported months, the net returns were more than two millions and a half below the seven months' returns in 1892. For all this frightful wreck of business the responsibility lies primarily at the door of the silver agitation. The loss of earnings is the visible sign of shrinkage and distress in the country through which the Union Pacific runs. It is grim justice which has meted out the heaviest penalties to the hotbeds of this silver craze, the States whose Senators are now leading in the struggle to block legislation.

---

The new Chinese-exclusion law reported on Wednesday week by Congressman McCreary, and passed on Monday almost unanimously, makes some approach to humanity and decency, as may be inferred from the fact that Congressman Geary of California opposed it. Luckily, his sand-lots arguments and threats did not prove as formidable as they were a year ago. It is to be presumed, moreover, that the amendments of the law reported from the committee on foreign affairs are acceptable to the Chinese Government, in the sense that they are the most to be hoped for at present, and take a good deal of the cruelty and insult out of the statute of May 5, 1892. The color line is not any longer to be drawn by the infamous phrase of the old law, "one credible white witness," and the period for taking out certificates is extended by six months. Further, the amendments make a definition of the word "laborer," instead of leaving it undefined, so as to be applicable to almost any Chinaman whatever. We do not find "highbinding" included in the definition, and this would seem to upset the recent decision of the California judge that it is a form of manual labor.

---

The Bar Association has lost no time in showing that the attitude of its members towards Judge Maynard has not been modified since it pronounced him guilty of one of the "gravest offences known to the law." By a practically unanimous vote it declares that his nomination was "one not fit to be made," and "urges upon every citizen, irrespective of party, and especially upon all lawyers, the paramount duty of opposing to the utmost the attempt to reward unworthy conduct with a seat on the bench of our highest judicial tribunal." If Maynard has any friends among the lawyers of this city, they are very shy about appearing in public in his behalf, for the three or four of them

who were present at the Bar Association's meeting when this declaration was made, were careful to keep in the background. The proposal which was made to appoint a committee of nine to procure the indictment and trial of Maynard for felony was voted down—very wisely, we think, because it would have been an impossibility to accomplish anything in that direction within the few weeks before the election. His case is before the people for decision, and the verdict must be rendered at the polls in November.

---

Gov. Flower came to town on Saturday without a "discreet mentor" of any kind in attendance upon him, and while in this exposed position was caught by the reporters and asked to talk about Maynard. He responded with perfect frankness, and the result was a clearer revelation of the governor's moral and mental attributes than the public has heretofore been permitted to enjoy. His main point in Maynard's behalf is that, while it is true that Maynard was a thief, it cannot be denied that he was stealing for the people the "constitutional rights" which the Republican party had stolen away from them [the Democrats] through an unjust apportionment. We think it safe to say that this is the first time that the governor of an American State has taken the position openly that theft is a justifiable and praiseworthy method for recovering lost "constitutional rights," and that the thief should be paid for his crime by placing him on the bench of the State's highest court to interpret its laws.

---

It is doubtful if the power of any former Tammany boss has been as absolute as that which Croker is exercising at present. There is no concealment of the fact that he is selecting all the candidates for all the offices. He decides what Senators and Assemblymen shall be allowed to return to Albany, what men shall go on the ticket as delegates to the Constitutional Convention, who shall run for comptroller, district attorney, and the judgeships, and who shall be "turned down." When it is remembered that the man who exercises this power was an ordinary rowdy or "tough" till he took to politics, that he is without education, that he is very rich to-day, though he declared on the witness-stand a few years ago that he was a poor man, that the men who are associated with him in the direction of the city government are, like him, amassing fortunes, the wonder of it all is that the people of the city remain quiet under his dictatorship. Why is he able not merely to put criminals and semi-criminals in office, but to "turn down" honest officials simply because they do not obey his orders, or because they commit that to him unpardonable offence of commenting on his sudden wealth and asking its sources?

---

Discussion of the World's Parliament of Religions continues in the pulpit and the religious press, and the verdicts on it run all the way from hearty praise to shuddering contempt. The Rev. Dr. Dix is reported to have characterized the Parliament on Sunday as a "masterpiece of Satanic ingenuity." It is a little difficult to understand such heat. What was done at Chicago was simply to illustrate in a concrete form what travel and the comparative study of religions have for years been bringing to the minds of men. Those types of belief and religious theory which travellers and such publications as 'The Sacred Books of the East' have made more and more familiar, were grouped, by their representatives, on the platform at Chicago, and it is difficult to see why those who admit the educating value of travel and the comparative method should condemn the display of their well-known results. It recalls the intense prejudice which existed fifty years ago in this country against a theological education gained in Germany. There was no telling what ideas a man might bring back from a land where theological professors encouraged free inquiry and drank beer. That has pretty much passed away, and even the most orthodox of American seminaries have their fellowships to send promising graduates for two or three years' study in German universities. Indeed, it is now no small part of the glory of some of the most eminent of the conservative theologians of this country, that they went through, in their youth, the perils of German rationalism, and came out absolutely unscathed.

---

The American Board of Foreign Missions has at last got itself out of the absurdity in which it has been floundering for the past dozen years. For all that time it has been setting up its authority above that of the churches whose creature it is. It has refused to appoint as missionaries, on the ground that they were not orthodox, men whom the churches declared to be orthodox, and whose ministerial good standing in this country was never questioned, not even by the men who prevented them from becoming missionaries to the heathen. This defiance of its maker by the machinery could not go on for ever, despite the skill with which some of the secretaries have managed to obstruct and thwart the majority of the denomination in a way to put even Senator Stewart to the blush. Thursday's vote at Worcester ends all that. The case was fortunately made up for the liberals. Mr. Noyes is a man of unquestioned scholarship and character, has actually been supported for some years in Japan as an independent missionary, and his appointment under the board was desired by all the native churches and by the other missionaries in Japan. Under these circumstances it is surprising that as many as twenty-four members of the board were willing to stultify themselves and their church by voting that the appointment should not be made. But they were outvoted, five to one, and the decisive majority, together with the changes in the personnel and powers of the prudential committee which are to be made, puts an end to an intolerable situation. Whatever may be the theological bearings of the decision, its practical effects must be good, since it will enable the churches which support the board to make it do what they want done, and will put an end to the ludicrous notion that a man who is orthodox in the United States is made heterodox by going to Japan.

---

We have seen the end of the Briggs case so many times that a sceptical public has come to doubt if there will ever be a real end of it, and sure enough, to justify that doubt, word comes that the Presbyterian Synod of Ohio has been fighting that battle over again, as the New York Synod will also soon be doing in its turn. Meanwhile, there is some significance to be seen in the honorary degree of D.D. conferred upon Prof. Briggs by Williams College in connection with its centennial celebration. That he should be singled out at this point in his career as a man whom an institution delights to honor that has been so long supposed to stand for conservatism in theology, is suggestive, to say the least. Particularly is it so in view of the fact that the most prominent of the Williams graduates in the Presbyterian ministry are stout opponents of Prof. Briggs.

---

That was a very handsome notice, as the publishers say, which the editor of the *Sun* gave the Bible in his lecture on journalism before the students of Union College. He put it in the first place among the authorities of modern journalism, and altogether paid it such a touching and heartfelt tribute that the honest young fellows before him broke into applause. It is a curious thing, by the way, that such a welcome is usually accorded by believers to the confessions of unbelievers. The testimony borne to the power of religion and the divinity of Christianity by those whose forte is not exactly a religious one, is always accorded greater weight in apologetic writings than the witness of the greatest saints. How often have the words of Rousseau and Napoleon in praise of Christ been cited for the confusion of the wicked! Thus we see that the applause of the Union students is not altogether without precedent.

At the very opening of the football season, Mr. Walter Camp, speaking of some of the gloomy aspects of the outlook, referred to a horrible rumor that the Yale faculty would not allow the Yale team to play the annual Thanksgiving game with Princeton in this city. This was on account of the orgies of the students after last year's game. Mr. Camp could only say that the rumor ought to be sufficient to make every loyal Yale man take a vow that he would not be seen in the streets of New York on Thanksgiving night either drunk or disorderly. But it is just reported from New Haven that the faculty have devised a more excellent way. They have agreed to let the game be played on condition that the manager shall go to Superintendent Byrnes and "request that he arrest all disorderly Yale men on Thanksgiving eve and the night following." We hope now to see the Princeton faculty make similar terms. In time we may, with the vigorous coöperation of the police, arrive at the idea that a brawler is a brawler, even if he is able to add a college yell to his other means of disturbing the public peace.

---

Judge Abbett's charge, delivered to the grand jury at Trenton last week, urging the investigation of the recent hazing at Princeton and the indictment of the offenders for assault and battery, will of itself have a good effect. Coupled with the announcement of the public prosecutor that he will press the investigation with all diligence, it will, as Dean Murray of the college declares, remind the students who maltreat their fellows under the name of hazing that they "are amenable not only to the college faculty, but also to the civil courts of New Jersey." Hazing is a remnant of barbarism which carries its own mental and moral debasement with it, but perhaps its indirect evils are as great as its direct. Of these none is greater than the idea which it fosters that some classes of men are above the law. What sort of training for law-abiding citizenship is it to give college students to understand that they can with impunity subject another to personal indignities and perils, for which the law would speedily and severely punish less favored offenders? Equality before the law is of the very foundation of democratic government. That this truth should be brought home to Princeton students by showing them that some of their number are in danger of two years' imprisonment, may be very unpleasant for them and painful to the college authorities, but it is in the interest of good morals and good citizenship.

---

There has been another failure in the attempt to overcome the lawlessness which has so long prevailed in the mountains of eastern Kentucky. A bloody feud between the French and Eversole factions in Perry County had raged so long and embroiled so many people, not only in that county, but also in neighboring counties, that there was no hope of bringing the offenders to justice by the usual methods. Although court could be held under the protection of troops, every imaginable obstacle prevented the serving of processes or the procuring of a jury, and trials were rarely more than a farce. The Legislature accordingly passed a law in 1890 which provided that the commonwealth might transfer such cases to a county safely removed from the scene of disturbance whenever it became manifest that a trial could not be had in the ordinary way, and the cases against the surviving participants in the French-Eversole feud were transferred to Clark County. They were very numerous, and for three years have greatly obstructed the civil business of the court in Clark County, while it appeared to be no easier to secure a conviction than in Perry, as witnesses could not be procured and no case at all could be made out against the surviving leaders in the feud. At last it has been decided to file away the indictments, upon the promise of the defendants to behave themselves. Meanwhile the spirit of the feud is still alive, and it is thought to be unsafe for certain of the old leaders to return to their homes. The Louisville *Courier-Journal*, which has labored zealously for years to abate this scandal, deplores the humiliating result, but finds ground for encouragement in the fact that there has been a gradual improvement in the condition of the mountain region, through the incoming of the schoolmaster, the railroad, and the capitalist. "The redemption of the mountains," it says, "will be completed, as it was begun, by the material development of the section, the building of railroads, the infusion of new ideas, along with new population, including the pedagogue and the editor."

---

After the race on Friday it cannot be claimed that the latest contest for the *America's* cup has put an end to the controversy as to the comparative merits of centre-boards and keels in racing-yachts. The question is as open a one now as it ever has been. Whatever superiority the *Vigilant* may have shown in the first two races, it cannot be denied that in the final one she came out with only even honors with *Valkyrie*. In going to windward in a heavy blow, *Valkyrie* surpassed her antagonist. In running home before the wind there is no doubt that *Vigilant* showed greater speed. She recovered the two minutes, or nearly that, which she had lost in the beat to windward, and had passed *Valkyrie* when the latter's spinnaker was split, but for which accident the English yacht might have won the race by a few seconds on her time allowance. Of course accidents are part of the chances which the builders of racing yachts must have in mind, and if *Valkyrie* had not been seeking the advantage which a light spinnaker was supposed to confer, the accident would not have happened. It appears, also, that *Vigilant's* centre-board got jammed and that she was hampered somewhat by this in her run home. Taking all things into consideration, therefore, it is plain from this final test that the yachts were very closely matched, and that if *Valkyrie* had carried the additional ballast and greater sail area that she had in her English races, she might have given *Vigilant* a much harder task to save the cup. The two yachts are, in fact, a credit to the skill of the two countries which have produced them.

---

An electoral bill with clauses conferring full suffrage upon women, having passed its third reading before both houses of Parliament in New Zealand, has received the formal assent of the governor, an officer appointed by the crown; the act becomes operative at the next general election in December, 1893. For three successive years the popular branch of the Legislature passed enfranchisement acts which gave women of European races the right to vote for all offices and on all matters on the same terms as men of European races; they were, however, prohibited from holding office, and all native (or Maori) women were excluded from the list of voters. In 1891 the Legislative Council (corresponding to our Senate) rejected, by a considerable majority, those clauses of the new electoral act which affected the political status of women. In 1892 it agreed to the enfranchisement of women of European races, but inserted an amendment allowing such women to vote *at home*, by recording their votes on specially prepared ballots or "voting-papers." The lower house declined to accept this amendment, on the ground that it opened the door to fraud and intimidation. No agreement was reached between the opposing parties until this autumn, when full political rights have been accorded to "women of both European and Maori races." The New Zealand Legislative Council consists mainly of life members appointed by the crown, and of certain cabinet officers, who change with each change of party. Had not the present ministry been Liberal, the record shows that this measure would have been again rejected, the vote standing 20 for and 18 against woman suffrage. New Zealand may claim a place in history as the first of English colonies to give women equal political rights with men. Her population is about 650,000, and women are numerically much in the minority.

*CONSTITUTIONAL GOVERNMENT.*

As the fight over silver repeal thickens, the fact becomes clearer, and is more widely recognized, that the question involved is that of constitutional government in America. Silver repeal is now only a branch of a much larger issue. Secretary Carlisle is a constitutional lawyer of the best type and of the first class. We are not surprised, therefore, to learn that he is inflexibly opposed to any compromise, no matter what happens. He is opposed to it because compromise would be the abdication of the majority, and this would be the end of constitutional government. The right of the minority to govern was affirmed by Senator Teller last Friday, in debate with Senators Hoar and Platt, in these words:

"So far as I am concerned, I am willing to take the responsibility which I have seen taken in this Senate by the best men in it for the last seventeen years. I am willing to go before the country on this question and insist that obstructive measures are placed in our hands by the Constitution and the rules of the Senate to prevent just such legislation; and under my oath I think it to be just as much my duty to enter into every obstructive measure possible to defeat it as I do that I should come here and vote against it when the final test comes upon the vote; and I intend to prevent any unusual proceedings if I can by any kind of obstructive measures, answerable only to the general constituency of every Senator, which is the constituency at large, my own local constituency, and my own conscience."

This brazen affirmance of the right of the minority to rule was demolished by Senator Hoar in a short but powerful speech, which closed with these ringing paragraphs:

"Under our system of government there is a more sacred constitutional right than the right of speech, and that is the right that, after full and fair and free speech, the irresistible current, the will of the majority of the American people, shall have its way; and there is but one way to determine what is the constitutional will of the American people, and that is by the constitutional vote of the majority in this and the other chamber. . . .

"Mr. President, if the Senator's doctrine be true, let us shut up our law books, let us burn up our Constitution, let us haul down our flag, for the fundamental thing upon which the sacredness, the wisdom, the usefulness, the glory of all these things rest, is that the constitutional will of a constitutional majority constitutionally declared shall be enacted into the law of a free people."

We repeat that the time of compromise is past. Better now that we should meet national bankruptcy, inability to pay the interest on the public debt, or the salaries of congressmen, judges, cabinet officers, or pensions, or the cost of carrying the mails. Better that we should come to the silver standard, and all that that implies, scaling down the wages of workingmen and shaving their deposits in savings banks 35 per cent. Better any kind of financial calamity than the overthrow of the rule of the majority on which our present and future national existence depends.

These things are what we have to look forward to if the silver-repeal bill does not pass. The course of events can be easily predicted. The gold balance is running down at the rate of nearly a million dollars per day. It cannot last more than ninety days at the present rate; it will probably not last so long. There will be some point at which the public will take the alarm and draw out what gold is left. Then the Government will no longer be able to maintain parity between the two metals. There will be a premium on gold, and this premium will increase gradually as it did during the war. The revenues of the Government will not improve. To the loss of confidence in the standard of value will be added the loss of confidence in the theory of our government.

Whatever else may happen, it is certain that the Government revenues will continue to shrink, so that the Treasury will not be able to meet its daily obligations either in gold or in silver. Many people think that in a last resort the Government has a great hoard of silver dollars and bullion which it could use when other funds failed. This is an entire mistake. The silver dollars belong to the holders of silver certificates, while the silver bullion is held against the outstanding Treasury notes. The amount of silver or of silver certificates *owned* by the Treasury is insignificant. The decline of the gold balance from day to day represents the decline of Government income. This is due mainly to the shrinkage of general business, which is due to the loss of confidence in the standard of value.

We are moving straight to national bankruptcy, which cannot be more than ninety days distant if the present condition of deadlock and minority government continues. We expect, however, that the deadlock will be broken and the rule of the majority restored long before the expiration of that time. An obvious way to bring on a vote would be for the Vice-President to refuse to recognize the minority after he considered fair debate exhausted. Fair debate was exhausted long ago. If the Vice-President should exercise this power, he would be sustained by an overwhelming majority of the nation. Speaker Randall exercised similar powers in the House when the count of the Presidential vote was going on under the report of the Electoral Commission in 1877. There was no rule in the House for limiting debate or dilatory motions. Yet Mr. Randall quelled the turbulence on the floor of the House with these memorable words:

"The chair rules that when the Constitution of the United States directs anything to be done, or when the law, under the Constitution of the United States, enacted in obedience thereto, directs any act by this House, it is not in order to make any motion to obstruct or impede the execution of that injunction of the Constitution and the laws."

What followed this decision of the speaker is told in the current number of the *Atlantic Monthly*, in an article on the Hayes-Tilden Electoral Commission. The first time that a dilatory motion was made, the Speaker refused to entertain it. An appeal was taken from the decision of the chair. He refused to entertain the appeal. He refused to entertain a motion for a recess, or for a call of the House, or to excuse a member from voting, or to reconsider, or to lay on the table. When asked if these motions were not in order under the rules of the House, he said they were. When asked if he would not put them, he said he would not. Why not? Because his obligations to law and Constitution were superior to his obligations to the rules of the House. In this way and in no other was a revolution prevented by the courage and manliness of Mr. Randall. Whether or not Vice-President Stevenson assumes the same responsibility and takes the consequences, the time for compromise on the pending bill has passed. Compromise now would not relieve the business situation; still less would it relieve the political situation. No more legislation can be done by Congress if a minority has the power to stop any bill that is displeasing to it. The election bill that has passed the House will be stopped, of course, and ought to be. Every bill ought to be stopped on system till order and the rule of the majority are reëstablished.

*WHAT MAYNARD DID.*

FOLLOWING the State election in November, 1891, there was a bitter contest over the returns from Dutchess County, involving the seat in the Senate from the Fifteenth District. The Board of County Canvassers, controlled by the Democrats, threw out, on a charge of being defective, thirty-one Republican ballots, and thus secured a majority sufficient to elect the Democratic Senatorial candidate in the district. The clerk of the board, who was a Republican, refused to sign the return thus secured, whereupon Gov. Hill summoned him to Albany, and after a brief hearing removed him from office and appointed one Storm Emans in his place. In the meantime the County Canvassing Board had appointed as secretary *pro tem.* one Mylod, who signed the return and forwarded it to Albany to be filed in the State offices for use before the Board of State Canvassers. After this so-called "Mylod return" had been forwarded, application was made to Judge Edwards of the Supreme Court, a Democrat, for a mandamus compelling the Dutchess County Board of Canvassers to reconvene and recanvass the vote, counting the rejected Republican ballots. At the same time application was made for an order restraining the Board of State Canvassers from canvassing the Mylod return.

Both these applications were argued before Justice Barnard of the Supreme Court, a Democrat, on December 5, and he granted both, declaring not only that the Dutchess County Board must make

a new canvass and return, but must count the thirty-one Republican ballots. In granting the orders, Justice Barnard said: "The State Board has a return which does not indicate the true result. It is proper that the board should hold its hand until the true record reaches it." Acting under Justice Barnard's order, the Dutchess County Board reconvened, recounted the vote, made out a return electing the Republican Senatorial candidate, and Storm Emans, the new clerk, signed it, and on the evening of December 21 mailed it in triplicate as the law requires to the offices of the governor, secretary of state, and comptroller. After he had mailed these three copies of the return he learned that a stay had been granted which estopped him from sending them. He started at once for Albany, and on the following morning he took from the governor's mail, at the governor's direction, the copy which had been sent to the governor, and received from the secretary of state the copy sent to him. The copy in the comptroller's office was taken from his mail by Maynard, without the comptroller's knowledge or permission; Maynard going to the office in the early morning and obtaining it from one of the comptroller's clerks.

Shortly after this legal and correct return was thus taken from the files of the State, the Court of Appeals rendered its decision upon the Dutchess County and other contested election cases. It upheld the position taken by Justice Barnard, declaring the Mylod return to have been the "result of an illegal and erroneous canvass," which the "court should not permit to be canvassed," since it "would alter the result of an election," and saying: "If another return should be duly sent to the board, properly authenticated, and containing the result of the legal action of the Board of County Canvassers, the State Board could canvass it." Under this decision, the Bar Association committee which investigated Maynard's conduct said it seems to have been the plain duty of the State Board to canvass the corrected return from Dutchess County. The State Board met immediately after the decision, with Maynard present as their counsel, and canvassed the Mylod return. The corrected returns, mailed by Emans, were never seen after Maynard and Emans took them from the mails. Other authenticated copies were served upon the members of the Board of State Canvassers before their meeting, but they refused to admit their existence when they came to act.

It is undisputed, Maynard himself admits it, that the purloining of the corrected and legal returns by himself, and Emans acting under his advice, was the only thing which prevented those returns from being before the State Board of Canvassers and being canvassed as the Court of Appeals directed. The Mylod return was canvassed, in defiance of the court's decision, because it was the only return before the board. By canvassing it the Democrats gained control of the State Senate by counting in a man who had not been elected. As for the stay upon Emans, which reached him after he had mailed the corrected returns, Judge Cullen of the Supreme Court decided on February 19, 1892, that the returns passed out of the official custody of Emans for ever when he put them in the mail, and that whatever action he might take to recover them would not constitute official misconduct, but personal crime. As for the legality of the transmission of the returns and the legality of their presence in the State offices, Judge Cullen said:

"There was, therefore, in law and in fact, a complete transmission of the returns to the officers prescribed by statute. The returns were not before the Board of State Canvassers, not because of any defect in the transmission, nor of a disobedience of the order of the court, but because, by the action of the secretary of state, the governor, and the counsel of the comptroller [Maynard] the returns were taken from the several public offices where they had been properly received and were given to Mr. Emans."

The nine eminent lawyers who composed the Bar Association committee, seven of them Democrats, and of whom two, at least, were put on the committee at Maynard's special request, said of his conduct in taking the returns from the comptroller's office:

"The county clerk's transmission of the returns of the 21st was regular and lawful. On the morning of the 22d they were regularly and lawfully in the respective offices of the governor, the secretary of state, and the comptroller. The secretary of state, under the statute, was bound to procure the two copies in the offices of the governor and comptroller. And those officers had no right in law to deliver these copies to any other person than the secretary of state.

"Even if the stays were valid, as to the county clerk, and the amended statement was transmitted by him in violation of the stays, this, in our opinion, would afford no justification for their removal by Judge Maynard. The situation of the county clerk with reference to the stays did not authorize Mr. Maynard to remove the document in question from the office of the comptroller.

"The removal of these returns, therefore, on the morning of December 22, by Judge Maynard and Mr. Emans was entirely without any warrant or justification in law, to be found in any order of stay.

"If we have correctly stated the facts, the offence committed by Judge Maynard is one of the gravest known to the law."

Mr. Frederic R. Coudert, one of the Bar Association committee, testified before the committee of the Legislature that he considered Maynard's offence a "shocking crime"; and he has said of it since Maynard's nomination:

"Having appropriated this paper, Judge Maynard retained it. He was present when the count was made and the election was given to the Democratic candidate for the sole reason that the abstracted return was not before the Board of Canvassers. This gave the Democrats the majority. It was a great service, and one of the delegates to the recent convention, with blunt frankness, stated that Judge Maynard was entitled to this high reward for that service.

"Personally, I am free to say that my opposition to Judge Maynard is not based so much upon the act, illegal and immoral as I believe it to have been, as upon the fact that he believes it to be justifiable. If the view of his brethren of the bar is correct, he suffers a defect of moral vision which should incapacitate him for the bench."

The impressive words which ex-Judge Danforth, retired by limit of age after years of honorable service upon the Court of Appeals bench, uttered last week upon the gravity of Maynard's candidacy, cannot fail to exert a profound influence upon the voters of the State. Especially will they impress the lawyers of the State, whose calling is menaced by that candidacy as nothing else could menace it. Judge Danforth, speaking as a lawyer to lawyers, truly says: "The office of judge is not a political office. It is personal in its character. We are bound to inquire for ourselves and our clients whether the candidates for that office are men of integrity and purity of character." If defiance of law, open and confessed, is to be rewarded by elevation to the bench, then what confidence can any one have in the courts? Men will will not go to law if the law is to be administered by those who defy and disregard it, and the lawyer's calling will cease to be a profession in which honorable men can engage.

## *REPUBLICANISM IN BRAZIL.*

THE conflicting reports that come from the scene of the civil war in Brazil leave a great deal of doubt hanging over the actual condition of affairs, and still more over the question what the trouble is all about and what the parties to it expect to accomplish. If we may believe the proclamations and manifestos of the rivals, Admiral Mello and President Peixoto, each has room in his breast for no other passion than the purest patriotism and love of free institutions. The admiral wants to oust the President only because the latter has violated the Constitution and trampled upon the rights of free Brazilians. He asserts that he wants no office of any kind himself, and is only desirous of restoring the republic to its pristine purity. On his part, the President has wrapped the flag about himself in an affecting manner, and declares that he holds on to his office, not out of love of power, but only in order to save republican government from being stricken down.

A great deal of light is thrown upon the antics of these warriors by a little book just published in Paris by Oscar d'Araujo, entitled 'L'Idée Républicaine au Brésil.' In it the author gives a clear historical sketch of the true republican movement in Brazil, from its beginnings to the present day, and shows how, after it had done much by peaceful propaganda to prepare the minds of the people for a republic, it was unfortunately supplanted and pushed one side, for the time being, by those military adventurers who have been playing ducks and drakes with the fortunes of

Brazil for the past four years. The celerity and completeness of the fall of Dom Pedro cannot be explained except on the ground that there was at the time a widespread readiness in the country to accept a republican form of government. Otherwise there would have been uprisings in the provinces when the Emperor was made a captive at the capital. There would have at least been loud protests and some form of organized resistance. But the fall of the empire was acquiesced in with surprising quiet and unanimity. This was no doubt partly the result of the ignorance and degradation of vast numbers of the population, who were prepared to submit without murmuring to any government that might come along, and to be thankful that it was no worse. The centralization of the empire also no doubt helped on its fall, as the army in possession of Rio de Janeiro had as good a chance of dominating the whole country as an army in control of Paris would have of bending all France to its will. But granting all this, it yet remains to account for the ease and willing minds with which the Brazilian people dropped the empire and took up a republic.

It is the merit of Senhor d'Araujo's book that he shows how this was possible. He traces the growth and spread of republican ideas in Brazil, and shows that the republican agitation was a genuine historical movement, retaining its form and aim from the days of the viceroyalty down through the break with Portugal to our own time. Beginning with 1720, when a certain Filipe dos Santos was drawn and quartered for having tried to set up a republic, there were seven distinct and considerable attempts to establish republican institutions in Brazil before the finally successful effort in 1889. All through, it is possible to trace a close connection between republican agitation in France and in Brazil, as some of the dates of Brazilian uprisings would indicate, viz., 1792, 1831, 1848. Indeed, the first serious republican movement was the work of a group of Brazilian students educated in France, where some of them made the acquaintance of Jefferson, with whom they opened negotiations for the recognition by the United States of their projected Brazilian republic.

They failed, as did some of their successors who appealed to force, but resort to methods of national discussion was more successful. Newspapers devoted to the propagation of republican ideas sprang up here and there throughout the country, no less than seventy being in existence when the revolution of 1889 broke out. Through pamphlets and books, also, as well as by articles in the paid sections of non-republican newspapers, the republican propaganda was carried on, and one man, Silva Jardim, made himself famous by his public lectures and speeches in favor of a republic. He had shrewdly and patriotically, like all the other advocates of a republic, thrown himself body and soul into the abolition movement, sure that the impulse towards liberty given by freeing the slaves would turn to their account in the end. He it was who, early in 1889, declared, on the strength of his knowledge of the gathering strength of republicanism in Brazil: "In the course of this year, the centenary of the French Revolution, the world will see a republic in Brazil. In that way we shall celebrate the great date."

In his concluding chapter Senhor d'Araujo shows how the military autocrat, Fonseca, stepped in at the critical moment to take advantage of the republican movement for his own aggrandizement. Calling the new order of things a republic could not disguise the fact that it was a military oligarchy. Little by little the old republican leaders were pushed aside or drew aside, and the control of affairs passed more and more into the hands of soldiers. When Fonseca lost the army, he was toppled over by Peixoto, and it now remains to be seen whether Mello can use the navy to put himself in power. Meanwhile, in all the confusion, it is clear that the republican sentiment of the country has body enough to make the rumored restoration of the monarchy highly improbable. The question is if it can make head against its own professed friends. The recent action of the Brazilian Supreme Court, in asserting the dignity and independence of the judiciary in the face of an arbitrary and overbearing President, is of the happiest omen. It is in such men that the hope of the country lies, whatever be its form of government, and it will depend upon the number of such men that they can muster whether Brazilian republicans will be able to show their right to bear the name.

## SOUTHERN CALIFORNIA REVISITED.

PORTLAND, OREGON, August, 1893.

THERE are few more delightful and exhilarating experiences than driving, or riding in an open cable or electric street-car, along one of the eucalyptus and pepper-tree avenues which adorn all the towns and villages of southern California. Not only is their evergreen appearance a pleasure to the eye, but they diffuse an agreeable, invigorating fragrance which is so characteristic and unmistakable that, if a New Yorker who has once been in this region could, without his knowledge, be transferred there again while asleep, he would exclaim on awakening, "I am in southern California." Yet these fragrant, tonic, and hygienic avenues are not any more indigenous to California than the jinrikishas, or man-power carriages, which we see in all modern Japanese pictures, are to that country, where they were introduced only about a quarter of a century ago by foreigners. No older than that are the eucalyptus and pepper-tree avenues of southern California, most of them existing in regions which twenty years ago were portions of a desert as barren and parched as the greater part of Arizona is to-day. They are among the magic results of irrigation, which has converted land worth about a dollar an acre into homesteads worth $500 an acre; as at Riverside, for example—in 1870 an uninhabited stretch of desert, now a city of 7,000 inhabitants, with 12,000 acres under cultivation, yielding almost $3,000,000 a year, or an average income, it is claimed, larger than any other town of the same size in this country, or in any other, can boast of.

Such a claim may seem somewhat "Californian," but to one who has seen the well-kept, luxuriant orange-groves of Riverside, it does not sound extravagant. On the other hand, it must be said that a community which has been so exceptionally lucky and prosperous should have known how to bear a temporary affliction with more prudence and honesty than the Riversiders showed last year. An unusually heavy frost damaged a large part of the crop. The oranges were all right to the eye, but on being cut they were found to be without juice or flavor. Nevertheless, they were sent to market, with the result that this year the purchasers were wary and shy. Such a way of jeopardizing a well-earned reputation was the more foolish as Riverside has now many rivals in the wholesale production of the juicy, seedless, profitable navel oranges, of which for a few years it had almost a monopoly.

This growing predominance of the Washington navels over inferior kinds of oranges illustrates one phase of the progress which has been made within the last five years in southern California, where formerly the growers were altogether too careless in the choice of varieties for cultivation. Equally significant is the progress which has been made in combating the scale pest, which a few years ago threatened to exterminate the whole orange industry. The little beetle known as the Australian lady-bird has kept all the promises made for it by its importers a few years ago, having made short work with the white scale. It is extremely interesting to watch these pretty little beetles. They work in colonies, flying in large numbers on to one tree, which they proceed to clean until not a trace of the scale remains, whereupon they fly to the next tree and make that their camping-ground until it has been similarly scoured. The orange-growers have also successfully combated the prejudice against California oranges as being too sour, which arose from the fact that they used to be picked too soon. They are now picked and marketed not when they turn yellow, but a month or two later, when they have had time to ripen. The lemons, on the contrary, used to be picked too ripe, and for some reason the trees did not seem to flourish as well as the oranges. But within the last few years the lemon industry has recovered lost ground, the trees do well, and the price of California lemons begins to approximate that of the Sicilian. This is largely due to the fact that the growers have learned how to pick them green, and to cure them (each lemon being wrapped in tissue paper and laid away in boxes until the time for marketing has arrived). There are now more than a million bearing orange-trees (50,000 acres) in the State, and perhaps a quarter of that number of lemons; but there are some who predict an even greater future for the California lemon than for the orange. For my part, I should like to see the lemon superseded entirely by the Mexican lime, which has a superior flavor, twice as much juice, is more easily squeezed, and has only this disadvantage, that it does not keep so well as the lemon.

There is still a widely prevalent notion in the East that California fruit, while large and juicy and pleasing to the eye, is deficient in flavor. It cannot be denied that in New York it is not apt to be as luscious as Eastern fruit, but this is largely because it has to travel 3,000 miles and must therefore be picked before it is ripe. All tropical and semi-tropical fruits are infinitely more luscious eaten ripe off the tree than when picked green and made to ripen in a sunless car or ship's hold. It is also to be borne in mind that ignorant buyers make it more profitable to cultivate large and beautiful fruits, which are apt to be comparatively insipid, than varieties more highly flavored but less attractive to the eye. I lived for ten years in an Oregon apple orchard, and Oregon apples are perhaps the best in the world; yet I know that it was always the most beautiful apples and not the best-flavored that fetched the highest prices in the market. In various parts of California I have eaten peaches, cherries, figs, melons, etc., that were as richly flavored as any I have tasted in Italy or Spain, but I have also eaten much insipid large fruit which looked well in the market. The growers, however, are now learning that there are varieties which combine beauty with flavor, and by cultivating these they are teaching their customers that a rich taste, or fragrance (all so-called "tastes" in fruit, except sweet, sour, and bitter, are really a matter of fragrance) is not naturally denied to California fruits, as it is, for example, to the fruits of Japan—an instructive comparison. The fruits and vegetables of Japan are insipid because it rains too much there in summer. Now in California it never rains in summer. Why, then, have so many of its fruits been more or less insipid? Because—apart from the selection of inferior varieties—most of them were raised with the aid of irrigation imperfectly applied. It is only within the last few years that it has been discovered that too much irrigation is almost as bad as too little, damaging the trees and impairing the flavor of the fruit. A notion thus arose that irrigation in itself is injurious to fruit, but this is absurd, for irrigation is simply the application of rain-water at the right moment instead of leaving it to chance. Barely half as much water as formerly is now used by irrigators, who have also learned how to regulate and apply the flow with mathematical precision. The results are already evident in the superior quality and flavor of the fruit. The State now has more than three million acres under irrigation, and in a few years this figure will be doubled.

With the exception of the grape, probably everything grown for profit in California has made progress during the last few years. Raisins are, indeed, grown on a larger scale than ever before, and there is no diminution in the exportation of ripe grapes for the table, but the wine industry is not as flourishing as could be wished. The mysterious vine disease which arose at Anaheim appears, indeed, to have lost its virulence, and some young vineyards in that vicinity are doing well, but the phylloxera has now spread from Sonoma and Napa Counties to southern California, to the discouragement of the growers. These men have otherwise suffered unreasonably from the avarice and dishonesty of the middlemen and wholesale dealers, who refuse to pay more than fifteen cents a gallon for wines which they sell in the East for ten to twenty times that sum, the best of them under foreign labels, thus discouraging the formation of first-class Californian brands and helping to sustain the fictitious reputation of French wine-adulterators. Nevertheless, progress must be noted in the diminution of the supply of unskilfully made rough, sour wine, and in the more careful selection of grapes of a superior quality for bottling purposes.

If the supply of California wine equals or exceeds the demand, the same is not true of another luxury for the production of which the climate is specially suited. It would be well if all the disappointed vineyardists should turn their attention to the olive, which flourishes well in the State, and for which, as oil and in the pickled state, there is an unlimited field, as may be inferred from the fact that the United States imports almost a million gallons a year of what is supposed to be olive oil, though it contains but 34 per cent. of pure oil. California is expected to produce this year about 20,000 gallons—a mere drop in the bucket wanted. Of the three hundred varieties of the olive in existence, about seventy are said to be now growing in California; when the kinds best suited to climate and demand shall have been definitely ascertained, the profits and benefit to the country will be great. An olive tree over six years old is easily worth $10 a year, while a hundred-year-old mission tree at San Diego has yielded $144 in one year (192 gallons of olives). It must be remembered, too, that the American people have hardly yet learned a tithe of the value of olive oil, which, for cooking purposes, is far superior to lard, and even to butter. We do use it for salads, but even here we have much to learn from the French and Italians, who would not tolerate our cotton-seed adulterations for a moment. Californians could also enlarge the market for their olive oil by advertising the excellent French artichokes they raise, which make the best of all dishes with oil and vinegar. In New York restaurants we get half of one artichoke for twenty-five cents, while in California markets you get a dozen whole ones for about thirty-five cents. As artichokes keep well, here is a chance to make a fortune. The artichoke is the most tender and delicious of all vegetables, and the day will come when it will be as common as asparagus.

After all, in spite of the amazing developments of the last decade, southern California is still in an experimental state. Fruits, trees, vegetables, flowers, etc., of Mexico, South America, Africa, Japan, Australia are being tried and acclimated in picturesque confusion, and it is possible that the country will at the end of another decade again bear a quite different appearance, although the change will not be so great as that from the desert and cattle ranches of 1870 to the orange groves, clover-fields, and flower-gardens of to-day. Of the minor industries that I have had occasion to examine personally, only one—that of raising the large-eyed, awkward ostriches—has failed to prosper, and that not through any fault of the climate (for that, as an expert from South Africa told me, is remarkably like that of the ostrich's home), but because fashion is obdurate. But the Californian can always console himself with the reflection that if one thing fails to flourish on his twenty-acre ranch, he can try another; and if he is wise, he will not put all his faith in one crop, but will cultivate variety, so as to be independent of weather and seasons. He can market oranges from December to June, apricots from June to August, peaches from August to September; in October walnuts, prunes, plums, figs; and till January grapes—to give only a few samples. I may subjoin some specimens of profits made last year in Orange County—figures for the accuracy of which I can vouch: One 60-acre ranch (oranges and walnuts) yielded $18,100. One man obtained $550 from a single acre of orange trees. A walnut orchard of 35 acres, only ten acres in full bearing, brought $1,800. Twenty-five acres of apricots averaged about $100 per acre; 5 acres of peaches brought net $400; ten acres of pampas plumes netted $1,750; 1 acre of lemons $325; 1 acre of alfalfa (six cuts a year) brought $112.

With all this evidence of prosperity, the traces of the foolish "boom" of five or six years ago have not yet entirely vanished. For instance, the direct railroad from Colton to San Diego is not now running. In various towns, too, as in the lower part of National City, one notes buildings half finished at that time, and still half finished. Poor Tia Juana, the border town between the United States and Mexico, has been almost entirely demolished by a flood, which left only three or four shanties standing besides the Custom-house. Its only visible source of income is from the daily carload of tourists from San Diego, who may eat lunch or buy a few curios. On the other hand, San Diego and its fine Coronado Hotel on the sandy peninsula wear an air of prosperity. Let him who believes that southern California is too warm for comfort in summer spend a week at Coronado and he will change his mind abruptly. In three June days we found the noon temperature of the air 68, 66, 64—a good average—while the ocean was 67 and the bay water 73. Summer mornings at Coronado are apt to be foggy and melancholy, the evenings balmy and delightful. Coronado, too, is free from dust, the great summer nuisance of California. Los Angeles, not being quite so near the ocean, is less tempting in summer than in winter, but its streets always present a busy appearance, and many fine buildings, including two costly public edifices, have been erected in the last few years. And if you will take the Temple Street cable-car, you may see on a five-mile ride many ideal sites for a summer and winter villa. A town to be avoided in summer is Pasadena, except as a station on the way up to Mt. Lowe or Mt. Wilson on the mountain railroad, which is now being built, and which promises to be a great scenic attraction. We found not even a construction car running and had to pass a hot and dreary day in Pasadena, which is a paradise in winter, but the opposite in summer. The fine Raymond Hotel is then closed, and the only urban hotel open is so strictly "temperance" that you cannot get even mineral water or lemonade; this in a parched prohibition town, the water of which is criticised in the daily papers for impurity.

When the people of Pasadena or Los Angeles feel uncomfortable in summer, they go for a few days or weeks to Santa Catalina Island, twenty-eight miles off the coast, where it is never too warm in summer or too cold in winter, the climate, in fact, being pretty much the same all the year round, although the absence of rain in summer makes the amphitheatric mountains, of which the island is built, change in hue from green to yellow and gradually to brown. Catalina shows more signs of progress than any other resort of southern California. When I first visited it in 1889, steamers ran only once a week, and there was only one hotel; now there is a daily steamer (which touches at all the rival harbors of Los Angeles), half-a-dozen hotels, and last summer there was a tent population of 3,000 at Avalon, Catalina's harbor. A tunnel has been made to the next cañon or bay, and new paths laid out, including the plans of a stage road to the isthmus, while a fence is to be built separating the island into two sections, on one of which the

sheep are to be herded, while in the other the wild goats may again be hunted. It would be well, however, if the present law forbidding all shooting on the island were kept enforced permanently. Irreparable damage has already been done by the greedy wretches who, for the sake of a few inches of pretty down, have killed off the hundreds of pelicans which added so much to the exotic appearance of the island. The fishing is so good and varied here that it ought to give a sufficient vent to all sportsmen's cravings. You can sit at breakfast watching a dozen seals driving before them a school of flying fish making frantic endeavors to escape from their voracious pursuers, or men on the wharf hauling in the "gamey" twenty and thirty-pound yellow-tails.

If you prefer nature to sport, nowhere than in Catalina can you more easily and in less time walk into such an absolute and picturesque wilderness, up a cañon adorned with pools and cascades, varied shrubs and surprising floral beauties. Not the least attractive of these is the cactus, which in June still has some of its large yellow blossoms, while the beautiful red and juicy fruit, with its agreeable acid flavor, begins to ripen. Last year these cactus plants proved very useful to the islanders. The rain had been insufficient, and for months water and food were scarce; but the cattle were saved by burning the thorns off the cactus leaves and using them as food. There is a spoonful of juice in a square inch of cactus; were it not for its protecting thorns it would soon be exterminated by thirsty animals in the parched deserts.

In these Catalina cañons the June air is melodious with the voices of thousands of mocking-birds. Listening to them you recall with dismay the report that the abominable English sparrow has invaded northern California and is driving the mocking-birds away. It would be a calamity to have it come south too; in that case isolated Catalina might become the last refuge of the most interesting of all our song-birds—a bird which, on the perch or on the wing, is ever singing, not, like other birds, to attract a mate, but for the artistic pleasure of the song itself. Instead of a single call it has scores of phrases; seems, in fact, to try how many different melodies a bird-throat can utter without repeating itself. The mocking-bird is a genius among birds.

On Catalina Island, as in other parts of California, one of the most pleasant experiences is the unvarying courtesy and hospitality of the people. They never seem to tire of taking visitors, even perfect strangers, to see their flowers and fruits; they urge you to help yourself to oranges, figs, grapes, or whatever happens to be ripe, and they pick the choicest flowers to make a bouquet for you, giving the name, origin, and peculiarity of each, like expert botanists, and seeming to take a special pride in them, as if they had invented them. Nor would it be fair to trace this generosity entirely to the lavish profusion with which Nature bestows these luxuries on them; it is rather indirectly that we must seek for the source of these pleasant traits, in the benignity of the climate and fertility of the soil, which lessen the American fever of toil and competition, and pave the way for leisure and the social amenities which follow it.

HENRY T. FINCK.

## ARTS AND CRAFTS IN LONDON.

LONDON, October 2, 1893.

SOUTH Kensington Museum and its schools, it was once fondly hoped, were to revive the industrial arts in England, and set them once more on an artistic—that is, the only possible—basis. The failure of South Kensington in aught save the turning out of mediocre picture-painters is now a threadbare tale. The task it has not succeeded in accomplishing was undertaken, though on a much less ambitious scale, by the Arts and Crafts Exhibition Society some few years since. The name explained the members' object: they were to give shows of the work of genuine arts-and-crafts-men, and thus the people's taste must eventually be educated and the public standard raised. The first show, however, proved little but the narrowness of the society's own standard; only the neo-Gothic school, of which Mr. Burne-Jones, Mr. Morris, and Mr. Walter Crane are chief exponents, was represented. All decoration, judging from the collection, began and ended with arrangements of tall, gaunt, willowy figures, or else enlarged editions of the "Baby's Opera," done in various mediums and carried out in Morris schemes of color. Into the second and third exhibitions there entered a strong commercial element, which, perhaps, was one reason why it was thought well to leave a longer interval between third and fourth. This fourth has just been opened in the New Gallery.

If it can honestly be called representative, then indeed must the arts and crafts of England have fallen to a lower level than ever. It is easier to record its deficiencies than its merits. Furniture comes within the society's scope, and yet none is shown save an occasional desk, or sideboard, or table more remarkable for solidity than for grace or originality. In the designing of carpets, again, the craftsman has a fair field for the exercise of his ingenuity; but the one example contributed (one of Mr. Morris's creations) is so restless and dazzling in pattern and color alike that it is an offence rather than a pleasure to the eye. Of wall-papers there are few, except a new variation of Mr. Crane's peacock designs, and one or two of Mr. Day's rather heavy papers printed in tinted lacquers on metal foil. Textile fabrics make no finer display; of all the hangings of any kind none but one of the Morris tapestries attracts attention, and that, perhaps, because of its unusually large proportions and unusually vivid colors. Metal work, save in a few cases, glass, and pottery, come from long-established shops. Embroideries are mediocre. And, to crown all, the arrangement of exhibits is sadly ineffectual: confusion prevails; colors and effects are jumbled up together with strange indifference to harmony and fitness.

The truth is, to give its fourth exhibition vital interest, the society has borrowed from work done in the past. Thus, intentionally or no, it acknowledges the debt these craftsmen owe to the great leader of them all, Dante Rossetti, and, at the same time, confesses its members' shortcomings. The society has always made an elaborate showing of cartoons for stained glass, which this year again are to the fore. But, though many are by Mr. Burne-Jones; though the small color studies of Mr. Guthrie, the young Glasgow painter, are heralds of new talent in this branch of art, there is nothing to be compared with the six designs by Rossetti for the St. George series. Here you see spaces admirably well filled; figures treated with the necessary convention, but with none of that affectation beloved by Rossetti's disciples; color (at least in one design) exquisitely suggested. In these few small cartoons is thoroughly worked out the decorative problem which so many of the exhibitors have endeavored, haltingly, to solve in their own treatment of line and color. He is the master where they are but imitators. This simple series gives the keynote to the whole exhibition; it serves as additional proof—were proof needed—that Rossetti was the true inspiration of the English school of Primitives, the original man of genius among many artists of talent and ambition.

He is also the presiding influence in the department devoted to the art of book-making—he and Frederick Sandys. As was to be expected in a society of which Mr. Morris and Mr. Crane are prominent members, prejudice has ruled the selection of drawings, ornaments, and printed books included. Almost all the illustrations are done in the same archaic style; there are few specimens of printing that do not come from the Kelmscott Press; greater latitude has been allowed in the matter of bindings, but still Mr. Cobden-Sanderson has here the ascendency. However, these are matters that can be overlooked when a certain corner hung with drawings by Rossetti and Sandys monopolizes interest. Here are the originals upon which the other illustrators represented have based their methods. They are chiefly the well-known illustrations by Rossetti for Tennyson's and Christina Rossetti's poems; by Sandys, for poems by Christina Rossetti and Wither, and stories by Mr. Baring-Gould. They were published just at the time when England saw such a marvellous revival in the art of illustration, when photography was first applied to the arts of reproduction. Only too much of the best black-and-white work of that day—before the introduction of photography—perished, because drawings, being made on the wood-block, were ruthlessly cut to pieces by the engraver. But, fortunately, sometimes the artist made a duplicate drawing, or else, when photography began to be used, the drawing on the block was photographed before it was cut, or the original drawing was made, as now, on paper and then photographed on to the wood. Thus, a few illustrations and facsimile photographs have survived; to those who have never seen them before, the drawings now exhibited come as a revelation of the power of the pen work done by both Rossetti and Sandys.

In the same frames with them are shown prints of the woodcuts by Swain and Linton and Dalziel, the best engravers of the time. It is really cruel to learn how much of the delicacy, the refinement, the grace of the originals was sacrificed in the engraving. At times, even the lines themselves were not followed, new arrangements being substituted by the engraver. For the draughtsman it must have been heartrending to find his work so inadequately interpreted. These woodcuts would answer as excellent object-lessons to the purists who cry out against "process." In the same frames are also the preparatory sketches made by the two draughtsmen, who worked with a care and conscientiousness all too rare among latter-day illustrators. In their present surroundings the designs explain more forcibly than in the books where they were printed the distinction as pen draughtsmen of both Rossetti and Sandys, and also the well-nigh revolutionary effect they produced upon the art of illustration in England. Some of the woodcuts after Ford Madox Brown's designs for Dalziel's Bible are also exhibited, and are only less notable. Madox Brown, overrated as a painter, has never produced better work than his early illustrations.

If it be but little to the credit of the society that, for its best exhibits, it was forced to resurrect the work of some thirty and more years

ago, it is still more disheartening to find that its least successful contributions are those which should have been of paramount importance. Chicago has called attention to the art of mural decoration, sadly neglected, outside of France, in modern times. One is therefore doubly eager to see what in England just now is being done in this direction. It is only too seldom English artists are given a chance to display their powers; but, recently, the decoration of two public buildings has been undertaken. One building is St. Paul's, and Mr. W. B. Richmond, A.R.A., is the decorator. He shows at the Arts and Crafts his first sketches and one or two full-sized cartoons. The result is depressing. He has searched the Scriptures for his subjects, which necessarily are those often treated before by other painters. Not that this, in itself, is a drawback: but Sibyls and Annunciations and Angels have been so superlatively well done by other and greater men that his compositions and figures and color schemes seem all the more commonplace by the inevitable comparison. But the other enterprise promises even less well. Birmingham has a town hall with walls to be decorated. It is a commission which in France would fall to masters like Puvis de Chavannes and Besnard; in Birmingham it is handed over (from motives of economy probably) to the students of the Art School. The paintings now at the Arts and Crafts are no better nor worse than one expected. Barely commendable as the efforts of the mere apprentice, they are without dignity or beauty of design, without charm or glory of color, and are totally unworthy of a place on the walls of a great municipal building. That they at present hang in the New Gallery points to a lamentable lack of judgment on the part of an exhibition society of such artistic pretensions. N. N.

## MABILLEAU'S VICTOR HUGO.

PARIS, September 28, 1893.

IT seems as if there was not much more to say about Victor Hugo. Has he not said himself, in verse and in prose, all that we care to know about his birth, his life, his writings, his political views? A place has, however, been given to him in the series of critical essays on "les grands écrivains français," and the task of judging the most illustrious of our modern French poets has been given to an unknown writer, M. Léopold Mabilleau.

I will say at once that, difficult as it was, the task has not been badly done; the little volume on Victor Hugo (I do not know why all through the book the author writes V. Hugo instead of Victor Hugo; it is as if we wrote W. Shakspere instead of William Shakspere) is superior, in my estimation, to a great many volumes of the same series. Not that I approve the systematic order of M. Mabilleau's chapters; he has followed too exactly the method of analysis which was inaugurated by Taine. A man, especially a poet, is not like a chemical compound, which can be by some sort of process decomposed in order that we may know all its elements. Such titles of chapters as "La psychologie d'un poète," "La lumière et la couleur," "La forme plastique," etc., etc., give you the secret of the analytical method adopted by the new school of critics. The method is, in a sense, a convenient one; you can apply it to any work of art. There is no creation of the mind in which imagination, memory, method do not play a part; and you vary the applications of the method almost *ad libitum*, according to the nature of the work of art. The danger of the method is a tiresome dogmatism; and M. Mabilleau has not avoided it. His little book is full of definitions, of classifications. The sensibility of V. Hugo is, for instance, thus defined:

"In all the orders of perception, it passes through three phases: first *opposition*, then *exaggeration;* in the end the *fusion* of all the perceptible elements in a sort of final unity, where all the distinctions perceptible to the senses disappear. This order is logical and necessary, for a contrast ends in excess, and excess in the impression produces the evanescence of the reality."

In former times, this would have been called *galimatias;* but we are bound now to admire, even when we don't understand, these subleties of the analytical school.

The first years of Victor Hugo are well known. He has himself told us that he was born at Besançon (February 26, 1802), his father being a Lorrainer and his mother a Vendean. The father was an officer of fortune, probably of German origin. Hugo is not an uncommon name in Germany; it is the same as the English Hugh. The mind of the young child who followed his father's fortunes in Italy and in Spain became filled with many images, which were afterwards, by a sort of resurrection, found in the 'Orientales' and other poems. These reminiscences are very common, especially when the child is an "enfant sublime," as Victor Hugo proved to be. M. Mabilleau follows with a minute care the development of his poetical faculty. Victor Hugo felt at first the influence of the classical school, which was uppermost at the time of the Empire and at the beginning of the Restoration, but he did not feel it long. Chateaubriand initiated him into a new order of ideas; the transformation was completed by his love for Mlle. Adèle Foucher, who became his wife.

"We must note," says M. Mabilleau, "this first invasion of passion in the life of Hugo; we shall find no such example of it during the sixty years which he has still to live. Not that he remained insensible to the charms of woman—several celebrated liaisons and even some scandals would prove the contrary. But love proper, sentimental love, the feeling which inspires the poet and leads him to sing his happiness or his suffering, the very source of poetry for a Lamartine or a Musset—that sentiment found little place in the heart of V. Hugo, and his verses have kept only a feeble echo of it. Oftentimes his expressions regarding it are pure invention, or, rather, pure convention."

This remark is very true: in the poems as in the dramas, love is always somewhat artificial; it is a theme for magnificent images or for picturesque developments. "Must we conclude," asks M. Mabilleau, "that Hugo had no heart?" No, only in love as in everything else, the "faculté maîtresse," to use a favorite term of Taine's, is imagination. "With him, the states of consciousness, as soon as they are formed, become external, symbolic, and compose themselves by a sort of cerebral mechanism. The new emotion produces a world of forms, of colors, of notes which stifle the intimate accent. The sentiment ends in a metaphor." Here again we have some *galimatias;* but the final thought is just, and it was perhaps sufficient. With Victor Hugo the sentiment ends in a metaphor. The development of the poetical genius of Victor Hugo is the development of his imagination.

"You must understand by this word a power of impressionability always awake to the changing spectacles of the world, a rapid and intense perception of expressive form, a collaboration of the mind with the vision, which gives birth to an *image* where there was only a material appearance; which out of colors and lines draws thought and emotion; which, finally, interprets all sensations and symbolizes all figures."

For Victor Hugo, poetry is by excellence the echo of the material world in a vibrating and sonorous soul. He writes the 'Orientales' though he has never been in the East; he writes them with colors and images borrowed from Spain or from the setting sun. The poet has himself declared: "The idea of writing the 'Orientales' took possession of me in a rather ridiculous way, last summer, in going to view a sunset." There is in his mind a sort of permanent hallucination; he composes a "local coloring" of his own. It was while he was writing the 'Orientales' that Victor Hugo became a *romantique*, and associated himself with the new school, which had declared war on the ruling school, and of which he soon became the leader. He set forth its programme in the preface to "Cromwell": "A vast and profound movement is at work in the literature of this age; . . . nor is this surprising after a political revolution which has affected society root and branch. . . . There is a false literature, which is scholastic, and which is to the classic what superstition and fanaticism are to religion." Literary programmes are useless and pretentious when they are not supported by great literary works. "Hernani" came in time to serve as a living expression of the Romantic programme. It marked, in my opinion, the culminating point of the poetic genius of Victor Hugo. His dramas are ever young; they are applauded now even more than at the time when they appeared. There is much truth, however, in what M. Mabilleau says: "Victor Hugo, properly speaking, created no type. *Hernani*, *Didier* (of "Marion Delorme"), *Ruy Blas*, the only living figures of his dramas, are younger brothers of *Werther*, *René*, *Manfred*." What we really admire in "Hernani" is the lyrical beauty of the verses; we are also led away by the heroic character of the passions in play. Heroes, heroines are all characters *à outrance:* excess in love destroys *Marion* and *Didier;* excess of chivalrous honor destroys *Hernani*—all is excessive, superhuman, imaginary. We could not bear it in prose, but the splendid lyricism makes all these excesses seem almost natural.

Victor Hugo loves the superhuman; he likes also the grotesque, which, in a sense, is superhuman. He delights in such characters as *Quasimodo*, as *Rigoletto*, etc.; he likes deformities, or at least he considers them as the necessary antinomies of beauty. Fortunately, he does sometimes (not often) express perfectly natural sentiments, and he then rises to his true height. Nothing can be finer than these verses, which he wrote a year after the sudden death of his daughter Léopoldine, who was drowned with her husband two years after her marriage:

"Je viens à vous, Seigneur, Père auquel il faut croire,
Je vous porte, apaisé,
Les morceaux de ce cœur, tout plein de votre gloire,
Que vous avez brisé.
Dans vos cieux, au delà de la sphère des nues,
Au fond de cet azur immobile et dormant,
Peut-être faites-vous des choses inconnues,
Où la douleur de l'homme entre comme élément."

How simple, how different from so many later poems, which I must call apocalyptic for want of a better expression.

The quality of simplicity will certainly not be found in that part of M. Mabilleau's book in which he analyzes the foundations, the springs of Victor Hugo's poetical genius. We are informed by him that Hugo's eyesight was not like everybody else's; that he never wore spectacles, even at an advanced age; that his drawings, which were lately exhibited, show violent

oppositions of black and white—he never was sensible of any delicate shade of color. All his descriptions are, so to speak, violent; his sensations of form were violent also—he liked angular forms, fantastic, exaggerated lines. His eye was an instrument of imagination. He saw nature through his own mind, and it was to him a sort of permanent hallucination. Through his vision of the world, he ended by seeing nothing but himself.

His physical nature was peculiar: he was strong, and remained so to the end—square-shouldered. Sainte-Beuve had it from his hairdresser that his beard was very hard and chipped the razors. His teeth were like those of a wolf and could break anything. His appetite was extraordinary, and he could eat a great deal more than anybody and digest everything. He had a large head, heavy, a monumental forehead. Théophile Gautier has told us of his first visit to Victor Hugo, after "Hernani": "Twice did we mount the staircase, slowly, out of breath; we heard our hearts beat in our bosoms. At last the door was opened, and in a radiance of light, like Phœbus Apollo issuing from the gates of the dawn, appeared on the obscure landing Victor Hugo himself in all his glory." M. Mabilleau says that Victor Hugo was more than seventy when he first saw him. "It was the same man, with the same forehead, the same eyes, the same mouth, the same imperial majesty, the same audacity with the same mildness."

According to the theory of M. Mabilleau, founded on the succession of the poems, Victor Hugo became more and more subjective; images, forms, words became the mere playthings of his own imagination. He became at times almost drunk with words, with useless enumerations, with appositions and repetitions, with sonorous rhythms, with a purely plastic verbalism. At the same time, though he liked to play with physical appearances and with verbal formulas, he appeared in his own eyes more and more as a "pensieroso," as a thinker who has the privilege of looking behind nature, and who has for his mission to reveal its great secret to mankind. He became popular, and popular among people who certainly did not know even the names of his poems. He was known to be an apostle of the "pitié suprême." He had written 'Les Misérables'; his Olympic kindness embraced even the animal kingdom. He became a sort of idol; but he could not be unaware that, as he had been the first, he was also the last of the Romantics. When he disappeared, his revolted sons had formed new poetical schools, the Parnassiens, the Naturalists, the Symbolists, the Décadents. They could all say to him what Sainte-Beuve said to Chateaubriand: "We are your children; you have shown us the way."

# Correspondence.

## THE GENESIS OF A SENATOR.

To the Editor of The Nation:

Sir: The "wave of venality" which, according to the *Nation* of October 5, is now sweeping over the country, has gone over Delaware. The phenomena of its progress are distinctive enough to be worth recording.

Five years ago, when a split in the Democratic party gave the Republicans a majority in the Legislature, and they were struggling with that most difficult problem of political physics, the reduction of a multitude of candidates to a caucus nominee without the loss of energy and adhesion, there was suddenly sprung into the lists an altogether new and unfamiliar name. Inquiry revealed the fact that the gentleman represented by the name was the head of a large corporation doing business in several cities, and that his only connection with the State of Delaware was the ownership of a summer home in the northeastern part of the State, where he occasionally spent a few weeks. The new candidate bought up two or three small papers, established headquarters at the capital, and, for his money and his pains, failed to secure in caucus a single vote. His candidacy for the Senate was regarded as a joke, and as a bold man's device for gaining notoriety for himself and some desired legislation for his corporation.

For the next four years, but little was heard of our intermittent inhabitant as a factor in Delaware politics. A year ago, however, the Republicans put forth all their energy to elect a successor to the Hon. George Gray, whose term was about to expire. When election-day came, the Republicans, much to the chagrin of the Democrats, had more money than they could really spend. (Let it be remarked, in passing, that our Australian Ballot law is a mere statutory flourish) The Democrats saved themselves as if by fire. The wonder was where the money came from. Gradually it transpired that the political adventurer of four years before was the source of the tremendous corruption fund. As in the Van Alen case, there seems to have been no bargain. No pledges were exacted from the candidates for the Legislature. The money was given, and then a wish for the Senatorship expressed. He simply trusted to the wave of venality to float him into the Senate.

In March, 1895, the term of the present Republican incumbent, Anthony Higgins, will expire. All of the spoilsmen and bosses and henchmen are expecting our absentee candidate to hand over one or two of his supernumerary half millions, and thus assure power to both them and himself. If ends did not submerge means, if party did not ride over patriotism, we might ask the Republicans to save us from the scandal of being farmed out to the highest foreign bidder; but they will reply: "There is no lack of precedent in high Democratic circles. Your own Senator Gray reported favorably upon the Van Alen nomination. As your Van Alen is to the Italian mission, so is our Crœsus to the Senatorship." Delaware.

October 14, 1893.

## ENTRANCE EXAMINATIONS IN SOUTHERN COLLEGES.

To the Editor of The Nation:

Sir: In two tendencies colleges in the South present an interesting contrast with those in the North. It is also interesting to note that in each tendency the movements are towards similarity.

When a strict curriculum continued to be the rule at the North, a purely elective system, under the strong influence of the University of Virginia, gained ascendency at the South; and while among Northern colleges there has been a tendency to introduce the elective system to a greater or less extent, the tendency among Southern colleges has seemed to be in recent years in the direction of the curriculum. Certain schools which have not a prescribed curriculum have recently begun to publish recommended courses for the bachelor's or some other degree. Washington and Lee University, for example, publishes three four-year courses for the B. A. degree, and the University of Virginia publishes a curriculum for the courses in civil, mining, and mechanical engineering, "recommended, though not obligatory." The newest of Southern colleges, Tulane, provides four courses in the undergraduate school, to one of which the student is required to adhere. It ought, however, to be said that the policy of Tulane, as of some other Southern colleges, is to admit pupils to the freshman class, and thus to confer the B.A. degree at least a year earlier than is the custom in Northern colleges.

To the general statement of this tendency towards a curriculum, exceptions may perhaps be found. The University of Georgia, for instance, which began with a close curriculum, permits election, with the proviso, however, that "the student must satisfy the faculty that there is some good reason."

The other contrast of tendency to which I have alluded concerns entrance examinations. While at the North there is a tendency to less definiteness in the prescribed requisites for admission, there seems to be growing in the South a tendency towards greater definiteness. In each case the tendency indicates a healthy change. Considering, for example, the requirements in Latin, there is no doubt that the prevailing law, which demanded four books of Cæsar, six or seven orations of Cicero, and six books of Virgil, has been of immense benefit in fixing and maintaining a standard in the secondary schools of the North. The standard having been set, the law having proved itself a "schoolmaster" to the schoolmasters, the time seems at hand for encouraging freedom and variety. In the South, on the other hand, there has been no prevailing law. It might almost be said that each college, each school, has been a law unto itself. The result has been hurtful in preventing an advance of standard and any steadiness of requirement by which secondary schools might direct their teaching.

The South has always enjoyed a few private secondary schools of exceptional excellence, whose pupils, on entering college under the elective plan, have taken advanced standing; but these schools are apart from any general system which contemplates the preparation of pupils for the first year of a regular course, and have thus, in spite of individual excellence, had little influence upon the general standard of admission.

Examining the announcements of twenty colleges, we find in the published requirements for admission a great lack of agreement and definiteness. Especially is this the case in colleges without a curriculum, between which and the others any comparison is difficult. Although the colleges without a curriculum have generally a preparatory class, yet, inasmuch as their regular undergraduate classes are three, namely, junior, intermediate, and senior, it seems proper to take their junior class as corresponding to the freshman class of other colleges. Of these twenty colleges, twelve have a curriculum, seven are elective, and one, the University of Texas, has the so-called group system. The following list, in which the colleges with a curriculum are put first, is made from the point of view of a secondary teacher who should wish to know how much Latin and Greek his pupils should have read, and how far in mathematics they should have advanced, in order to enter the first regular college class.

Roanoke College — Cæsar 4 books; easy Greek prose; algebra through quadratics.

Hampden-Sidney College — Some readiness

in translating Latin prose and the Anabasis; arithmetic.

Davidson College—Cæsar, Cicero 4 Orations; Xenophon 2; algebra through radicals.

Tennessee—Ability to read Nepos, Cæsar, or Cicero; ability to read selections from Xenophon, etc. (*sic*); algebra to quadratics; geometry 2 books.

Vanderbilt—Cæsar 4, Virgil 4 (or, for two of these, equivalent of Ovid), Cicero 4; Xenophon 4, Homer 3 (Iliad or equivalent of Odyssey); algebra, plane geometry.

Mercer—Cæsar, Virgil; Xenophon; algebra to quadratics.

Mississippi—Cæsar 2, Cicero 1; algebra to quadratics, geometry 3.

Louisiana State—Smith's Principia Pts. I. and II.; elementary algebra.

Tulane—Nepos 5 lives, Cæsar 3, Virgil 1; Xenophon 3; algebra through quadratics, geometry 6.

Austin College—Cæsar 4; Xenophon 1; algebra to quadratics.

Georgia—Nepos, Curtius 2 (or for both, Cæsar 4), Virgil 1; Xenophon 1; algebra to powers and roots, geometry 2.

Alabama—Cæsar 3, Virgil 4, Cicero 6; Xenophon 2; algebra through quadratics, geometry 2.

North Carolina—Cæsar 2, Virgil 6, Cicero 4; Xenophon 3; algebra to quadratics.

Texas—Cæsar 4, Cicero 4; Xenophon 3; algebra through quadratics, plane geometry.

The catalogues of the following give no data as to entrance examinations for general admission, the position of the student being fixed by the head of each department which he may elect to enter. The list gives the subjects of the first of the three college classes, generally called junior. Sewanee has a preparatory school. Washington and Lee, Richmond, and Randolph-Macon have a class before the junior called respectively preparatory, junior i., and introductory.

Virginia—Selections from Sallust, Ovid, Curtius, Virgil; Xenophon, Lysias; latter part of algebra, geometry, and trigonometry.

Washington and Lee—Selections from Livy, Cicero, Virgil; Xenophon, Herodotus, Homer; latter part of algebra, geometry, plane trigonometry.

Richmond College—Virgil, Cicero; Xenophon, Lysias; latter part of algebra, geometry, plane trigonometry.

Randolph-Macon College—Cicero, Virgil, Livy; Xenophon, Lysias; algebra, beginning with quadratics, geometry.

Furman—Virgil, Ovid, Cicero; Xenophon, Homer; algebra and geometry.

South (Sewanee)—Livy, Ovid; Lysias, Demosthenes; geometry, trigonometry.

The English requirements in those colleges which hold formal entrance examinations show an encouraging unanimity, all of them except two specifying as part of the requirement the writing of a composition, and most of them naming the books from which the subjects will be given.

In the announcement of Furman University there are published "Suggested Requirements of Admission," which were recommended at a conference of representatives of the colleges of South Carolina held in 1892.

Vanderbilt University and the University of Texas publish specimen entrance examination papers. The catalogues of these two universities, together with those of the universities of North Carolina, Tennessee, Alabama, and Tulane, are noticeable in the information which they give to preparatory teachers, as indicating a growing demand for better preparation and illustrating the tendency to a definite statement of requirements.

If it were possible to secure more harmony among the colleges, good results would doubtless follow more quickly; and now that public high schools are increasing in number and importance throughout the South, the need of better coördination between the colleges and the schools will become every year more apparent.—Respectfully, J. H. Dillard.

New Orleans, October 4, 1893.

## JUDICIAL POWER.

To the Editor of The Nation:

Sir: The letters in the *Nation* of September 28 and October 12 upon "Judicial Power" are very interesting, and—may I be allowed in passing to say it?—show how evanescent magazine articles are; for the whole subject was exhaustively considered by me in 1885 (*Amer. Law Review*, March-April, pp. 175-202), and, I think, little new matter has been found since.

To this latter remark, however, there is one exception. The late Brinton Coxe of this city devoted much time in his latter years to the subject, and gathered together a mass of material, very much of which is quite new. This is all now set up in type and will very soon be given to the public, and it is in order to announce this fact to those interested in the subject that I write you. One exceedingly interesting question, not touched by your correspondents, is the question to what extent the framers of the Constitution *foresaw and intended* the doctrine upon the subject which has now become so fully established; and this subject is fully considered by Mr. Coxe, who examines the debates and traces the growth of the clauses in the Constitution upon the subject from what he calls their "historical antecedents." This line of investigation is almost entirely new. Mr. Coxe also examines at length the earlier law system in England and the systems upon the continent of Europe, and has unearthed numbers of cases which show that the American doctrine is not so entirely novel as is usually supposed. But the book will soon speak for itself.

Very truly yours, Wm. M. Meigs.

Philadelphia, October 13, 1893.

# Notes.

The Fleming H. Revell Co. announce 'More About the Mongols,' by the late James Gilmour; 'Five Hundred and Eighty-nine Wise Sayings,' selected from Eastern sources by W. A. Clouston; 'The Handwritings of the Kings and Queens of England,' with facsimiles, by W. J. Hardy; 'The Romance of Electricity,' by John Munro; and 'Foreign Missions after a Century,' six lectures delivered before the Princeton Theological Seminary by the Rev. J. S. Dennis, D.D.

Besides the 'Letters of James Russell Lowell,' edited by Prof. Norton, Harper & Bros. publish directly a translation of Moltke's 'Essays, Speeches, and Memoirs'; 'Evening Dress,' a farce, by W. D. Howells; and 'Short Stories,' the last of the "Distaff Series."

Thomas Whittaker has nearly ready 'The Significance of Names,' by Leopold Wagner, and 'A Calendar of Verse,' by George Saintsbury.

Duprat & Co. of this city hold out a promising table of contents for their luxurious *Book-Lovers' Almanac* for 1894, together with etchings by Robida and many other illustrations.

Balch Bros., Boston, have issued a quarto volume entitled 'American Landmarks: A Collection of Pictures of Our Country's Historic Shrines,' with descriptive text by George A. Cleaveland and Robert E. Campbell. The fervid patriotism of these gentlemen is manifested in every section of the work, which for the rest is handsomely illustrated with full-page photogravure plates and with many artistic vignettes. The selection has been catholic, and the civil war, while not wholly neglected, has been but sparingly drawn upon. The plates are of very even excellence, and are mostly picturesque as well as photographically faithful. We remark by the way that the great Bennington obelisk is depicted only in vignette, and that a full-page view from the south would have shown its relation to the quiet old street of a town at its base: a violent contrast, surely, yet not so damaging as that occasioned by ill-made and ill-placed statuary in some other luckless New England villages we know of.

The Arts and Crafts Society has gathered together a number of the essays which have from time to time appeared in the catalogues of its exhibitions, Mr. William Morris has furnished a preface, and the Scribners have published the whole in a volume under the title of 'Arts and Crafts Essays.' Some of the writers deal with the various artistic handicrafts in a practical and suggestive way, but the larger number are vague, and merely suggest that good work is impossible under the reign of modern "commercialism," and that the world must be remade (presumably on socialistic lines) before much is to be hoped for. It is interesting to note how the British vision is limited by salt water. For instance, in the chapter on stained glass no mention is made of the admirable work of La Farge and other Americans, and in that on mural painting neither the wax method by which the best French work is done, nor that work itself, is considered. To talk of mural painting to-day without knowing the work of Puvis de Chavannes is to talk in the air.

It is somewhat difficult to see what are the qualities of 'The Literary Works of James Smetham' (Macmillan) that merit "a more permanent place in literature than the pages of a periodical admit or allow of," as the editor, Mr. William Davies, says of them. The first article in the volume is a good enough review of Leslie's and Taylor's Life of Reynolds, but, so far as we can see, contains nothing specially important or not to be found elsewhere. The essay on William Blake is sympathetic, but is marred by much quaintness and affectation of style. That on Alexander Smith is entirely nugatory, and that on Gerhard Dow altogether misses the real objection to Dow as an artist, which is not that he wasted an infinity of labor on mean subjects, but that the labor was so misapplied that the result is mean in style. The poems which conclude the volume show a slender thread of sentiment, and are rather melodious.

Dr. John Nisbet served many years in the care of the teak forests of tropical Burma, and has brought to Britain all the wealth of his experience. His book on 'British Forest Trees and their Sylvicultural Characteristics and Treatment' (Macmillan) "makes no pretension of being a work of original research or of observation based on long experience in the treatment of forests in Britain." The author confesses that it is, to a considerable extent, a compilation from the best German sources, but says that he can at any rate vouch for the correctness of the scientific principles enunciated, from his own observations in both Bri-

tain and Burma. The whole subject of forestry is treated methodically in the first fifty-four pages; and then follow the individual species of British and introduced forest trees, from the Scots pine to the willows—in some cases as many as twenty or thirty pages being devoted to a single species. The general character, distribution, tree-form, and root system, requirements as to soil, situation, and light, age of maturity and reproductive capacity, liability to injury, treatment in the forest, sowing and planting are all treated of carefully and thoroughly. As for what the writer has translated from the German, one could read the book through and not suspect that it was not all his own. Of course, the climatic conditions of the United States are as different from those of England as our kinds of forest trees are unlike those of Europe; but the general principles of forestry set forth in this treatise may well be studied by thoughtful Americans.

So may Dr. Jarchow's 'Forest Planting: a Treatise on the Care of Timber-Lands and the Restoration of Denuded Wood-Lands on Plains and Mountains,' published by the Orange Judd Co. The author has had twenty years of experience in forestry in northern Germany, and has had a like period of personal observation in this country, and has written this practical work as an answer to the question, "How shall we preserve our forests?" His recommendations are very practical, such as that the forests left us should be guarded against unlawful encroachment, protected from fire, insects, and cattle, cleared of dead or defective trees, thinned out where too dense, and replanted where there is no other remedy. He says: "Under all circumstances, steps should be taken at once to establish on a proper place in the Adirondacks a nursery for raising the principal common forest trees to be used upon the denuded State lands." A further suggestion is, that among the inhabitants of the Adirondacks could be found the best crude material for good foresters to be trained and educated by the State.

Mrs. Lewis tells very briefly, in 'How the Codex Was Found' (Cambridge, Eng.: Macmillan & Bowes), the story of her remarkable discovery of a very ancient copy of the Gospels in Syriac. Accompanied only by her sister, Mrs. Margaret D. Gibson, who edits this volume, she spent a month in the winter of 1892 at the Convent of St. Catherine, Mt. Sinai, photographing ancient manuscripts, among them a palimpsest of 358 pages. The first part of the book is mainly descriptive of the journey and the life at the convent. A short account of the identification of the manuscript at Cambridge follows, and the closing chapter narrates, only too briefly, a second visit to Sinai by these ladies in February, 1893, in which they were accompanied by Prof. Bensly of Cambridge and Mr. Rendel Harris, who carefully transcribed the Codex. The editor has also added translations of a modern Greek description of the convent, and extracts from the journal of St. Sylvia of Aquitaine, who made a pilgrimage to Sinai in the latter part of the fourth century. It is interesting as giving a faithful description of the scenery around the sacred mountain nearly a century before the present convent was built.

The most convenient translation of the Book of Enoch is that of R. H. Charles (Oxford: Clarendon Press; New York: Macmillan), based on Dillmann's Ethiopic text, which, however, is largely emended after hitherto uncollated Ethiopic MSS. and the Gizeh and other Greek and Latin fragments. Mr. Charles's critical and exegetical notes are good.

The Rev. Dr. G. U. Pope has published a useful edition of the Tamil classic, the 'Naladiyar' (Oxford: Clarendon Press; New York: Macmillan), with English translation and notes. It is a contribution both to the history of Indian wisdom and to the knowledge of the Tamil language.

W. R. Morfill's 'Poland,' in the "Story of the Nations" series (Putnams), is a readable work, and gives a fairly lucid account of the complicated career of a nation whose misfortunes have awakened far more sympathy than her achievements while she was independent. If "Freedom shrieked when Kosciusko fell," it was because the spectacle of a people crushed by foreign domination always appeals more strongly to our sense of justice than does the spectacle of a people oppressed by its own tyrants. The truth is that there was never any real freedom, as we understand it, in Poland—a very small oligarchy was free to bleed the burgher and peasant classes, that was all. The fate of Poland should be a warning to every country of the inevitable ruin which awaits a nation in which a small and selfish class—be that class military, clerical, hereditary, or commercial—absorbs all the civic power and enjoys all the resources of the State. Mr. Morfill attributes the fall of Poland to the want of patriotism and to the greed of the nobility; to the intolerance of the clergy; to the absence of a middle class; to the oppression of the peasantry, who could have no national spirit; and to the dearth of great men. He might have added as a concomitant cause the weakness of the dynastic principle. In other States the dynasty was often the prop to which national sentiment clung until it was strong enough to stand alone. Many illustrations add interest to this volume. A better map, in which the various partitions should be represented by different colors, instead of by confusing dotted lines, could easily have been prepared.

In the current Proceedings of the American Antiquarian Society incidental mention is made of the celebration this year of the centennial anniversary in Worcester, Mass., of a fire society, sole survivor of its kind, whose functions have, however, become "social and literary rather than 'antipyretic.'" In November, 1892, there was celebrated in Boston the inception of the Massachusetts Charitable Fire Society, whose object was not to put out fires, but to encourage invention to that end and to the suppression of them, and to aid sufferers by fire. A brief history of this excellent and still flourishing organization has just been published in handsome shape (Little, Brown & Co.), with some fine portrait and other illustrations. Paul Revere was one of the founders, and associated with his are some of the best of Boston names, including these suggestive ones: the Rev. William Emerson, John Phillips, Francis Parkman, and Oliver Wendell, besides Charles Pinckney Sumner, the one-time odist of the society. The volume is, in its historical, biographical, and antiquarian phases, a real contribution to the annals of Boston, in which city it is wholesome to recall (for our present national shame) that a negro woman was judicially burned alive for arson in 1681. The society now has an income of about $3,000 a year. The growth of insurance long ago induced an enlargement of its charter privileges, and its benefactions have been extended to the victims of various forms of disaster both in and out of Massachusetts, and have even availed to help found a lying-in hospital.

We recur to the A. A. S. Proceedings to mention also a valuable account, by Mr. W. Noel Sainsbury, of the British Public Record Office, and the material in it for early American history. And noteworthy is the memoir of Maj.-Gen. Thomas Harrison, by Charles H. Firth, who proves that this regicide was not an ancestor of ex-President Harrison.

Four years ago, Mr. Henry F. Waters, in his researches concerning the pedigree of Roger Williams, came upon a connection with the Rev. Josse Glover, a New England worthy in so far as that he furnished the means for establishing at Cambridge the first printing-press in Protestant America. Mr. Waters then promised to return to Glover, and he now fulfils the pledge in the October number of the *New England Historical and Genealogical Register*. Among his "Genealogical Gleanings in Eng land," Mr. Waters gives a number of Glover wills introducing "Josse Glover Clerke," besides some pertinent notes from the Suffolk (Mass.) Court files, which reveal the Appleton and Winthrop relationships through Glover's married daughters in this country. The will of the Rev. Nicholas Moreton of Southwark brings us face to face with John Harvard's transatlantic pastor; while the wills of Pryaulx and Mercer complete the links of descent from that picturesque character, the Rev. Stephen Bachiler, who was certainly the ancestor of Whittier, and is reputed to be also of Daniel Webster. Richard Quiney's will touches again on John Harvard, as it does on Shakspere at Stratford-on-Avon. Finally (by our forbearance), the wills are given of the mother and brother of Edmund Quincy, the immigrant ancestor of the eminent New England family bearing that name.

From the astronomical observatory on the summit of Mont Blanc, in the construction of which M. Eiffel extensively interested himself, the following despatch is sent by M. Janssen, the distinguished astronomer of Paris and director of the astro-physical observatory at Meudon:

"The observatory has been erected, and the great work is ended. Only the interior arrangements now remain to be completed. It is a success in which everybody did not believe, and which is due to the enthusiasm of our courageous workmen, several of whom remained for twenty days without coming down, and also to the extraordinarily favorable weather in August. The windlasses adapted for use on the snow which I put in their hands worked admirably, and greatly contributed to the success and the relief of the workmen. I made much use of them in my ascent. It was curious and extraordinary to see the materials moved by these machines scaling the icy slopes of the ridge. We have had no serious accident to deplore. I hope the observatory may be utilized for certain observations this autumn."

—At the Congress of Astronomy convened in Chicago last August, Mr. Alvan G. Clark read a significant paper on the great telescopes of the future. Most of the important original discoveries in the optical line have been made with the largest telescopes in use at the time. Once seen with the large glass, however, the new objects were readily seen with smaller instruments. In the case of discoveries of a certain class made with telescopes of medium size, Mr. Clark is of the opinion that the discoveries would have been more numerous and important if the discoverers had been able to command the largest telescope. When the two 15-inch telescopes were made in 1846, one for Russia and the other for Harvard, they were considered monsters, and most astronomers thought the limit in size had been reached. Then came an interval of fifteen years with no increase in size, when in 1860 the order was given for an 18½-inch telescope now at the Dearborn Observatory in Evanston. Some ten years afterwards, Mr. Newall of Gateshead,

England, built a 25-inch telescope, now at Cambridge, followed in 1873 by the 26-inch for the National Observatory at Washington, and one of like size at the University of Virginia. About 1880 the 30-inch glass was ground and figured for the Imperial Observatory of Russia at Pulkowa; then came the 36-inch Lick telescope, about seven years later; and now Mr. Clark has well under way the largest lenses ever constructed, of 40 inches diamet r, for the University of Chicago. Such prodigious instruments are needed to make original discoveries, and in research bearing upon the constitution of the stars they are vastly superior to smaller ones. The trouble experienced by the earlier opticians in procuring good discs of glass seems to have passed away, and we are now able to procure discs of almost any size, the only obstacles being the time required to make them, and the money to pay for them.

—Mr. Clark strongly expressed the opinion that the great telescopes of the future will be refractors, not reflectors. The large telescopes of the latter type have rarely accomplished much except in the hands of the opticians who made them; they are extremely sensitive to unfavorable conditions affecting the use of the high magnifying powers which they are intended for. But, having once procured the great disks for the refracting telescope, all that is required is an optician to figure and polish them; and he must be an artist in color, as well as in light and shade, in order to do the perfect work required. This is a very difficult task, and the difficulties grow with the constant increase in size. Furthermore, it is work which will probably never be accomplished by machinery. Mechanical appliances are available for the rough work of the first polishing, but the fine grinding and smoothing is always done by hand. The increase in size of even our present great refractors is not alone a possibility but a fact, and with this will come large acquisitions to our present stock of knowledge. The new astronomy as well as the old demands more power.

—The interest of the Catalonians and their congeners of the Balearic Islands in the current developments of early American discoveries is manifested in a photographic reproduction of the well-known Catalan chart of Gabriell de Valsequa of 1439, very welcome as it is to students who have had heretofore to depend on the engraving made by Santarem in the days anterior to photographic accuracy. It is known that Vespucius owned and paid a hundred and thirty ducats for a chart of this same Valsequa, and it has been stated that the copy belonging to Vespucius was in existence in Majorca as late as 1838. We are not quite satisfied that it can be proved to be no other than the copy now photographed. Two little tracts further attest the current interest in these questions among the Majorcans and the neighboring Aragonese, both of which have been lately printed at Palma. One is on the 'Influencia de los Aragoneses en el descubrimiento de América,' by Don Miguel Mir of the Spanish Academy of History, and the other is on the 'Descubrimiento de América por Cristóbal Colón,' by Lorenzo Cruellas y Rovira. The first-named possesses the most interest. If Ferdinand the Catholic was lukewarm towards the merits of the great Genoese, the descendants of his subjects apparently do not care to be forgotten in the award of credit which the nineteenth century is making to the adventurous spirit of the fifteenth. There are some curious questions yet to be settled as to the exact relations which the people of Ferdinand sustained at that time to those of Isabella. The present essay is an effort to find the truth.

—In taking the census of Alaska in 1890, the Government agent saw that the Arctic Alaskans were on the verge of starvation. The whale and walrus, which had been their principal food, had been killed or driven off by whalers, and wild reindeer had been shot by white hunters. The natives, thus cut off from former sources of subsistence, had no hope save of Government rations such as are doled out to Indians. But the agent, Sheldon Jackson, devised a more excellent way. Learning that Siberians across the sea made a good living by raising domesticated reindeer, which gave to them food, clothing, shelter, transportation, etc., he became satisfied that importing Siberian animals might be the salvation of the Alaskans. On the strength of his report, a bill for such an importation was at once introduced in Congress and favorably reported on, but failed to pass. The measure, however, so commended itself to benevolent men as wise, humane, and demanding immediate action, that several thousand dollars were contributed by individuals in aid of Mr. Jackson's enterprise, and the United States vessel in Alaskan waters was ordered to render him all possible aid. It had been contended that reindeer could not be bought, or could not bear a thousand miles of necessary transportation—could not find food, or be protected from wolves. Several of these bugbears were short-lived. Before the close of 1891, Mr. Jackson had purchased sixteen head of the Siberian animals and safely transported them to an island in the harbor of Unalaska. They wintered there well, and in the spring showed an increase of two.

—In 1892 the experiment was still more successful. It was backed by a congressional appropriation, the best spots on the mainland for colonization had been sought out, and on the 4th of July fifty-three deer were put ashore at a single station, on the first inlet south of Bering Strait. This number was the first instalment of 171 which during the season were distributed to selected points. With them were brought skilled Siberian herders, under whom Alaskan boys were placed as apprentices, with the promise of deer for themselves as soon as they showed that they could fitly care for them. When Jackson left his colony, he was triumphant, but not without trepidation. It was impossible for him to hear from his herds for more than half a year, and meantime the fate of his experiment must be decided. His official report has not yet been made, but it is gratifying to know that his success is commensurate with his philanthropy. Of the 171, 4 were shipped to other parts of the United States, 13 died from injuries in transportation, 5 from fighting among themselves, and 2 strayed away at landing. To the herd of 147 in 1892 87 fawns were born this spring, of which 79 lived. Up to the middle of July 67 new imports had arrived from Siberia, and more are on the way. On the whole, the prospect is good that the new industry will not only keep the Alaskans from starvation and Indian idleness, but will lift them to a higher plane of living.

—The excellent series of "English History from Contemporary Writers" has received a scholarly and timely addition in Joseph Jacobs's 'The Jews of Angevin England' (G. P. Putnam's Sons). Mr. Jacobs has included in the volume every scrap of evidence in the English records relating to the Jews of England up to the year 1206. Latin and Hebrew sources, printed and manuscript, are for the first time collected and translated, forming a work that reflects credit on the author's industry no less than on his scholarly exactness. The material thus gathered throws a full light on the activity of the Jews in England in the period mentioned, the relation of the Church to them, their function as money-lenders at a time when capital was needed by barons and monks, and the attitude of the king, who was the sleeping partner in all the Jewish usury. Mr. Jacobs shows the importance of Aaron of Lincoln, by whose moneys nine Cistercian monasteries of the north country were erected, and who boasted that he had built the shrine of St. Albans. The story of the York massacre, due to the desire of some nobles to evade their debts by the shrewd plan of destroying the Jews and the evidence of their knightly indebtedness, is told at length. The central fact brought out by Mr. Jacobs is the literary and spiritual prominence of English Jews during the last third of the twelfth century. He has enhanced the value of the work by presenting many curious illustrations, with full bibliographical and name lists, and running comments that are always of interest, even if at times a little garrulous. The book is quotable throughout, but this incident may suffice: A certain Jew travelled to Shrewsbury with the archdeacon of the same place, whose name was Peche, and the deacon, whose name was Dayville. When the Jew heard the archdeacon saying that his deaconry began at Bad-place and lasted until Bad-pass near Chester, he said, "It will be a wonder if chance bring me back safe from this country whose archdeacon is Sin (Péché), whose dean is the Devil, which you enter by a Bad-place and go out in a Bad-pass."

—The death of Emin Pasha, apparently confirmed by the latest reports from Africa, lends a peculiar interest to 'Die Wahrheit über Emin Pascha,' by his medical officer, Vita Hassan (Berlin: D. Reimer). In the second and concluding volume, which has just come to hand, the story is told of the Mahdist invasion of the Equatorial Province, of the mutiny of the Egyptian officers, and the retreat with Stanley to the coast. There is little that is new in all this, excepting the account of a mission to Unyoro by the author in company with Dr. Junker. The king of this country, Kabarega, who has generally been regarded as a savage of the worst type, he describes as an unusually brave and capable chief, and gives some remarkable instances of his trustworthiness and honesty. For Stanley he has only bitter words and charges of tyranny, inhumanity, faithlessness, and indirect extortion. With reference to them we can only say that this narrative, perhaps more than any other, shows how trying the circumstances were for all concerned in this unfortunate expedition. Some bitterness of feeling, surely, is pardonable to one who lost a child on this terrible march for lack of proper care. The main interest of the book, however, centres about Emin Pasha, and many little details of his life are given which make it possible to form what is apparently a truthful picture of the man. Though possessing few of the heroic qualities with which the popular enthusiasm invested him a few years ago, he had some of the characteristics of the successful ruler of half-civilized races. But in the hour of danger he showed himself fatally lacking in energy and decision. If Vita Hassan can be believed, the attack of the Mahdists on the province would certainly have failed but for Emin's timidity and dilatory action. His was

a most difficult situation, however, and perhaps it is the chief merit of this book that it shows so clearly and effectively what Emin had to contend against. The closing chapter sketches briefly the present condition of the Sudan so far as it is known. As a proof of the hatred with which the Mahdists have inspired the people, the author quotes the first two lines of a ballad sung throughout the eastern Sudan, notwithstanding the strenuous efforts of the Khalif to prevent it:

"O Father Negus, O Englishmen, rescue us.
Sons of kings were we, and now are we become as women."

"Father Negus" is the king of Abyssinia.

## LETTERS OF A PESSIMIST.

*Schopenhauer-Briefe.* Herausgegeben von Ludwig Schemann. Leipzig: Brockhaus; New York: Westermann. 1893.

ALTHOUGH no man of genius was ever more convinced of his greatness and of the immortality of his writings than Arthur Schopenhauer, he did not wish his private letters to be printed. When, a few years before his death, his apostle Bahnsen expressed a desire to copy the letters to Becker, he begged him to desist, on the ground that such duplication would increase the chance of their falling into the hands of a publisher, "which I do not desire, since they are letters hastily written, without premeditation or care. You will assuredly not lose much thereby; for they contain no new ideas whatever, as I am not in the habit of squandering such in private correspondence." In the case of his letters to members of his own family he had other grounds for not wishing them to be printed. During the period of the quarrel and long estrangement with his mother and sister, his irascible temper must have given birth to letters which neither he nor the recipients could have wished to be preserved for the scandal-mongers of future generations; accordingly they were destroyed, and not a trace of them has been found by his biographers and followers. Although this is on the whole a matter for congratulation, one regrets the loss of the numerous characteristic touches and bits of autobiography which these letters must have contained, and of which we have an occasional echo in the numerous and voluminous letters of his mother. In one of these (dated 1807) she says, in reply to one of his communications: "You are an ungodly fellow, and you lead your mamma to ungodliness, too, for, may the Lord pardon me, I had to laugh over the death of honest old Stender, and that surely is not permissible." In these letters he seems to have allowed his pessimistic candor and censoriousness even greater sway than in his published writings, for his mother repeatedly urges him to be more careful in his way of expressing himself, since the post-office is not to be trusted, and half a word is enough for her.

In spite of Schopenhauer's obvious desire that none of his letters should appear in print, his disciples and friends have now made public every scrap they could find, justifying themselves on the ground of duty to the world, and the conviction that his wish applied only to his lifetime. Frauenstädt, Gwinner, Lindner, and others have given to the world specimens of his correspondence, but it remained for Herr Schemann to attempt a collection of the miscellaneous groups and single letters written to various parties. Questions of copyright and other considerations prevented him from including all of Schopenhauer's letters in the volume now before us, and it must, therefore, be regarded merely as a supplement to previous publications. Most of the material presented is new and based on the MSS., but in the case of special groups the editor has secured permission to insert letters already printed. He has also inserted a considerable number of letters addressed to Schopenhauer by his mother, his disciples, and admirers, most of which are also worth reading. The appendix contains more than a hundred pages of notes on the correspondence, and miscellaneous information about the philosopher's friends, his last will, etc. In short, it is a book which will prove invaluable to future biographers, and at the same time all admirers of the most lucid and poetic philosopher since Plato will find therein much to instruct and entertain them. For although Schopenhauer was right in saying that he did not "squander" important new ideas in his private letters, he could not help throwing valuable side-lights on various points, while his grim but honest personality is vividly brought before us during their perusal.

Unlike her son, Johanna Schopenhauer did not destroy her family correspondence. Quite the contrary, she asked for the return of most of it, for the purpose of incorporating it in her memoirs. She was a most voluminous writer, for while her son's collected works are included in six volumes, hers are extant in twenty-four. From her letters to Arthur, Herr Schemann has included in his volume a number of extracts that afford glimpses of her style and mind, which are the more interesting as, according to Schopenhauer's doctrine, men of genius inherit their intellect from the mother, their character from the father. She was undemonstrative, averse to a show of sentiment. "You have just left me," she once wrote to Arthur. "I still inhale the smoke of your cigar. I know I shall not see you again for a long time. We have spent the evening most agreeably together; let that be the parting. When you get these lines, I shall probably not be here any more; should I be, do not call! I cannot endure leave-taking." And a few days later she wrote that he was a good boy for taking her "Polish leave" as it was meant. When Arthur writes to her, dissatisfied with his position and the world, she replies: "I know only too well how little of the happy spirit of youth was allotted to you, how much disposition to melancholy musings you received as a sad inheritance from your father." She feels that he lacked a mother's care and advice in the period of transition to serious life, and attempts to console him with the maxim that every man not destined to be a mere log must have his moments of dissatisfaction with the world. She tells him that the more she observes mankind, especially when in distress, the more does she notice and admire its noble traits; but such optimistic sentiments are entirely thrown away on Arthur.

Johanna Schopenhauer had the good luck to be one of Goethe's friends in Weimar, and she tells her son many interesting things about their social intercourse, of which Goethe's biographers (especially Düntzer) have been glad to avail themselves. We get glimpses of the poet following Johanna's example in alleviating the sufferings of the wounded after the battle of Jena; of the amiability, sincerity, and frankness of his character, and its childlike simplicity. She relates how one day he helped her and Meyer to make a fire-screen: "If a senator or burgomaster could see how Meyer and I glue together paper cuttings while Goethe and the others stand by eagerly proffering their advice, he would feel a genuine Christian pity for us poor childish souls." Arthur's personal acquaintance with Goethe did not begin till some years later, when he spent a winter in Weimar, where, as he says in an autobiographic sketch, "I enjoyed the association with Goethe, which became as intimate as a difference of thirty-nine years in our ages permitted." He worshipped Goethe as he did no one else but Kant, and almost the only utterances of personal enthusiasm in his writings are his references to "the divine Goethe," to the "infinite advantages" of intercourse with him, or a passage like this: "Your friend, our great Goethe, is well, is merry, social, well-disposed, friendly; praised be his name to all eternity."

Schopenhauer's correspondence with Goethe (seventeen letters, 1814–1818) is given complete in the present volume, and forms its most valuable feature. It relates entirely to the subject of Goethe's writings on color-phenomena and Schopenhauer's treatise on the same subject, in which he endeavors to comprise Goethe's isolated facts under a theory, supplying them with an *a-priori* proof; but, while accepting most of Goethe's observations, controverting a few of them, Schopenhauer's attitude in this correspondence is characteristic. He has forwarded his treatise to Goethe in the hope that it would be cordially welcomed as a desirable prop of an edifice which the scientific experts were inclined to pooh-pooh. When Goethe delays a definite answer, yet keeps the MS., the pessimist is unable to restrain the expression of disappointment, impatience, and fear that some one might plagiarize his ideas. Goethe, on his part, behaved in this matter in a way curiously opposed to his usual frankness and sincerity. Whether he was influenced by the few points of disagreement or some other consideration, is not clear, but he refused to give his correspondent a definite criticism, although Schopenhauer begged him over and over again, in the most pleading tones, to do so, whether the verdict should be favorable or unfavorable. Details cannot be given here, but two incidental sentences from Schopenhauer's letters may be cited as illustrations of intellectual traits: "I know with absolute certainty that I am the first who has provided a true theory of color. . . . I know, too, that this theory will some day be universally accepted and familiar to school-children." In the other passage to be cited he endeavors to account for his nervous fears for the fate of his manuscript: "I know from your own statement that your literary activity is of secondary importance to you, actual life the main thing. With me the contrary is true; what I think, what I write is of value and importance to me; what I personally experience and what happens to myself is a matter of indifference to me, nay, of scorn."

Had not Goethe chosen to act so strangely and ungenerously towards the most intellectual of all his followers and admirers, had he endorsed the *Farbenlehre* and sent it into the world with a preface of his own, Schopenhauer's fame might not have had to wait several decades longer before it was fairly launched. Eleven years after his correspondence with Goethe, he made another effort to draw attention to his theory of colors by translating it (with important changes) into Latin, in order, as he says, "to appeal from the German public to the European." The publication was delayed in a most vexatious manner, explicable by the fact that the periodical in which it was to appear was in a moribund condition. For ten years Schopenhauer had not sent anything to the printer, so little encouragement did his contemporaries give him. The translation he had of course made *pro gloria*

alone, for he received nothing for it, and he consoles himself with Jean Paul's witty maxim: "Not till books no longer have a price shall we have some that are priceless." He pronounces the Latin version greatly superior to the German, notwithstanding the linguistic disadvantage of using a dead language. It is odd to find that as a youth he did not like to study Latin, and made so little headway that his mother, as she relates, was for advising him to drop it, but was dissuaded by Goethe. In later years he became an enthusiast for the dead languages, and never wearied of contrasting classical elegance with the slovenliness of modern literature, or of berating people in general for their ignorance of Latin and Greek.

These letters give us also a vivid realization of Schopenhauer's thorough mastery of modern languages. English, French, Italian, Spanish, were almost as familiar to him as to a native. That he read the London *Times* every day of his life is notorious. In a letter to a publisher (150-152), in which he offers to translate two of Hume's masterworks (on religion), he says: "As I learned the English language thoroughly in early youth from a country parson near London, I have retained a ready command of it; so that all Englishmen with whom I have had much converse of late, especially in Italy, acknowledged that they had never heard their language so well spoken by a foreigner; twice, indeed, for a while, I was mistaken among them for an Englishman." In the same letter he adds: "I would also offer my services for translations from the Italian. Both by a residence of almost two years in Italy and by much reading I have acquired an intimate knowledge of the language." What he had in mind especially was a philosophical work by Giordano Bruno. Eight years later we find him appealing to Keil in Leipzig, as the leading German authority on Spanish, for assistance in finding a publisher for a translation of Balthasar Gracian's 'Oráculo Manual,' adding the information that for seven years past he had been devoting himself to a study of that language, and subjoining as proof of his proficiency some corrections in the text of Keil's edition of Calderon, which had escaped even the eye of the expert critic. Keil cordially welcomed him to the realm of Spanish literature: "I have compared your translation with the original, and admired the accuracy with which you have reproduced in German the language of this old and difficult author." A publisher was found, but could not come to terms with the translator as regards the remuneration for the first edition and a possible second.

French, too, was a language in which our philosopher felt thoroughly at home. Pages 182-5 are taken up with a letter, written in French, to a Paris publisher, who had announced a translation of Goethe's works. To him Schopenhauer offered his services for a final revision. The project came to naught, and even if it had not, it is not likely that Schopenhauer's services would have been accepted, for his contemporaries had no use for him in any rôle or capacity—the more's the pity, for it arrested his productivity, and in the present instance deprived the world of a most interesting commentary on Goethe's poems, founded, as Schopenhauer promised, "on circumstances known only to personal friends of the poet." Luckily he was not again ignored when he took up another scheme and begged the editors of Kant's works, Rosenkranz and Schubert, in Königsberg, to make the first version of Kant's 'Critique of Pure Reason' the basis of their edition, instead of the second, as they had intended to do. With all his worship of Kant, Schopenhauer expresses his conviction (p. 187) that the changes in the second edition were the result of ecclesiastic intimidation, and, therefore, a weakness of the aged philosopher, to whom we should apply, as to all others, the corrected maxim, *de mortuis nil nisi verum*. To retain the second version would be, he says, like placing the recovered genuine limb of a statue by the side of the restoration instead of putting it back in its original place. This group of letters belongs among Schopenhauer's most lucid and vigorous writings, and their value is increased by a supplement of four pages giving minutely all the differences between Kant's two editions—a supplement which the Königsberg editors were glad to make use of too, for they could not help admiring their adviser's Kant-scholarship, notwithstanding their own Hegelian tendencies.

Of Schopenhauer's scorn for Hegelism there are some amusing illustrations in this correspondence. In letters of his last period he gleefully notes the evidence of Hegel's waning popularity and the growing brilliancy of his own star. He notes the number of his apostles, keeps a record of all the articles on himself, tells of the homage he receives in the shape of letters and personal demonstrations, and is as happy as a child in his gratified vanity. Had he lived till to-day, he would have seen the realization of his dreams; for while Hegel is now a mere memory, and his works have never had more than two editions, Schopenhauer's two leading works reached their eighth and seventh editions before the copyright expired, while since then there have been a number of others, including that apotheosis of popularity, a Reclam edition—which is not only absurdly cheap, but is the best edited of all, and contains an index to the six volumes. Yet the triumph is not as complete as Schopenhauer would have desired, for although his pessimistic creed has many votaries, his metaphysical theory proper is not generally believed to have solved the mystery of the world; indeed, his fame rests chiefly on his quality as great thinker and elucidator of the thousand miscellaneous problems which he discusses incidentally, and expresses with marvellous literary art and suggestiveness. Had he lived to see Schemann's volume, he would doubtless have been gratified to read (p. 509) that his portrait is the only one to be seen in the room of Tolstoi, who has also written that no other author has given him such exquisite pleasure as Schopenhauer, "the greatest of all geniuses." It is now safe to say that the next generation will pronounce Schopenhauer, with Darwin and Wagner, one of the three greatest revolutionary forces of our century. Strange to relate, he treated the most intellectual of *his* admirers (Wagner) very much as Goethe had treated *him*. For Darwin, too, he has nothing but a sneer ("shallow empiricism," p. 325). He also sneers at Faraday and Humboldt because of their sceptical attitude toward table-rapping and other spiritualistic phenomena.

Although the great pessimist talks in his letters usually about business matters or intellectual topics, and rarely about himself, there are not a few revelations by the way of his personality, his habits and hobbies. That he succeeded in passing his seventieth year was largely owing to his sensible living. "Most persons," he writes, "have some recurrent or chronic illness; I see it daily. Not so I." He warns his disciple Doss against sacrificing sleep to books: "Sleep is the source of all health and vigor, including that of the mind. I still sleep seven, often eight, occasionally nine, hours. Therefore I laugh at my seventy years, including its psalm-reference." And again: "You should daily take a two-hour walk, *alone and rapidly;* that will help you more than all baths, and costs nothing." He probably would have sneered at the notion that married men live longer than bachelors, and when he discovered that even his "apostle St. John," as he called Doss, was about to get married, he pelted him with his pessimistic jokes: "May you happily continue your three-years' betrothal, which is a truly fortunate thing for you, since pleasure lies chiefly in anticipation." And two years later: "I rejoice to hear that, after the lapse of a year, you still feel so happy in your married state; certainly an unusual case, the great prize in the lottery of life." It seems, however, that in his later years the sculptress Elizabeth Ney, to whom he refers as "twenty-four years old, very pretty, and indescribably amiable," succeeded in making him modify his estimate of womankind. Nevertheless, in the same letter (p. 325) he relates with much glee how he frustrated the designs of a female journalist who had sat next to him at the table-d'hôte for a whole week for the purpose of utilizing his table-talk; and when the suspicious philosopher remained silent, she departed and wrote a spiteful description of his personality. It appears, indeed, that although most eager for homage, he was very particular as to the form of it. He forbade his publishers to seek notoriety for him by the customary "puffing" of his books, and when a Leipzig illustrated periodical desired to print his picture with a sketch of his life, he became angry with the "scamps" on finding that they expected him to have the photograph taken at his own expense. On another occasion his ire was aroused by a photographer who sent his picture to an exhibition in Paris, one cause of the wrath being that there it might possibly be seen by Napoleon III. Herr Schemann has included in his volume two of the best of Schopenhauer's portraits, those by Ruhl and by Lenbach (Cosima Wagner's property). In the letters of the last years there are various references to portraits and photographs, for which he sat repeatedly, on behalf of and at the expense of admirers. "Göbel, our best portrait-painter, a man of much talent, has just (1859) completed my portrait—certainly very like and not flattering; but I see no trace of intelligence and genuine expression; it is an old dragon. Göbel is a superlative realist." Elsewhere (256) he quotes an artist's opinion that it was impossible to paint him accurately because his face changed every moment.

Of the appendices to Schemann's volume the most interesting is Schopenhauer's last will, with codicil, and in these the most characteristic point is the provision for the dog, who is to be taken care of by his servant or by one of several designated friends, for a compensation of 200 florins, which in the codicil is increased to 300. His love of dogs was as pronounced as Wagner's and Darwin's, and many interesting stories are told of it. The most amusing of these is referred to repeatedly in the correspondence. He made a collection of the pictures of dogs famous in literature or for some heroic performance. The number gradually increased to sixteen, and these pictures were hung on the walls of his room, of which, with a statue of Buddha, they formed the chief ornament. The newspapers finally heard reports of his hobby, and he was described

as sitting in his room surrounded by sixteen living dogs.

## RECENT NOVELS.

*Nowadays, and Other Stories.* By George A. Hibbard. Harper & Bros.

*The Translation of a Savage.* By Gilbert Parker. D. Appleton & Co.

*The Two Salomes.* By Maria Louise Pool. Harper & Bros.

*A Father of Six, and an Occasional Holiday.* By N. E. Potapeeko. Translated by W. A. Gaussen, B.A. Cassell Publishing Co.

Mr. Hibbard passes easily from grave to gay and again from gay to grave, and in each vein shows decided merit. He is seen at his best in his lighter mood, exhibiting there less tendency to mannerism, and expressing his idea more definitely and compactly. "Guilty Sir Guy" is a pleasing extravaganza, with neat things not too sparsely strewn through the dialogue. "A Flirt" hits off what Mr. Hibbard is pleased to dub "militant girlhood," with spirit and an evident leaning to the "coming-on" young woman of modern development. Rightly or wrongly, one imagines a Western flavor in the social tone and in the descriptions of places. But sharp individualization either of persons or places need not be looked for in any of these stories; all are more or less marred by a tendency to generalize that very nearly overlaps the limits of platitude. An unfortunate inclination to piece out the story-teller's web with the preacher's shuttle is most marked in the first story, "Nowadays." If, however, Mr. Hibbard is not yet past-master of his craft, he has left his 'prentice manner well behind him, and his present volume is quite clever, with a promise that bespeaks a welcome for his next venture whenever it shall appear.

In 'The Translation of a Savage' there is novelty enough of incident to tickle the palate of the most jaded novel-reader. The irruption into the domestic circle of a well-bred, decorous, English county family of a bride in moccasins and buckskins is an episode that comes as near being something new under the sun as can reasonably be expected in these days of strained invention. Choosing such a bride from her father's wigwam, and forwarding her promptly, in her aboriginal blanket, to an English home, may also be regarded as a *haute nouveauté* in the way of revenge for parental interference in the matter of another marriage. How admirably the worldly but high-minded Armour family behaves under this dispensation of a son's hand is very readably and convincingly set down. Beyond this point, however, something is left to desire. Lali's transformation into the conventional, neglected, unsuspectedly beautiful, and late-loved wife proceeds at such a breakneck speed that the imagination has difficulty in keeping pace, and reason rebels. It was not, after all, a savage, daughter to Eye-of-the-Moon, that Frank Armour wedded in his fit of pique, but only a transmigrated angel. The secondary love stories are of the stuff out of which the book-maker ordinarily manufactures his padding; and some sentimentalities, pretty enough in the nursery, are here a trial to the taste. To sum up one's impressions briefly, this is a book whose lively beginning is not justified by its end, yet which no one will be satisfied to put down until the end has been made matter of certainty and assurance.

Ever since Elsie Venner first left the mind in a state of delightful bewilderment, there has been no dearth of New England heroines with psychical complications to unravel. It is consequently not much of a surprise to discover that the two Salomes are not two girls, but one girl with two heredities. The blood of a Spanish grandfather has somehow got mixed with the otherwise unadulterated Puritan strain of this fair Yankee's ancestry. Hence her lack of mantling blushes, and other peculiarities of a more serious nature. The latter do not appear until home, its cranberry bogs and syntax-defying lovers, have been exchanged for Florida, with a "climate" and a lover of another stamp. The exact means by which this change of scene is carried out may be learned from the volume with great minuteness of detail. Realism without reality is a pervading characteristic in the story of Salome's singular lapse from integrity. A book that raises questions may be the very best sort of a book; to close a tale with a large interrogation point is the method of some of our cleverest story-tellers. But the whys and wherefores that here intrude are not the sort that urge the mind again to try conclusions with character and destiny; they are the expression of confusion and disagreement. A return to the simpler themes and more restrained manner with which Miss Pool first pleased her readers, is the best that can be wished her.

It is a pity that the author of the pleasant little Russian country sketches should again be deprived of the credit, as he was in the case of the first volume of his which was translated into English. In the former instance, the publishers had the unhappy thought to print his name in Russian characters only, on the title-page. These were guessed at by each reviewer separately, and the variety and complication of the results were marvellous. On the present occasion, when there is a pretence of furnishing the English transliteration, the initials are wrong and the surname reads Potapeeko instead of Potapenko.

"A Father of Six" is the melancholy story of a poor *diatchók* in Little Russia, who has six children, the eldest aged seven years, and a wife who is dying of consumption. He is anxious to be ordained a priest, that he may get a better position and salary to rear his children; but the bishop has refused to ordain him because he does not sing in tune—a much more important matter in Russia than the foreign reader would suppose. As a last resort he borrows, on very hard terms, money to bribe the secretary of the consistorium from the usurious daughter of his priest, Father Pankrátii, himself a shrewd farmer and hoarder, but returns in despair, after another refusal, to find his wife almost at the last gasp. She begs him to hasten back at once to the bishop, forty versts away, confide the case to him in person, and beseech him to administer ordination at once, on the chance of her being still alive, since it is illegal to ordain widowers, unless under very exceptional circumstances, and when they are over forty years of age. Father Anton is only twenty-eight, there are no exceptional circumstances in his case, and if he remains a mere *diatchók* at his wife's death his hopes are at an end for ever, and his children must starve on his slender salary. The kindly old bishop yields to poor Father Anton's entreaties, and runs the risk of the wife's death. Father Anton returns to his wretched home to find his wife dead, and the future of his children assured—provided he can get a post as priest, and can pay off the large debt which he has contracted to the hard-hearted priest's daughter. How these two points are to be managed, the author omits to mention. It is an affecting little story, told in an agreeable, straightforward way, with no attempt at padding or fine writing.

The same may be said of the much slighter sketch called "An Occasional Holiday," which narrates how a formerly well-to-do peasant is driven by bad harvests and misfortune to hire out as a laborer to a viragó of a priest's wife, at starvation wages. During his year of service with this termagant, an overwhelmingly abundant harvest runs up the price of labor to such a degree that while Artem is getting but forty rubles a year, laborers in the hayfields are getting a ruble and a half a day, with a prospect of double that sum when the grain harvest is ripe. The manner in which the laborers of the Squire go on a sudden "strike," and the scenes between the priest, his fury of a wife, Artem and her other servants, who desert for higher wages (with perfect right, it must be observed), are delightfully told.

The translation is fairly good, but, with more knowledge of the language and of the customs of the country, several peculiar errors might have been avoided. For example, it is certain that poor Father Anton never had "a beaver cassock," beaver being a very expensive fur, and used only for collars. Again, as "requiem masses" are said only in church, it is not possible that the sentence with which the first story ends can have been rightly translated. The word must have been *panikhidi*, which means prayers of a certain kind, not "a requiem mass." The English of the rendering is, at times, extremely careless, *e. g.*, "It was far to the town—forty versts—and therefore impossible to drag an invalid thither during the winter time; moreover, it was impossible to persuade Natiónka to do so"—Natiónka being the invalid in question.

## A MEDIATORIAL HISTORY.

*The United States:* An Outline of Political History, 1492–1871. By Goldwin Smith, D.C.L. Macmillan & Co. 1893.

It is significant that Messrs. Higginson and Channing's 'English History for American Readers' and the work before us, "intended for English rather than American readers," have met with immediate acceptance and passed to a second edition. They are likely to have a common use as text-books in our higher schools and academies. But here their resemblance ends, as they differ not more widely in theme than in construction. Mr. Goldwin Smith's sketch is a literary masterpiece, as readable as a novel, remarkable for its compression without dryness, and its brilliancy without any rhetorical effort or display. What American could, with so broad a grasp, and so perfect a style for those who, in Edward FitzGerald's phrase, "like to sail before the wind over the surface of an even-flowing eloquence," have rehearsed our political history from Columbus to Grant in 300 duodecimo pages of open type? or would have manifested greater candor in his judgment of men and events in a period of four centuries? It is enough to say that no one before Mr. Smith has attempted the feat, and that he has the field to himself.

Americans, as they have already proved, will buy this compendium eagerly, and it is already evident that they will judge it favorably, in spite of opinions and estimates at variance with their traditions or (in the case of our more recent history) with the convictions of perhaps one-half of the present generation. Herein lies precisely its value as a mental stimulus to the private reader, and as an occasion

for discussion, reflection, and research in the class-room such as our formal text-book-makers are almost under bonds not to furnish. In a work which makes the impression of having been produced at a single heat, errors of fact have naturally been pointed out. One critic has noticed the slip by which the Charter Oak is spirited from Hartford to Providence; another has corrected the tale of Benton's years in the Senate; a third, profiting by Mr. Waters's discoveries, controverts the assertion that Roger Williams was a Welshman instead of a Londoner; a fourth may object to making "red herrings" of the winter's "salted provisions" which the boy Franklin begged his father to say grace over in the cask by way of saving time (the popular gloss is *pork*); and we will add that Mr. Smith's apologia for the mother country, in her dealings with the colonies before the Revolution, might properly have been strengthened by his adopting not the contemporary and transmitted view of Gov. Andros's arbitrary character, but the vindication which he has received at the hands of a fair-minded American historical student, Mr. W. H. Whitmore, editor of the 'Andros Tracts.' It has not failed to be remarked, too, that the New England colonies receive the greater part of Mr. Smith's attention, to the apparent neglect of the others; but here we touch the main object which our author had in view, viz., to interest his own countrymen in our annals, and it would have to be shown that any other group of colonies compares with New England in the richness of its material for picturesque narration, or for exhibiting the development of self-government, the spirit of independence, enterprise, expansion, nationality, humanity, on this continent.

Mr. Smith's rapid summary, then, though submitted to an American audience, must not be regarded as a challenge of accepted ideas. We are allowed to overhear, as it were, a discourse conceived in absolute good will to this country, in an ardent desire to cement fraternal and peaceful relations with his own. Heaven knows that we need every possible corrective of the wretched little school histories which, unconsciously no doubt, perpetuate in our youth of to-day the animosities engendered by wars between an America and an England not those of to-day, and make this thoughtless age an easy prey to protectionist chauvinism. We can but welcome the privilege of listening to the old story told by one not of ourselves, though in sympathy with us, and who does not ask us to forget that he is an Englishman, but only to make allowance for his position as one "who regards the American commonwealth as the great achievement of his race, and looks forward to the voluntary reunion of the American branches of the race within its pale, yet desires to do justice to the mother country and to render to her the meed of gratitude which will always be her due." The rest is a matter of personal equation or of literary art. Thus, when Mr. Smith says (p. 6), "Unhappily these [Puritans], in common with other colonists of the period, retained not only their love of the old land, but their political tie to it," and again (p. 64), "It cannot be too often repeated that the relation between the imperial country and a colonial dependency was radically false," we read between the lines a sermon to Canadians. They are in his mind, too, when he asks, on page 70, "Would Chatham have thought of allowing the colonies to lay protective duties on British goods, he who talked of forbidding them even to make a nail for a horseshoe?" So Mr. Smith's aversion to home rule crops up in the sentence (p. 123): "In the group of States with which the framers [of the Constitution] had to deal, . . . there was no towering predominance to excite the permanent jealousy of the rest, as there would be if England were federally united with Scotland, Wales, and Ireland." Twice, too (pp. 175 and 217), he insists, not untruthfully, on the part played by Irish immigration in reviving the waning sentiment of hatred towards Britain, yet with less than his usual justice to the victims of British misrule, and more than his customary palliation of England's wrongdoing. Nor does he fail to note the Irish alliance with the pro-slavery Democracy, in spite of O'Connell's example and exhortation to the contrary; or Father Mathew's forgetting in America "that he had signed [in Ireland] an anti-slavery manifesto."

In Mr. Bryce's 'American Commonwealth,' it may be alleged as a defect that too little stress is laid upon slavery as a factor in modifying the political development of this country. Mr. Smith's sketch is not liable to this charge. Five chapters embrace the whole of it, and the fourth deals explicitly with "Democracy and Slavery," while the fifth, "Rupture and Reconstruction," is, of course, only a continuation of the same topic; and the two together constitute nearly one-half of the entire work. But slavery begins to be mentioned as early as page 25, and is never afterwards lost sight of. Such a proportion of attention to this subject is a refreshing novelty, without example among our native historians. Hardly to be called novel, though individual and striking in their mode of presentation, are Mr. Smith's characterizations of leading statesmen, such as Jefferson and Lincoln. And while the reader must often be struck with what seems caprice in the choice of typical incidents to color and substantiate the narrative, he can but admire the skill which finds room for so many classic extracts, so many proverbial party sayings. Throughout, too, one meets with passages of epigrammatic force and weight, such as this, touching the neutral trade of the United States during the Napoleonic wars (p. 162): "You may have a right to traffic on a battle-field, but you will have difficulty in exercising it, especially if the battle-field is one in which nations are fighting for their lives"; or this (p. 173):

"The war [of 1812] is sometimes justified on account of its supposed effect in consolidating American union. To make war for such a purpose would surely be a satanic policy. Instead of consolidation, the war nearly produced secession, to the very verge of which it drove New England. The true instruments of consolidation were, not the war, but the improved means of intercommunication, the national roads, the canals, the steamships, the railways, to which the period following the war gave birth, as well as the growing activity of the press, and the other intellectual agencies which overcome geographical distance. The fruit of moral or political effort is not to be won by violence."

Let us cite also the pregnant remark (p. 150): "Federal parties extended, as they ever have, to State politics, the party in each State being a sort of donkey-engine to the great Federal machine"; and again, in the helpful analysis of the Constitution (p. 126): "The States were prohibited from laying import or transit duties on each other's goods. Internal free trade was thus secured to the whole of the continent occupied by the United States. This was practically the greatest of all the measures of free trade in commercial history"; and finally (p. 219): "An international copyright law would have done more to emancipate from British influence than any war with Great Britain."

"Should this volume find acceptance," says Mr. Smith in his preface, "it may be followed by a companion volume on the same scale, and treating, necessarily with the same succinctness, the recent history of parties and the questions of the present day." This volume, so desirable, yet so delicate and difficult of execution, we may say is now assured. Externally, should it proceed from the same press (in Boston), it will be agreeable to the eye and will closely resemble an English product, and it will be apt on closer inspection to betray some of the typographic carelessnesses fostered by that provision of our crude copyright law which enforces domestic manufacture. The punctuation in the volume before us is often extremely slovenly, an amusing example being that on page 24, where the hyphen has been omitted from the compounds: "There were social meetings for the young, such as raising bees and sewing bees." An English proof-reader, indeed, might have been guilty of this, and pardonably so; but an American should have done better, and should, moreover, have secured uniformity in the capitalizing of the word State, and not let pass "Governeur [Morris]" on page 99 while Gouverneur occurs on page 142.

---

*Negative Beneficence and Positive Beneficence.* Being Parts V. and VI. of the Principles of Ethics. By Herbert Spencer. D. Appleton & Co. 1893.

WHAT magic art can Herbert Spencer practise to render his books so marvellously dull? It is a psychological problem. Dry they are not, nor are dry books more apt to be dull than others. Books that are both there no doubt are, say, in ethics, Whewell's 'Morality'; so there are books that just manage to keep dulness at arm's length by an agile exercise of a virtue the opposite of dryness, such as the 'Tale of a Tub.' But very often method, condensation, and business-like exclusion of all flights, which make up dryness, serve to keep the reader's mind alert. Stephen on 'Evidence,' Kant's 'Critic of the Pure Reason,' Ricardo's 'Political Economy,' Cremona's 'Geometry,' are dry to the last degree; yet, given an interest in the subject, any of them will detain your attention till you are exhausted by the mental labor it demands. On the other hand, such eternal monuments of dulness as the Koran, Volney's 'Ruins,' Tucker's 'Light of Nature,' Wordsworth's 'Excursion,' and, most overpowering of all, Spencer's 'Synthetic Philosophy,' are not a bit dry.

The phenomenon of dulness in Spencer's books is partly explained by his inimitable method of expressing himself—inimitable, at least, by any man of taste. He has disclosed the secret of it in his famous 'Essay on the Philosophy of Style': it lies in the "economy of attention." He artfully induces the reader to relax the muscles of the mind until nothing hinders the last stages of narcosis but the irritation produced by the Spenceresque diction. That, for all this, people read him is a great compliment to him and a great credit to them. The present volume opens thus:

"One division of an earlier work in this series of works—*The Principles of Psychology*—was devoted to showing that all intellectual operations are ultimately decomposable into recognitions of likeness and unlikeness."

And so the author proceeds through five mortal pages of platitudes about discrimination, in a psychological vein both cheap and superficial, and all to what purpose? Why, simply that he himself is intending to draw a distinc-

tion, one of the most familiar of distinctions, upon which all this dishwater about discrimination has just as much bearing, and no more, as upon any other distinction that any author might anywhere draw upon any subject. What an accomplished artist in tedium!

But the most stupefying principle in Spencer's writings is, for some readers, not his method of expressing himself; much less is it the essence of his thought, which (we need not say) is almost always striking and impressive. It is that the thought is developed in an old-fashioned way. In 1857 Mr. Spencer was not a remarkably well-read man in philosophy. He has himself admitted his ignorance of Kant. There is much in German idealism having an intimate relation to the philosophy of evolution of which he knew no more than an Italian monk would to-day know of Spencer. Outside his great conception, he was hardly more than abreast of his reader's stage of thinking. But to construct a durable system of philosophy it is necessary to build upon the solid foundation of deep reflection upon all that man has excogitated. During the many years that Spencer has devoted to writing his books, he has read little, especially of the kind that records advancing thought. The list of authorities in the volume before us illustrates this. It contains something like a hundred books. Two-thirds of them relate to savage life, and were very likely epitomized by readers. At any rate, it is for the most part crude and uncritical material. A quarter of the whole are old stand-bys which every educated man is supposed to be familiar with, or at least to know about. Then there are works on ethnology, anthropology, and biology, of a special character; and the small residuum is hardly calculated to give a serious idea of modern thought. The inevitable result has been that Mr. Spencer has fallen behind the times. He treats at wearisome length difficulties that are no difficulties, and consequences that are obvious, while many of the questions, objections, and suggestions that most interest the reader he soon finds have not entered into the author's head.

If Mr. Spencer's shortcomings and blindnesses were such as one could see were natural and almost inevitable to a mind engrossed with the conception of evolution, though they would make him more one-sided, they would not prevent the full presentation of his side of the question. But that is not the case; they in fact either have no relation to evolutionism, or, and that more frequently, actually antagonize it. Take, as the first example at hand, the passage quoted above, which represents every operation of the mind as a recognition of a likeness or the recognition of an unlikeness. According to this, every operation of volition, every operation of going to sleep, and every other mental operation, is but an act of recognizing. The first objection to this is that recognizing is something which takes place in the focus of attention, so that all the operations of the mind would take place in that focus, while all modern psychologists agree that most mental operations are so far into the dark that there is room for doubt whether they are in the field of consciousness at all. Clearly, a theory of the evolution of the mind would be aided by thus conceiving mind to shade off into unconsciousness. The next thing we notice about the opinion quoted is that it implies that all relations can be analyzed into likenesses and unlikenesses, the falsity of which has been recognized by every analyst who has seriously examined the question. Spencer says that sequence is unlikeness in order. Undoubtedly, a sequence is *an* unlikeness, but that is no sign that it is nothing but unlikeness, or nothing but a compound of likenesses and unlikeness. It clearly cannot be so, for when A is like or unlike B, B has that same relation to A; while when A is followed by B, B is *ipso facto* not followed by A. Spencer is therefore tiresome, with his old-world psychology of likeness and unlikeness; it is particularly unfavorable to clear conceptions of evolution, which demand a recognition of the distinction between temporal relations and the mere acervations of the crudest form of generalization.

In ethics Mr. Spencer adopts the hedonistic theory. Almost no reason has ever been given for this, except that most dangerous of reasons, that we cannot help thinking so. We certainly are under no such necessity, and the theory ought to be regarded with great suspicion for the present, until scientific observation can be brought to bear upon it. At any rate, it is nothing but a disfigurement of evolutionary ethics, which it only weakens.

A system of philosophy ought to consist in the development of an idea, in the tracing of it out into its necessary consequences, and in the comparison of these consequences with experiences. This comparison will show how far the philosophy may be accepted and what modifications of it are required. This view makes of a system of philosophy nothing more nor less than a very general scientific theory, and it follows as a consequence that a system of philosophy, like every other scientific theory, must stand or fall with its power of making successful *predictions*. But Herbert Spencer, instead of trying to show what characters his first principles require the facts of biology, of psychology, and of sociology to possess—what those principles virtually predict—and then proceeding to compare those predictions with the facts, has begun by endeavoring to make out what the character of those facts *is*, and has loosely traced, as he went along, such harmony with his theory as he could. No philosophy can be firmly established in that way. Nevertheless, it is incontestable that shortly after Mr. Spencer began to write, the world began to take up the idea of evolution, and that to-day nine-tenths of all thinking men carry it just about as far as Spencer does. A man who should have a theory carrying it a little further, although that theory should be of such a nature that it should afford predictions mathematically deduced from it, and capable of being compared with experience, would find no encouragement to develop his theory, or even to state it as far as already developed, or to compare by laborious mathematical calculations the predictions already made with observations already made.

As for the present volume, its contents have little or nothing to do with the theory of evolution. Its discussions of special questions, such as the poor-laws, coming from such a mind as Spencer, must, of course, have their value. But its general principles are little more than prejudices, and that of a pretty old-fogy kind. No doubt, in questions of morals, prejudices are proper subjects of respect, especially when they are such as are shared by all parties and all civilized nations. At the same time they are not unlikely to contain errors which may become important when applied to novel questions. We have always understood that the last parts of the Ethics were to be the crowning glory of the Synthetic Philosophy. Will the world be persuaded that British toryism is the truth with which the universe has so long been in travail?

*Memoirs of William Nelson Pendleton, D.D.*, Rector of Latimer Parish, Lexington, Virginia; Brigadier-General C. S. A.; Chief of Artillery, Army of Northern Virginia. By his daughter, Susan P. Lee. Philadelphia: J. B. Lippincott Co. 1893.

One does not hesitate to speak of the subject of these memoirs as Doctor, rather than as General, Pendleton, although he was a West Point graduate and served with credit, if not with distinction, through the whole course of the rebellion in the Confederate army. We have only to look at the picture of his face which fronts the title-page to be aware that his dominant quality was ecclesiastical and not military. It is the typical ecclesiastical face, that of the priest clothed with a little brief authority and serenely conscious of his official dignity and importance. The whole course of the book bears out this first impression. The ecclesiastical proprieties are never silent in the midst of arms. Willingly at all times Gen. Pendleton puts by his sword and takes his shepherd's crook, and we always feel that the joy of battle which delights him most is behind the pulpit-cushion, not the bristling parapet. His life is written by his daughter, Mrs. Lee, the wife of Edwin G. Lee, a Confederate general, casually mentioned as a kinsman of Robert E. Lee, but with no hint of the degree of his relationship. The tone is feminine throughout, and, though but seldom shrill, is never critical or dispassionate. There is no praise of her father which is not willingly conceded to her filial piety. In every personal relation he was a man to honor and esteem, one who laid the lowliest duties on himself with a patient heart, who, whether as a servant of the Church Militant or the Confederacy triumphant or defeated, did his work man-fashion, in a simple, honest, and straightforward way.

Mrs. Lee's biography is not less valuable for not being critical. It is wonderfully instructive. We seem to be reading again the headlines of the Southern newspapers during the war and their editorials of flaming hope and eager expectation. This note is loudest in the letters of Sandie Pendleton, a brother of Mrs. Lee, who was a colonel attached to Stonewall Jackson's staff, was with him at his death, and met his own September 22, 1864, while trying to rally Early's skirmish line in the affair at Fisher's Hill. There is much more ardor and extravagance in these letters than in Dr. Pendleton's. But, take them both together and the connecting narrative, and we are admitted with remarkable distinctness into the Confederate mind, so confident and hilarious, and into the Federal, so doubting and depressed, while the war drew along its first two tedious years.

Dr. Pendleton was the son of Edmund Pendleton, jr., whose great-uncle and adoptive father was Judge Pendleton of Revolutionary fame. "Early and repeated marriage was a Pendleton habit," and William Nelson, the subject of this biography, was the son of a second marriage which his father consummated at the age of twenty-three. The promise of his youth suffered from the exigencies of his maturity as trout do in their weight when taken from the water into the boat. He was, however, a studious youth, and gladly accepted the opportunity to study at West Point, which an elder brother had declined. The fighting Bishop, Leonidas Polk, was ending his course as young Pendleton was beginning his. Jefferson Davis was two years in advance of Pendleton, Robert E. Lee and Joseph E. Johnston one year, while John B. Magruder was one of his classmates, and Albert T. Bledsoe, a literary, mathemati-

cal, and political secessionist, was another. Pendleton was afterwards remembered with Lee as "one of the good cadets" After his graduation he was first stationed at Fort Moultrie, was then made assistant professor of mathematics at West Point, and shortly transferred to Fort Hamilton, where, hearing that President Jackson was going to order his command to Charleston to put down the nullifiers, he immediately wrote his resignation. The rumor proved unfounded and his resignation was delayed, but this rehearsal must have made his course in 1861 more natural than it might otherwise have been.

His teaching at West Point had convinced him that he was better fitted for the position of a teacher than for military life, especially as he had married with the proverbial Pendleton haste. Leaving the army, his life for some years was one of constant struggle and indifferent success in one petty educational enterprise after another, in Delaware, Virginia, and Maryland. Gradually he found his way into the ministry of the Episcopal Church, and ultimately he became the rector of a church in Lexington, Va. At one time he acted as the agent of the Episcopal Sunday-School Union, and went to New England and to Boston in the discharge of his duties, whence his letters home are of uncommon interest, for they contain well-nigh the only allusions to slavery in the whole course of the book. He found Nehemiah Adams's 'South Side View of Slavery' "infinitely more just than Mrs. Stowe's romance, not hiding the manifold evils of slavery, but very truly contending that in itself it is not sinful, and is even a mighty agency of Providence in mysteriously working out a hopeful destiny for the African race." He "could not but think" of the Southern "operatives" when he went to Lowell and saw the operatives there:

> "Those girls—with their three dollars a week—steaming the livelong day amid the din of machinery that deadens every sense, standing for ever over the clattering looms or spindles, and inhaling an atmosphere charged with the mingled fragrance of fish-oil and fetid exhalations, and with common dust interspersed with cotton or woollen fibre, seemed to me doomed to a harder lot than thousands of slave girls."

While he was engaged in teaching, Dr. Pendleton's life was one of rigorous self-denial and much hardship. More than once a cherished theodolite was pawned to bring an answer to the prayer for daily bread. When the war broke out, he was summoned to take command of the newly formed Rockbridge Artillery, and he obeyed the summons with alacrity. His reasons for doing so are given under his own hand with much elaboration. They are principally concerned with a justification of his course, a servant of the Prince of Peace, in taking up arms, and with the provocation of the seceding States for their course. The subject of slavery is conspicuously absent from the discussion, as if it had nothing to do with the matter in hand.

He was made a brigadier-general in the spring of 1862, and, had not the rule of promotion in the artillery arm of the service been different from that of the infantry, he would have been made a major-general, for he had at one time three brigadiers of artillery subordinated to himself. There were few engagements in Virginia and Maryland in which he did not have some part. He was least fortunate at Sharpsburg, and was subjected to some criticism which he endeavored to answer or forestall in an elaborate official report which is given in full. The interest reaches its climax at Gettysburg, where, with Early and others, he bears testimony to the backwardness of Longstreet in carrying out Lee's orders, and attributes to it the Confederate defeat. These pages should be read in connection with Longstreet's justification of himself and attack on Lee in the *Century Magazine* in 1887. Dr. Pendleton's opinion of Lee's character and ability was very high, but of personal relationship they had so little that the suspicion is unavoidable that, on one side, at least, there was antipathy. A bit of correspondence between them in October, 1864, is extremely characteristic of Dr. Pendleton. He had dined with Lee and had omitted to say grace. He writes to apologize, and to say that he may have missed the sign for him to proceed; "or you may have for the time forgotten my sacred office under the military relation in which we commonly meet." Dr. Pendleton was deputed to communicate to Lee the opinion of his generals that the struggle must be given up. This was on April 7, 1865. Lee answered, "I trust it has not come to that." The next morning Grant demanded his surrender, and the circumstances of that event are detailed with all the pathos of extreme simplicity.

It happened before long that Lee came to Lexington and assumed the presidency of the Washington College, and thus became a parishioner of Dr. Pendleton, who, when the war was over, made haste regularly to resume the clerical function which he had never consciously abandoned altogether. Lee's connection with his church was a piece of pecuniary good fortune for him and it, for it enabled him, after the death of the great captain, to economize his fame for the raising of a fund to build a Lee Memorial Church in place of the old one, which was tumbling down. In the course of his efforts to raise this fund he met with some rebuffs, as when a Pennsylvanian who had been approached sent his subscription, but at the same time suggested a plan for a monument to John Brown to which the South would be asked to contribute equally with the North. Dr. Pendleton did not see the joke, not being much developed on the humorous side. His new church was hardly finished when he died very suddenly on January 15, 1883. He was born December 26, 1809. His health was never good, and in the army a succession of ailments sapped his vital force. After the war he had made haste to make his peace both with the national government and with the Northern Episcopal Church, which certainly had not done much to offend the prejudices of the South. Naturally he was a man of peace, and his military career was but the accident of a political conspiracy which swept everybody in the South, except a few persons of exceptional sense or character or fortune, into the ranks of the pro-slavery secession.

---

*The Deeds of Beowulf:* An English epic of the eighth century, done into modern prose, with an introduction and notes. By John Earle, M.A., Rector of Swanswick, Rawlinsonian Professor of Anglo-Saxon in the University of Oxford. Oxford: Clarendon Press; New York: Macmillan. Pp. c, 203.

*Beowulf:* An Anglo-Saxon epic poem, translated from the Heyne-Socin text by John Lesslie Hall, Professor of English and History in the College of William and Mary. Boston: D. C. Heath & Co. Pp. xviii, 110.

THE publication of both an English and an American translation of 'Beowulf' in the same year is a testimony to the increased interest in that poem which stands at the head of our earliest literature, and an evidence of the zeal with which studies in Old English are now pursued. Prof. Earle's book is about equally divided between introduction, translation, and notes, each occupying about one-third of the volume. The introduction consists of three sections, treating respectively of (1) the discovery of the text and progress of interpretation, (2) the contents of the poem, and (3) "My theory of the origin of the Beowulf." These titles explain themselves, and the contents of the first two sections are sufficiently familiar to Anglo-Saxon scholars; the third may be noticed briefly. Prof. Earle considers that the Hrothgar part and the Hygelac part of the poem are independent. He says (p. lxxviii): "Hygelac has been inserted, not merely into the web of the story, but into the fabric of this very poem after it had been cast upon a simpler plan"; further: "Hygelac and his realm are pure fiction." He then seeks for the motive of this invention, and finds it in the desire of the later poet to glorify the historical Offa, King of Mercia, his wife Cynethryth, and their son, Ecgferth, the Eomaer of the poem. Hygd is introduced to set off Thrytho, *i. e.*, Cynethryth; and Hrothgar, not Hygelac, is a type of Offa, the renowned King. Moreover, with Müllenhoff, Prof. Earle sees "a political drift" in lines 12-25, and thinks that this criticism confirms his own theory. "As Scyld is an allegory of Offa, so is Beowulf, the son of Scyld [not the son of Ecgtheow], an allegory of Ecgferth, the son of Offa." "This description of the mythic Beowulf" is "the vital germ of the entire composition." How simple and easy an explanation of the structure of this perplexing poem, all based on fourteen lines of the Prologue, which constitute "a programme of princely duty in the eighth century"! As we have discovered the *why* of the present form of the poem, the *when* follows as "the last quarter of the eighth century," and the *where* as Gothland; "but though Scania was thought of, the realm of Hygelac is essentially Utopian."

As to the origin of the earlier poem into which "this Utopian part was inserted," Prof. Earle is no wiser than the rest of us. He goes still further, however, and identifies this later poet, the originator of the glorification of the Mercian reigning family, with a certain Hygeberht, "the man chosen by Offa to be Archbishop of Lichfield, and of whom we read in the Life of Offa II. that he was the chief adviser of that King." Prof. Earle grants that the name Hygelac was borrowed from the 'Chocilaicus' of Gregory of Tours, an identification made long ago, "but it was arbitrarily transformed into harmony with the chief element in Hygeberht's name. The Queen of Hygelac is Hygd, another name from the same root, and both these names are of allegorical significance—Prudence and Discretion."

It is impossible in our brief space to give the reasons assigned by Prof. Earle for his theory. We have not found them convincing. As for his translation, it reads well and smoothly, but exception may occasionally be taken to his renderings. Two general criticisms are that he shows a great fondness for Latinized terms, and that he sometimes uses terms which seem inappropriate in an epic poem. As examples of the first may be cited, "So domineered and nefariously warred" (144), "nocturnal pests" (193), "confidential token" (247), "bombastic groom" (869), "enterprized," "shed its intaylèd foliations" (2257), "illustrious potentate" (2385), and, to pass

over many, "tenemental body" (3179). Such terms scarcely suit the simplicity of 'Beowulf.' A few examples of the second point may be found in the use of "insense" (415), "they had their quietus" (567), "the boss of horrors" (751), "the genial saloon" (!) (772), "that was the whole affair of Grendel's fang" (836-7), "I'd a liked it vastly better that thou'dst a seen his very self" (961-2)—imagine Beowulf talking as a country farmer; "recount to the eagle of his luck *at the spread*" (3027)—perhaps the slang use of this expression has not crossed the water, but its use here is calculated to excite one's risibles.

Prof. Earle's notes are full and learned, and form a valuable addition to the translation. The translation itself has been made from Heyne's fourth edition, with use, however, of the fifth edition, *i. e*, the Heyne-Socin text, which will, doubtless, become the standard.

Prof. Hall's translation, made from the Heyne-Socin text, is both rhythmical and alliterative. The first few lines may serve as a specimen:

"Lo! the Spear-Danes' glory through splendid achievements
The folk-kings' former fame we have heard of,
How princes displayed then their prowess-in-battle.
Oft Scyld the Scefing from scathers in numbers
From many a people their mead-benches tore."

Here there is a preservation of two accents to the half-line, the prominent characteristic of Anglo-Saxon poetry, with alliteration in lines 1, 3, and 5, on the first and third initially accented syllables, in lines 2 and 4 on the first, second, and third accented syllables, the normal Anglo-Saxon alliteration. The attempt is made to preserve this dactylic-trochaic rhythm, with anacrusis often in each half-line, throughout, and it may be said to be in general successful, although it sometimes fails. The chief objection to alliteration in English translation is that there is a tendency to sacrifice exactness of translation to it, and this difficulty has not always been overcome. Some of the lines have occasionally a prosaic rather than a poetic rhythm, but this may sometimes be mended by transposition of words or slight emendation of phrases. On the whole, the work has been well done, and gives the general reader a good idea of the form and substance of the ancient poem. It contains no introduction, but a brief preface summarizes the story, and is followed by a short bibliography of translations, a glossary of proper names, and a list of words and phrases used by the translator which are not in general use. Footnotes on certain passages give various readings and the views of other scholars, and in the addenda some discrepancies and other oversights in the Heyne-Socin glossary are noticed, but there are oversights in these. A practical drawback to the use of the translation is that there are no marginal numbers corresponding to the lines of the original text, as in Prof. Earle's translation, and this causes a waste of time in comparing the text with the translation. While the translation is not line for line, and therefore there could be no exact correspondence, the insertion of these marginal figures would facilitate reference. But, whatever deductions must be made, this is a commendable translation. The publishers have just issued a cheap edition for the use of students.

## BOOKS OF THE WEEK.

Aldrich, T. B. Two Bites at a Cherry, with Other Tales. Boston: Houghton, Mifflin & Co. $1.25.
A Journal of the Conversations of Lord Byron with the Countess of Blessington. New ed. London: Richard Bentley & Son; New York: Scribners. $6.
Arnold, T. K. Latin Prose Composition. Revised. American Book Co. $1.
Balzac, H. de. Love. Robert Bonner's Sons. $1.
Barr, Mrs. A. E. The Bow of Orange Ribbon: A Romance of New York. Dodd, Mead & Co. $2.50.
Bartol, Prof. W. C. The Elements of Solid Geometry. Leach, Shewell & Sanborn. 75 cents.
Bascom, Prof. John. An Historical Interpretation of Philosophy. Putnams. $2
Batory, Ignatius. State's Philosophy, Economy, and Finances. Baltimore: The Author.
Beckford, William. Vathek: An Arabian Tale. London: Lawrence & Bullen; New York: Macmillan. $7 50.
Beet, Rev. J. A. Through Christ to God. Hunt & Eaton. $1.50.
Berry, E. P. Where the Tides Meet. Boston: *Arena* Publishing Co. 50 cents.
Biddle, Arthur. A Treatise on the Law of Insurance. 2 vols. Philadelphia: Kay & Brother.
Billings, E. E. Marking the Boundary. St. Paul: Price-McGill Co.
Blackmore, R. D. Lorna Doone. 2 vols. T. Y. Crowell & Co. $3.

**The Philosophy of Hume.** As contained in extracts from the First Book and the First and Second Sections of the Third Part of the Second Book of the "Treatise of Human Nature." Selected, with an introduction by HERBERT A. AIKINS, Professor in Western Reserve University. (*Series of Modern Philosophers*, edited by E. Hersey Sneath.) 176 pp. 12mo, cloth. Teachers' price, $1.00, postage 10 cents additional.

**Falckenberg's History of Modern Philosophy.** Translated by A. C. ARMSTRONG, JR., Professor in Wesleyan University. 655 pp. 8vo. Teachers' price, $3.50; postage 25 cents additional.

"As there was no history of Philosophy of middle size accessible before to English readers, I think you will be widely thanked for printing this excellent book, especially since the translation is so readable and scholarly."—*From Prof. G. H. Palmer.*

**Joynes's Minimum French Grammar and Reader.** By EDWARD S. JOYNES of South Carolina College. vi+269 pp. Cloth. Teachers' price, 75 cents; postage 6 cents additional.

Combines in a single brief volume the essentials of grammar with ample exercises and graded selections for easy reading, with Notes and Vocabularies. The object is to reduce preliminary grammatical study to the minimum consistent with due method and completeness.

**HENRY HOLT & CO., N. Y.**

**NURSERY PROBLEMS.**

**Edited by LEROY M. YALE, M.D.**

The collection of "Nursery Problems" offered to the public in this handsome volume is made up of contributions to the columns of *Babyhood; The Mother's Nursery Guide*. The inquiries addressed to the medical editor by anxious mothers on a great variety of subjects, with the replies thereto, proved in their original form so popular a feature of that magazine that a careful selection, it was thought, could not fail to interest and benefit a large circle of new readers. The letters will be found to cover a wide range of topics bearing upon the welfare of young children.

*PRINCIPAL TOPICS DISCUSSED.*

| | |
|---|---|
| Feeding; Diet, | Colds, |
| Milk, | Eruptions, |
| Weaning, | The Care of the Child, |
| Sleeping, | The Bath, |
| Teething, | Crying, |
| Constipation, | Questions of Dress, |
| Digestive Difficulties, | The Mother. |

An ideal gift to any young mother.

For sale by all booksellers, or will be sent, postpaid, on receipt of $1.50.

## MEISTERSCHAFT SUPERSEDED

*BY ITS OWN AUTHOR,*

**DR. RICHARD S. ROSENTHAL.**

Dr. Rosenthal's name has become a household word wherever foreign languages are studied. A new work,

### The Rosenthal Method of Practical Linguistry

has just been issued by him, which does not only supersede his former system, published 20 years ago, but will be found superior to any method. It is the mature outcome of 25 years' experience of "the greatest linguist and foremost teacher of the age," enabling any one to learn to

*Speak Fluently and Correctly*

with scarcely an effort and without a teacher.

GERMAN, FRENCH, or SPANISH,

within a marvellously short time.

"Next to living in a foreign country, this is undoubtedly the best of all methods for learning modern languages."—*The Dial.*

Exact pronunciation given. All subscribers become actual pupils of Dr. Rosenthal, who answers all questions and corrects all exercises free of charge. Terms of membership $5.00 for each language. Part I., each language, 50 cents.

## Charles Scribner's Sons' New Books

### David Balfour

Being Memoirs of His Adventures at Home and Abroad. By ROBERT LOUIS STEVENSON. 12mo, cloth, $1.50.

"Nothing better in the field of historical fiction has been produced since Scott."
—*Philadelphia Telegraph.*

### With Thackeray in America

By EYRE CROWE, A.R.A. With 121 illustrations from sketches by the author. Small 4to, $2.00.

"A book that no lover of Thackeray will be willing to leave unread."—*The Critic.*

### Meh Lady

A Story of the War. By THOMAS NELSON PAGE. *New Edition.* Illustrated by C. S. Reinhart. Small folio, $1.50.

"Nothing more beautiful has ever been penned by a Southern writer."—*New Orleans Picayune.*

### The One I Knew the Best of All

A Memory of the Mind of a Child. By Mrs. FRANCES HODGSON BURNETT. Fully illustrated by R. B. Birch. 12mo, $2.00.

Mrs. Burnett's story is unique in literature, being the frankly autobiographical narrative of the experiences of a child up to girlhood, with its sensations and emotions as each new phase and problem of life opens to it.

### Customs and Fashions in Old New England

By ALICE MORSE EARLE. 12mo, $1.25.

In this volume Mrs. Earle, the author of the popular book, "Sabbath in Puritan New England," describes the daily life of the Puritans in the same interesting style that marked her former work.

### The Land of Poco Tiempo

By CHARLES F. LUMMIS. Illustrated. 8vo, $2.50.

Mr. Lummis has made the land of Poco Tiempo —New Mexico and adjacent regions—his own subject; and in this volume he describes it in his well-known vivid and picturesque style.

### The Watchmaker's Wife,

And Other Stories. By FRANK R. STOCKTON. 12mo, cloth, $1.25.

These new stories all reveal that fertile fancy, quaint drollery, and quiet though delicious humor which have made the author's name famous.

### Men of Achievement

**Men of Business.** By WILLIAM O. STODDARD.
**Statesmen.** By NOAH BROOKS.
Each illustrated, half leather. Cr. 8vo, $2.00 *net.*

### Ivar the Viking

A Romantic History, based upon authentic facts of the third and fourth centuries. By PAUL DU CHAILLU. 12mo, $1.50.

A most interesting story of old Norse life.

### The Sunny Days of Youth

A Book for Boys and Young Men. By the author of "How To Be Happy Though Married," etc. 12mo, $1.25.

## Charles Scribner's Sons

743-745 Broadway, New York

## HOUGHTON, MIFFLIN & CO.'S NEW BOOKS.

### Thoreau's Works.

New *Riverside Edition.* Carefully edited, with Introductions giving an account of the time and circumstances in which the volumes were written, and full Indexes.

In ten volumes. Now ready:
1. A Week on the Concord and Merrimack Rivers.
2. Walden; or Life in the Woods.

Crown 8vo, handsomely bound, gilt top, $1.50.

### A Native of Winby, and Other Tales.

By SARAH ORNE JEWETT. 16mo, $1.25.

Seven delightful stories of New England, in which Miss Jewett is unsurpassed, and two Irish-American stories equally good.

### Rachel Stanwood.

A Story of the Middle of the Nineteenth Century. By LUCY GIBBONS MORSE, author of "The Chezzles." $1.25.

An engaging story of the anti-slavery agitation in New York city about 1850, describing life among the Quakers, with charming views of child-life and including several famous persons among its characters.

### No Heroes.

A Capital Story for Boys. By BLANCHE WILLIS HOWARD, author of "One Summer," "Guenn," etc. Illustrated. Attractively bound, 75 cents.

### Mrs. Whitney's Books.

Bonnyborough.
Mother Goose for Grown Folks.
Ascutney Street.
A Golden Gossip.

These volumes complete the new edition of Mrs. Whitney's admirable Novels and Stories in attractive form and at a reduced price. $1.25 a volume; the set, 17 volumes in a box, $21.25.

### The Hanging of the Crane and Other Poems of the Home.

By HENRY W. LONGFELLOW. New *Holiday Edition.* With photogravure illustrations by several artists. A beautiful volume in general style like the popular Holiday Editions of "Sir Launfal" and "Snow-Bound." 16mo, daintily bound, $1.50.

### College Tom.

By CAROLINE HAZARD, author of "Memoirs of the Rev. J. Lewis Diman," etc. 8vo, $2.00.

"College Tom" was Thomas Hazard, the great-great-grandfather of the writer, and from his account book, and the records of the South Kingstown Monthly Meetings, Miss Hazard has prepared a book of much interest and historic value. She has woven into the narrative of College Tom's career incidents and facts which throw much light on the social and industrial conditions of Rhode Island four generations ago.

### The Silva of North America.

A description of the trees which grow naturally in North America, exclusive of Mexico. By CHARLES SPRAGUE SARGENT, Director of the Arnold Arboretum of Harvard University. Illustrated with Figures and Analyses drawn from nature by Charles Edward Faxon, and engraved by Philibert and Eugène Picart. In twelve volumes, quarto, each containing fifty plates. Price, $25.00 each, *net.* Vol. V. Hamamelidaceæ-Sapotaceæ.

"One of the most important works of descriptive science which this generation has produced."—*New York Tribune.*

*Sold by all Booksellers. Sent, postpaid, by*

**HOUGHTON, MIFFLIN & CO., Boston.**
**11 East 17th Street, New York.**

**Royal Baking Powder**

*Absolutely Pure*

A cream of tartar baking powder. Highest of all in leavening strength.—*Latest United States Government Food Report.*

ROYAL BAKING POWDER Co., 106 Wall St., N. Y.

## THE ARCTIC PROBLEM

**AND NARRATIVE OF THE PEARY RELIEF EXPEDITION.**

By Prof. ANGELO HEILPRIN.

Cloth, profusely illustrated, $1.00; Polychrome Edition (limited to 750 copies), with 23 plates, plain and in tint, $3.00.

"Prof. Heilprin has set forth clearly and convincingly the plain issues involved in the Arctic problem. . . ."—*Nature (London).*

"The result is that an hour with Prof Heilprin's book is as good as a week in a library. . . ."—*Brooklyn Standard-Union.*

*By the Same Author:*

**THE BERMUDA ISLANDS.**

8vo, 17 plates, $3.00.

"Rarely does one find so charming a combination of rhetoric and science."—*N. Y. Critic.*

**THE GEOLOGICAL EVIDENCES OF EVOLUTION.**

A Popular Exposition of Facts bearing upon the Darwinian Theory. Fully illustrated, $1.00.

## Kitchen Extension.

University Extension is good, but Kitchen Extension is better. When science strikes the kitchen it strikes *home* and every member of the family is the gainer.

The latest and best gift of science to the kitchens of the world is

## Cottolene

the new vegetable shortening and substitute for lard.

Every woman who has ever cooked a meal, knows that lard is disagreeable in use and unhealthy in its "richness" as we call it.

Cottolene is a most satisfactory substitute — clean, delicate and far more economical. Try it for yourself. Refuse all imitations.

Sold in three and five pound pails.

Made only by
**N. K. FAIRBANK & CO.,**
**CHICAGO,**
St. Louis, Montreal, New York, Boston, Philadelphia, San Francisco, etc.

*If you are a* **PIPE** *Smoker, we want you to try*

## Surbrug's Golden Sceptre

All the talk in the world will not convince as quickly as a trial that it is almost perfection. We will send on receipt of **10c.** a sample to any address.

**159 Fulton Street, New York City.**

Prices GOLDEN SCEPTRE: 1 lb., $1.30; ¼ lb., 40c., postage paid. Send for pamphlet, giving list of dealers who handle our tobaccos.

## KNABE PIANOS

UNEQUALLED IN

*TONE, TOUCH, WORKMANSHIP, AND DURABILITY.*

Baltimore, 22 and 24 E. Baltimore St. New York, 148 5th Ave., near 20th St. Washington, 817 Market Space.

VOL. LVII—NO. 1478. THURSDAY, OCTOBER 26, 1893. PRICE 10 CENTS.

THE

## Popular Science Monthly

FOR NOVEMBER.

**The Conservation of our Oyster Supply.** By ROBERT F. WALSH. Illustrated. Shows that an oyster famine is threatening us, and describes the modes of restocking depleted beds that are coming into use in some places.

**Evolution and Ethics. I.** By Prof. T. H. HUXLEY. Prof. Huxley proves that the operation of evolution had been perceived in both Greece and India six centuries before Christ.

**Electricity at the World's Fair. II.** By CHARLES M. LUNGREN. (Illustrated.) Concluding this subject. Electric welding, cooking, heating, and the telautograph are the matters treated.

**The Scientific Method with Children.** By HENRY L. CLAPP. Shows that schemes of science teaching designed for college students are not adapted to the standpoint and mental habit of children.

**An Argument for Vertical Handwriting.** By J. V. WITHERBEE. Illustrated. The claims for the new penmanship are that it is both more legible and more rapid than the old, easier to teach, and allows a more healthful position.

*OTHER ARTICLES ON*

LAPLACE'S PLAN FOR PERPETUAL MOONLIGHT; THE PESTALOZZIAN SYSTEM: NATURE AT SEA; NORTH AND SOUTH AMERICAN ABORIGINAL NAMES; IMMATERIAL SCIENCE; VEGETABLE DIET; ORIGIN OF THE MISSISSIPPI VALLEY RAINFALL; MATHEMATICAL CURIOSITIES OF THE SIXTEENTH CENTURY; BIRDS' JUDGMENTS OF MEN; SKETCH OF JOHN ERICSSON (with portrait).

*50 cents a number; $5.00 a year.*

D. APPLETON & CO.,
NEW YORK.

## D. Appleton & Co.'s New Books.

### Personal Recollections of Werner von Siemens.

8vo. Cloth, $5.00.

"Will be welcomed by the many who knew the famous electrician, and the still larger number familiar with his endless inventions. . . . In the course of a busy life, Werner von Siemens did much, and mingled with all conditions of men. . . . In the early days of telegraphy, Siemens was prescient enough to foresee, in the face of ridicule and official opposition, the great future in store for it. He vastly improved every process, introduced his inventions into the Prussian military organization, and, after leaving the army, constructed the first telegraph system in Russia. . . . Altogether it will be seen that the latest reminiscences are so entertaining that it must be regretted that Dr. Siemens left so few behind him."—*London Standard.*

"The whole work is rich in genial narrative, stirring adventure, and picturesque description, and stamped throughout with the impress of an original mind and a sterling character."—*London Times.*

### Memoirs.

By CHARLES GODFREY LELAND (Hans Breitmann). With Portrait. 12mo. Cloth, $2.00.

Mr. Leland's vivacious reminiscences include the French Revolution of 1848, the Knickerbocker literary circle in New York, the coal and oil fevers of nearly thirty years ago, the study of Romany language and customs—in short, a most remarkable range of experiences of men and things, told in a manner always piquant and entertaining.

### The Art of Music.

By C. HUBERT H. PARRY, M.A. 12mo. Cloth, $4.00.

A concise and admirable exposition of the growth and development of musical art, full of the kind of information which persons desiring to cultivate a taste in music ought to have.

### Miniatures from Balzac's Masterpieces.

Translated and compiled by SAMUEL PALMER GRIFFIN and FREDERICK T. HILL. 16mo. Cloth, 50 cents.

In this litttle volume is collected much of the wit, philosophy, and keen analysis of human character for which Honoré de Balzac is so justly famous.

### The Country School in New England.

By CLIFTON JOHNSON. With 60 Illustrations from Photographs and Drawings made by the Author. Square 8vo. Cloth, gilt edges, $2.50.

This volume is so delightfully novel, quaint, picturesque, and so thoroughly informed with the fresh and unsophisticated spirit of childhood, that it inspires instant sympathy and appreciation. The author describes successive periods of the country school—the winter and summer terms, the scholars in their classes and at the blackboard. their punishments, their fishing and coasting, their duties and amusements on the farm—in short, the every-day life of the boys and girls of rural New England in the days of our fathers and our own. Every phase of his subject is aptly illustrated with pictures from life.

### The Story of Washington.

By ELIZABETH EGGLESTON SEELYE. Edited by Dr. Edward Eggleston. With over 100 Illustrations by Allegra Eggleston. A new volume in the "Delights of History" Series. 12mo. Cloth, $1.75.

This book will supply a demand for a life of Washington, the man, of convenient size, popular, including the latest results of research, planned according to the methods of the new school of history, and containing illustrations of almost every available subject which the story includes. Mrs. Seelye's book is always interesting, and it is not encumbered with superfluous details. It is uniform with "The Story of Columbus," by the same author.

### Mental Development in the Child.

By W. PREYER, Professor of Physiology in the University of Jena; author of "The Mind of the Child." Translated by W. H. BROWN. Vol. 24, International Education Series. 12mo. Cloth, $1.00.

The special object of this book is to initiate mothers into the complicated science of psychogenesis. The author desires to evoke a widespread interest in the study of the development of the infant mind, and has selected from the extensive material he has gathered in a long period of systematic observation, that which has special reference to practical application. It is a book of much value to teachers in the kindergarten and primary schools, as well as to all parents.

### Duffels.

By EDWARD EGGLESTON, author of "Roxy," "The Hoosier Schoolmaster," "The Faith Doctor," etc. 12mo. Cloth, $1.25.

This new volume of fiction is certain of a cordial welcome. For an explanation of the title the reader is referred to the charming introduction which forms the author's prelude to his collection of admirable stories.

### Speeches and Addresses of William McKinley.

From his Election to Congress to the Present Time. Compiled by JOSEPH P. SMITH, Librarian of the Ohio State Library. With Portraits on Steel of the Author and others. 8vo. 650 pages. Cloth, $2.00.

These selections, sixty-five in number, embrace a wide range of topics of absorbing public interest, and include twenty-five speeches devoted to the tariff question in all its aspects, and others on silver, Federal elections, pensions and the public debt, civil-service reform, the Treasury surplus and the purchase of bonds, the direct tax bill, etc.

The orator whose views are thus presented is the best authority of his party on most of the matters considered. An elaborate analytical Index gives the volume an encyclopedic character, which will be especially appreciated at the present time by the student of whatever political faith.

*For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,*

D. APPLETON & CO., 1, 3, and 5 Bond St., New York.

*SEM.—Sp'l offer, free tuit'n, no profit, $50,-*000 b'ld'g, good board, send st'mp, name *Nat.* 88th yr.

NEW YORK, Utica.

*MRS. PIATT'S SCHOOL FOR GIRLS.* —The next school year begins Thursday, Sept. 21, 1893. Applications should be made early.

NORTH CAROLINA, Asheville.

*RAVENSCROFT SCHOOL.—PREPAR-*atory Boarding and Day School for Boys. Head Master, RONALD MCDONALD, B.A., Oxford.

OHIO, Cincinnati.

*MISS ARMSTRONG'S SCHOOL FOR* Girls, Liddesdale Place, Avondale. Family limited. Circulars sent on application.

PENNSYLVANIA, Bryn Mawr.

*MISS BALDWIN'S DAY, BOARD-*ing, and College Preparatory School for Girls reopens September 28. For circular, address
MISS FLORENCE BALDWIN.

PENNSYLVANIA, Germantown, 202, 204, 335 West Chelten Avenue.

*MISS MARY E. STEVENS' BOARD-*ing and Day School.—24th year. "Approved" by Bryn Mawr College. The Bryn Mawr entrance examinations are held in the school by an examiner from the College. School certificate admits to Vassar.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

*MRS. COMEGYS AND MISS BELL'S* English, French, and German Boarding-School for young ladies reopens October 2. Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

*MISS ANABLE'S BOARDING AND* Day School for Young Ladies. Estab. in 1848. Opens Sept. 28.

VERMONT, Burlington.

*VERMONT EPISCOPAL INSTI-*TUTE.—Boys' Boarding School. Military Drill. Our certificate admits to most colleges. Also business course. Accommodates forty-five boys. Catalogues.
H. H. ROSS, A.M., Principal.

## *Educational.*

### MUSEUM OF FINE ARTS,

**Copley Square, Boston, Mass.**

SCHOOL OF DRAWING AND PAINTING.

The eighteenth year is now open.

Instruction in drawing from the cast and from life, in painting, modelling, and decorative design, and also in artistic anatomy and perspective. Principal instructors: F. W. Benson, E. C. Tarbell and Philip Hale (Drawing and Painting), C. Howard Walker and Mrs. William Stone (Decorative Design), B. L. Pratt (Modelling), G. H. Monks, M.D. (Anatomy), and A. K. Cross (Perspective). Pupils are allowed the free use of the galleries of the Museum. For circulars giving detailed information, address Miss ELIZABETH LOMBARD, Manager.

### Tulane University Scholarships.

Tulane University, New Orleans, for the purpose of encouraging post-graduate studies, offers fifteen scholarships to the graduates of its own and other colleges. The appointments are made for merit, and entitle the holder to free tuition and an honorarium of One Hundred and Fifty Dollars.

For further particulars address the
SECRETARY OF TULANE UNIVERSITY,
New Orleans, Louisiana.

### THE YOUNG LADIES' SEMINARY,

FREEHOLD, N. J. Admits to Smith, Wellesley, and Vassar on certificate. Graduates from the Seminary Course. Preparatory Class, Art and Music. Home care. Miss EUNICE D. SEWALL, Prin.

### RIVERVIEW ACADEMY,

POUGHKEEPSIE, N. Y.

58TH YEAR. Prepares thoroughly for College, the Government Academies and Business. Military organization. BISBEE & AMEN, Principals.

## *Teachers, etc.*

*A LADY, FOR NINE YEARS GOVERNESS* to Princess of the German Imperial family, is willing to accept position as governess to one or two girls. Accomplished linguist, fine musician and artist. Apply by letter. FRAULEIN, 25 West 46th St.

*A HARVARD PH.D., WHO HAS* studied in Germany (experienced tutor and teacher) will take a few pupils at his home in Cambridge during the winter, or will accept a tutorship. Address J. W., care *Nation*.

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship. Willing to travel. Address Dr. X. B., care *Nation*.

*CHARLES W. STONE, Tutor for Harvard*, 68 Chestnut St., Boston.

## *School Agencies.*

*AMERICAN AND FOREIGN TEACHERS'* Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to
Mrs. M. J. YOUNG-FULTON,
23 Union Square, New York.

*THE ALBERT TEACHERS' AGENCY*, 211 Wabash Ave., Chicago, has now vacancies for Fall and winter terms. C. J. ALBERT, Manager.

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*JUST PUBLISHED.*

### The Psychic Factors of Civilization.

By LESTER F. WARD. 8vo, cloth, xxi+369 pages. Price, by mail, postpaid, $2.00.

This book is a new presentation of the whole subject of social progress, written from a scientific standpoint, but in a popular style, and carrying the reader from the most fundamental principles up to their application to the living issues of the times.

**GINN & CO., Publishers,**
BOSTON, NEW YORK, CHICAGO, LONDON.

### KINDERGARTEN SUPPLIES

*at Schermerhorn's, 3 East 14th St., N. Y.*

## Scribner's Magazine for November, now ready, is an unusually interesting number.

**"MADAME ROLAND"** is a most important and interesting article on one of the chief heroines of the French Revolution, full of new material and illustrations furnished by the present representatives of her family, and appearing on the 100th anniversary of her execution. **AUGUSTINE BIRRELL, M.P.** ("Obiter Dicta") writes of "The House of Commons," its traditional customs, personalities of distinguished members, etc. **THE NOMINATION OF LINCOLN,** an account of the nominating convention, by Isaac H. Bromley, who enjoyed exceptional advantages for close observation, is a notable article in the Historic Moments series. The concluding article on **FRENCH ILLUSTRATORS** gives another delightful insight into their studios and notable examples of their work. **F. HOPKINSON SMITH** gives, with pen and crayon, an artist's impressions of the Fair, particularly the Midway Plaisance. The hitherto unexplored country of **THE KATCHINS,** which is likely to be of great strategic importance in the future, in upper Burma, is graphically described by Col. Colvile of The Grenadier Guards. **"MR. FREEMAN AT HOME"** describes the historian of "The Norman Conquest" as he appeared to a member of his household. **"EDUCATION FOR GIRLS IN FRANCE,"** written by Miss de Forest, long resident there, will be eagerly read by those interested in the education of women. **THE FICTION** includes a story by Octave Thanet and the conclusion of **HAROLD FREDERIC'S** serial "The Copperhead."

**Charles Scribner's Sons, New York.** *On all News Stands.* **Price 25 cts.**

### WILLIAM R. JENKINS,

851 and 853 Sixth Ave., N. W. Cor. 48th St., N. Y.

**FRENCH** *AND OTHER FOREIGN* **BOOKS.** *Send for Catalogue.*

**SCHOOLS** *furnished with all text-books, stationery, printing, and completely* **SUPPLIED** AT SPECIAL RATES.

*HEATH'S MODERN LANGUAGE SERIES.*

### Cinq Mars.

The greatest historical novel of France, abbreviated and edited, with valuable Introduction and Notes, by C. Sankey, Harrow School, England. Cloth, 292 pages. Price, 90 cents.

**D. C. HEATH & CO., Publishers,**
BOSTON, NEW YORK, CHICAGO, LONDON.

### *Back Numbers of "The Nation."*

In response to frequent inquiries from subscribers:

*An incomplete set* of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

*Complete sets*, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

*Single numbers* not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

### MEISTERSCHAFT SUPERSEDED

*BY ITS OWN AUTHOR,*

**DR. RICHARD S. ROSENTHAL.**

Dr. Rosenthal's name has become a household word wherever foreign languages are studied. A new work,

### The Rosenthal Method of Practical Linguistry

has just been issued by him, which does not only supersede his former system, published 20 years ago, but will be found superior to any method. It is the mature outcome of 25 years' experience of "the greatest linguist and foremost teacher of the age," enabling any one to learn to

*Speak Fluently and Correctly*

with scarcely an effort and without a teacher.

GERMAN, FRENCH, or SPANISH,

within a marvellously short time.

"Next to living in a foreign country, this is undoubtedly the best of all methods for learning modern languages."—*The Dial.*

Exact pronunciation given. All subscribers become actual pupils of Dr. Rosenthal, who answers all questions and corrects all exercises free of charge. Terms of membership $5.00 for each language. Part I, each language, 50 cents.

**POLYGLOT BOOK COMPANY,**

*45 Lafayette Bldg., Chicago, Ill.*

### UNIVERSITY TOWN OF INNSBRUCK, TYROL, AUSTRIA.

1,900 feet above the sea, with dry, bracing climate.

**HOTEL TIROL.**

Open all the year. CARL LANDSEE, Proprietor. Large, airy, sunny rooms; modern conveniences; superior cuisine. Reduced rates in winter. Eminent medical care if desired. Unusual educational advantages on moderate terms. Excursions a specialty. Best references. Illustrated pamphlets sent on application.

SENT FREE Our **15th Annual Holiday Catalogue of Choice Books,** suitable for presentation or for the library, at **25 to 50 per cent. reduction** from publisher's prices. **Just ready.** Send your address **now** and have a copy mailed to you **free.**

**ESTES & LAURIAT, Boston**

# RECENT AND FORTHCOMING PUBLICATIONS

A Story of the Days of Columbus. By JOHN RUSSELL CORYELL, author of "Diego Pinzon." 12mo, illustrated, $1.25.

## HEROES OF THE NATIONS.

A series of biographical studies of the lives and work of certain representative historical characters who have been accepted, in many instances, as types of the several National ideals. Cloth, $1.50; half leather, uncut edges, gilt top, $1.75.

The following volumes are now ready: **Henry of Navarre, Napoleon, Wyclif, Cæsar, Sir Philip Sydney, Theodoric, Pericles, Gustavus Adolphus, Nelson.**

---

*** *Illustrated Holiday Number of Notes on New Books, Illustrated Catalogue of Books for Young People, Prospectuses of the Story and Heroes of the Nations Series, and Knickerbocker Nuggets and Gem Series sent on application.*

## G. P. PUTNAM'S SONS,

**New York: 27 and 29 West 23d Street.** **LONDON: 24 Bedford Street, Strand.**

# The Nation.

NEW YORK, THURSDAY, OCTOBER 26, 1893.

## The Week.

THERE had been so much weakness and "wobbling" among all the other Democrats in official life at Washington that it was not strange that many people should have feared that even Mr. Cleveland might yield, more or less, to the pressure. It was therefore with a sigh of relief that the country received the announcement, made authoritatively on Monday, that "the President adheres to the position that the purchasing clause of the Sherman silver law should be unconditionally repealed." It seems almost incredible that politicians who pride themselves upon their shrewdness should for a moment have lent the slightest favor to any such compromise as the latest one —or, indeed, to any compromise at all. The idea that a party which had declared a law so intolerable that it ought to be repealed without delay, should propose to continue it in operation for another year, was in itself too absurd for serious consideration; and when the proposed extension for a twelvemonth of this "cowardly makeshift" was accompanied by other makeshifts even more cowardly and dangerous, one had not the patience to discuss the matter. The continuance of the present law unchanged was infinitely to be preferred to any such substitute as had been so readily accepted by nearly all of the Democratic Senators.

---

To Mr. Cleveland, and we might almost say to Mr. Cleveland alone, belongs the honor of putting an end to the deadlock in the Senate and securing the passage of the repeal bill. If he had taken the advice of some of the most practical politicians in the party—Senator Gorman, for instance—he would have "compromised" long ago and have utterly ruined his party. For nothing is more certain than that any prolonged dilly-dallying with the silver question would have irretrievably associated the Democratic party with the worst business convulsion the country has experienced since 1837, and have consigned it once more to the powerlessness and obscurity from which Mr. Cleveland dragged it in 1884 and 1892. His silver letter was pronounced by all the wise men of the party a blazing indiscretion. It proved to be one of his masterstrokes. His firmness in the late trial of strength in Washington, maintained undoubtedly in the teeth of innumerable appeals both to his hopes and fears from quarters which he is accustomed to respect, shows that he has lost none of the courage which has most contributed to his political success.

---

The attitude of the Republicans in Congress during this long controversy has been such as to merit the warmest praise. In the House during August, and in the Senate since early September, they have stood firmly for repeal, with the exception of the few from the silver States and (in the Senate) Don Cameron and "Bill" Chandler. They have resisted more than one temptation to try and seize partisan advantage by assisting a compromise that would undoubtedly have hurt the Democrats, but would also as undoubtedly have worked vast harm to the country. They sustained the Democratic leader in the Senate in his "test of endurance," they supported the Democratic President against the opposition of fully half of his own party, and, though in a minority of the body, they will furnish the majority of the votes that will carry repeal. In short, the record of the Republican party throughout this controversy is one that it may well be proud of.

---

The latest plan for the "rehabilitation of silver" appears in the *Fortnightly Review*, in which Mr. A. G. Schiff proposes that silver shall be taxed by a "majority of the powers in conference assembled," so that its price shall never sink below 48 pence per ounce. The benefit, he says, of having silver kept at this price would be enormous, for this reason:

> "Silver has been used as money from time immemorial until 1813; at the present moment it still forms the currency of the greatest portion of mankind, and as a natural consequence of the greatest number of debtors.
>
> "Creditors are benefited by the solvency of debtors.
>
> "These are axioms which the most inveterate gold man will accept."

It is of course impossible to state with certainty and accuracy the origin of a craze, but we believe that we shall come as near as possible to the truth in saying that the origin of the silver craze is to be found in the notion that the mass of mankind are debtors. This is the "fons et origo" of the whole bunch of hallucinations which make up the silver movement, and have worked such unfortunate results in this country. The fact is that the civilized world contains far more creditors than debtors. The laborers are all creditors as long as they are laboring. The class which saves is a creditor if its savings are—as they usually are—invested. All persons living on salaries are creditors. All holders of stocks, bonds, and other securities are creditors. The debtors are everywhere a small class. Either they are great operators in stocks, or they are persons struggling with adversity, and likely soon to go to the wall. If we step into any small town and inquire into the circumstances of the inhabitants, we shall find that the debtors are well known, not much trusted, and sure to disappear before long. If it be said that this is not true of the farmers, so many of whom have mortgages on their farms, the answer is that every harvest as it comes round makes the farmer a creditor, so that at best his interests and sympathies are as much on one side of the books as the other.

---

What has probably given rise to the notion that silver is dear to debtors, and that mankind is in debt, is, that a very large number of silver agitators are in debt, and want to pay off their obligations in a depreciated currency; but, compared to "the greatest portion of mankind," these gentlemen are a very small handful. The truth is that the world is divided between the creditor and the debtor interest, the vast majority of persons being the creditors of the community either for work and labor done, or for goods had and received. Every honest man pursuing a lawful calling keeps a running account with society, in which the balance is generally in his favor. The selling interest is probably smaller than the buying interest, unless we count in labor as a marketable commodity; but if we count this in, there will always be about as many vendors as vendees in the world's markets. So that the fearful racket about the catastrophe which is going to overtake the human race if gold goes up, is about as alarming as the music of a Chinese theatre.

---

The confirmation of Mr. Van Alen by the Senate was so sure to come that it will attract but little attention. The Senate is not the kind of body in these days to reject a man because he has been a liberal giver to the campaign funds. Among the majority for confirmation were Gorman, Higgins, Quay, Jones, Stewart, Cameron, and McMillan. All that the occasion calls for is a word or two of condolence with Mr. Cleveland. He has satisfied Mr. Van Alen and Mr. Whitney, but he has given his own reputation a blow from which it will never recover. He has spoken and written so much about the use of money in politics, and about the sacredness of the trust created by the holding of public office, that Mr. Van Alen's success is a great misfortune for him. It will make a large body of moral literature almost ridiculous. The curious thing about it, too, is that it was not necessary. He could readily have shown Mr. Whitney that, much as he was indebted to him, this particular thing

was something which he must not ask him to do. In the whole range of possible Presidential errors or blunders, there is not one from which President Cleveland is so completely cut off as the sale of high offices for cash. There is no other against which his friends were so ready to offer warranties, and have given so many warranties. What is still worse is that there is not one so dangerous to the safety, honor, and welfare of this government. The sale of legislation for campaign funds may be said to have begun with the Republicans. The sale of high executive office may be said to have begun with Harrison. The Democrats have turned the Republicans out in order to stop both abuses, and, lo and behold, they have plunged in themselves the minute they got a chance. If Mr. Van Alen had been a prominent public man, holding all the ordinary titles to high places, we should greatly have regretted his getting a foreign mission after giving $50,000 to aid in electing the appointing officer. But considering that he is entirely unknown in public life, and holds no titles to high places, the transaction is one of unusual nakedness.

---

The Massachusetts Civil-Service Reform League is not satisfied with Mr. Josiah Quincy's defence of himself, and has resolved that his refusal to recognize such a thing as "the spirit and purpose of the civil-service law" does not, in fact, entirely frown it out of existence. But a little thing like condemnation by his friends does not trouble Mr. Quincy, who reiterates his opinion that they are a sad lot of impracticables. He grants that there is "no objection to the assertion of the pure merit system by persons who look at the subject exclusively from the civil-service standpoint," but he himself, as a "party man," bound to follow some "practical method," is not free to take any such transcendental view. Mr. Quincy's shame is great enough without such glorying in it. His pretence that the stern realities of executive responsibility have cleared the reform cobwebs from his eyes simply invites comparison with the many examples of theoretical and practical spoilsmen who have, unlike Mr. Quincy, found executive power inclining them to reform. Ex-Secretary Tracy confessed that it was the hard experience of a "party man" in office that forced him to adopt reform methods in the Brooklyn Navy-yard, and even Wanamaker began to show some signs of weariness with the spoils debauch. We fear, therefore, that it is not the cares and teachings of office which have brought Mr. Quincy's civil-service reform professions to wreck.

---

Mr. Peck, the ex-Commissioner of Labor, who fled the country to escape the penalty of his acts in stealing and destroying the official records of his bureau, has returned and surrendered himself for trial, encouraged, it is said, by the "harmony" in his party over the nomination of Maynard. It will be interesting to observe the outcome of his case, in view of the decision of the Court of Appeals upon it, delivered in June last. The crime of which Peck was then pronounced guilty was precisely the one which the Bar Association of this city, ex-Judge Danforth of the Court of Appeals, and other high authorities have declared Maynard to be guilty of, coming under section 94 of the Penal Code as a felony, "punishable by imprisonment for not more than five years, or by a fine of not more than $5,000, or by both." Peck reasons, not unnaturally, that if Maynard can be nominated for the Court of Appeals, there is no reason why he should be afraid to return to a State whose rulers are capable of such doings.

---

Philadelphia has a Municipal League which is trying to secure better government of the city. At present the state of things is not quite so bad in Philadelphia as in New York and Brooklyn, but it is bad enough. Mr. Herbert Welsh says that the League has sufficient moral evidence to warrant the declaration that "the Councils of Philadelphia, as a body, are open to the charge that they look for orders to certain great corporations, and not to their constituents; that they legislate in the interest of these corporations as against the interests of these constituents, to the great detriment of the city." In his address at the recent annual meeting, Mr. Welsh pointed out that the League was working in the same line with men in all the other large cities of the country, who encounter the same discouraging obstacles and have the same intricate problems to solve; and he urged that, if it clearly perceived this fact, it would "work with a sense of generous rivalry, of enthusiasm, of careful thought and patience, far greater than that which marks its efforts now." The Boston *Herald* carries this idea a step farther by suggesting an organization of these bodies in different cities in the shape of a national municipal-reform league, which might meet in an annual congress for the discussion of the various important questions in which they are interested; holding that an interchange of views could not fail to be of great service in placing at the command of all a knowledge of the work for municipal reform in each city. This suggestion is well worth the consideration of municipal reformers.

---

The refusal of the Synod of New York on Thursday to sustain the efforts of Dr. Briggs and his sympathizers to have his case reopened on technical grounds was only what they must have expected. With technical correctness of procedure or without it, the judgment of the denomination on the main issue involved has been pronounced with unmistakable emphasis, and it is mere contentiousness to prolong the struggle. There is the more reason for the friends of Dr. Briggs to acquiesce in this, inasmuch as they are now practically assured of toleration of their views within the church. The zeal of the conservatives has distinctly cooled since their success in securing the condemnation of the head and front of the offending. Now they are all for peace and letting bygones be bygones. They want no more trials. The followers of Prof. Briggs may go out of the church if they choose to, but they will be in no danger of being put out. They may even hold the identical opinions of Prof. Briggs if they will—only let them use a little tact and discretion, and be a little more patient than he was in waiting for the majority to catch up with him. Are they not all brethren? Such really seems at present the most likely issue of it all. The heretic must go, but his heresies remain to become orthodoxy all in good time. Pascal's Jesuit laid down the great principle when he said: "These opinions would be orthodox in any other mouth than that of M. Arnauld." Prof. Briggs is anathema, but Prof. Moore, Prof. Brown, and other Presbyterian professors in good standing that might be named are to be made perfectly at home in the household of faith, although holding substantially the same opinions.

---

One of the topics for discussion before the World's Evangelical Congress at Chicago the other day was that nightmare of most clergymen—how to get people to go to church on Sunday evenings. A Wisconsin minister told of his success in building up an evening congregation by various means, among them the cutting down of his sermon to fifteen minutes. This is in line with the recommendation of the learned and pious judge who said, when asked how long, in his opinion, a sermon ought to be, "Fifteen minutes, with a leaning to the side of mercy." Yet we do not see how the remedy can be expected to be a truly permanent one. Those who think of a sermon merely as something to "hold a watch on," will be led on by such concessions only to demand a continued lowering of the record. Those, on the other hand, who look to the substance, will contend that fifteen minutes is too long for a poor sermon and not long enough for a good one. The only thoroughgoing reform is to multiply preachers whose sermons have more than that one point of intense interest which, according to George Eliot, all sermons have—the point when they are at last over.

The railroad disaster on the Grand Trunk Line on Friday was at once the most shocking and the most inexcusable of the long list which has disgraced the year. It was due, apparently, solely to the reckless disregard of positive instructions by the conductor of one train, who had been ordered to meet the other train on a siding, yet directed his engineer to keep on beyond that siding because he "thought" the other train had already passed him at a station. It is impossible that such a thing could happen on a road where there was proper discipline. Indeed, nobody can have travelled much this year without having been impressed by the spirit of recklessness and indifference which characterizes so many of the employees. This is a spirit which seems to grow naturally, when left unrestrained, in any employment which is especially hazardous; and the greatest reproach of American railroads is that they do so little to check its development in the only possible way, by the enforcement of severe discipline. The difficulty has been greatly aggravated this year by the immense increase in passenger traffic on all lines running to Chicago, which the companies have tried to handle without a corresponding increase in the working force—in some cases, indeed, with a smaller proportional force than usual. The result is that men have been compelled to work "till they were ready to drop"—we have heard of a brakeman who was kept on duty without sleep for forty-eight hours; and the too common recklessness has thus been heightened by the effects of bodily fatigue and mental exhaustion.

---

A peculiar form of injustice to an author through the lack of an international copyright law to protect his property has just been brought to light by the eminent Danish critic, Georges Brandes. He had undertaken to bring out a German edition of his 'Currents of Literature in the Nineteenth Century,' and had actually edited and revised three volumes of the work, when a German publisher, on the announcement of the enterprise, flooded the market with a cheap reprint of an old and grossly imperfect translation. As there is no copyright treaty between Germany and Denmark, Brandes was without redress and was driven from the field. This was bad enough, but what must have seemed worse to the critic himself was the fact that a slashing attack recently made upon him in the *Revue des Deux Mondes* was based almost entirely upon this old and misleading translation. He asserts in a letter to the *Figaro* that not a single one of the statements of fact or of opinion which were made the ground of severe criticism in the *Revue*, occurs in his revised edition. This is not only robbing a man but maltreating him to boot.

The earnestness and versatility of French Socialists are in no way more strikingly shown than in their pressing literature into their service. Novels and romances setting forth the abominations of the existing social order and the beauties of the one to come have long abounded. Lately the playwrights have been enlisted in the good cause, and more than one drama has been seen in which the zeal of a socialistic apostle was more conspicuous than the literary or dramatic gifts of the author. One of the latest devices is a "Socialist Catechism" designed for wide circulation among the people. It contains ninety-nine formal questions and answers, in which the wickedness of employers and the virtues of workingmen are duly set forth, together with glorification of fraternity, appeals for insurrection, and all the rest of it. Occasionally one comes upon a witty turn lighting up the general sombreness of the catechism. For example, in answer to the question, "What is a conservative?" we are told: "A conservative is an old gentleman, as a general thing very badly conserved." The definition of an economist is as follows: "An economist is a *bourgeois*, stupid, but very eminent." Neat, if somewhat unkind, is the reply to the question, "What is a Christian Socialist?" "A Christian Socialist is a worthy reactionary who goes so far as to admit that, for the workingman, the bread of life would be much more attractive if some beefsteak went along with it."

---

Several public executions in France have recently been attended with such scandals that interest is renewed in a proposed law to prohibit these demoralizing spectacles. A former excuse for public executions may have been, that by no other means could the popular mind be satisfied of the due infliction of the legal penalty, and freed from all suspicion that the real criminal had been smuggled away by some fraud or negligence. But such an end could be assured, as it is in this State, for example, by providing for a sufficient number of legal witnesses of an execution. One would suppose that the scenes of the Terror would have been enough to convince French lawgivers of the danger of cultivating a spirit of blood-thirstiness in the populace, and of making the guillotine a favorite toy with children. A curious and degrading feature of modern executions in France is the resort to them, besides the ordinary rabble, of decayed old roués and profligates, male and female, who go about in search of horrible sights to flog their jaded sensibilities into action. They cannot, perhaps, be shut out of their other favorite haunts, the morgue and mad-houses, but at least the State ought not to pander to their depravity by admitting them to public executions.

Count Taaffe's bill to extend the suffrage in Austria may be said to be one of the results of the successful struggle for universal suffrage in Belgium last spring. From Brussels the agitation was immediately transferred to Vienna, and, all through the summer, meetings were held and an active propaganda carried on to secure for the lower classes in Austria what had been won by the Belgian workingmen. There was, of course, the latent threat all along to resort to the same methods as had been employed in Belgium of public disorder and a universal strike. It was doubtless to head off any movement of that kind that the Government decided to come forward with the appearance of granting spontaneously a good part of the popular demand. Naturally, this action has been subjected to the usual comments made upon concessions of that sort. The "entering-wedge" argument is heard both from alarmed conservatives, who see the end of all things at hand, and from delighted radicals, who say that, having begun the descent of Avernus, the Government cannot stop till it lands at the very bottom. In like manner, the attitude of Roman firmness is advised by some of the same two sets of extremists—the conservatives asserting that it will never do to concede anything, even if just, to popular clamor, and the wilder radicals standing out for the "all-or-nothing" principle. Meanwhile the Government has to steer a difficult course as best it can, one of its prime necessities being to prevent any domestic discord in the Triple Alliance. The Triple Alliance, in fact, has become a sort of government above the Government, compelling both Italy and Austria to adopt financial and military measures which they would not think of if left to themselves.

---

It did not need recent events to show how completely in Brazil the profession of arms dominates all others, or to explain why military ideas are so often permitted to override the methods of peace and of law. Some months ago a Brazilian paper published a list of army and navy officers—active, retired, and honorary—who were then holding civil positions or were candidates for such places. No less than 361 names were included. The President of the country—whose strictly legal office is the Vice-Presidency, and who is also Senator—is a marshal of the army. Other army or navy officers are found in the persons of eleven governors of States, fourteen Senators, and forty deputies in the national Congress. No wonder that the laws give way to the rough-and-ready practices of the camp and quarter-deck, or that aspiring young politicians are learning the lesson that military preferment is the surest road to political advancement.

*INHERENT POWERS OF DELIBERATIVE BODIES.*

MR. EDMUNDS'S letter makes the situation in the Senate perfectly clear. There has been so much talk of senatorial courtesy, and of rules of mysterious potency, that many people have received the impression that the Senate was entirely helpless under the tyranny of a small minority, and that any attempt to check the flow of speech would be of the nature of revolution. All this fog is blown away at a whiff by Mr. Edmunds. His letter was drawn out by an inquiry addressed to him by ex-Gov. Stewart of Vermont, himself an experienced parliamentarian through long service in Congress and in the Legislature of his State. Mr. Stewart found himself unable to believe that any legislative body could be so powerless as the Senate appeared to find itself, and he accordingly asked the opinion of Mr. Edmunds upon the question whether the presiding officer of the Senate was legally authorized to terminate debate, as also upon the question whether this officer, if powerless to end debate upon other subjects, was equally so when a change in the rules was proposed. Senator Edmunds shows that the rules of the Senate afford no protection to obstructionists, and that the present inaction of the Senate is not forced but voluntary.

It is not easy to overrate the importance of this opinion. Not only is Mr. Edmunds a constitutional lawyer of the highest rank, but he presided for several years over the deliberations of the Senate. It would not be too much to say that this opinion, in connection with Judge Cooley's, is an advance statement of the judgment of the Supreme Court of the United States, should the case ever come before them for decision. In fact, when one comes to look fairly at the question, there seems to be no question about it. The rules of the Senate say nothing, it is true, about stopping a Senator who is speaking with the express purpose of preventing action. But it is an extraordinary inference that any act not expressly prohibited by explicit rule is therefore permitted. There is no rule forbidding a Senator to speak when he is drunk, or to appear naked on the floor of the Senate, or to sing indecent songs, or to address the Senate in the Chinese language, or to do a thousand other objectionable things. There is no rule either against these things or against obstructive talk, partly for the reason assigned by the ancient law-giver for not providing punishment for parricide—that the commission of the act was itself incredible—and partly because they are covered by the general rule against disorderly conduct. That rule provides that at any stage of the proceedings, except when the Senate is dividing, any Senator may raise the question whether another Senator is out of order, and the question, unless submitted to the Senate, shall be decided by the presiding officer without debate. An appeal from this decision may be taken to the Senate, but if they sustain it, that ends the matter definitively. Debate is allowed upon the appeal, but if any member shall be called to order during this debate, the question shall be decided without debate, and, although an appeal is allowed from this decision, there can be no debate upon this appeal. So far from the rules of the Senate protecting obstructionists, they seem devised specifically to suppress them. If it is really a disorderly act to speak with the announced intention of preventing legislation, there is nothing whatever in the rules of the Senate or in parliamentary practice to hinder the Vice-President—if supported by a majority of the Senate—from declaring it such and from stopping it.

It is quite probable that this view of the situation has not hitherto presented itself to the obstructive Senators. They are men of no great attainments, for the most part, in constitutional law, and they have very likely believed that there was no legislative device to hinder them from talking till the crack of doom. The suggestions of compromise with which the air has been filled were quite probably due to the discovery on the part of these men that they have aroused the bitterest enmity against their cause by their use of a weapon which they supposed was irresistible, but which proves to be worthless. They have outraged their colleagues and the coördinate branches of the Government, and defied the people, thinking that they could do so with perfect impunity; and now that they find that there is nothing in the rules to prevent their being put in charge of the sergeant-at-arms, they begin to talk of compromise. But any compromise that may now be offered them must be dictated by their opponents and not by them. Their brief period of despotic power is over, and it is beginning to be understood by the public as well as by parliamentarians that their dominion was nothing more than the brief period of license enjoyed by a gang of ruffians before the constables can reach the scene of disturbance.

The disposition to proceed to action which is now evident among the majority in the Senate is doubtless due, in part at least, to the same cause. So long as it seemed to be conceded that the minority must rule, and that there was no way of stopping them, the majority felt itself relieved of responsibility. To very many of them, it is to be feared, this freedom from responsibility was acceptable. They could not be accused of hostility to silver, because they had not voted to repeal the silver law, nor could they be denounced by the believers in honest money, for they had not voted against repeal. Now they find that responsibility has rolled back upon them with increased weight. They see that they can put a stop to obstruction, and that the people are learning that they can. If they do not, it is now because they will not, and the odium that has been heaped upon the silver fanatics will be transferred to them. That odium is now so intensified by torturing delay that it will be too heavy for any political party to assume.

*AN EXTRAORDINARY SITUATION.*

HAS there ever been anything in the politics of this State quite so remarkable as the attitude of the Republican organization at present? The State is ready and willing to turn against the Democratic party and give the Republicans the greatest political victory they have had for twenty years, yet, instead of making the most of the opportunity, the whole power of this Republican organization seems to be exerted to keep the victory from coming to the party. They are pushing it away by every means in their power. Mr. Platt in the State convention refused to put forward the strongest possible candidate against the criminal whom the Democrats are running for the Court of Appeals, and insisted on nominating a candidate who, while eminently respectable and well fitted for the place, lacked the popular strength which a candidate more generally known would have commanded.

Not content with this curious political manœuvre in the interest of the opposite party, the Republican machine in this city put in the field as weak and inconsequential a municipal ticket as could be arranged, and when a most unusual opportunity was afforded for strengthening it by putting Mr. Myers on as candidate for comptroller, the machine refused to accept it. Most remarkable of all, the machine uses as the medium for giving publication to its decisions and proposals the organs of Tammany Hall. Mr. Robinson, the machine's candidate for comptroller, chooses the *Sun* rather than the *Tribune* as the organ most congenial to his tastes when he wishes to avow his determination not to withdraw in the interest of Mr. Myers, but to run in the interest of Tammany Hall. In fact, his whole course could not be better shaped if its design were to make it difficult for any independent citizen to vote for him, for it is calculated to create general disgust with both himself and his party.

As a consequence of these proceedings there is such a general lack of confidence in Republican sincerity that many persons suspect that there has been a "deal" in accordance with which the Republican machine has agreed not to defeat Maynard. That he cannot be elected unless there is Republican faith-

lessness is as clear as noonday. The Democratic leaders are finding out what a difficult task they have on hand, and are sending out earnest appeals for "competent speakers," saying that only those must be put on the stump who have been "carefully selected." That is confession that the task of defending Maynard is so delicate, and the situation so critical, that no speaker must be trusted who is at all likely to weaken under fire. Of course the situation is critical. Maynard's assailants are not men whose charges can be disposed of easily. They are the foremost men at the bar in this State, and their words carry weight with the people because of the personal character behind them. It would be a marvel indeed if a candidate so assailed could be elected in this State without a desperate struggle.

Added to the weakness which Maynard's candidacy creates, there is also the failure of the Democratic majority in the United States Senate to accomplish anything. This, under ordinary and fair conditions, ought of itself to give the State to the Republicans. Yet instead of improving that opportunity, the Republican platform is silent on the subject of silver-purchase repeal. How did that happen?

In view of these most suspicious proceedings, is it any wonder that political observers are saying that Maynard is likely to be elected because the Republican organization cannot be depended upon to work honestly for his defeat? Is it any wonder, after the Robinson performance in regard to the comptrollership, that the same observers are saying that if it is necessary to cheat in the count in this city in order to elect Maynard, there is no hope that the Republican machine will put any obstacles in the way of such cheating? That the candidacy of Mr. Myers, if accepted by the Republicans, would have drawn a large number of votes from Tammany, and would have endangered the success of their ticket, was shown clearly enough by the anxiety of all the Tammany organs to get him out of the field. His candidacy would also have added to the difficulty of electing Maynard, as was shown by the taking of Mr. Fitch out of Congress to run for his successor. By refusing to accept Mr. Myers as their candidate, the Republican organization has performed a great service both to Tammany and to Maynard, and the decent men of the Republican party ought to make themselves heard in protest.

In fact, the responsibility for Maynard's election, if it shall be accomplished, will rest squarely upon the Republican party. He cannot be elected if that party makes a sincere effort to defeat him. The defection in the Democratic party over his candidacy is widespread and great. He will receive a smaller honest vote than any candidate of his party has received for many years. He will be defeated if the Republicans do their duty not merely in getting out their own vote, but in opposing all Democratic schemes for cheating in the count. If the leaders of the Republican machine cannot be trusted to do their duty in these things, then the honest men in the party ought to take matters into their own hands, unite with the Bar Association and other non-partisan opponents of Maynard, and see to it that steps are taken to have both an honest election and an honest count. If there is not virtue enough left in both political parties to secure this result, the State is indeed in evil hands.

## *A GREAT MYSTERY.*

WE find the following interesting passage in a letter from Chicago to the *Spectator* of London, describing the impressions of some recent English visitors to this country:

"We were in the Fair grounds at all hours of the day and early night for weeks, and never heard of any pocket-picking; nor yet did we hear an angry word, much less an oath. Altogether, we saw so little that was evil, and so much that was good, that we began to wonder where all the wicked people whose doings made our blood run cold in the daily papers were to be found. These papers are a national calamity. With very few exceptions, they seem to serve up a banquet of brutal horrors to readers who will enjoy to the full every turn of the screw of the rack on which the murderer places his victims, and every agony of parents who still love the children whose evil deeds are made all too public. To an enterprising editor in America, no home has any privacy, no feeling of the heart any sanctity. The sins and sufferings of one-half of the world are to furnish the delights of the other; and scarcely a horror can be named which escapes serving as an occasion for a jest. If a man has the misfortune to lose a leg in a terrible accident, the headline of the paragraph which announces this is, 'His leg goes to Heaven before him.' If a couple of lovers are killed by lightning, we read, 'Lightning takes off two.' A lynching is gracefully described as 'a neck-tie party.' Worse things might be quoted, but we refrain; and yet, though these papers live and prosper, the people we see are as tender and compassionate as the heart of man can desire."

This remarkably accurate definition of the "live" American newspaper of the period raises a question which has troubled thoughtful minds for some time, and that is, Who are the readers who like these newspapers? One seldom or never meets a person who will admit that he likes them, or who says that he would discontinue them were they to stop publishing the daily "banquet of brutal horrors," scandal, and filth; yet one meets constantly people who denounce them as public nuisances and express unbounded contempt for the editors who conduct them. Even these editors themselves appear to be harassed with doubts about the attractiveness of their wares, for they are continually offering "prizes" or bribes of one kind or another to induce people to buy their papers. If horrors, scandals, exposures of private life, were the things which the "public wants" above all else in a newspaper, why bribe them thus? So in regard to the use of "cuts." It is evidently the belief of the editors of our great dailies that "cuts" are a wonderful attraction, but how often does one meet a reader who does not ridicule them and wish they were out of the paper? Indeed, it was only a few days ago that one of the papers formerly most disfigured in this way published a letter from a reader praising the paper's reports of the yacht-races, and saying that he enjoyed them all the more because they were not broken up with "cuts."

There is clearly a mystery here, and we know of no one so well qualified to explain it as the editors themselves. They must have reasons for their conduct. Take for example that great journalist who, for at least six months, was hailed by his admirers as the most wonderful editor the world had ever known, and who, when he was told by one of his reporters that a poor demented woman had delivered a wild harangue in a public hall which was so indecent that men as well as women were forced to leave, exclaimed, "Immense! Give it a page!" That man must have had some reason for thinking that his paper would be benefited by giving up a page to such "news." What was it? Why should he think that people would be eager to read in a newspaper the very things they had tried to escape from when they were said to them in a public place? His answer upon this point would throw light upon the whole theory of his kind of journalism. In private life, a man or woman who goes about prying into other people's business, discovering and disclosing family secrets, dragging from their sacred abodes private griefs and holding them up to the public gaze, is a social outcast, hated and loathed of all men. By what process of reasoning does an editor imagine that he becomes "great" and makes his newspaper prosperous by doing these things?

Unhappily we have in this vicinity a considerable number of editors who ought to be able to throw light on this mystery, for they are all engaged daily in this business. There was published recently in *Judge* an excellent picture of them and their occupation as it affects the youth of the land. It was called "The Modern School of Crime," and depicted a school-room filled with bright and handsome children eagerly receiving instruction from a real Professor of Journalism, who was expounding to them the "leading features" of the daily press. Above a raised platform the most "spicy" cases of newspaper horrors were displayed. The pupils held copies of the *Daily Sensation*, the *Daily Filth*, the *Daily Dirt*, the *Weekly Scandal* in their hands, and the professor was dilating on the instructive aspects of the collection. On a side wall was displayed in large and attractive letters the "Faculty of the School," which contained the names of all the really great and progressive editors of the period. That picture ought to be hung in every editorial sanctum of the land, and the men whose

names appear, rightly and justly, in that faculty ought to come forward and tell the public what the reasons are which impel them to engage in such business. They must have the key to the mystery which baffles every other mind.

It was only a few months ago that one of our newspapers, which had previously made a temporary descent in the same direction, departed permanently from the ranks of orderly and decent journalism and entered those of sensational journalism illustrated with "cuts." It is a matter of general knowledge that the editor has lost many of his former readers by this change, and there is no outward and visible evidence that he has gained new ones. He must have had some reason for the change, some strong and persuasive argument to convince him that there was somewhere a large number of people yearning for a newspaper which should either suppress entirely or hide in obscure corners all important news, and array on the first page all the scandal, silly gossip, and trivialities, each item in the list being expanded and topped with alluring headlines, under the remarkable delusion that almost anything can be converted into "important news" by "giving it a column and putting a scare head" upon it. There is no bid for intelligent readers in this method of editing, and the question is, Who are the people that the editor thinks will be attracted by it? Where do they live, and how does it happen that they are never encountered by any one from outside their set? The editors evidently believe there are untold millions of them somewhere, and that their appetite for newspapers is insatiable. Is this the case? If it is, it would be a great relief to a curious world to have some one of the parties to the secret give us exact information on the point. It would indeed be "immense" and would easily fill a page.

## *REFUSE.*

In the earlier months of the Chicago Fair, while the attendance was below 100,000, the administration was remarkably successful in keeping the grounds and buildings clean. It is no easy matter to "clean up" after a crowd—that is, to collect and dispose of the refuse of tens of thousands of lunches—the boxes, the paper, the grape-skins, the peanut and other shells, the orange and lemon peel, the peach and apple skins and stones, and, what is worst of all, the chop and other bones and the unconsumed pieces of meat, bread, and pie. But for some time the administration managed to perform this task by keeping the scavengers constantly at work. Since the attendance has doubled, it has become impossible, and portions of the exhibition grounds have fallen into a sad condition, through accumulations of refuse and offal. After the Chicago day, when the attendance passed 700,000, five hundred cartloads of débris were collected, but the work was still unfinished. It is now, of course, too late to make any change, and the Exposition will probably close knee-deep in some places in the remains of by-gone repasts.

There is one way in which this might have been prevented, and those who value the Exposition for its educational power will be the first to regret that it was not resorted to. It has been often remarked of this Fair, as of the Centennial, that the greatest service it rendered the country was familiarizing the untravelled portion of the population with other and better ways and things than those to which they were accustomed. It is not too much to say, for example, that the Centennial killed the linen duster as a national costume. Hundreds of thousands left home in linen dusters, unconscious of the effect they would produce if seen in masses. When they saw 100,000 persons of both sexes clad in linen dusters, the artistic shame of the garment came upon them with a rush, and they put it from them as soon as they got home. In like manner, there were before 1876 large areas, even on the eastern coast, in which good bread, raised with yeast, was absolutely unknown to the housewife. Of other bread than the saleratus-raised poison, she knew nothing. But once she had seen and tasted the Vienna bread, the baking art took on a new dignity in her eyes. She might still make saleratus bread and give it to her offspring, but she knew there was something better within her reach. We do not think it an exaggeration to say that the introduction of true bread, into the households east of the Alleghanies at least, dates from the Philadelphia Exposition.

In the great effort which we are all making just now for the introduction of a greater regard for beauty, order, and decency into the management of our towns, cities, and villages, one of the chief difficulties with which we have to contend is the national indifference to what may be generally termed "refuse"—that is, indifference to the sight and neighborhoods of things thrown away or cast out as garbage, or waste, or excreta. Spitting on floors is one manifestation of it, now rapidly passing away in this part of the world. Throwing down nutshells on the spot where the nuts have been eaten is another. Throwing down papers, baskets, boxes, and leavings of all sorts is another. In ninety-nine cases out of a hundred this is done because the offender has not been used to places in which the look of things was of any importance. In the tradition of the frontier, as long as the inside of the house was clean and decent, the outside surroundings were of no importance.

This tradition reigns to-day in nearly all our great cities. The great mass of the population has not the slightest idea that there is anything wrong in throwing down newspapers, scraps of paper, or nutshells in the streets. Consequently the streets of nearly every American town are by the afternoon, and often for days and weeks in succession, a litter of confusion and disorder such as is not seen anywhere else in Christendom. That duty to one's neighbor includes the duty of saving him from unsightliness, is not taught to our children. Two or three years ago there was a great Sunday-school picnic in the Central Park in this city. The spectacle presented by the great lawn on the following day was something to remember. The children had left their lunch-boxes and the remains of their lunches wherever they happened to be, in perfect unconsciousness of anything faulty. The occasion might have been used to give them a lesson in civic order and decency which they would never have forgotten, had they been requested to roll and pack up their leavings, for such and such reasons.

There has been no question about the orderliness, and decency, and respectability, in the best sense of the word, of the crowd at the Chicago Fair. Not less remarkable has been their teachableness. They were there to learn and they have learned. They have in particular, we may be sure, profited above all things by the spectacle of so much pains taken and so much money spent to produce simply a vision of beauty—something which is to pass away like a dream, leaving not a wrack behind. But they might have been taught also very readily, by notices distributed through the buildings, that it was the duty of those who visited the Fair to assist the administration in keeping the grounds clean and sweet and orderly, by taking care of their own refuse. The great majority bring their lunch with them. They have to eat it in the Fair grounds, and it is sure to leave behind a certain quantity of débris. Had receptacles been provided for these at certain places, as in Lincoln Park, and had lunching parties been requested to deposit in them their leavings, not only should we have been spared many collocations of great beauty and great squalor, but we should have helped to diffuse through many regions of the West and Southwest a knowledge of the part which tidiness plays in all municipal splendor.

## *MRS. LUCY STONE.*

There are personalities which share with greatness the function of marking the progress of ideas. Such a one was the late editor of the *Woman's Journal*. Not the most intellectual, certainly, of the notable group of women whose names are associated with the woman-suffrage movement in this country; not a pioneer in the sense that the Grimké sisters

were pioneers; not a member of the first woman's-rights convention, which Mrs. Stanton helped assemble; not more devoted to the cause than Miss Anthony, who, like Mrs. Stanton, survives her; not more eloquent than Abby Kelley, who almost with bleeding feet prepared the way for her, Mrs. Stone nevertheless earned the reward due to pure, disinterested, indefatigable promotion of the reform she had at heart: she personified it in the mind of the public. Her departure has naturally evoked reminiscences of the period when she came upon the scene, and reflections upon the changes she had witnessed, and in no small measure brought about, in the position and estimation of woman during her nearly four score years.

In one of the very last of her public addresses Mrs. Stone truthfully affirmed that "the woman's rights movement owes its inception to the anti-slavery cause." Before she had finished her schooling, the Grimkés, by relating their experience of slavery to mixed audiences in Massachusetts, had drawn down upon themselves the famous Pastoral Letter of the General Association of that State to the orthodox churches under its care. When woman, said this document, "assumes the place and tone of man as a public reformer, our care and protection of her seem unnecessary; we put ourselves in self-defence against her; she yields the power which God has given her for her protection, and her character becomes unnatural. . . . We cannot, therefore, but regret the mistaken conduct of those who encourage females to bear an obtrusive and ostentatious part in measures of reform, and countenance any of that sex who so far forget themselves as to itinerate in the character of public lecturers and teachers." The vilest insinuations were freely vented from the pulpit against the women who went forth as accredited agents of the anti-slavery societies. Half-a-dozen orthodox clergymen of New England withdrew from an abolition convention which invited women to become members and participate in the proceedings; and when Miss Kelley had been put on a committee with two men, the editor of the *Christian Mirror* intimated the disreputableness of such a closeting. This committee's memorial was rejected by the Rhode Island Congregational Consociation as coming from an unscripturally woman-ruled convention. The speedy disruption of the anti-slavery organization, though induced by a variety of causes, was ostensibly based upon the question of the equality of the sexes in philanthropic agitation. The same division invaded the World's Anti-Slavery Convention in London in the same year, 1840. The ground was now ready for the organization of women on their own behalf, and the moving spirits, like Mrs. Lucretia Mott, were found in the abolition ranks.

Lucy Stone's own introduction to the public as a speaker was on the anti-slavery platform. She brought with her to that, and presently to the woman's-rights platform, the distinction of being the first woman trained in the higher education who had publicly advocated either reform. She was a graduate, in 1847, of Oberlin College, which made no distinction of sex or color in its admission and instruction, yet deemed it improper that female graduates should read their own commencement parts. Miss Stone accordingly declined to prepare hers. She lived to see State after State in the newer sections of the country establish coeducational universities until no other could be thought of, supported by general taxation; and to see in the older States, even at the South, a pressure everywhere, more or less successful, to obtain for women the privileges enjoyed by men in institutions founded on behalf of the male sex only. In the meantime, the movement for political equality had passed through an acute stage of odium, ridicule, and mob violence. Its stated gatherings were coarsely stigmatized as hen-conventions, and Lucy Stone herself, in her anti-slavery capacity, was heralded in this fashion from an orthodox pulpit in a suburb of Boston: "I am requested to say that a hen will attempt to crow like a cock this afternoon at the town hall. All those who like that sort of music will attend." In 1853, Miss Antoinette Brown (afterwards Mrs. Blackwell), on attempting to speak as a delegate at a World's Temperance Convention in this city, in which the clerical element prevailed, was greeted by her fellow-delegates with the manners of a bear-garden. The war and the Sanitary Commission hastened the disappearance of this sort of ruffianism and of popular prejudice as directed against the coöperation of the sexes in all works of charity and public spirit: and the comparatively tranquil era which then set in has been employed for the persistent propaganda of civil and political equality. As always, many external influences, like the woman's temperance movement, have contributed to further the labors of the agitators, and the approach to universal manhood suffrage, if slow, has been steady. What remained of the sentimental repugnance to the mere act of depositing a ballot at the same polls with men, has been completely dispelled by the Australian system. School suffrage now very generally obtains without distinction of sex, and municipal suffrage has supervened in many quarters, while one State has eliminated sex from its Constitution.

Mrs. Stone, no doubt, was loath to close her eyes upon such unequal accomplishment, and in the rectification of common and statute law the progress, great as it is, has not been all that she and her coadjutors desired. In the field of education and employment an unlimited extension of opportunity has been assured. The grave problems of marriage and divorce have been specifically affected by the labors of woman-suffragists, but still await for a more perfect solution the direct concurrence of both sexes in the framing of legislation; nor can the social evil be otherwise wisely taken in hand. In becoming a married woman, Miss Stone entered a protest against the convenient practice of adopting the husband's name, and continued to wear to the end the name imposed by her father upon her mother. The individuality of an actress or a singer has a merchantable value, but, as Mrs. Blackwell, Lucy Stone would have forfeited nothing of her power as a reformer. Her singularity in this particular has not found imitators.

Mrs. Stone was, in her prime, a very winning and effective speaker, of the emotional rather than the argumentative order, and possessed of great fluency. She furnished her share of that eloquence which Emerson said was dog-cheap among the abolitionists. How far oratory will be developed or checked among the college-bred women of to-day cannot yet be decided; but those who lived through the struggle for emancipation may not expect to see again the fervor and passion of that grand debate. Each fresh triumph, too, of the equal-rights idea tones down the clamors of its promoters along with the expostulations of its opponents, faint echo of the voice of the extinct mob. For the moment, the press, debased as it is, is the principal forum, and less and less are men's convictions formed or swayed by the spoken word.

## THE COLUMBIAN EXPOSITION.—XI.

### PSYCHOLOGY.

CHICAGO, October, 1893.

THE division of topics in science at Chicago, whereby such subjects as Neurology and Psychology were included under Ethnology, has had in the event considerable justification, in spite of much criticism and some ridicule. For when we look at the way in which Psychology in particular fares, in comparison with its fate at other expositions, the difference is very striking. The principal, as it is also the official exhibit, in the department of Ethnology, is in the gallery at the north end of the Anthropological Building. It was gathered by Prof. Joseph Jastrow of the University of Wisconsin, who was appointed assistant to Prof. Putnam for this duty; and no praise would be, I think, too high for this really admirable collection of apparatus, charts, etc., illustrating the principal problems and results of the "new psychology." Prof. Jastrow's difficulties were great, and it is only fair to say that his success is also great. This main exhibit is displayed in three rooms, viz., a working laboratory, where a series of sense and memory tests are offered to candidates from the visitors in the building; an apparatus-room, which is well filled with instruments topically arranged; and a third room partly devoted to the exhibition of graphic charts, showing some results of modern researches in a form easily taken in by the eye. This last feature is, however, very meagre, owing, I suppose, to the difficulty of getting authors to restate their results in such a form for a special occasion. Another room is given up to an anthropological library of books and journals, only moderately full and representative, and with a rather poor showing for Psychology.

The collection of apparatus is probably the most complete, as a whole, that has ever been made, notwithstanding some obvious deficiencies. For example, instruments for sound and tone-experiments are almost altogether wanting; and if this omission is excusable in the working laboratory, considering the incessant noises made by the busy Fair-goers, it is unaccountable in a simple apparatus exhibit, except on the supposition that makers and owners could not be persuaded to contribute. The pieces for sight, muscle-sense, and color-sense are well chosen, and so is the apparatus for demonstrating the laws of reaction-time and other special psychophysical principles. Of course, it is impossible, without becoming too technical, to give a detailed account of these instruments; but some remarks on a few of the more recent adaptations of physical devices to the needs of psychological research may interest general readers.

The kymograph of Ludwig, exhibited by Petzold of Leipzig, still holds its place as probably the most complete and available apparatus for graphic recording. The instrument at the Fair has, besides a spiral attachment, an excellent device for tilting the revolving drum at any angle to the perpendicular. A new "movement," mounted on a table, devised by Dr. Witmer, and exhibited by the University of Pennsylvania, has a double writing attachment which will be found useful. Rothe of Prague sends a "polygraph" with accessories (after Knoll), which provides a very cheap revolving-drum movement of two velocities, with a variety of tambours for recording, and a seconds-clock for time-mark-

ing. Among other time-measurers, the two latest chronoscopes are those exhibited by Elbs and Verdin, devised respectively by Münsterberg and D'Arsonval. They are both excellently adapted to measurements to hundredths of a second, and both can be made to record thousandths. The D'Arsonval has this advantage over the other, as well as over all previous chronoscopes, viz., that it is practically noiseless. It is also portable, and in its attachments very convenient for the simpler reaction experiments. Among the pieces of apparatus for investigating movement, those of Cattell and Münsterberg are adapted to a great number of special uses; the former affording ready measure of force and rapidity, and the latter of direction, locality, symmetry, etc.

A new improvement in the matter of devices for color-mixing is shown in two instruments to be found among the exhibits of the University of Pennsylvania and the German Universities respectively—the former due to the ingenuity of Dr. Witmer, and the latter worked out by Prof. Ebbinghaus of Berlin. They both have appliances for regulating, during the revolution of the wheel, the amount of surface of each disc exposed. They both secure this (so far as they do secure it) by means of a spiral interlocking arrangement of concentric tubes supporting the different discs, so that by moving one tube within the other it is also turned upon its axis, thus disclosing or concealing more or less of the color-disc which it bears. They both seem to lack, however, an accurate means of recording the exact amount of color change secured by a given amount of longitudinal axis movement. Other interesting pieces of apparatus are the color-contrast instruments of Hering, exhibited by Rothe of Prague; a series of contrivances for utilizing the principle of the Marey tambour, exhibited by Verdin of Paris; the new control-hammer of Wundt, for use in connection with the Hipp chronoscope (in the German educational exhibit); Stumpf's tone instruments (also in the German collection); Münsterberg's large *Augenmass* apparatus for experimental work in the dimensions, locations, etc., of the field of vision; Cattell's dynamometer, and the capital series of simple sense-test appliances exhibited by Jastrow. The universities which contributed most generously of their apparatus, photographs, etc., are Harvard, Toronto, and Wisconsin. The pieces from the Johns Hopkins University are historically interesting.

In the testing-room, a series of interesting sense and memory tests are given to all comers. The educative value to those taking them, and to the public generally, is probably their greatest value under the circumstances, which are not conducive to scientific accuracy. More may be expected, however, from a series of results obtained from different colleges in this country, where the same tests were given to groups of students by competent instructors before the Fair opened. These results, together with a detailed description of the tests themselves, will, it is hoped, be published by Dr. Jastrow. The arrangements for administering these tests, I may add, exhibit much ingenuity; indeed, two of the pieces of apparatus used—one a time-marker constructed on the pendulum principle with well-contrived accessories (from Dr. Fitz of the Lawrence Scientific School), and the other a new falling-screen for brief exposures to the eye, designed by Prof. Jastrow—are, in my opinion, improvements on most of the older contrivances for their particular uses.

Besides this so-called "official" exhibit, the Fair has other smaller collections. The Deutsche Gesellschaft für Mechanik und Optik displays in the Electricity Building many pieces of apparatus which are in common use with physiologists and psychologists; and I have already referred to the small group put under the head of "psychophysics" in the German educational exhibit in the Liberal Arts. A magnificent piece of work in this latter collection is the apparatus designed for mixing the spectral colors, after Helmholtz. Smaller separate exhibits were also made by the University of Pennsylvania in its general exhibit, and by the University of Illinois, under charge of Prof. Krohn, in the Illinois State Building.

In conclusion, I may be allowed a word of reflection on the present state of experimental psychology so far as it is revealed in these exhibits. Most of the separate instruments are contrivances of particular men for the investigation of particular problems. The science has not yet reached the stage of real demonstration—the stage at which its acknowledged results may be stated under general principles of critical value, whose truth may be shown by a few representative experiments. No doubt we shall, in the future, have more demonstration apparatus of recognized value—apparatus indispensable to teachers in class instruction. But it must be admitted that instruction in this field is now very haphazard, and each teacher is a law unto himself, both as to what he shall teach and as to how he shall teach it.

Another reflection is more encouraging. It arises from the very extraordinary display made by American institutions and professors as compared with those from abroad. And this discrepancy cannot be attributed to lack of interest on the part of the foreign psychologists, for, despite such lack, it is still true that this continent has to-day more chairs for the prosecution of research and teaching than all the world besides, and as many laboratories. The actual results so far attained dispel all fear that the movement is a mistake or a fad; and, with a continuation of the liberal treatment already given to the subject by the universities, great things may be expected in the future.

J. M. B.

## THE OMAR KHAYYÁM CULT IN ENGLAND.

ALDEBOROUGH, October 8, 1893.

THERE are some old authors in whose writings survive their living hearts, and among these is Omar Khayyám, the astronomer-poet of Persia. Those who like him, presently love him: they feel as if holding not a mere book, but the warm hand of a friend; and some have heard, as if addressed to themselves, the poet's parting appeal to his friends, near eight centuries ago, that when they met, after he had sped, they would remember "old Khayyám," and "turn down an empty glass." Feelings of this kind, mingled with intellectual appreciation, led to the formation, last year, of the Omar Khayyám Club in London. It is small as yet, consisting of about a dozen gentlemen, who, with almost as many guests, have twice dined together. Each dinner had its artistic *menu*, with pictorial illustrations suggested by one or another of the Quatrains. Among the chief promoters of this club were, and are, Clement Shorter, editor of the London *Illustrated News;* Edwin Clodd, author and banker; William Simpson, artist and traveller; George Whale, solicitor (vice-president of the club); Frederick Hudson, solicitor (secretary of the club); Arthur Hacker; and Justin Huntly McCarthy, president of the club, who studied Persian that he might read Omar Khayyám in the original, and translate, as he has done, more of the Quatrains. It will always be a question how much of the personality which the lovers of Omar Khayyám find in his Quatrains is derived from his marvellous translator and interpreter, Edward Fitz-Gerald. He has made only 75 out of the 500 Quatrains; but it must be remembered that a larger number have gone into his seventy-five. To Prof. Cowell, by whom his Persian enthusiasm was kindled, Fitz-Gerald wrote (1858): "My translation will interest you from its form, and also, in many respects, its detail; very unliteral as it is. Many Quatrains are mashed together; and something lost, I doubt, of Omar's simplicity, which is so much a virtue in him. But there it is, such as it is." Careful perusal of the more exact translations of Nicolas (in French) and of Whinfield, proves that Fitz-Gerald has indeed taken extensive liberties with his author as to form, condensing a good deal; but he has not interpolated his own thoughts. Some have supposed that the religious heresies are largely those of Fitz-Gerald, and that Omar Khayyám would have been put to death for writing some of them; but in this respect the English poet has in several lines softened the original.

Fitz-Gerald, also, had a charming personality, a sweetness of heart, that won to him the love of the best men—of Thackeray, the Tennysons, Spedding, Carlyle, Laurence, Prof. Charles Eliot Norton, Lowell. "His friendships were more like loves," he used to say. Rarely has any man been more beloved. Bernard Barton, the Quaker poet, when dying, asked Fitz-Gerald to take some care of his only daughter, and the poet married her. He was about forty at the time (born in 1809), and she a little younger, I believe. Both soon reached the conclusion that they were happier in single life, and parted pleasantly, his comfortable income being equally shared with her. He lived, for the most part alone, in Boulge Hall, not far from the grander "Bredfield," where he was born (near Woodbridge, Suffolk). He could hardly be allured from his literary solitude. He had no ambition for publicity, and it required the persuasion of friends to bring his works to the public. Prof. Norton (whom Carlyle introduced to Fitz-Gerald with great cordiality) induced him to finish and print his two translations from Sophocles. He had as little care for money as for fame. While reading, if bank-notes came, they were apt to be used as bookmarks; a number were found in various volumes after his death, where they were placed and forgotten. He was eccentric in his charities. He invited the fishermen to a festival, and gave them fine old port instead of beer. Hearing that an humble neighbor, a grocer, was in pecuniary difficulties, he bought his entire stock. He was not wealthy, having only about a thousand pounds a year, but he owned his pretty homestead, and he was a practical believer in "plain living and high thinking." He made very little by his publications. Although Quaritch appears in the title of the first edition of the 'Rubáiyat of Omar Khayyám' (anonymous), it was not at once sold by Quaritch. Fitz-Gerald had it printed at his own expense, and gave a few about to his friends. Mr. Quaritch tells me that one day Fitz-Gerald, whom he had long known, came to him and threw on the counter about two hundred copies, telling him he was welcome to them. Quaritch began trying to sell them at half a crown, then sixpence, but got them off only at one penny. (I see by Qua-

ritch's last catalogue that he has one copy of that first issue held at five guineas). Dante Rossetti bought a copy, and at once communicated to his circle what a treasure he had found. Swinburne, William Simpson, and others procured copies, and the two hundred gradually came into circulation. Quaritch then brought out a second edition, and, although no money was to be expected, he offered Fitz-Gerald ten pounds, which the translator desired him to present to a Persian famine fund raised at the time.

The earliest critique on the book was, it is believed, written in *Fraser's Magazine* by the late Thomas W. Hinchcliff. Mr. William Simpson, who was Hinchcliff's friend, relates an anecdote about him. Hinchcliff was once at sea near Panama, in a formidable storm, when some on board were expressing doubts whether they could weather it. Hinchcliff said: "He knows about it all—He knows—He knows!" Instantly his hand was seized by an American, named Clarke, who cried, "You have been reading Omar Khayyám!" The two men fairly embraced, on account of the ancient Persian, and remained friends through life. Mr. Simpson could not tell me more about this Clarke, nor his first name, but Mr. Quaritch says that from the first Omar Khayyám has been more widely read in America than in England. The edition of Fitz-Gerald's works, published by Quaritch, and by Houghton, Mifflin & Co., is somewhat more complete than the edition of William Aldis Wright (Macmillan), but the latter contains the author's sparkling letters to his friends, giving many glimpses into the literary life of his time.

It is rather remarkable that Fitz-Gerald, though something of a hermit and fond of reverie, should reject mystical interpretations of the "wine" celebrated by Omar Khayyám and by Hafiz. He believes it was real wine, and the 'Rubáiyat' "an epicurean eclogue in a Persian garden"; but he does not suppose that the poets drank very freely of the wine they wrote so much about. Those who remember Fitz-Gerald personally may find some support for the transcendental theory in the fact that he himself, not without mysticism, should have been so absorbed in his Persian as to seem almost his reappearance.

What I have written thus far is mainly the talk of some ten "Pilgrims" (as the London papers call us) who, on October 7, left the great metropolis for the grave of Edward Fitz-Gerald, there to perform a "function." It was to plant beside the grave two little rose-trees bred in Kew Gardens from hips of a rose-tree growing beside the grave of Omar Khayyám at Naishapúr, in Persia. When the Afghan Boundary Commission started, it was instructed to try and find the Soma plant, the ancient Aryan nectar-vine; in this they failed, but William Simpson, when they passed Naishapúr (capital of Khorassan), sought out the grave of Omar Khayyám—which has been preserved, it seems, not from veneration for the heretical poet, but by being in a nook of the domed monument of some once majestic, now forgotten, imam. Omar Khayyám's hope was that the north wind might scatter rose leaves on his grave, and so it is to this day. The seeds were sent to Mr. Thistelton Dyer, who grafted them at Kew. They have not yet budded—being only a foot high—but there is reason to hope that their first petals will open above Fitz-Gerald's dust next year.

Mr. Clodd, who arranged the pilgrimage, had everything prepared. A brake was waiting at Woodbridge Station, and the pilgrims drove through four miles of embowered lanes to Boulge ("Bowidge," the folk call it), where we saw the poet's ivied home, a cluster of red roses peeping over the wall. There we were joined by Col. Kerrich (Fitz-Gerald's nephew) and the Rev. Mr. Doughty, his co-executor, the polit vicar of the little church (St. Michael's) whos rector had frowned on the homage which included a "pagan." A score of countryfolk, who remembered their benevolent neighbor, were present, and some children; also the family of Mr. Holmes White, the local solicitor, who now reside in Boulge Hall. These young ladies and gentlemen have taken the rose-trees under their care. There were also present several friends of the poet, Mr. Loder of Woodbridge, Mr. Barrett of Ipswich, also Sir Brampton Gurdon, K.C.M.G. After the rose-trees were planted, Mr. Simpson, with uncovered head, gave an account of his visit to the tomb at Naishapúr. The American present gave a brief address, in which the interest of some of his countrymen in Omar Khayyám, and the illustrations by Vedder, were spoken of, and concluded with some translations from the poet, not found in Fitz-Gerald's book, but thought appropriate for the occasion:

"Diversity of worship has divided the human race into seventy-two nations. From among all their dogmas I have selected one—the Divine Love."

"The morning hath already thrown off the veil of darkness. Wherefore thy sadness? Rise up, let us breathe again the morning air before having to long for it. For alas! long enough will the morning breathe when we breathe not."

"The entire world shall be populous with that action of thine which saves a soul from despair."

"A thousand chains of thine own broken by thee are less than to have chained to thee by sweetness the heart of a free man."

"The dogmas admit only what is obliging to the deity. But refuse not thy bit of bread to another, guard thy tongue from speaking evil, and seek not the injury of any being, and I undertake on my own account to promise thee paradise."

"Since from the beginning of life to the end there is for thee only this earth, live at least as one who is on the earth, and not buried under it."

"O my heart, thou wilt never penetrate the mysteries of the universe; thou wilt never reach that culminating wisdom which the intrepid omniscients have attained. Resign thyself, then, to make what little paradise thou canst here below; for, as for that one beyond, thou shalt arrive there, or thou shalt not."

Mr. Edwin Clodd then read some poetry written for the occasion. The poem of Justin Huntly McCarthy was printed in the *Pall Mall Gazette*, and that of Edmund Gosse in the *Athenæum*. Four lines by Grant Allen, sent to Edwin Clodd with deep regret at his inability to be present, and read by Mr. Simpson, represent the feeling pervading other letters sent by eminent men:

> "Here, on Fitz-Gerald's grave from Omar's tomb
> To lay fit tribute, pilgrim singers flock:
> Long with a double fragrance let it bloom,
> The rose of Iran on an English stock."

Colonel Kerrich made a felicitous address on behalf of the Fitz-Gerald family; and the Vicar pleasantly promised, for the ladies present and himself, care for the rose-trees. These were removed from pots, and planted by the gardener of Boulge Hall, amid silence, at the head of the slab of rosy granite which marks the grave. An iron frame was placed for their protection, and on it a bronze plate with the words: "This rose tree, raised in Kew Gardens from seed brought by William Simpson, artist-traveller, from the grave of Omar Khayyám at Naishapúr, was planted by a few admirers of Edward Fitz-Gerald in the name of the Omar Khayyám Club, 7 October, 1893." Such is the English answer to Omar's line, "The flower that once has blown for ever dies."

After looking through the small, but pretty and ancient, church, whose tablets are those of Fitz-Gerald's father, mother, and sister (near which hangs their arms), the pilgrims drove to Grundisburgh Hall, the mansion of Sir William Brampton Gurdon, where we were handsomely entertained at luncheon. Fitz-Gerald was sometimes lured from his retreat to this ancient mansion, because a friend of his there, a lady, excelled in music, of which he was very fond. Sir William is a near relative of the Saltonstalls of Massachusetts. The present baronet's wife has written an interesting book, 'Suffolk Folk-Lore. Compiled by Lady Camilla Gurdon. Introduction by Edwin Clodd.' In this entertaining book, published this year, there is notice of a ghost long supposed to haunt Boulge Hall, and described as "The Queen of Hell." It is the ghost of a Mrs. Short, who murdered a gentleman at Boulge Hall; the blood-stain being said to be still traceable on the floor. She wore, when last seen, a silk dress, and came out of the gates in a carriage, with regular driver but headless horses. That, however, was early in the century, but Mrs. Short has of late been superseded, and the present story is as follows: "At Boulge Hall, upon the stroke of twelve at midnight, a coach drawn by a pair of headless horses, and driven by a headless coachman, who dismounts to open the lodge gates, takes back the ghost of the late owner, Mr. Fitz-Gerald."

After walking about the beautiful grounds of Grundisburgh, the pilgrims departed—some for London again, some to pass the Sunday at Strafford House, seaside residence of Edwin Clodd, at Aldeborough. And it is here, mainly, in the intervals of our Anglo-Oriental symposium, that these wayside notes were jotted down, which are now written out so ramblingly. Even so, let me hope they may be of more value to your readers than any attempt at elaborate treatment of the many literary, philosophical, and religious matters represented in this singular pilgrimage. What Emerson said of every rose may be especially said of our Anglo-Persian rose: It speaks all languages.

MONCURE D. CONWAY.

## A TRUE REALIST.

ITALY, September, 1893.

IT is strange that the little volume of Giovanni Verga, 'Cavalleria Rusticana, and Other Sicilian Peasant Tales,' should appear in the "Pseudonym Library" (London: T. Fisher Unwin), with a publisher's note to the effect that Verga's works have not hitherto been presented to the English public. As soon as Verga's best work, 'I Malavoglia,' appeared in Italy, it was translated by Mary A. Craig, with an introduction by W. D. Howells, under the title of 'The House by the Medlar Tree.' This work gives a very fair specimen of Verga's aims, method, and style; it is a perfect picture of Sicilian life in the fishing villages of the province of Catania, which mostly begin with Aci—Aci Reale being the district; Aci Bonaccorsi, Aci Castello, Aci Trezza, communes, with their separate municipalities and belfry-tower feuds and jealousies. The village of Trezza, or Aci Trezza, is one of the loveliest spots on the eastern coast of Sicily. We spent a day there last year. The shore was covered with artists painting the huge rocky needles which serve as bulwarks to the tiny bay full of fishing boats; and, as one does in Scotland among the scenes

where Walter Scott has laid his stories, we went about trying to find the originals of Verga's humble folk.

When he wrote, the fishermen and the caulkers and the boat-builders were merely grumblers at the new régime because of the taxes, light in comparison in those days to what they are now. Now they are openly rebellious because those same taxes are too heavy to be borne. Save salt, which cannot be taxed because of the innumerable salt-mines and salt-factories, nothing is spared; and, what is worse, as in all small communes in Sicily, the signori fill the posts of honor and of lucre, and put on the taxes as they please. Thus, cattle and horses, their property, are but slightly taxed, while mules and donkeys pay so much that their owner is often obliged to sell his cart to pay for the beast, lest that should be taken also; fruit, vegetables, the very wood that the poor creatures spend hours in collecting, are taxed, and the fish is all bought up by the *maffiosi*, or ring, in Catania, who make all the profits out of the men who daily risk their lives in plying their dangerous trade. The Don Micheles of these days think less of protecting people's property, of saving drowning fishermen, less even of smugglers, so engaged are they in the municipal and political struggles—urging the people to vote for the Government candidate, protecting the partisans of the Government from the just vengeance of the voters whose schedules have been burned or carried off by the Don Silvesters of the hour. You can scarcely take up an English paper without reading of brigands who have sequestrated proprietors, or condescended to plunder poor peasants and carters; of murders and woundings, of housebreaking and petty larceny, just as it was in the bad old times of the Bourbons and the still worse ones of the Moderates.

No truer picture did Dickens give of the Debtors' Prison, of the Chancery Court, of Dotheboys Hall, than does Verga of every phase of Sicilian life. His works have not the pathos, or bathos, of Dickens, even as they have not the repulsive details of Zola. He deems that life is sad enough and gloomy enough on its seamy side without the need of piling up the agony by the describer. He, however, spares nothing and no one, and there are notes of warning in even his earliest writings which might have saved many a scene of bloodshed, many a crime, had it been listened to by the classes who have monopolized the power, the wealth, the very sources of production which the makers of Italy fondly thought that they were securing for the masses of the newly liberated country. The 'Cavalleria Rusticana' is a simple incident taken from the daily life of the Sicilian people. They *are* chivalrous in their barbarous, Old World fashion. The stab from behind is not Sicilian. All the tales told of the Sicilians abroad have to be sifted. Are they malefactors? Then of course they use stratagem, craft, and all other evil means of committing crimes without being found out, just as do the burglars and murderers of every city in the world. But the constant killings and cuttings and woundings that go on among the common people are not inflicted without due notice. A has insulted B at the game of *toccu*, a drinking game in which not the drink, but the possibilities of giving offence, lead to endless quarrels. A knows, and all who are present know, that B will take his revenge where and when he can, but with equal arms. Whoever succumbs and is carried to the hospital is silent as to his antagonist; none of the spectators ever comes forward. Or C has touched D in his womanfolk. If caught in the act, swift and sudden vengeance follows, and no jury in Sicily—you may say in all Italy—will condemn the avenger. But if the husband or lover or brother learn that his house has been "ornamented" (that is the polite way to put it), just as Verga makes the jealous and abandoned Santa inform Compare Alfio of his misfortune, he takes it quietly, and the scene ensues as follows:

"Turiddu, the seducer, is at the tavern; the outraged husband enters, and merely from the way that he fixes his eyes Turiddu knows that he has come 'about that business,' and lays down his fork, asking, 'Have you any orders for me, Compare Alfio?' 'None. It is some time since we have met, and I came to speak to you of the thing you wot of,' and he puts aside the glass Turiddu offers him, who rises, saying: 'I am here.' The carrier puts his arm round his neck, saying: 'If to-morrow morning you will come to the Indian fig we can talk over the affair. Wait for me at the road and we will go together.' After these words they exchanged the challenge kiss; Turiddu closed his teeth on the ear of the carrier, and thus gave a solemn promise not to fail."

They meet, fight with knives; at the last thrust Alfio wounds Turiddu mortally, saying, "This is for my house which you have ornamented." A newspaper column would contain all Verga's simple story, and you may read it daily in the Sicilian newspapers in much fewer words. This "chivalrous method" of settling their old grievances you will never change among the people, unless, indeed, the signori leave off fighting duels as they do every day. When in 1866, after the revolution of Palermo, got up by the priests and carried out by the very scum of the island, the Government placed the city in a state of siege, and all the populace were disarmed—even the being found with a knife being made punishable—the people, as if with one instinct, found hiding-places in old walls and in holes dug along the shore to hide a couple of knives, so that the free fights went on just as usual. Only when the aggressor is of a higher class and would not stoop to give satisfaction to the injured man of the people, does he take his vengeance when and how he can; but the injurer knows perfectly well that this will be the case, and keeps on his guard as much as possible. The old folk-lore is full of these episodes.

One of Verga's most touching stories is "Jeli the Shepherd," who at thirteen makes friends with Alfonso the signorino (little squire) after they had had a good fight first. He used to teach him how to mount barebacked the wild horses under his care, to rob birds' nests from the tops of trees higher than the belfry tower of Licodia, while Alfonso astonished Jeli with his writing, especially when he wrote the name of Mara, the daughter of the factor for whom Jeli kept the master's herds and whom he meant to marry when he had six ounces of salary (twelve dollars and a half); but of this Mara was to know nothing. Jeli's mother, to whom he used to take his savings once a year, dies; then his father comes to him dying of malaria, which in the plains of Catania "kills more surely than a pistol shot." All sorts of misfortunes befall him: Mara's family go away, then a colt falls over a precipice, and he is sent adrift without his salary and goes where Mara is, and sees that she is going to be married to the son of the factor Neri, "who owned more than twenty head of cattle." But it comes to the intended's ears that Miss Mara was on too friendly terms with Alfonso, the little squire of other days, and the factor, to hush up the scandal, gives Mara to Jeli, who is in the seventh heaven, gets a good place and works like the good husband that he is to please and satisfy Mara's every caprice. But he has now large flocks of sheep to look after and the cheeses to make, and so he is absent from home weeks and sometimes longer. There are not wanting ill-natured people who hint at Mara's conduct; but Jeli, "who has never lived in the world, understands nothing." Mara welcomes him home, as she always knows when to expect him, but the eve of Santa Barbara he returns suddenly, a horse left with him being ill and needing the blacksmith, who acts as veterinary surgeon. He is left to knock at his house for a long time; the neighbors laugh and jeer. Now, although "all new ideas had difficulty in getting into his head," he becomes thoughtful when he sees Don Alfonso, a handsome young man with a long beard and velvet jacket and a gold chain to his watch. When Alfonso comes to his master's place to a picnic dinner, his heart shrinks, all the more when Mara, who never would come with *him*, appears, on the pretext that, being *enceinte*, she had a longing for fresh cream cheese. He thinks and thinks. It is the shearing season, and he is very busy, but is ordered to kill two kids, the year-old calf, a turkey, and poultry, and while he is doing this, the merrymakers get up a dance. Alfonso calls Mara to dance. "Don't go, don't go, Mara!" "Why?" "I will not have you go." Mara goes, laughs, dances, flirts with Alfonso, till Jeli, white as death, with his shears in his hand, rushes on Don Alfonso, and cuts his throat with the shears "just as if he had been a kid." They arrest him, bind, and take him before the judge, he making no resistance, only saying, "*Come?*—how then? Was I not even to kill him? Why, he took Mara from me!" How many of the so-called murders in Sicily occur because the *signorini* will take the one ewe lamb from the peasants and the laborers!

One of the most remarkable of Verga's short tales is entitled 'Libertà,' written as early as 1860, when the inhabitants of the circum-Etna communes rose up against the *galantuomini* who had robbed them of their land and their hard-earned produce and derided them into the bargain. Most horrible crimes were committed, but they were not prompted, as it was thought, by the reactionaries who desired the return of the Bourbon or who were aghast at Garibaldi's impiety. It was the beginning of that land war which, for all who have eyes to see and ears to hear, is preparing in Sicily with equal intensity and with much more method than heretofore in Ireland. But for the volunteers of Messina, the massacres would have been general of the women "whose flesh was formed of partridges and red wine," of the gentlemen with white hands who had never touched a spade or guided a plough. Then Bixio arrived and shot half-a-dozen of the ringleaders, and hundreds were imprisoned. The trial lasted three years; numbers were sent to the galleys. "To the galleys?" they murmured; "why, none of us has touched a span of land! And they told us that this was the reign of liberty!" Three and thirty years have passed since then, and the question is still unsettled. The *galantuomini*, the syndics, the assessors take possession of the land, sow and reap, and the people starve. This year there have been several riots in Sicily. At Cavaltatura the peasants, seeing that the lands said to belong to them were being all "annexed," went one day and dug them over; the troops fired, six were killed, many wounded, others were imprisoned.

Verga, who is a poet as well as an artist, without making any profession of Socialism shows that he sees clearly that the present

state of things cannot last, that the masses are drawing together in an ever-increasing hatred of the classes. As in the 'Malavoglia' he portrays the restless efforts of the very poorest to better their condition, to get some slight addition to their meagre fare, and follows the poor old grandfather (who would have been content to follow his dangerous trade to the last) to his deathbed in the hospital, so in the later volume, 'Mastro Don Gesualdo,' he gives the history of the proud, poor, noble family of the Trao in their crumbling palace—Don Diego and Don Ferdinando, with their young fair sister Bianca, seduced by her cousin, who would marry her if his miserly old mother had not refused him a cent. Nothing will induce Mastro Gesualdo to consent to the marriage, so the family look up a spendthrift duke. The story is a painful one throughout. All Verga's stories are sad, for life is so at this close of the nineteenth century. It is so especially in Italy, where the people are awakened to a sense of their suffering, of their misery, of the injustice that prevents them from bettering their condition. Nothing in Verga's writings tends to foster that discontent. He merely depicts things as they are—the false pride of the poor aristocrat, who will starve in his palace rather than let part of it; the greed of the strong and masterful ones, who, in despite of obstacles, are working their own way up, careless of those who fall under their feet. His satires on the governments of the day are quiet but very bitter. He suggests no remedy, does not seem to see one. Things will take their course, since those who have, take no thought for those who have not. In one of his rare prefaces he writes:

"The continuous, painful, feverish, fatal path which humanity follows in its march of progress is grand in its result seen as a whole and from a distance. In the glorious light which irradiates that path the restlessness, the greed, the selfishness disappear; passions, vices, become transformed into virtues. . . . But the observer, carried away himself by the impetuous torrent, has a right, looking around, to interest himself in the weak ones who fall by the way—in the spiritless ones who allow the waves to overtake them so as to end the sooner, in the vanquished who raise their despairing arms and bow their heads under the brutal feet of the newcomers, the victors of to-day, hurried, eager to arrive, and who will be themselves conquered on the morrow. . . . Who sets himself to observe this spectacle has no right to pass judgment on it. It is much if he succeeds in keeping outside the struggle so as to study it without passion, to depict the scenes faithfully in their natural colors, so as to represent the reality as it is, or as it ought to have been."

In this, Verga succeeds perfectly.

# Correspondence.

## LONG'S PORTRAITS OF THE VIRGINIA PRESIDENTS.

To the Editor of The Nation:

Sir: In view of the bold and somewhat novel outlines in which Prof. Goldwin Smith has limned the characters of some of the founders and early chief magistrates of the republic, in his recent political history of the United States, it may not be uninteresting to the readers of the *Nation* to catch a glimpse of Jefferson, Madison, and Monroe as they appeared to another distinguished Englishman, who personally knew them—the late Prof. George Long, author of 'The Decline of the Roman Republic.' It will be remembered that Mr. Long was one of the group of young Englishmen who, through the influence of Mr. Jefferson, were called to professorships in the University of Virginia on its organization, and who afterwards returned to England to win high rank among the scholars of the mother country. Fifty years after the opening of that university, Prof. Long wrote, under date of Portfield, Chichester, May 30, 1875, to his former pupil and life-long friend, the late Prof. Henry Tutwiler of Alabama, giving his reminiscences of those early days. That letter is now in my possession, and, although it was not intended for print, its historical interest will justify me in giving a few short extracts in which the three ex-Presidents in question are casually mentioned:

"A few days after my arrival at Charlottesville I walked up to Monticello to see Mr. Jefferson. I made myself known to his servant, and was introduced into his great room. In a few minutes a tall, dignified old man entered, and, after looking at me a moment, said, 'Are you the new professor of ancient languages?' I replied that I was. He observed, 'You are very young,' to which I answered, 'I shall grow older.' He smiled and said that was true. He was evidently somewhat startled at my youthful and boyish appearance, and I could plainly see that he was disappointed. We fell to talking, and I stayed to dine with him. He was grave and rather cold in his manner, but he was very polite; and I was pleased with his simple Virginian dress, and his conversation free from all affectation. I remember this interview as well as if it took place yesterday. During my solitary residence before the University opened I visited Monticello several times, and occasionally passed the night there. I thought that he became better satisfied with the boy professor, and we talked on all subjects. He saw that I took great interest in the geography of America and in the story of the Revolution; and he told me much about it, but in a very modest way as to himself. He showed me the original draft of the Declaration of Independence; and he could clearly see that I was in habits, as I have always been and still am, a man who preferred plain republican institutions to the outward show and splendour of European kingdoms.

"I often saw Mr. Jefferson between this time and his death. When he came on his horse to the University, he generally called on me. His thoughts were always about this new place of education, of which he was really the founder; and though the first few years of the University were not quite satisfactory, he confidently looked forward to the future and to the advantages which the State would derive from the young men who were educated in the University of Virginia.

"I remember well a long conversation which I once had with Mr. Jefferson on George Washington. He spoke of him freely and generously, as of a man of great and noble character. Mr. Tucker, in his 'Life of Jefferson,' has given the character of Washington as Jefferson wrote it, and it is perhaps certain that the character was written at the time when Mr. Jefferson spoke of Washington to me, though he told me something more than the written character contains, but nothing contradictory to it. The character is exceedingly well written, and it proves that as a mere writer Jefferson might have excelled most men of his day.

"I discovered that Mr. Jefferson was well acquainted with Polybius, who is not a good writer, but a man of excellent sense and the soundest judgment. The last time that I saw Mr. Jefferson when he was suffering from a complaint which caused his death, he was reading Pliny's letters, and we had some talk about a passage. A few weeks after, when I was at Sweet Springs during the summer vacation, I heard of his death. There was much foolish display on the occasion in Virginia, and some extravagant, bombastic orations. Those who had more sense showed their feeling in another way. The man who had done so much for Virginia and the United States was honored for his services, for his talents, and his grand and simple character. His great deeds are recorded in the epitaph which he wrote for his own tomb.

. . . . . .

"Soon after my arrival in Virginia, and it was either in December, 1824, or in January, 1825, I received a letter from Mr. Madison, whom I had not then seen. He asked me if I could write something in the newspapers which would give the people some notion of what I proposed to do as a teacher in the new university. I wrote something which appeared in the Richmond *Enquirer*, but I have no copy of it. Mr. Madison, on reading what I had written, wrote to me a very kind letter. It is enough to say that he was much pleased with what I had done, and with the plain, simple way in which I had expressed my meaning. I often saw Mr. Madison afterwards, and I think that he was one of the most sensible men that I ever spoke to. I do not know what I should think of my youthful work if I saw it now; but Mr. Madison's appreciation makes me suppose that it contained good sense and was of a practical nature, and adapted for the use of the young men whom I was going to teach."

. . . . . .

"I once saw Mr. Monroe, who was a Visitor of the University, and I dined in his company with the two other former Presidents, Jefferson and Madison. I could form no opinion of him, for I believe that he said nothing, and only made an unfortunate attempt to say something to me, for I sat by him. After some time he turned to me and said, 'How is your father?' I was so surprised at this question from a man who could have known nothing of my father, who was then dead and had only been in the West India islands, that I made an answer as silly as the question. My answer was, 'I have no father'; and he said no more to me. He was a man very unlike Jefferson and Madison; but I know he had some good qualities and some merits. But I think he must have been rather a dull companion. I have seen letters by Mr. Monroe, and I can testify that he neither wrote well nor observed well the orthography of common practice. Jefferson and Madison wrote in all respects as gentlemen should write. I can now understand how Monroe failed in his orthography. His education, I think, was imperfect; and I admit that I, who was great at spelling in my youth, am now by no means a very good master of orthography, one of the most disorderly parts of our language."

In this simple letter of reminiscence to a friend, Prof. Long does not attempt any subtle analysis of the character and ability of the personages of whom he wrote, such as we have in Prof. Smith's brilliant, but not impartial book; but we see in it no suggestion of the "feminine not to say feline face" which Prof. Smith ascribes to Jefferson, nor of the "somewhat prim mediocrity" which he discovers in Madison.

I cannot help expressing the regret which will be felt by many Southern readers that Prof. Smith's book, the brightest monograph that has yet been written on our political history, should be marred by an apparent prejudice against the Southern people. The student of American history who can see little or no good in our civilization outside of New England, has yet something to learn.

T. C. McCorvey.

University of Alabama,
Tuscaloosa, September 29, 1893.

## NEBRASKA BIMETALLISTS.

To the Editor of The Nation:

Sir: Your editorial comment on the recent Nebraska Democratic State convention is a further evidence of the fact that the silver sentiment of the West is very much underestimated in the East. I think I speak advisedly when I say that a fair majority of the delegates to that convention were pronounced bimetallists, and at least one-third of the delegates were advocates of the free and unlimited coinage of silver at a ratio of sixteen to one. The fact is notorious that this convention was packed and manipulated by patronage dispensers, made up of federal appointees and post-office applicants. Every applicant for a federal position that had been endorsed by the Democratic

State central committee was advised by letter that his endorsement *might* be subject to reconsideration, and was admonished to attend the convention as a delegate, or see to it that none but reliable Administration men were placed on the delegation; and many a delegate fixed his eye on a promised appointment, swallowed his convictions, misrepresented his constituency, and voted at the dictation of the patronage dispensers.

Your editorial does Mr. Bryan an injustice when you say, "Mr. Bryan thereupon announced that he should join the Populists." Mr. Bryan made no such announcement. He did say: "When I am convinced that the Democracy of this State are in favor of a single gold standard, I will serve my people under some other name." Mr. Bryan knows full well that this promise threatens no change in his party affiliations. Mr. Bryan has thousands of admirers in this State, myself among the number, who believe him honest in his position, but who do not endorse his sixteen-to-one ideas nor look with favor on his position towards the repeal of the purchase clause. Nebraska Democrats are in favor of the repeal of the purchase clause, but have faith that the Administration will carry out the promises of the Chicago platform and legislate to the end that both gold and silver shall be the money of the country, and shall be received and coined without charge for mintage. The sixteen-to-one wail that comes from the silver States meets with no approval from the thinking Democrats of Nebraska, for it smells of the paternalistic ideas of the McKinleyites; but when the Eastern press seeks to make the public believe that Nebraska Democracy is advocating a single gold standard, it is either deceived or deceiving. BIMETALLIST.

OMAHA, NEB., October 15, 1893.

## MEDICAL EXAMINERS FOR PENSIONS.

TO THE EDITOR OF THE NATION:

SIR: The degree of debauchment to which the public morality has been led by our iniquitous pension system is constantly exposed by the *Nation*, and numerous remedies as frequently suggested. Among the latter, however, I have failed to find one which, it appears to me, would tap the root of the evil, and it is—if I may be permitted to offer it to the public—that the examinations of candidates for pensions be confined to the medical officers of the army and navy. They are peculiarly well fitted for such duty, and the amount of expense involved in their mileage, if it should be found necessary to order them occasionally from point to point, would in no sense approach that of maintaining the present "army of pension examiners," which, as I know from personal observation, is recruited frequently from medical men of neither professional nor moral standing in their respective communities.

If the *Nation* would publish this letter, or, better still, urge this idea editorially, I believe the Government would be saved an enormous expense, and the appearance of a worthy pensioner's name on the list be relieved of the tinge of suspicion or dishonor that now surrounds it. The crown ulcer of the present cancerous system is undoubtedly the method pursued in selecting the pseudo-medical examiners—men who, nine times in ten, if they possess any professional knowledge, are so far lost to all moral sense that they prove but tools in the hands of their vicious but virtual creators, the pension agents. B.

## MISSIONARY THORNTON'S DEATH IN ALASKA.

TO THE EDITOR OF THE NATION:

SIR: Missionary annals record no more pathetic death than the murder of H. R. Thornton in far-off Alaska and the flight of his poor wife, news of which was telegraphed from the Pacific coast less than two weeks ago. The details of the tragedy are very meagre, giving only the fact that the murder was committed by a group of Eskimo boys, pupils in Mr. Thornton's school, and that the elder part of the community at once put to death several of the boys implicated in the affair. But I am just in receipt of a letter from Mr. Thornton (probably by the steamer which brought Mrs. Thornton to San Francisco) which shows that the cloud was gathering when the letter was written; the lives of the four whites had already been attempted, and they feared the worst. This last letter of Mr. Thornton is an appeal for help—congressional help in the way of money for protection, and especially for protection against the *liquor traffic*. A copy of a little yearly paper, from Cape Prince of Wales, opens with the sentence: "The liquor question in the Arctic is a question of self-preservation to white residents and the Eskimo race"—a fact true of many places south of Alaska!

Mr. Thornton's loss is a grievous one to his friends and to the work. He was a man of very great ability and culture. Coming as he did out of one of Virginia's most brilliant groups of brothers, he was a first-honor man at old Hampden-Sidney College and a distinguished graduate of the University of Virginia. In his life he was scrupulously careful and manly. His last letter gives repeated expression to a full trust in God and confidence in the future of the work in Alaska. There will, no doubt, appear some more extended and authoritative account of his life and death. I simply offer this tribute as but a suggestion of what might be said. JOHN A. PRESTON.

CHARLOTTE, N. C., October 17, 1893.

## PROFESSOR SAUPPE'S LIBRARY.

TO THE EDITOR OF THE NATION:

SIR: It will be of interest to all students of philology to learn that the library left by Prof. Sauppe, the famous philologist of Göttingen, is to be offered for sale. This collection includes 9,000 volumes relating to classical philology and archæology. The library has been examined by Prof. Wilhelm Meyer and Carl Dziatzko of Göttingen, who say that it is one of the choicest and most valuable libraries of its kind that ever have been offered for sale.

Believing that the fact above mentioned will be of interest to the readers of your esteemed paper, I take the liberty of communicating it to you.—Respectfully,

DR. CONSTANTIN NÖRRENBERG,
Commissioner German Library Exhibit.

No. 2 GERMANIA PLACE,
CHICAGO, October 16, 1893.

# Notes.

J. SELWYN TAIT & SONS have ready for publication 'The Larger Life,' by the Rev. Henry Austin Adams, and 'The Soul of the Bishop,' by John Strange Winter.

D. C. Heath & Co., Boston, announce 'The Literary Study of the Bible,' an account of the leading forms of literature represented in the Scriptures, by Richard G. Moulton, M.A.

The volume of poems, lyrics, songs, and sonnets by Charles H. Crandall, called 'Wayside Music,' to be published by the Messrs. Putnam, will be issued in a limited edition. A frontispiece will be furnished by Rosina Emmet. One-quarter of the collection has not hitherto appeared in print.

Brentano has in press 'Modern Scientific Whist,' by C. D. P. Hamilton.

How evanescent are the charms of the light essays on life, letters, and things in general with which the magazines regularly furnish us, one scarcely realizes until he sees them put on the outward appearance of books. The spice of anecdote and allusion and the meandering grace which characterize Miss Repplier's contributions to the *Atlantic* have, no doubt, won for her a place in the affections of many of the readers of that magazine; Mr. E. S. Martin's jocosely serious comments on life, in the style in which Robert Grant at present excels, may also easily have amused, or perhaps instructed, numbers of people who stumbled on them in the public prints. When, however, this disconnected matter is collected respectively in 'Hours of Idleness' (Houghton, Mifflin & Co.) and 'Windfalls of Observation' (Charles Scribner's Sons), it is hard to determine what their functions as books are, or to what public they address themselves. Those who read the magazines have already sated their appetites, and those who do not—Mr. Howells holds that the two classes are thoroughly distinct—can hardly have much taste for a course here and there from the banquets of seasons gone by.

Nor is the case greatly different with the miscellaneous essays—on more serious subjects, it is true—which Mr. Gosse collects under the title of 'Questions at Issue' (D. Appleton & Co.), defend the christening as he may by insisting in his preface that they have the common bond of treating unauthoritatively some of the unsettled critical questions of our time. Interesting as most of these essays are, they are not only now out of season, but incapable by their very shreds-and-patches quality of being woven into a single well-organized volume. If one should chance to be curious as to what Mr. Gosse thought of Kipling in 1891, or as to what part he took in such and such a discussion in the *Forum* in 1889, he could readily find what he desired from the periodical files in any good library. But in a book the reader—or, at least, the buyer—expects something more than miscellaneous literary matter. Of course, the case is different when the author's opinion on even a bundle of unrelated subjects is of high importance. We cannot, however, with safety set so high a value on Mr. Gosse's work. He has a deft hand and a dainty touch, and to read him is to row with the tide; but at best he offers us decidedly more style than substance. Even one who holds the tenets Mr. Gosse advances, finds himself unsatisfied with the justification they receive at his hands.

In 'An Embassy to Provence' (The Century Co.) Mr. Thomas A. Janvier has given a delightful account of a delightful trip in a one-horse "shay" to Avignon and neighboring towns. His purpose was to meet and become acquainted with the Provençal poets who form the brotherhood of Félibres, and who count among their number men like Mistral (a photogravure of whom forms the frontispiece to the volume), Roumanille, Gras, Mathieu, Tavan, and others. The magic charm of Provence and its poetry quickly fell upon Mr. Janvier, and it is in sympathetic and appreciative mood that he describes the scenes, the men and

the women he saw and met. A large measure of the fragrance of the sunny South has passed into his book—something of the witching grace of Daudet when he writes of the beloved land of mirage; so that, quite apart from the useful information the author has collected in his pages, he has succeeded in making his readers understand that the Félibre movement is not a mere ebullition of poetic fancy, but the expression in an already rich and true literature of a deep patriotic feeling. Readers who learn something of these poets of southern France from Mr. Janvier's daintily written pages will surely be tempted to extend their knowledge of the Félibrige and the works of the first rank to which it has given birth.

Prof. Genung's 'Practical Rhetoric' has been for some years one of the best-known text-books on that subject in common use in colleges. The author has now followed a prevailing tendency in treating almost the same material in a much more elementary fashion, in his 'Outlines of Rhetoric' (Ginn & Co.), for the use of high schools and academies. In many respects the smaller book is an improvement on the larger. It is more simple in plan, more compact, and shows the same good sense and absence of fussiness. This new attempt to make plain to children what has long been reserved for young men, will benefit the ordinary high-school curriculum, and help to hasten the day when colleges will no longer be obliged to waste precious time on elementary rhetorical training.

College instructors who give courses in argumentative composition will be glad to have their attention called to G. P. Baker's 'Specimen Briefs' (Cambridge: Harvard Coöperative Society), a pamphlet containing a large variety of briefs actually drawn by Harvard students in preparation for argumentative essays. Accompanying each brief are criticisms, and, in most cases, suggestions as to the precise way in which the plan in question could be improved.

'Old Anti-Slavery Days' is the title of a volume embodying the proceedings of a notable gathering held at Danvers, Mass., on April 26 of the present year, under the auspices of the local historical society (Danvers: Rev. W. M. Ayres). A large and representative number of veteran abolitionists and their posterity was in attendance; and the brief speeches, the letters from those unable to be present, and the biographical sketches in the appendix both reflect the spirit of the anti-slavery movement and add not a little of interest to its annals. Reminiscence here sometimes goes astray, as it will, and reports the thing that was *not*, or confounds date and place; nevertheless, this volume ought to find its way into every collection of anti-slavery literature.

Dr. W. Peterson's critical and explanatory edition of the 'Dialogus' of Tacitus (Oxford: Clarendon Press; New York: Macmillan) begins with a long introduction on the question of authorship (decided in favor of Tacitus) and date, on the matter of the dialogue with its language and style, and on the MSS. The bibliography shows that this work has been all but neglected hitherto by English and American scholars. The text is the result of most careful study, and differs often from that of Halm. The notes are full, and the evidences of painstaking work shown throughout the volumes make it a worthy companion to the editor's tenth book of Quintilian.

A new edition has just reached us of vols. i. and ii. of Prof. Jebb's 'Attic Orators from Antiphon to Isæus' (Macmillan). This masterly work, as valuable to the English student of oratory as to the classical scholar, was noticed in our columns on its first appearance seventeen years ago. We observe no changes in the present edition, except the new indexes required by a slight alteration of the pages in reprinting. The author has reverted to the conservative spelling of proper names, *e. g.*, Andocides, Clearchus (*vice* Andokides, Klearchos, of the former edition).

Dr. Fennell's 'Pindar' has long been favorably known to Pindaric scholars as the most important complete edition of the odes published in England. A new edition just issued ('The Olympian and Pythian Odes,' Cambridge: University Press; New York: Macmillan), is primarily intended for students, and is very similar in scope and purpose to Prof. Gildersleeve's work, to which the editor makes repeated reference and due acknowledgment. It is remarkable for the self-denying brevity and pertinence of the introductions and notes, which condense in the smallest compass a vast amount of research, sound scholarship, and sober independent judgment. Touching Mr. Bury's extreme application of Mezger's theory of "verbal responsions" or catchwords, Dr. Fennell is somewhat sceptical. He concludes that responsion of single words recurring in exactly the same position as regards metre is as a rule without significance, and may sometimes be due to chance. Such responsions, he suggests, may be partly due "to perfunctory compliance with a lyric tradition derived from earlier and simpler forms of verse in which repetition had been both effective and significant."

It is always a satisfaction to open a new volume bearing Ferdinand Brunetière's name. He is at once so solid and so clear, so thoughtful himself and suggestive of thought in others, so bold in the novelty of some of the views he puts forward, and so dominating, aggressive, one might almost say, in his manner of pressing his arguments, that never yet has an intelligent reader wearied of following him. A declared believer in the law of evolution, he has applied it with singular success to the elucidation of literary movements. In the present volume, the fifth of the series of "Études critiques sur l'histoire de la littérature française" (Paris: Hachette), he has collected five essays which have appeared in reviews and magazines. All are interesting and valuable, the first and third particularly so, for they are excellent examples of his method. In the first ("La réforme de Malherbe et l'évolution des genres") he controverts the widespread belief that Malherbe broke completely with Ronsard and the Pléïade to inaugurate a new movement. On the contrary, according to M. Brunetière, Malherbe could not so break, and the influence of Ronsard was felt by him at the same time that he tended practically to the same end as that poet. In the last, and shortest, article in the volume, "Le caractère essentiel de la littérature française," he takes a comprehensive view of the literature of France, and brings out in a luminous manner its "sociable" character. Every page of the book is worth reading.

M. Ernest Tissot has written a book at once interesting and bold, 'Le Drame norvégien—Henri Ibsen; Biörnstierne Biörnson' (Paris: Perrin & Cie.). The boldness of it lies in his quiet assertion that Ibsen, though making use of a different poetic, is truer to nature than the most realistic of French dramatists, and, in many respects, superior to Augier and Dumas the younger, while Sardou is quite unworthy to be named beside him. In this latter opinion many will heartily concur, though they may not be disposed to agree that the work of Dumas and Augier is almost pure conventionality in comparison with Ibsen's. M. Tissot does genuine service, in his book, both to the pair of famous Norwegian writers and to the French public, by giving the latter a good insight into the marked personality of Ibsen and Björnson, and by briefly summarizing and describing their works. His effort in this respect is in many ways akin to Mme. de Staël's successful attempt to reveal to the French of her day the beauties of Goethe, Schiller, and other Germans. To Americans, what M. Tissot has to say is not novel; to most Frenchmen it will come as a revelation, in spite of the work already done by Mme. Arvède Barine and Count Prozor.

We have been dilatory in calling attention to a charmingly printed and useful little book now several months old, viz., Guido Mazzoni's 'Avviamento allo studio critico delle Lettere Italiane' (Verona: Fratelli Drucker). It was written by a teacher who has the good sense to acknowledge that even his advanced pupils are often ignorant as to the terms employed in describing books and manuscripts, the names and functions of common books of reference, and the location and contents of the great Italian libraries. All this and much more the little book tells us, and any one who has to do with Italian literature will find it an excellent manual to consult for many matters seemingly so obvious or so trivial as to be neglected by the larger books of reference.

The Bulletin of the Italian Dante Society for February, 1892, has at last appeared, simultaneously with the double number for June, 1893. The latter contains further directions for the exhaustive description and classification of manuscripts of the 'Divine Comedy' which the society has undertaken, as well as an elaborate account, covering more than a hundred pages, of the manuscripts now in the Riccardiana at Florence.

The educational section of the Liberal Arts Building, and the Woman's Building, divide the contents of Part seven of the 'Book of the Fair' (Chicago: Bancroft Company; New York: Rhule, Thomas & Co.). The illustrations are as abundant as ever, if not always precisely designated, and remain the chief excuse for this expensive work.

Mr. Arthur J. Balfour has found time, amid the distractions of home rule, bimetallism, and parliamentary fencing, to prepare for the October issue of *Mind* a paper entitled "A Criticism of Current Idealistic Theories." He describes it as a chapter from an as yet unfinished book. He presses the question whether idealists must not grant "that, in all experience, there is a refractory element which, though it cannot be presented in isolation, nevertheless refuses wholly to merge its being in a network of relations," even though the latter may be necessary to give this "refractory element" significance for us as thinking beings. Mr. Balfour accepts the Kantian dictum that "without matter categories are empty," and insists upon its rigid application as against idealists themselves. His conclusion—so far as he reaches any—is that neither idealism nor empiricism provides any method for extracting general truths out of particular observations unless *some* general truths are first assumed. Perhaps this is as far as the author of 'A Defence of Philosophic Doubt' can be expected to go.

The *Geographical Journal* for October opens with a paper by Mr. W. M. Conway, principally interesting for its graphic accounts of the mud avalanches in the upper Himalayas and the "astounding" scenery of the Hunza val-

ley, lately acquired by the British. He calls attention especially to the extent and frequency of these avalanches, making them a powerful agent in determining the physical character of the country which geographers and geologists have hitherto overlooked. There is also an unusually interesting account of Lieut. Peary's Arctic work, prepared from his unpublished note-books by Mr. C. C. Adams, in which special recognition is made of the value and importance of the ethnographical work of the expedition, "the most noteworthy yet done among the Arctic Highlanders." Among the other articles are an address before the Teachers' Guild Conference, held at Oxford, by Prince Krapotkin, on the teaching of physiography, which is in fact an earnest appeal for making the natural sciences the very foundation of education; and the opening address to the Geographical Section of the British Association by the President, Mr. H. Seebohm, a popular description of the North Polar Basin, closing with a very striking account of the sudden transition from winter to summer in the Arctic regions of Siberia, when the disappearance of the ice on its breaking up in the rivers is almost inconceivably rapid. An accompanying series of six maps shows the river basins, the heights and depths, the temperature of the coldest and warmest months, the amount of rain and snow, and the vegetation of this region.

The *Scottish Geographical Magazine* also publishes Mr. Seebohm's address at Nottingham, together with the notes, chiefly geological, of a journey in southern Africa from Mashonaland to the east coast. Besides the usual carefully prepared monthly record, reviews of geographical literature, and lists of new maps, we remark a very appreciative notice of the late Surgeon-Major Parke, the medical officer of the Stanley expedition for the relief of Emin Pasha.

As our English dictionaries tend to become encyclopædias, so atlases encroach on the domain of the gazetteer and 'Statesman's Yearbook' or political almanac. That new third edition of Kiepert's 'Grosser Hand-Atlas' which the house of Dietrich Reimer is issuing in Berlin, accompanies each map with statistics of government, area, population, industry, financial condition, etc., and with an index of places in which population is affixed to each name. The amount of information thus condensed is very great, and much enhances the value of the work. The third and fourth parts are before us with fine maps of the whole of Europe, of Russia, the German Empire in detail, Belgium and Holland, England, Spain and Portugal, and middle Italy; singularly clear, in spite of an exceptional fulness of places.

From the same house we have a notable map of the globe with reference to sea-soundings, coaling-stations and docks, submarine cables, and overland telegraphs. This work proceeds from a bureau of the Navy Department. It is in three sheets to be joined in mounting. The land surface is indicated as well as the ocean depths.

—The fourteenth volume of Washington's Writings completes the task of the editor, Mr. Worthington C. Ford, and publishers, G. P. Putnam's Sons. A "Note" contains information not communicated in the preface to vol i., viz., that this edition is a "selection from the wealth of material found," with intent to "preserve a proper balance between the public and the private acts of the man, so displaying his character more fully than has been done." We now learn, too, for the first time, that while Mr. Ford prints about 500 more letters than Sparks, he omits at least as many which Sparks printed, making good the room by drawing more freely "on the diaries, farm journals, and plans of campaigns and of army organization." There is a special index to these omissions, to which must be added the unused parts of letters that furnish illustrative extracts for footnotes. While in his preface four years ago Mr. Ford had a grateful word for historical societies throughout the country (and especially the Massachusetts society) that had assisted him, in his "Note" he excepts the New York and the Long Island societies; so that, slight as may hereafter be the inducement to print another edition of the Writings, Mr. Ford's is evidently not final in respect to what may yet be brought to light, as it is not in the perplexing choice between the numerous forms of the extant documents. It was Mr. Ford's plan to indicate in the present volume "the source of the printed version, whether an original, a draft, a transcript, contemporary letter-book, or a late copy"; but the labor probably seemed too great, even if it were worth while, and the attempt has been abandoned, the reader being left to reconcile as well as he can the inconsistency of literal and conventional reproductions of Washington's MS. Altogether, however, the "father of his country" is to be found entire in Mr. Ford's volumes, which cannot be read, especially in these degenerate days of national statesmanship, without increased admiration for Washington, and without a sense of obligation to his latest editor.

—This obligation is much enhanced by the chief feature of the volume before us, namely, the Washington pedigree, charted and set forth in detail for eleven generations, with wills, etc., together with a succinct history of the tracing of it, from Sir Isaac Heard to Mr. Waters and even (as our readers are not ignorant) to Mr. Ford himself, who has discovered some important links in the now convincing chain of evidence. This is a very valuable service indeed, and well-nigh final, though one represses a wish to see this chapter made a separate publication just yet. The remaining contents—Washington's correspondence of 1798, 1799, Tobias Lear's account of his death, the action of Congress thereon, his will, etc.—make a pathetic impression. His being dragged back into the public service by fears of an attack from France, leading to his appointment as commander-in-chief of a provisional army; the annoyances which immediately beset him from a want of coöperation on the part of Adams's Administration; the waning strength of Federalism; his overburdened estate, on which he maintained twice as many negroes as were profitable, whom he could not free, as they were mixed up with his wife's dower, and would not on principle sell or hire out; finally his last ailment, with the unskilful treatment and suffering end—make a picture in one tone. Mr. Ford tells the checkered fate of the will, which, being transferred for safety during the civil war to Richmond, was there exposed to the looting of the office of the State Secretary, and thrown into a rubbish heap. It now reposes in its original depot, the Fairfax County Court-house. Mr. Ford is able to fix the location of Washington's landed property in the District of Columbia devised in the will. An appendix contains a letter from Cambridge, dated August 20, 1775, which is quite the most remarkable in the volume on account of its strong and contemptuous judgment of "the People of this government." Washington was particularly incensed by the cowardice and peculation of the Massachusetts officers. The men, he concedes, might fight very well if properly officered, "although they are an exceeding dirty and nasty people." These privates, as he wrote to Richard Henry Lee nine days later, could not be induced "to believe that there is or can be any danger till the Bayonet is pushed at their Breasts"; not "from any uncommon prowess, but rather from an unaccountable stupidity in the lower class." In the former letter Washington censures the defeat at Bunker's Hill, as the fault of the officers. We conclude these remarks by calling attention to the last letter penned by Washington, the day before his death, which is given in facsimile in the current issue of the *Pennsylvania Magazine of American History*, for October. Its intrinsic value is nil, but the sentimental interest attaching to it would have insured it a place in Mr. Ford's collection if it had been available in season.

—Following in due sequence his school editions of Cæsar and of Cicero's Orations, President Harper, with Dr. F. J. Miller, gives us an edition of the 'Bucolics' and the first six books of the 'Æneid' (American Book Co.). The unique thing about it is that the notes, which are on the same page as the text, contain nothing whatever of a grammatical nature, but are designed "to afford stimulus and material for the study of the poet from a literary point of view." These notes, therefore, while presenting the usual brief explanations on points of antiquarian lore, are chiefly remarkable for containing a large collection of passages taken from Greek, Latin, Italian, and English authors in relation to whom Virgil stands either as the imitator or as the imitated. If the boy could be made to read them (a point, by the way, on which the gravest doubt may be entertained), such passages would be very enlightening to him. With the too narrow range of classical authors now read in our schools, it is extremely desirable that the student should be shown how wide a field there is beyond, and how great is the debt which modern literature owes to the ancient. Whether, however, such passages are really instructive as to the actual meaning of Virgil, and help to a real understanding of the Latin language *in the Latin*—whether they assist the boy to put himself in the place of a Roman reader and to get the Roman point of view—these are questions still *sub judice* and too long to discuss here. But about one point we feel no doubt, and this is that the series of supplementary notes contained in a dozen pages at the end of the book is a positive evil, for these notes contain nothing but out-and-out translations into English, without a word of explanation, of the more difficult passages in the poems. Such a translation, of course, applies only to the passages in question, the boy swallows it bodily, and it is of no more use to him, when he meets a similar phrase in his future reading, than is last month's pill for this month's headache. Such a passage should be explained by the teacher in the classroom without translation, and translation should never be employed until the boy has been made to feel the Latin thought as it stands in the Latin itself. Grammatical, prosodiacal, and rhetorical studies of Virgil are not neglected in this edition, but all such matters are treated in an introduction and by the "inductive method"; the treatment is excellent of its kind. Antiquities are illustrated by about fifty woodcuts in the text

(with no references to the sources from which they are taken), and by a dozen full-page copies of ancient statues and modern paintings.

—A very sumptuous edition of Catullus, together with the "Pervigilium Veneris," is that of Mr. S. G. Owen (London: Lawrence & Bullen; New York: Macmillan). It is a quarto, printed on the finest and heaviest hand-made paper, with wide margins and rough edges, and it is illustrated with eight beautiful photogravures designed by Weguelin. The notes at the end are purely critical, and show at a glance that the value of the book does not rest alone upon the lavishness of its outer attire, and that it is no mere *édition de luxe* of somebody else's work. Mr. Owen has bestowed upon these texts the same careful work which made his edition of Ovid's 'Tristia' invaluable for the critical study of those poems. While using the best editions as a foundation, he has not followed slavishly in the footsteps of any of the modern editors, and has even, in numerous places in Catullus, had recourse once more to a fresh collation of the Oxford MS. His own emendations and corrections he admits into the text in about twenty passages of Catullus, and in three or four of the "Pervigilium." Most of them have already been submitted to criticism, having first appeared in the pages of the *Classical Review;* all deserve respectful attention and study. It is only to be regretted that the magnificence of the book makes its price so high as to put it out of the reach of most scholars.

—Regarding "The Division of Words," a correspondent writes:

"The dispute in your columns is no new thing under the sun. It was evidently rife among the Romans in the Augustan age, and Augustus himself, in this altercation as in so many other emergencies, proved an artful dodger. He offended neither party and was safe from the criticism of both. He never divided his words at all. We read in Suetonius (Augustus, § 87): 'In his handwriting I have especially noticed this: he does not divide words, nor, when letters are too many, does he carry them over from the end of lines to another, but at once writes them there underneath, and draws a line round them" (Notavi et in chirographo ejus illa praecipue: *non dividit verba*, nec ab extremâ parte versuum abundantes literas in alterum transfert, sed ibidem statim subjicit, circumducitque.) Whatever the imperial division of words might have been, Augustus must have been suspected of partiality. But, thanks to a masterly evasion, he was as safe as the fox who, after running into his hole, pulls in the hole after him, or as the modern Paris in a picture at Chicago who eats up the apple himself, leaving the goddesses with much to lament but nothing to complain of."

—The Oxford and Cambridge certificate examination lists, published in the *Guardian* of September 13, give some interesting indications of the condition of the higher education in England. The number of candidates was 1,683, an increase of 100 on the previous year, and they were sent by 80 schools. Several of the largest, however, as Harrow, Marlborough, and Charterhouse, were not represented. Eton heads the list with sixty boys, followed closely by Winchester, Rugby, and St. Paul's, London. The subjects for examination were 19, and 1,486 offered for elementary mathematics, 1,274 for Latin, 1,214 for Scripture knowledge, 1,025 for Greek, 1,012 for history, 1,001 for French. Natural science was divided into six subjects, and the total number offering was 435. As compared with last year, the students in the following subjects have decreased, viz., history, botany, and physical geography; in the three divisions of "natural philosophy" there has been no increase, while the proportional numbers are the same in elementary mathematics and Scripture knowledge; and there has been a decided increase in French, German, and Greek, but especially in Latin. This would seem clearly to indicate that the leading public and grammar schools still hold fast to what have long been regarded as the best instruments of mental training, with a recognition of the unwisdom of the neglect of foreign languages in former days. The "honors" numbered 518, the higher mathematics leading with 95 (including a boy of thirteen), and being followed by French 78, English 73, Greek 51, and Latin 39. Two boys gained honors in five subjects, viz., Latin, Greek, German, Scripture, and history. The lists also show that the number of girl candidates has increased, and that they offer principally French, German, elementary mathematics, and the "English" subjects. Greek and (rather singularly) music and drawing are hardly offered at all. The number of "honors" was very creditable, the 154 successful students receiving 86 "distinctions." The "lower certificates," for boys who do not intend to go to the universities, were given to 406 out of 838 candidates, a slight increase over 1892. The leading subjects were mathematics, French, English history, Scripture, and Latin, there being a very marked increase in the number offering English history.

## LOWELL'S EVE OF THE FRENCH REVOLUTION.

*The Eve of the French Revolution.* By Edward J. Lowell. Boston: Houghton, Mifflin & Co.

In the *ancien régime* lies the explanation of the Revolution: the state of France during the fifty years or so which preceded 1789 makes intelligible the fall of the French Monarchy, the foundation of the Republic, and the growth of the Empire. Yet there are thousands of educated men and women, throughout the length and breadth of the United States and of England, who find it impossible to obtain any clear idea of French society during the reigns of Louis XV. and Louis XVI. They have neither the time nor the opportunity to consult original authorities. Tocqueville's 'Ancien Régime,' every sentence of which contains some new thought, is incomprehensible to students who have not some acquaintance with the general history of France. Taine's volumes are easier reading than Tocqueville's succinct treatise; diffuseness is more intelligible than compression. Yet Taine does not provide for Englishmen exactly the guidance they need. Readers are perplexed by the mass of Taine's facts; they lose the outline in the details of the subject dealt with by their author. It is, moreover, impossible not to feel that Taine's work, lengthy though it be, is fragmentary and incomplete. He is most anxious to support certain political or social theses. But his desire to instruct exceeds his power of narration. To any man who has a general knowledge of the state of France immediately before the Revolution, Taine's first and second volumes are full of instruction; but no one, from the mere perusal of Taine's pages, will obtain any clear view of the state of France on the eve of the Revolution.

This bird's-eye view is exactly what Mr. Lowell's 'Eve of the French Revolution' supplies. It is not, nor does it pretend to be, a work of original research. It is a short treatise or essay; it does not lay before the public the original, and probably therefore worthless, notions of a writer who propounds new opinions of the Revolution, but sums up the assured results attained by historians and thinkers such as Tocqueville and Taine. The practical effect of Mr. Lowell's labors is most satisfactory. Any one who studies his pages will be freed from the two delusions which prevent Englishmen and Americans from understanding either the *ancien régime* or the political catastrophe which brought the *ancien régime* to its close.

The first of these delusions is, that France immediately before the Revolution suffered under gross and cruel tyranny. No idea is more prevalent and no idea has less real foundation. Of its prevalence any one may judge who meditates upon the doctrine inculcated by the most popular and the most worthless of Dickens's stories, the 'Tale of Two Cities.' What Dickens believed, and what he wished to impress upon his readers, is clear enough. He held French society to be a world full of knaves and tyrants, in which men and women of worth and character were oppressed by dissolute and tyrannical noblemen; he teaches that the outrageous crimes of the oppressors of France at last brought upon the country a just and dramatic retribution which unfortunately fell, as the vengeance of history is apt to do, more severely upon the victims than upon the perpetrators of iniquity. The Revolution thus looked at is a terrible storm necessary to clear the moral atmosphere of France from wickedness and cant. This doctrine, preached under different forms in England by Carlyle and Dickens, and in France by such writers as Victor Hugo and Michelet, has obtained the widest circulation among the English people on both sides of the Atlantic. In London and in New York ninety-nine men out of a hundred believe that, in 1789, the Bastille was filled with hundreds of captives, and would be startled to find that, as was the fact, the fall of the fortress released but six or seven prisoners. How erroneous is this popular picture of France during the second half of the eighteenth century, will at once become apparent to any one who reads with intelligence Mr. Lowell's brief but lucid rendering of Tocqueville's or of Taine's teaching. France no doubt suffered a good deal from a kind of governmental despotism and caprice which is inconsistent with the respect for fixed law characterizing English constitutionalism no less under the rule of the American commonwealth than under the rule of the English monarchy. But to admit that, under Louis XVI. or his predecessor, Frenchmen did not enjoy that sort of freedom which has always seemed of priceless value to the English people, is a different thing from allowing that, immediately before the meeting of the States-General, France groaned under a grievous and intolerable despotism.

No assertion could be further from the truth. The power of the French monarch was in theory unlimited, but in practice it was hampered on all sides. The French nobility enjoyed unjust privileges which profoundly irritated the nation, but it is the height of ignorance to suppose that the French nobility were as a class the oppressors of their countrymen. French nobles sympathized warmly with the American struggle for independence; French nobles ardently desired the meeting of the States-General. One reason why the commons were so strong was that many of the nobility shared the aspirations of the middle classes. The more you look into the matter in detail, the more clearly you perceive that not cruelty

and tyranny, but sentimentality and philanthropy, were the marked features, one may almost say the vices, of the nobility, who in their ignorance hailed with delight a revolution which proclaimed the doctrine of universal equality. In all countries, and especially in France, social feeling counts for a great deal more than the law of the land. When the Revolution broke out, there existed in France many iniquitous laws and many oppressive institutions; but it is clear enough that a generation which adored Rousseau was filled with humane and philanthropic sentiment.

The second of the delusions which prevent many Englishmen from really understanding the course of the Revolution is the idea that, because the French monarchy was not an oppressive despotism, the French people had no valid ground for detesting the *ancien régime*. This is an error which has infected some of the most powerful thinkers. It vitiates all Burke's speculations about the Revolution. He saw with greater clearness than any man of his generation, we might almost say than any man who has lived since his time, both the speculative unsoundness of Revolutionary principles and the practical viciousness of Revolutionary methods; he all but prophesied, during the sittings of the National Assembly, both the horrors of the Reign of Terror and the advent of a military despot. But he either would not or could not perceive why it was that Frenchmen preferred enduring the brutal cruelty of Jacobin tyranny to incurring the risk of a Restoration. Taine, with far less excuse than Burke, is guilty of a similar blindness. When he dwells on all the evils of the Jacobin conquest, he is apt to use expressions which suggest that, under the mild rule of Louis XVI., the French people had no reasonable ground for desiring fundamental changes. Yet every attempt to rehabilitate the *ancien régime* is answered by one remark of Tocqueville's which goes to the root of the whole matter: "A condition of society," he says somewhere, "which was detested by every one who knew it, was, we may be certain, detestable."

This observation, obvious as it is, is as conclusive as it is obvious. Yet one is naturally curious to know in some detail what were the causes which in the eighteenth century led the mass of Frenchmen to detest the social condition under which they lived. This curiosity is amply satisfied by Mr. Lowell's treatise. As one glances through the topics with which it deals, one sees that, towards the end of the last century, every class of Frenchmen was harassed and irritated by a system of government which France had outgrown, and which was the more annoying just because Frenchmen enjoyed enough freedom to feel bitterly the evil of arrangements which hampered every action of their lives. The smaller States of Italy and of Germany were far more oppressively governed than France, yet the subjects of Italian or German princes felt the ills under which they suffered less acutely than did Frenchmen. A despotism which has crushed the people's spirit is less resented than feeble tyranny which leaves its victims energy and hope enough to agitate for reform or to desire revolution. It is no exaggeration to say that, towards the later years of Louis XVI.'s reign, there existed no single large body of Frenchmen which did not feel bitter discontent. On the support of the army must repose in the last resort the power of every government, yet the French army was, long before 1789, prepared to coalesce with the populace against the crown. The main causes of discontent were two. Men of capacity who were not nobles could not hold high military rank, and the reforms suggested by the defeats of the Seven Years' war had broken up the old military system without conciliating the good will of the soldiers. Next to the army, the main prop of every government must be the magistracy. Yet, by a singular fatality, the magistracy of France had, for more than a generation, been engaged in a contest with the crown. There is no single department of government in which the incompetence of Louis XVI. and his advisers is so manifest as in his dealings with the parliaments. The French parliaments were very bad law-courts. From the point of view of a philosophic reformer there was a great deal to be said in favor of their abolition. A monarch who had despotically reformed the judicature of France would have gained the applause of philosophers and the good will of the people. A monarch who had conciliated the parliaments would at least have been supported by the French magistracy. Louis XVI. so mismanaged matters that he irritated at once the parliaments and the people. He allied against him all that was revolutionary and all that was conservative in France.

Consider, again, the position of French men of letters. Their influence was, towards the end of Louis XV.'s reign, greater than it has ever been at any other time either in France or in any other European country. Men talk of Johnson as a literary despot, but the moderate and constitutional rule of Johnson was as nothing compared to the limitless power of Voltaire. Nothing like it now exists in modern Europe. Nor was his influence due solely to his own astounding energy and talent; he represented in its highest form the authority of a class. The modern literary world has no despot, but one of the reasons why no man can play the tyrant of literature is that the world of letters, as a great social and political power, no longer exists. If every writer in the United States were hostile to President Cleveland, the hostility would hardly weaken his influence. In England at the present moment the enmity of literary men to Mr. Gladstone would be felt by every one to be a far less serious matter than (say) the defection from his side of the Nonconformist ministers, of the Irish priesthood, or of the leaders among the English artisans. Yet at the very time when literature was a real power in France, men of letters were to a man hostile to the King and to the governing classes. The hostility is intelligible enough to any one who ponders upon the story of the celebrated 'Encyclopædia.' Had the work been published in England, its appearance would not have affected for a moment the stability of the throne or the security of the church. Its publication shook the French monarchy and the French Church because the Government attempted to hinder its publication. The delay in bringing out the work and the danger involved in its publication irritated the masters of French opinion, and every volume that came out was a triumph over the Government. The 'Encyclopædia' was the outward and visible sign of the decaying authority of the State and the Church.

Let our readers, again, following Mr. Lowell's guidance, examine the general characteristics of French taxation. Our author appears to hold, and with reason, that the burden under which taxpayers groaned was not so heavy as is generally supposed. To make out what was its exact weight is now an impossibility, but the finance of the French monarchy was marked by two features which were enough to excite the bitterest popular indignation. Taxation was visibly unequal. The nobles and the priests did not, indeed, in reality escape from the payment of taxes, but it was patent to all the world that nobles and ecclesiastics enjoyed the odious privilege of exemption from taxation the weight of which crushed the middle classes and the poor. Taxes, again, were as a rule levied by farmers-general, or, to use an expression with which readers of the New Testament are more familiar, by publicans. It may well be doubted whether modern readers realize the results which inevitably flow from the farming out of the taxes. The resources of the State are thereby greatly diminished. Nothing like the whole tax collected ever flows into the national treasury; or, to put the same thing in other words, the taxpayers are inevitably made to pay a far larger sum than is required for defraying the expenses of the State. The exaction, again, of taxation which is already too heavy, becomes from the nature of things intolerably severe. The publican must, in order to recoup himself for his advances to the State, wring every penny he can out of the taxpayer. The State, in short, when it farms out the collection of taxes, borrows on high terms from usurers who, if they are to make a good thing out of the transaction, must cheat the State and oppress the people. England, during the great war, raised so huge a revenue that the present generation stand aghast at the taxes paid by their grandfathers, yet the Government of England was never stronger than during the contest for national existence. The France of the Bourbons was never called upon to pay any fine so tremendous as the milliards which were wrung from republican France by Germany; but the taxation of the Bourbons created and left behind it a feeling of bitterness which, after the lapse of a century, has hardly been forgotten, while the Third Republic has gained the adherence of the mass of the French people. The explanation of these facts has already been given. In England taxation has always fallen on all classes alike, and the farming of taxes has, as a general rule, been for centuries unknown. Republican France knows nothing of exemptions and employs no farmers-general.

Look at the matter, then, from whichever side you will, you come to one and the same conclusion. The *ancien régime* was not a system of oppressive tyranny, but it was a system of misgovernment which harassed, tormented, and irritated every subject of the French monarchy. This is the lesson taught by Mr. Lowell's 'Eve of the French Revolution,' and it is a lesson well worth learning, for, when once learned, it explains the enigmas presented by the history of France from 1789 to 1893.

## THE NEW LEWIS AND CLARK.—I.

*History of the Expedition under the Command of Lewis and Clark*, to the sources of the Missouri River, thence across the Rocky Mountains and down the Columbia River to the Pacific Ocean, performed during the years 1804–5–6, by order of the Government of the United States. A new edition, faithfully reprinted from the only authorized edition of 1814, with copious critical commentary, prepared upon examination of unpublished official archives, and many other sources of information, including a diligent study of the original manuscript journals and field-notes of the explorers, together with a new biographical and bibliographical introduction, new maps and other illustrations, and a complete index. By Elliott Coues, late Captain and Assistant Surgeon United States Army, late Secretary and Naturalist

United States Geological Survey, Member of the National Academy of Sciences, etc. In four volumes. New York: Francis P. Harper. 1893.
